Petition re: Land Use LU-24-027

Coffin Butte Expansion

We are extremely concerned about Republic Services' attempts to expand Coffin Butte landfill.

This proposal is not in accordance with the Principles as defined in the **2040 Thriving Communities Initiative** which values:

-Vibrant, Livable communities: A landfill makes a mockery of the "vibrant, safe and livable community" which we should "strive to ensure" and is not "forward thinking". We should be implementing more long-term solutions for waste, including reducing the production of single use items and the expanding of recycling and reuse programs.

-High Quality Environment and Access: The landfill will be a toxic, environmental hazard for decades to come. Even if the existing standards, as defined by DEQ and state and local requirements, were enforced, (which is currently not the case) the plans proposed by Republic Services (including no cap on annual tonnage brought in) will only make matters worse. The current and future air, soil and water quality issues will not be resolved without enforcing current standards and limiting future expansion.

-Community Resilience: "Recovering from human caused disasters, threats and changes" is of course critical. But should we not also be preventing, or at least minimizing human caused disasters such as this land fill and Republic Services' disregard for sited emissions violations, methane leaks, PFAS dangers and pollution of the Willamette River?

Violations of BCC 53.215.1- "Interference with uses of adjacent property "

The far-reaching odors from the landfill site and the noise and destruction of Coffin Butte are ruinous of property values and make the EE Wilson Wildlife Area virtually unusable for recreating on many days.

Violations of BCC 23.325.2 – "Imposition of undue burden on public improvements, facilities, utilities or services"

Heavy truck traffic to Coffin Butte drastically increases deterioration of our roads, leaves roadsides strewn with debris and creates more tailpipe emissions near homes and schools.

Leachate from Coffin Butte is dangerous to ground water and soil, creates even more truck traffic, burdens our water treatment facilities and pollutes a major recreational feature of the area, the Willamette River.

Please DO NOT LET THIS EXPANSION PROCEED!

Respectfully,

Commissioners, FYI, In case you missed this very well written As I See It:

COFFIN BUTTE AND THE PERILS OF PRIVATIZATION
Written by Barry Reeves and published by the GT on January 23rd.

Amidst the discussions around the ongoing environmental calamity that is Republic Services' Coffin Butte Landfill, it is difficult to come to grips with just how, exactly, we've arrived at this dilemma. The "dilemma" in question includes these features:

■ The landfill in north Benton County receives fully one-third of all the garbage from Western Oregon. Less than 7% comes from Benton County.

■ The landfill is owned by Republic Services, headquartered in Phoenix, the second largest solid waste company in the United States

■ The landfill is emitting vast amounts of methane, a greenhouse gas whose impact on global warming is 30 to 90 times greater than that of

carbon dioxide.
■ Republic Services is requesting an expansion of the existing landfill.

So how did we arrive here, in a county, and near a community, Corvallis, that is considered a hub for sustainability? The answer, I believe, lies in an understanding of the impact of the neoliberal economic model that has, like a toxic cloud, influenced our economic/political decisions for more than four decades. This ideology has been the central driver of record levels of income inequality, increasing homelessness and environmental degradation. Referred to by other names — Reaganomics, trickle-down economics, etc. — neoliberal economics has these components:

■ Small government — whatever government does, the "private sector" can do better more "efficiently"
■ Deregulation — regulations hamper growth and innovation and are "costly"
■ Privatization — privatizing government functions leads to greater "efficiency"
■ Austerity policies that cut government funding for social programs
■ Free trade policies (NAFTA, etc.) that allow jobs to be moved abroad where labor costs are lower and environmental regulations less stringent.

Coffin Butte, then, can be seen as a case study on the long-term impact of privatizing a municipal function, waste management, within the belief structure of neoliberalism. Rather than a function of local government, with the possibility of oversight and accountability, a large corporation will manage the site to benefit shareholders and to maximize profit. As local governments cede control over municipal functions, they become more beholden to their corporate "partners" and less beholden to their citizen "stakeholders."

As the power relationships evolve, a management/consulting class takes on the role of intermediary between this corporate-government "partnership" and the public. Managers/consultants then are responsible for creating a veneer of collaboration between the corporation (Republic Services), local government and the public. This can take the form, for

example, of citizens' advisory boards, often with catchy titles concocted by the manager/consultants ("Benton County Talks Trash").

This veneer of collaboration, however, is cover for the actual intention behind the process. That intention is, primarily, to manufacture consent within the narrow framework of the status quo and to siphon off activist energy. Should public participants/activists who choose to participate in these advisory boards refuse to "stay in their proscribed lanes" of discourse and decision-making, they will then find themselves stonewalled or marginalized. In other cases, the advisory board may simply be suspended.

The managerial/consultant class is also tasked with "partnering" with environmental groups. This "partnership" involves "greenwashing" — giving an appearance of environmental stewardship. The effect, also, is to blunt or co-opt environmental groups who are incentivized, like citizen's advisory boards, to "stay in narrow lanes" and avoid any serious threat to the status quo. Deregulation, taking many forms, enhances this power dynamic between public good on the one hand and corporate interests on the other, favoring of course, the latter!

Though there is no quick fix for our dilemma, as a starting point, we should absolutely forbid any expansion of Coffin Butte landfill. As the saying goes, "If you've dug yourself into a hole, the first step to take is to stop digging!"

Barry Reeves was an emergency medicine physician in Corvallis for many years. His interests and focus include social justice, nonviolence and community building as a pathway to respond to the dual threats of rising authoritarianism and environmental disruption from climate change.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Commissioners:

I hear that tomorrow you'll be considering whether to grant Republic Services an extra 58 days to add more material to their revised application to start a new landfill on the south side of Coffin Butte Road.

Per the cover letter from former Benton County counsel Jeff Condit, now working as an attorney for Republic, the main purpose of this extension would be to give them more time to complete an "odor study" which they claim will help to meet the County's requirement to assess impacts of the existing landfill operation.

Let me suggest, today would be a good day to do your own "odor study." All you need is to drive out to Adair Village -- home to more than 1000 of your constituents, plus daytime location of hundreds of school children attending Santiam Christian School -- and take a sniff for yourselves.

Once you've done that, you'll have a better idea of whether more "odor studies" are really needed to confirm what North Benton County residents already know: This operation stinks.

Along your way, you can get an idea of why it stinks. I'm attaching a photo that I took on Sunday, which shows the condition of the tarps along the whole south face of the landill. They're completely shredded.

You can also see exposed garbage up on top, which -- per conditions of approval of past CUPs granted by the county -- is all supposed to be covered by the end of each working day. The landfill was closed on Sunday, so this was the condition how they left it over the weekend.

I took this photo from 3 miles away, near the edge of residential neighborhoods of North Albany. Even at this distance, you can easily see there's a problem.

North Benton County residents don't need more "odor studies" to gaslight us for what we experience on a regular basis. Nor does this company need another grace period, to complete their application.

What we do need is for Benton County government to start enforcing conditions of past CUPs. The lack of enforcement by the County was one of the most clear findings to come out of the BCTT process. A year or more ago, we were told that you were planning to act on that finding, and hire a compliance officer who would start to bring this operation into compliance. Could you please inform us as to when and how you plan to follow through on that promise?

Yours sincerely,
Joel Geier
North Benton County resident

Good morning Commissioner Shepherd,

Congratulations on your election to this important and influential position. I hope your term is starting off well.

I wanted to make you aware of a couple of points on county process and code regarding the topics of Solid Waste and Landfill Site.

1. In the 1/30/2025 Board of Commissioners discussion on the proposed 58-day extension requested by the franchisee for LU-24-027, I believe late in the discussion you made a reference to "starting with the Planning Commission" in regarding the public consideration process for this application. I am certainly not a lawyer nor a county code expert, but I believe the Benton County Code still specifies that for any proposal to expand the area approved for landfill "The Benton County Environmental Health Division and the Solid Waste Advisory Council shall review and make recommendations through the Planning Official to the Planning Commission regarding the Site Development Plan Map and narrative." [**77.305**] As you may be aware, the Board of Commissioners announced a "temporary pause" of Solid Waste Advisory Council (SWAC) activities in November 2023; this action has effectively disbanded SWAC, which was established by

Benton County Code Chapter 23 and functioned in part as an avenue for public comment on solid waste issues.

Proceeding with formal consideration of LU-24-027 without conforming to code requirements for recommendations from the Environmental Health Division and the Solid Waste Advisory Council would seem to leave the county vulnerable to future challenges to the decision on this CUP, whatever the outcome. My humble suggestion is that rather than take this risk, or revise the code to eliminate this prudent provision, the county reconstitute SWAC, allow it to hold public meetings on this topic and provide a recommendation to the Planning Commission as required by county code.

2. On a related note, you should be aware that during the course of the Solid Waste Process Workgroup ("BCTT") proceedings it was revealed that the county could not produce any record of a permit for the filling of Coffin Butte Cell 6 (quarry site). See **LSCL R-6** and the debated and indeterminate **LLU F-23** items in the BCTT Final Report. The decisions on this contentious issue clearly predate your term as Commissioner, but you should be aware that a) the county is unable to provide a clear record of approval for Cell 6, b) the county has allowed the franchisee to move forward with emplacing waste in this cell despite the lack of a clear permit, and c) the lack of a formal, documented permit for this extremely large cell means that there is no record of any public debate, consideration by county agencies, formal vote of approval or defined Conditions related to this cell. These points may come up during the public discussion on LU-24-027.

I would be happy to provide more underlying detail on either or both of these issues if you wish.

Hoping that most of your duties are more pleasant and productive than the points I discuss above.

Regards,
Paul Nietfeld

Sent For: Board of Commissioners <bocinfo@bentoncountyor.gov>

Message Body:
Dear Commissioners,

I am writing to you to express my serious and urgent concerns about Coffin Butte Landfill. We live only a few miles from this public hazard, and we have several concerns:

- Air Quality: We smell the stench of this rotting mass quite regularly. The methane smell and the smell of rotting garbage cannot be good for our health, our neighbors, visitors or the community.

- Water Quality: I am very concerned about our water quality. With all the leachates being generated from the landfill, it is only a matter of time before our and other wells are contaminated.

- Truck Traffic: It is one thing to have the truck traffic required to serve the needs of our own community, but the number of trucks coming from all over the state, bring a level of congestion, pollution, and added danger to our local roads and Highway 99.

- Pollution: The amount of litter that spills out of the trucks heading to the landfill is mind boggling. Highway 99 is of course the worst, but so our other roads of approach, Granger Road, Arnold, and other roads in and around Adair Village. The litter is rarely picked up and it is getting worse every week. It is a blight on our neighborhoods and our community at large. Nothing like saying welcome to Corvallis or Welcome to Benton County than a litter strewn Highway, truck traffic, and a large pile of stinky garbage.

I implore you to please not expand the Landfill. There is no amount of money Benton County could make on this endeavor that will not be eaten up by the lawsuits associated with well water and surface water contamination, excess methane emissions, and loss of property value. Inviting other counties to utilize this dump is inviting environmental disaster. Landfills are better suited for dry climates, not our extremely wet one. The Coffin Butte Landfill is like the County owning a ticking timebomb of pollution, well contamination, degradation, and lawsuits. Stop the Expansion!

Sincerely,
Sara Ash

As Kiko states, we had a conversation on February 1st in the parking lot of Philomath High School immediately following the Merkley-Hoyle Town Hall. He asked several questions about the landfill, which are detailed in this email. I did my best to explain the concept of "ex parte contacts" to him and suggested that he send me (and/or the BOC) an email.

Subject: trash and cash

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Commissioners Wyse, Malone, and Shepherd,

First, thank you, Commissioner Wyse, for taking the time to talk with me after last week's town hall in Philomath.

Per your suggestion, I am sending you some thoughts and concerns regarding our trash, and what we do with it.

From what I have been able to discover, other Oregon counties have proactive plans for managing waste.

In Yamhill County, citizens opposed to the expansion of their regional landfill took the issue to the Land Use Board of Appeals, who agreed with them. They then had to sue the landfill in order to get it to close. Meanwhile, they set a goal for Zero Waste and are actively taking aggressive steps to meet their goal.

Lane County recently announced plans to build and operate the most advanced integrated reuse and recycling facility in the nation.

Polk County is looking into building a waste transfer station, to break their dependence on Coffin Butte Landfill.

Metro Portland decided, years ago, that sending trash to landfills in the Willamette Valley went against their stated values of protecting the environment. Because the Valley supports one of the most productive ag economies in the nation, they decided it was an irrevocably bad idea to dump their trash in the garden where farmers grow their food,

so they took a moral stance to guide their waste policies.

Closer to home, we have obvious problems with the Coffin Butte Landfill.

Benton County planning documents clearly state specific goals for waste management and waste reduction (BCC Ch. 23). The franchise agreement with Republic Services includes those and other environmental goals, but extensive evidence shows that Republic is failing to meet its legal obligations.

Perhaps they are more concerned with financial gain than they are with meeting their goals? There is certainly evidence in that direction as
well: In August of ’22, Forbes Magazine quoted investment manager Michael Hoffman as saying that garbage “is capital-intensive and [while] it’s not compounding at 20% per year like software…for the big players it’s become an extraordinarily repeatable and inflation-resistant business.” Goals like “waste reduction” don’t generate income as quickly or easily as waste collection and disposal.

Cascade Investments (Bill Gates’ personal holding company), has a 34% stake in Republic’s business. According to Forbes, it earns more than $200M/year from it’s investment — profits that are paid by the residents of 1/3 of the state of Oregon; profits that also leave the state, never to return.

Meanwhile, Benton County residents face a future in which we will have to pay all the costs of managing the consequences of storing all the waste collected in Coffin Butte — consequences which include (and will quickly exceed) a host of already well-documented problems:

- dangerous methane leaks (methane, of course, being a potent greenhouse gas, highly flammable and clear and present fire risk in a heavily wooded area),
- continuing release of noxious and dangerous fumes and gases
- millions of gallons of toxic leachate (currently being dumped into our rivers, essentially untreated and full of heavy metals and PFAS (aka “forever chemicals”).)
- arsenic leaching into well water,
- illegally dumped and buried toxic wastes,
- continuing surprise fires

The agreement with Republic Services requires insurance coverage merely equal to the liability coverage for 15 average single family homes. How can this amount cover the consequences of dealing with decades of trash from 1/3 of the entire state? And after the landfill closes, the agreement effectively terminates any liability for the contractor at all! Clearly, the consequences of waste disposal will be borne by the public.

Every citizen generates waste that will need collection and disposal, and every citizen needs a safe, clean, and healthy environment that will protect them against pollution, wildfire, and economic hardship. So it seems only logical that our government has an urgent obligation to serve those needs in the best way possible. Currently, however, we’re hog-tied by a contract that allows an outside, private entity to make undisclosed gains without regard for the damages incurred against the present and future interests of local citizens.

Does such a situation not put us in a profoundly dangerous situation?

My question, then, is simple: If we, as a county, contract for services to meet specific goals, and if the contractor consistently fails to meet those goals, why are we continuing the contract? Especially when there is both precedent and example for better solutions to the overall problem of a “throw-away” society?

It seems to me we need to look beyond the interests of out-of-state entities who convert our trash to their cash. We need to look past the intricacies and minutiae of bureaucracy. We need to serve the immediate and profound needs of all your constituents — all our children, grandchildren, and all future generations.

Obviously, these issues and concerns extend beyond the bounds of the specific agreement with Republic Services, and won’t be answered quickly and/or easily. It will take a long conversation, free of the “interests”
of outside parties who have no long-term stake in or commitment to the long-term outcomes. The responsibility is ours.

But as clear as the situation seems to me, it's also clear to me that between citizens and government, we have the capacity to significantly and effectively address the situation so that our descendants will remember us with gratitude, for addressing needs they will have after we are all long dead.

With sincere thanks for your service (and for reading this long email!)

— Kiko Denzer

Subject: VNEQS: refuse Coffin Butte Expansion extension request

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Official Schuetz, Commissioners Wyse, Malone and Shepherd, and Administrator McEneny:

We in the group VNEQS (Valley Neighbors for Environmental Quality and Safety) understand you will be discussing Jeff Condit's 58-day extension request at this Thursday's Commissioner meeting with Heads of Departments. Mr. Condit is proposing this two-month pause to the Coffin Butte Landfill Expansion Application timeline so that Republic Services can complete some odor studies.

We recommend against granting this extension. Here's why:

Republic Services has been dragging their feet and this feels like yet another attempt to stretch the process out. They've been given ample time to resubmit materials. With their Jan 15 submission, out of one side of their mouth they say what they've submitted is "complete for purposes of review"… yet out of the other side, say they want to "give you" this extension of time to review additional materials they want to develop ("technical adjustments" and "additional information on odor modeling and other issues") before you rule on completeness.

As one of our group says, this is like a teacher accepting a term paper, right at the deadline, from a student who claims they've completed the paper and wants to be graded as "on time" but at the same time wants another 58 days to come back and add "additional information" on "issues" before the teacher grades the paper.

Honestly, we think they are gaming you - and think it's high time you stood up to them and said enough is enough. Let them know you are through making special accommodations for them. Stick to the process: declare the application "incomplete" (it will move forward anyway, we know), and keep the ball rolling. As Mr. Condit notes, the process already has a way to accept any new information. We recommend against your granting them this latest "extension."

This issue should have been put to rest after the decision of the Planning Commission in 2021. The applicant did not present convincing arguments for an expansion then, nor have they presented convincing arguments with the passage of the latest deadline.

It's unreasonable to keep putting the community through this protracted level of stress when the applicant is still unable to present a complete and coherent application.

Respectfully submitted on behalf of VNEQS,

Debbie Palmer

We are extremely concerned about Republic Services' attempts to expand Coffin Butte landfill.

This proposal is not in accordance with the Principles as defined in the **2040 Thriving Communities Initiative** which values:

-Vibrant, Livable communities: A landfill makes a mockery of the "vibrant, safe and livable community" which we should "strive to ensure" and is not "forward thinking". We should be implementing more long-term solutions for waste, including reducing the production of single use items and the expanding of recycling and reuse programs.

-High Quality Environment and Access: The landfill will be a toxic, environmental hazard for decades to come. Even if the existing standards, as defined by DEQ and state and local requirements, were enforced, (which is currently not the case) the plans proposed by Republic Services (including no cap on annual tonnage brought in) will only make matters worse. The current and future air, soil and water quality issues will not be resolved without enforcing current standards and limiting future expansion.

-Community Resilience: "Recovering from human caused disasters, threats and changes" is of course critical. But should we not also be preventing, or at least minimizing human caused disasters such as this land fill and Republic Services' disregard for sited emissions violations, methane leaks, PFAS dangers and pollution of the Willamette River?

Violations of BCC 53.215.1- "Interference with uses of adjacent property "

The far-reaching odors from the landfill site and the noise and destruction of Coffin Butte are ruinous of property values and make the EE Wilson Wildlife Area virtually unusable for recreating on many days.

Violations of BCC 23.325.2 – "Imposition of undue burden on public improvements, facilities, utilities or services"

Heavy truck traffic to Coffin Butte drastically increases deterioration of our roads, leaves

roadsides strewn with debris and creates more tailpipe emissions near homes and schools.

Leachate from Coffin Butte is dangerous to ground water and soil, creates even more truck traffic, burdens our water treatment facilities and pollutes a major recreational feature of the area, the Willamette River.

Please DO NOT LET THIS EXPANSION PROCEED!

Subject: Considering the coffin butte landfill expansion.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I would just like to take a minute to write and add my voice to the overwhelming majority of Benton County residents when I ask you to turn down republic services application to expand the coffin butte landfill. Republic services has clearly shown that they cannot run the landfill in a way that protects the environment or surrounding community. They routinely exempt much of the landfill from methane requirements releasing unknown amounts of this potent greenhouse gas into the environment but then have the hubris to ask for more land to trash. They are making huge amounts of money taking in trash from all over the state and yet Benton County will have to deal with the after effects for generations. However as long as the county is getting their small cut they seem to be willing to bend over backwards to accommodate this toxic mess. Benton county has exhausted a lot of political capital with its constituents lately with numerous unpopular policies including the eminent domain issues surrounding the building of a new court house in a way that seemed to alienate a huge number of people. Huge and repeated failures and overspending in the benton county public works department and other issues I won't bother going into. Pushing this down the throats of the vast majority of benton county residents who have shown themselves to be actively opposed will just further undermine trust in county government and further the divides we face as

corporations continue to find partners in government willing to steamroll the public in order to make a little more money.
Thank you for your help in placing the welfare of the citizens of benton county above corporate greed.
Malcolm Anderson

Submit your written testimony here :
To the Benton County Planning Commission,
I am a longtime resident of Corvallis, deeply concerned about the proposed expansion of the Coffin Butte Landfill. I urge you to deny the Conditional Use Permit (CUP) application, as this expansion threatens the health and well-being of our community, particularly our children and grandchildren, and the natural beauty we cherish.
My family has lived here for 24 years, nurturing our family with vegetable gardens and fruit trees, supporting local wildlife by building habitat with native plant species, and growing a variety of plants to support 3 local charitable garden groups with thousands of plants for their fundraisers. I want my grandchildren to grow up healthy, enjoying this beautiful community—breathing clean air, drinking safe water, and playing outdoors without fear. The landfill's current operations already jeopardize this vision, and expansion will only make it worse.
The landfill accepts one-third of Western Oregon's garbage, with less than 7% coming from Benton County. We're a dumping ground for other regions, bearing the burden of their waste—326,000 tons from Marion County alone in 2021—while facing methane leaks, PFAS in leachate, and unbearable odors. The 2022 EPA inspection found methane levels 20 times above federal limits, posing health risks like respiratory issues and contributing to climate change. I'm alarmed by how pollution from this landfill could impact our family's well-being and that of all other community members, human and otherwise.
Expansion means more trucks, more noise, and more pollution, threatening our air, water, and the Luckiamute River headwaters. Our community, the McDonald-Dunn Forest and the E.E. Wilson Wildlife Area are at particular risk—leachate and litter don't respect boundaries. I fear my grandchildren will inherit a Corvallis scarred by a mountain of garbage, unable to enjoy the outdoors as I do.
Benton County must prioritize sustainability, not expansion. The Benton County Talks Trash workgroup recommended reducing regional trash inflow, yet this proposal ignores that call. The waste needs to go somewhere less damaging—where communities aren't forced to sacrifice their health and environment for others' refuse.
Please deny the CUP and protect Corvallis for future generations. My grandchildren deserve a healthy, vibrant home—not a legacy of pollution.
Sincerely,
Christing Clark

Submit your written testimony here :
I'm writing today in favor of the conditional use permit submitted by Republic Services. Benton County has been on a long journey through the Benton Talks Trash workshops and the generation of the well thought out Sustainability Materials Management Plan. Continuing to host landfill services within the County will allow the next step of materials management and place Benton County as a leader in responsible resource management. We can be an example to the rest of the Pacific NW in responsible materials management but only if we have the leverage of hosting a landfill. We cannot expect that other counties will have the resources to do the heavy lifting already done in the materials management plan. Further, there is no viable alternative to hosting landfill services. Either garbage trucks will need to travel long distances (Eugene, Portland, or Bend) adding considerable costs, traffic, and emissions to what we have currently or new landfills will need to be built in counties that do not have the resources or skilled labor that Benton County does. While others may argue differently, our County is best equipped to host a landfill and should bear the moral responsibility of managing it effectively.

Submit your written testimony here :
Coffin Butte should not be expanded. Republic Services does not do a good job controlling methane gas and toxic leachate produced by the landfill that accepts garbage 90% from outside Benton county. The landfill should be reduced and other counties should take care of their garbage. Now is the time to do something different. Why did Benton Country agree to raise Republic Services garbage rates when only 10% of the landfill is supplied by Benton County. Benton County should do a better job of recycling. Benton County should tell Republic Services that Coffin Butte is no longer a regional landfill for the Willamette Valley. We need to reduce garbage by doing a better job sorting. All counties dumping in coffin butte should start now sorting and composting garbage to reduce the amount. Coffin butte should not be expanded. It should be reduced and managed differently. Republic Services is doing a terrible job. Their employees are working in toxic conditions and they do not care. Methane gas escapes from coffin butte on a daily basis and they do not care. Toxic leachate contaminates surrounding groundwater and they do not care. I do not trust Benton County commissioners to make the best decisions for residents of Benton County. Do the right thing. DO NOT EXPAND COFFIN BUTTE!

I hike in Dunn Forest and EO Wilson wildlife area. I see the privately owned for profit landfill sitting on Coffin Butte as though it were an old factory, built before modern technology and concern for water and air pollution standards became standard. It continually sends toxic emissions into our community, and attempts to reduce or control them have been ineffectual. If it were an ugly old above ground factory left over from the Camp Adair days with visible emissions, we would be appalled by having this out of compliance facility operating. However, because we confuse garbage collection, landfill operation, and general community helper services, Benton County tends to view the landfill as some necessary evil, unaware that only 7% of the garbage is ours. The significant funds that the county receives from the operation are a large portion of their discretionary budget, making the commissioners reluctant to rein in the documented pollution violations. The last thing we need to do is allow this facility to expand! Yes, we need to be responsible for regional waste disposal in an environmentally safe manner, but importing large loads of trash for profit at the expense of air and groundwater is indefensible.

Submit your written testimony here :
First let me state that I am opposed to the expansion of Coffin Butte Landfill. I swim in the Willamette in areas ranging from Albany to Salem. The river has become a hazard to my health due to the extreme amount of untreated leachate dumped into the Willamette by Republic Services. This contamination will only increase with the proposed expansion. This violates BCC 53.215 (2) and the Benton Co comprehensive Plan policies 5.1.2, 5.2.1, and 5.74.

The amount of leachate currently produced by Coffin Butte is unacceptable. There is no treatment for this these toxic chemicals including PFAs [forever chemicals] dioxin, and microplastics. Dumping this waste into the Willamette is in violation of Benton County Comprehensive Plan policy 6.5.5 (Benton County shall strive for the safe storage, collection, reduction, reuse, recovery, and appropriate disposal of hazardous waste materials.) This waste should at least be hauled to a landfill in a drier climate for disposal. Water treatment plants are not equipped to remove harmful chemicals such as PFA's. Expanding the landfill will in effect be expanding the leachate.

When I completed my MPA many years ago, I remained very aware in my work that my main goal was the well-being of citizens. Serving in government remains a service-oriented job – accountable to the citizens for health and well-being.

I appreciate your service and know that you will remember to keep the well-being of Benton County citizens and wildlife in mind in your decision making.

I am and have been for years appalled about the amount of trash coming from outside our area to the Coffin Butte Landfill. I remember living in a rural community in Washington as a child. There were individual dumps all over. They stunk and attracted all kinds of bugs and rodents. I would imagine if the truth were known that many people died and/or contracted serious illnesses from their own garbage.
I don't live particularly close to the Landfill but I worry about the people that do. I know some have lived in the area for decades and have every right to complain about the loss of livability in their own homes. I'm sure the community of Adair and surrounding areas that have young families are worried sick about the health of their families.
The idea that a great deal of that garbage is coming from other communities is beyond comprehension to me. If Republic Services wants to run a landfill here, they should invest in the latest equipment available to destroy the garbage and clean up the surrounding atmosphere.

I am writing to strongly urge you to deny any expansion of the Coffin Butte Landfill. Republic Services has expanded the acceptance of waste from the greater geographical area of Western Oregon so that the actual refuse from Benton County only amounts to about 7% of the volume. Republic Services has done a poor job of monitoring their release of methane gases, and to my knowledge they are in violation of those releases with the DEQ.

I know that Benton County receives $3-4 million dollars in franchise fees, but this is a drop in the bucket for when Republic Services abandons the landfill and Benton County is the one responsible for paying the cleanup costs.

Coffin Butte needs to severly limit the amount o garbage being brought in by other cities and counties that are not local. We are paying the price for Republic Services, an Arizona corporation, operating and dictating the terms of how they are going to collect garbage in our local landfill.

Benton County needs to assert themselves and listen to the citizens that don't want this landfill to expand. Don't be swayed by the short term money that seems so alluring.

Submit your written testimony here :
I've loved living with my family and recreating in Benton County since 1997. I believe that the values statements put forth in the Benton County Comprehensive Plan match my values. It seems I'm not along…a citizen participation process was used to describe the values that we were led to believe would be used for county planning. Unfortunately, those values have been violated by our county leaders in their agreements that have led to an increase in the landfill operated by Republic Services. There will be further degradation of our environment if the current expansion request is granted.
Goal 5 of the comprehensive plan speaks to natural resource and open spaces. It acknowledges that natural resources of the county are central to the long-term sustainability and livability of the county. By taking in trash from places other than Benton County and agreeing to further expansion of the landfill, the commissioners are willingly selling off our natural resources, including clean water and vibrant wildlife.
We enjoy biking in the county, especially on Sulfur Springs, Tampico, and various connector roads to Independence Highway. I also enjoy gardening in my yard, hiking in the county north of Corvallis, playing disc golf at Adair Park and visiting EE Wilson. All these activities are negatively impacted by the landfill operated by Republic Services and allowed by the Benton County commissioners. The landfill is unsightly now and will be even worse if farm and forestlands are turned into more trash piles.
Biking has become dangerous because of the increased number of large Republic Services trucks on the road thus I have stopped that to avoid untimely death. EE Wilson and hiking trails are negatively impacted by odors emitted by the landfill. Even gardening in my yard is often unpleasant due to the smells that travel to us. Wildlife, native species and water ways will be negatively impacted if more trash is brought into Benton County. Please follow our values and stop!

In short, just say no. While garbage is a fact of life, the volume being generated in Oregon and the trucking it all over the state to make it the problem of a few towns is not. Republic could get serious about recycling and reclamation. They could get serious about garbage collection services of the future. They could get serious about being neighbors and good partners. But instead they do the bare minimum when it comes to recycling (and even that is debatable), they continue the same outdated garbage collection practices, they don't take seriously the complaints of neighbors, and they don't demonstrate that they understand what it means to citizens to house a dump in one's county.

Hello Benton County Administrators, I strongly urge you to stop the Coffin Butte Landfill expansion. It will create too many problems including undesirable quality of life for neighbors of the landfill, toxic runoff which could have negative health consequences for many residents, additional greenhouse gas (methane) production, reduced quality of bicycle riding in that area, and many more problems. We can extend the life of the current landfill as-is by immediately stopping taking any further waste from other counties and municipalities in Oregon. Allowing waste from other cities and counties is something that should never have been approved. Once we've stopped taking other peoples' garbage, that will buy us time to find a new location for a second landfill. And that second landfill should also not take any garbage from other counties and cities, or we will be in the same situation we are now in a few years. Yes, this means our waste removal rates will increase, and that is a reasonable price to pay so we can safeguard our quality of life in Benton County.

Dear Board of Commisioners,
We bought our Appaloosa home in 1979. This was such a pristine area. Coffin Butte mountain was at least one- tenth of the height it is today and far less odiferous.
Corvallis has long been considered one of the ideal places in the US to live. Well it won't be any more! Lawfully a realator is required to reveal issues pertaining to a local landfill.
Here are some of the problems; the county has taken on so many surrounding counties trash and with it water,air(there are methane gas leaks)and noise pollution(trucks coming and going starting at 4:30 am)and risk of fires. Spun glass is now being dumped which is a hazmat issue.
It's disgusting that Republic Services is prioritizing money above life!
Sincerely,
Joanie Stevenson

Street Address, City and Zip code:
4202 Scenic Drive NW, Albany 97321

Submit your written testimony here :
Hello,

I am a resident of Benton County, having lived in North Albany for over 25 years on Scenic Drive. What attracted me to that location is the rural feel of the area with easy access to the Willamette River and lots of country roads for bicycling. I live an active lifestyle which has been significantly degraded by the recent activity at the Coffin Butte landfill. I used to regularly bicycle along Independence Highway and surrounding roads, but in the past 5-10 years the amount of truck traffic from Coffin Butte, specifically Republic Services and Knife River trucks, has made it so dangerous that I no longer bike in that area. There is also a large amount of debris along the highways (Independence and 99W) leading to the landfill which is unsightly and dangerous if in the bike lane. When I learned about the dumping of leachate from the Coffin Butte landfill into the Willamette from the Corvallis water treatment plant (which is not designed to treat toxic metals, PFAs, or other hazardous liquids), I worry about how much exposure my family has from paddling and wading in the Willamette River. The proposal from Valley Landfill to expand Coffin Butte is a threat to me and other residents in terms of personal safety and ability to enjoy the area as it will further increase the amount of truck traffic and leachate, as well as a threat to the wildlife that live in and along the Willamette River. This proposal is in direct opposition to the Benton County comprehensive plan policy BCC 53.215 (1) that states "The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone" and BCC 53.215 (2) "The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area". Lastly I am concerned about my property value if this landfill expansion is allowed to proceed due to the impact to the character of the area and long-term financial liability to the county and its citizens. I strongly urge you to reject the expansion proposal for Coffin Butte landfill and support the rights of landowners in Benton County.

Regards,
Laura Tully

From: Jo Ann Casselberry
To: Benton Public Comment
Subject: Opposition to LU-24-027 - Please NO Expansion for Our Children"s Future
Date: Sunday, March 23, 2025 10:50:52 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission,

I urge you to take this opportunity to be an environmental champion & create a healthier future for Benton County by opposing LU-24-027. Don't we owe it to our children & grandchildren to give them a better, healthier place to live in the future? Please think long term.

My name is Jo Ann Casselberry. I live at 751 SE Alexander Ave, Corvallis OR.
I oppose the expansion of the Coffin Butte Landfill (LU-24-027) & urge you to oppose it as well.

I know that many others have provided testimony about the science of the negative environmental impacts of expanding this landfill operation. A case has been made that the Landfill Expansion does not meet the required Land Use Criteria.

We stand at a crossroads where the reduction of methane gases provides an opportunity to make a large positive impact to slow climate change. **Don't we owe it to our children & grandchildren to take this opportunity to make Benton County a better, healthier place to live in the future?** Isn't clean air & clean water a core value of the Benton County Comprehensive Plan? (See 6.1.2, 6.1.4, 6.3.1, etc.)

At this point the Coffin Butte Landfill has large methane plumes. There appears to be no effort or enforcement to reduce these methane emissions. It seems extremely unwise to allow for them to get even larger, thereby rapidly degrading the air & water quality of the Corvallis area. It makes no sense.

It appears to me that the only motivation to expand the landfill would be the short term financial benefit. Of course that is a temptation. But **please think long term!** No amount of extra money now is going to help future generations when they cannot breathe the air or drink the water. **I urge you to take this opportunity to be an environmental champion & create a healthier future for Benton County by opposing LU-24-027.**

Thank you.
Jo Ann Casselberry

Corvallis OR 97333

From: Pamela Castle
To: Benton Public Comment
Cc: Pamela Castle
Subject: Testimony for LU-24-027
Date: Sunday, March 23, 2025 4:45:07 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

This testimony is regarding LU-24-027, the application to expand Coffin Butte Landfill. I strongly oppose this expansion. Coffin Butte Landfill has a record of producing large quantities of methane that are not mitigated and are released into the atmosphere. Republic Services have shown that they have not met past conditional use criteria (Benton County Talks Trash key findings) and have not sufficiently mitigated methane emissions in the past. There is no reason to expect that they will mitigate the methane emissions in an expanded landfill and if they make an attempt there is no reason to expect it would be in an environmentally sound manner.

In addition to being a potent greenhouse gas, methane is highly flammable making a fire at the landfill a real risk. Our area is already vulnerable to wildfires. A fire at the landfill is a daunting thought – it is a considerable liability and would put undue burden on our fire-fighting service, making an expansion at odds with Benton County Code 53.215 (2). Odor from the landfill reaches my home in northwest Corvallis and methane plume maps show high levels of methane extending up to a mile from the landfill. If there were to be a fire, I'm confident that smoke would blanket much of Corvallis. Such smoke would contain many pollutants including fine particulate and would present a serious health hazard for the entire community. This potential liability is too great for the county to consider allowing expansion of the landfill. Benton County Comprehensive Plan policy 6.3.1 dictates that land use decisions must take into account air quality implications such as what would happen in the event of a fire, not a small risk given the large quantities of methane at surface level at the landfill. According to Benton County Comprehensive Plan policies 6.1.2 and 6.1.4, air quality must be managed to ensure protection and minimize degradation. Approving the landfill expansion is at odds with those two policies. I sincerely hope you will use your power of discretion to deny the landfill expansion application.

Respectfully,

Pam Castle

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

This testimony is regarding LU-24-027, the application to expand Coffin Butte Landfill. I strongly oppose this expansion. Coffin Butte Landfill has a record of producing large quantities of methane that are not mitigated and are released into the atmosphere. Republic Services have shown that they have not met past conditional use criteria (Benton County Talks Trash key findings) and have not sufficiently mitigated methane emissions in the past. There is no reason to expect that they will mitigate the methane emissions in an expanded landfill and if they make an attempt there is no reason to expect it would be in an environmentally sound manner.

In addition to being a potent greenhouse gas, methane is highly flammable making a fire at the landfill a real risk. Our area is already vulnerable to wildfires. A fire at the landfill is a daunting thought – it is a considerable liability and would put undue burden on our fire-fighting service, making an expansion at odds with **Benton County Code 53.215 (2)**. Odor from the landfill reaches my home in northwest Corvallis and methane plume maps show high levels of methane extending up to a mile from the landfill. If there were to be a fire, I'm confident that smoke would blanket much of Corvallis. Such smoke would contain many pollutants including fine particulate and would present a serious health hazard for the entire community. This potential liability is too great for the county to consider allowing expansion of the landfill. **Benton County Comprehensive Plan policy 6.3.1** dictates that land use decisions must take into account air quality implications such as what would happen in the event of a fire, not a small risk given the large quantities of methane at surface level at the landfill. According to **Benton County Comprehensive Plan policies 6.1.2** and **6.1.4**, air quality must be managed to ensure protection and minimize degradation. Approving the landfill expansion is at odds with those two policies. I sincerely hope you will use your power of discretion to deny the landfill expansion application.

Respectfully,

Pam Castle

Subject: Testimony LU-24-027
Date: Sunday, March 23, 2025 4:33:27 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear County Planning Commission members,

This testimony is regarding LU-24-027, the application to expand Coffin Butte Landfill. I strongly oppose this expansion. When we moved here in 2018, I had no idea that on a routine basis, we'd be greeted with landfill odor at our home- especially given that we live in the city of Corvallis many miles from the landfill.

I'd gone to OSU as an undergrad back in the late 1980s and we chose Corvallis when we returned to the pacific northwest because it is a small city in what appears to be a bucolic, yet progressive, setting. It presents itself as a forward-thinking community that emphasizes protecting the environment and enhancing the wellness of its residents. The landfill odor fits neither the community image nor its stated objectives and policies from the values defined in Benton County's 2040 Thriving Communities Initiative's Core Values (in particular, the high-quality environment goal) to many policies and goals in the Benton County Comprehensive Plan – in fact, just about all of the landfill's practices and community effects are antithetical to what this community purports to represent. Why spend time, money and energy defining goals and making policy to achieve those goals when it appears the county has no real desire to pursue them?

On days when I smell the landfill odor, I refrain from engaging in my planned outdoor activities and keep my windows closed. I do this not only because it is unpleasant, but also because it has been well-documented that landfill gas contains many contaminants and I do not want to inhale them. Having the ability to use my own property be affected by a landfill was not what I expected when I moved here. If I'd known about all of the problems associated with the landfill, I would not have purchased a home in Corvallis. It has left me deeply saddened and feeling that the leadership in Benton County has let all of its residents down by not providing the leadership that holds operators like Republic Services accountable for their negative community impacts. Republic Services has not met conditional use requirements in the past (Benton County Talks Trash key summary), there is no reason to expect they would operate an expansion in any different way.

Landfill odor affects both my use of my property and the character of the area and thus the current use does not meet the criteria defined in Benton County Code 53.215 (1). This will only worsen with an expansion of Coffin Butte Landfill and this impact on air

quality must be considered under Benton County Comprehensive Plan policy 6.1.4. Please use your power of discretion to protect this community and deny the permit for expansion of Coffin Butte Landfill as it would exacerbate existing landfill issues.

Sincerely,

Pam Castle

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

This testimony is regarding LU-24-027, the application to expand Coffin Butte Landfill. I strongly oppose this expansion. Expansion of the landfill will place undue burden on our transportation infrastructure by increasing the number trash- and leachate-hauling trucks on roads where their presence is already of consequence. This does not meet the criteria defined in Benton County Code 53.215 (2). The Coffin Butte landfill expansion will interfere with the character of the area by increasing the number of large, noisy trucks lumbering along our roads, often strewing litter in their wake, and thus does not meet the conditions defined in Benton County Code 53.215 (1). In addition, Benton County Comprehensive Plan policy 6.3.1 states that the county is to reduce vehicle miles traveled to preserve air quality when making land use decisions – any expansion is not in keeping with that policy. Thank you for considering my testimony. I urge you to use your power of discretion to deny the application for expansion of Coffin Butte Landfill.

Sincerely,
Pam Castle

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members,

This testimony is regarding LU-24-027, the application to expand Coffin Butte Landfill. I strongly oppose this expansion. Coffin Butte Landfill has a record of producing large methane plumes that are not mitigated but are instead released into the atmosphere. Methane is a potent greenhouse gas so Coffin Butte Landfill is contributing to climate change to a larger extent than it should be. According to the Benton County Talks Trash final report, the county has not held Republic Services accountable for meeting prior conditional use terms. Any current problems will be exacerbated by the expansion as there is no reasonable expectation that Benton County will begin holding Republic Services accountable or that Republic Services will make operational changes to mitigate methane emissions. Climate change affects us all – we are experiencing increased temperatures making outdoor activities difficult to take part in during the summer. The methane emissions will only worsen with an expansion of Coffin Butte Landfill and this impact on air quality must be considered under Benton County Comprehensive Plan policy 6.1.4. I urge you to use your power of discretion to deny the application for expansion of Coffin Butte Landfill.

Respectfully,

The landfill expansion is not needed or desired by county residents. Start representing your constituents instead of thinking you're smarter or better informed than the voters. The expansion is a bad deal for Benton County. Limit use by outside counties to extend the life of the dump.

I strongly believe we should DENY Republic Service's request to expand Coffin Butte Landfill.

I've been following this issue for a few years now and I'd like to understand the deal we currently have with Republic Services. They bring in garbage from all over the state, dump it on our land, make a tidy profit and when the landfill is full, they'll move on with their bank accounts full, looking for the next place where they can repeat this cycle.

What is Benton County getting out of this agreement? I can only presume it's money. How much money? And where is that money going? What is the benefit of this agreement for the citizens of Benton County? How will it impact future generations?

Whatever the calculus, I can't imagine that it is worth it. In my opinion, the contract with Republic Services is a bad one and should be renegotiated or ended as soon as soon as possible. We should not be accepting waste from other places. Let other municipalities take care of their own waste while we focus our efforts on reducing and managing our own.

As the saying goes, out of sight, out of mind. Benton County has given this luxury to many communities, but we as citizens who live here can no longer afford it.

We want to thank Republic Services for the services they provide our community however we are very concerned about the expansion. We think they are becoming way too big by taking in so much trash from a third of Western Oregon. Maybe they need to start downsizing instead of expanding. I do not profess to know the legal and environmental issues/regulations concerning landfills I just think we are out growing this disposal sight. Benton County needs to start working on a new solution as it appears we have about an 18 more year capacity.

I am opposed to an expansion of the Coffin Butte landfill. For over 50 years I relied on a big breathe of sweet Soap Creek air to boost my spirits. Too often these days my nose is assaulted by an odor like vomit and feces wafting from the dump.

Republic Services promised to control their noxious belching. They have failed to keep their promise. We would be foolish to believe they would (mis)manage an expansion any differently.

I am not the only one affected. Benton County is not the only place facing this problem. It is time to "Just Say No!"

Submit your written testimony here :
Benton County Planning Commission:
Please consider these comments as you decide the merits of the Coffin Butte Landfill expansion variance: Application file number: LU-24-027. I hope that you use your legal discretion to reject the application and thereby protect the quality of life for local residents and others who utilize this area. I am glad that we empower citizens to apply their independent judgement to determine what is best for our community.

My comments here regard the ways in which the expansion would impose an undue burden on any public improvements, facilities, utilities or services available to the area [Benton County Code 53.215 (2)]. The expansion would impose an undue burden the public's ability to use and enjoy E.E. Wilson Wildlife Area and poses a permanent risk to all people who recreate, farm, or live where water from the landfill may eventually flow.

E.E. Wilson Wildlife area is directly across Highway 99W from the Coffin Butte landfill. The existing mountain of refuse looms over the site and current truck traffic, dust, and odors issues will be magnified greatly and be stretched out for decades longer if the expansion is improved. The expansion would affect all activities of this facility through both the extremely negative impact on the character of the area and because of likely, or perhaps inevitable, intrusion of both air and water pollution into the area. Community activities at E.E. Wilson are numerous and diverse. Users of E.E. Wilson include birders, hunters, fisherman, archers, naturalists and educators and their classes. Those hunting there can bag pheasant, quail, rabbits, dove, snipe, crow, waterfowl (no goose hunting), coyote, and big game. According to Oregon Fish and Game, 3,970 hunters visited E.E., Wilson in the 2022-2023 season. The ADA-accessible fishing pond is very popular, as is the archery park. As the E.E. Wilson website notes, "The proximity of E.E. Wilson Wildlife Area to many local schools, colleges and universities makes it popular for those instructors seeking an "outdoor classroom" for students." Finally, there is also a Memorial Garden that commemorates the military units based at the site during and following World War II.

The most immediate impact of the expansion on the recreation area would be how it would haunt the view to the west. Already the existing landfill operation looms over the wildlife area. You can hear the operation, but even more bothersome is when you see the large truck being raised in the air and then the dust and other debris being blown out as they dump. When you drive roads to the east of the landfill from both the north and south, the landfill stands out against the Coast Range. Between Highway 20 and E.E. Wilson, the extensive litter along the

road is saddening.

A deeper impact of the expansion would be the continuation and likely increase in the stench from the dump that predictably hits E.E. Wilson. A simple visit to the area or glance at the map reveals the vulnerability of the spot to smells emitted from the dump even when it is operating properly. During the COVID epidemic I would regularly walk there and on a few occasions I cut my trips short because of the smell. I hope that as part of your review process you spend a little time at E.E. Wilson. You will be able to envision how a second mountain of trash would negatively affect your experience, and you may get a whiff of the odors (if not worse).
But the impacts of the proposed expansion go beyond those readily identifiable problems.

The greatest potential problem is the impact on local above-ground and underground water flows, which local geology drive towards the Wildlife Area, Soap Creek and the Luckiamute River. As noted in the Benton County Talks Trash Final Report, "Groundwater flows both east and west from the area of Coffin Butte Landfill and Tampico Ridge, depending on the underlying geology. Steve Taylor et al. note that there is an unnamed tributary between Coffin Butte and Tampico Ridge and that 'associated wetlands drain east-ward toward the E.E. Wilson National Wildlife Refuge.' Rainfall in the area is approximately 42 inches a year, with the majority falling between November and May." (Page 24). The flow of water from the proposed expansion site will therefore flow towards E.E. Wilson.

Dumps produce leachate, a mix of complex substances, some of which include heavy metals and other toxic chemicals. Currently the Coffin Butte industrial site produces at least 32 million gallons of leachate, which have recently been disposed at the Corvallis and Salem sewage treatment facilities.(Annual Environmental Monitoring Report, Coffin Butte Landfill, Benton County, Oregon, Solid Waste Permit # 306, 2024) According to Science Direct, "Due to its high toxicity, landfill leachate is a major threat for aquifer and surface water health status. The exact chemical composition of landfill leachate depends on waste composition, climatic conditions, and the age and degradation rate of the solid waste ". (Bulc, 2006, as found in https://www.sciencedirect.com/topics/earth-and-planetary-sciences/landfill-leachate, 014).

The Coffin Butte facility has systems in place to reduce the leachate problem and to prevent leachate from getting off-site accidentally, but whatever Republic Services does to control of leachate, major inherent risks for leakage remain. Three reasons for the risk deserve particular attention. First, a key way to reduce leachate production is to control the amount of water flowing into the landfill material. This is partially why there is the large fabric coverings on modern landfills, such as you see at Coffin Butte. Water still gets in, however, just as methane leaks out by accident. Therefore, leachate volume exceeds the liquid contained in the material being dumped or that decomposition creates. Western Oregon is not well-suited for a landfill due to our high precipitation. In contrast, Republic Services landfill operation in Roosevelt, Washington is much better located because, "Unlike older landfills which were more often located on existing sites that were convenient rather than environmentally sound, this one was carefully chosen. Since there is very little rainfall, the site doesn't produce much leachate (liquid runoff that could be contaminated by the garbage). It is a rural site with few neighbors except for the cows." (Solid Waste Report (May 27, 2016,)
Regarding the expansion, the greater area covered by the landfill creates more opportunities for water to get in and expand the volume of leachate. While the Roosevelt Landfill receives about 8.5 inches of precipitation per year, Coffin Butte gets more than 40 inches. Greater

precipitation increases that chances of leakage coming from the bottom of the facility as well. The specific risks of problems is enhanced by the potential for mechanical failure, such as tears or holes in the bottom lining. Also, Coffin Butte's required 2024 Environmental Monitoring Report, conducted for Republic Services by Tuppen Consultants, notes that there was a temporary pump malfunction in the leachate system in January 2023. This specific incident did not cause any measurable problem, but demonstrates the inherent difficulty of maintaining such complex systems. (https://cd.bentoncountyor.gov/wp-content/uploads/2024/08/2023-Coffin-Butte-Landfill-Annual-Environmental-Monitoring-Report-Part-1.pdf, p. 3-11)

The US EPA has concluded that all landfills eventually will leak into the environment.(https://pubs.usgs.gov/fs/fs-040-03/pdf/fs-040-03.pdf) Given the multiple decade after-life of leachate production in closed dumps, the expansion of the Coffin Butte landfill could more than double the risks of these leaks seriously affecting the surrounding area. Republic Services or their successor will someday leave, but the landfill will not. Benton County residents, and those who would like to enjoy E.E., Wilson, are likely to face the consequences of the facility's impact on the surrounding area and the waters that flow from it.

I am a retired RN living in SW Corvallis and strongly oppose any expansion of the Coffin Butte Landfill. Personally, I am grateful I don't live closer to it, as I would not want to put up with what its nearer neighbors have to. The proposed expansion is a bad idea no matter how you look at it. It would mean a definite increase in the truck traffic into the site which means more road damage. It would also mean more methane, PFAS and other noxious and toxic gases escaping into the atmosphere as well as more leachate, which ultimately ends up in the Willamette River. This is a disaster waiting to happen. The PFAS within that soup are known to be carcinogenic and therefore a detriment to safe drinking water and to the health of people who recreate in and on the river. This expansion will clearly place an undue burden on public facilities which include our airshed, watershed, and roadways, violating BCC 53.215 (2) “the proposed use does not impose any undue burdens on any public improvements, facilities, utilities or services available to the area.” All these things require me to request that you deny this expansion.

Subject: I oppose the application to expand the landfill - LU-24-027
Date: Wednesday, March 26, 2025 7:44:02 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I write to give my public comment on LU-24-027, the application to expand the landfill in Benton County. I strongly oppose this application and urge the planning commission to deny it.

I am a nearby resident of the existing landfill, and have seen over the last couple of years an increase in truck traffic, an increase in trash blown off trucks littering highway 99 and Camp Adair Rd and continued strong and persistent odors from methane emissions. All this is with the existing landfill space and a tonnage cap on the amount being dumped there. This traffic, increased trash along the roadsides and the air and ground pollutants inherent in landfill operations, in my opinion, significantly disrupt the use and enjoyment of the area surrounding the landfill. The E.E. Wilson natural area, which abuts the existing landfill, is an area which should be full of birds, other animals and plant life, and enjoyed by Benton County and surrounding residents and visitors. But it is often unusable due to methane odors, and the noise and trash off the roadway can't be positive for the animal life there.

Allowing the landfill to expand south of Coffin Butte Road will increase the damage to the area and environment, not mitigate it.

Our Benton County Comprehensive Plan has, among other goals, "to maintain and improve the quality of the air, water and land resources…" This application goes directly against these goals.

I urge the Planning Commission to use the discretion assigned to and expected from them by the establishing laws and code to protect our air, water, and the future of Benton County by rejecting application LU-24-027 entirely. There are no reasonable conditions of use which could be added to this application which adequately protect the people and natural resources of Benton County from the consequences of increasing the landfill size as proposed.

Thank you,

Dan DeKeizer

I do not want to continue being the trash solution for the rest of the state. If we expand the site and fill it with other's trash, the Benton County taxpayers will be paying millions of dollars to clean it up for decades after. Other counties will have to arrive at a solution then anyway. Find a solution now, somewhere other than Benton County. Limiting usage to Benton County only, will extend the life of the site while longer terms solution can be determined.

Submit your written testimony here :
I am submitting Marge Popp's letter to the editor of the Gazette-Times because it's better than anything I could have written and I support her perspective.

From today's (3/25/25) Gazette-Times
This 'limited' expansion is another ruse
AS I SEE IT

MARGE POPP

Proponents of Coffin Butte Landfill expansion claim Republic Services' conditional use permit application requests only a "limited" expansion. This characterization is misleading and obscures the true impact of the project.

Republic Services aims to exploit a loophole in the 2020 franchise agreement to lift the 1.1 million-ton annual cap on trash intake, paving the way for importing unlimited amounts of waste. This move would increase the profitability of its operations at the expense of our community and environment.

The expansion involves significant expenditure, with tens of millions of dollars allocated to moving leachate ponds and millions of pounds of dirt on the south side of Coffin Butte Road. This investment is purportedly for only six additional years of landfill lifespan?

The current landfill footprint already has an estimated 14 to 16 years of capacity remaining at current trash intake levels, making the economic rationale behind this expansion questionable.

Far from being "limited," this project is a large-scale endeavor designed to maximize landfill capacity, potentially leading to the eventual closure of Coffin Butte Road and transforming the valley into a vast waste disposal site for other counties.

An email exchange between Benton County Attorney Vance Croney and Republic Services employee Julie Jackson, dated Oct. 14, 2020 (obtained via a Public Records Request), reveals Republic Services' long-term ambitions for the site.

Vance Croney writes, "Hmm. Republic has a chunk of land south of Coffin Butte that is already zoned Landfill which only requires conditional use approval to begin use as a landfill

cell. It also has many acres of EFUzoned land that certainly can be used for additional cells, but would require rezoning. Are we both talking about the Landfill zoned acreage as creating an additional 15-20 years of life?"

Julie Jackson replies: "Vance, This is just the estimate for the cell area we are asking to rezone. We have many acres that could hold waste and that will likely be a future discussion with the County."

Republic Services has a history of inaccurate reporting and noncompliance with the conditions of use for the Coffin Butte Landfill, and Benton County has not taken appropriate action. The lack of consequences for noncompliance suggests a failure of our local government to protect our community and natural resources.

A 2023 EPA investigation revealed significant methane leakage exceedances, further underscoring Republic Services' lack of transparency and accountability. Recent communications between the EPA and Republic Services indicate further issues with the accuracy of information provided by the company.

The EPA's subpoena requiring written verification concludes with this sternly worded caution for the signatory:

"I am aware that there are significant penalties for submitting false information in response including the possibility of fine and imprisonment."

Interestingly, the landfill manager responsible for signing this document resigned about this time.

It is imperative that we demand honesty and transparency from both our county government and Republic Services. This requires a capable and proactive staff that can think critically and independently as well as engaged participation from the community.

Our county government and commissioners have become overly reliant on Republic Services to act responsibly, prioritizing the status quo over diligent oversight.

Similarly, complacent residents have placed too much trust in elected officials and county staff to act in their best interests.

With Benton County staff being well-compensated, we should expect and demand experienced and dedicated individuals who are committed to serving the community's interests.

It is time for us to recognize the true consequences of this expansion to our community and environment, and we must demand responsible governance and environmental stewardship.

We need to wake up and smell the dump!

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To Benton County Planning Commission Chair, Nick Fowler,

This letter is regarding LU-24-027, the application to expand the Coffin Butte Landfill.
As a full time resident of Corvallis, Benton County, I strongly oppose expansion of the Coffin Butte Landfill.

The environmental and health concerns are well documented and are of grave concern to me.
However, I believe the main reason we cannot move forward with this expansion is that Benton County STILL does not have a Sustainable Materials Mangement Plan or adequate toxic monitoring procedures in place at Coffin Butte
It is untenable that this expansion is being considered when systems are not in place to manage the landfill at its current size and capacity.
We are simply not ready for this expansion.

Sincerely,
Melissa Dawley Cowan
Corvallis Resident

Subject of Testimony: Coffin Butte Landfill Expansion

Full Name: Michael Newman

Email: mnewmanm@gmail.com

Street Address: 1521 NW 23rd St, Corvallis OR 97330

Written Testimony:

Members of the Planning Commission:

I am a Corvallis resident and am concerned about the environmental impact of an expanded Coffin Butte Landfill. I strongly object to the proposed expansion and urge the Planning Commission to deny the application.

The Benton County Code (BCC) 53.215(3) requires that the application for a conditional use permit comply with "any additional criteria which may be required for the specific use by this code." BCC chapter 77 lists various requirements for land use activities in the Landfill Site Zone. Specifically, BCC 77.105(1) allows "municipal waste solid disposal, IN ACCORDANCE WITH A SOLID WASTE DISPOSAL FRANCHISE AND AN APPROVED SITE DEVELOPMENT PLAN" (emphasis added).

The applicant VLI's Coffin Butte Expansion application looks to the future, not the past. In the past, however, the existing Coffin Butte Landfill has emitted methane at explosive concentrations. Only a fraction of the gas has been captured and burned. The lack of monitoring has allowed VLI to continue releasing excessive methane with no adverse consequences to them or their profits. VLI has no reason to comply with future requirements when they have failed to comply with existing requirements. VLI includes their response to the
County Board of Commissioners dated February 23, 2024 (Exhibit 28, appearing in Part 13 of the 10-20-24 Revised Application). VLI takes the position that there is too much confusion about measurements and practices, so let's just continue what we're doing.

This attitude is unacceptable, and the application should be denied based on this history.

Thank you for your consideration in this important matter.

Submit your written testimony here :
REJECT THE LANDFILL EXPANSION LU-24-027 for many reasons, including the following:

(Criterion 1) Landfill expansion will increase its negative effect on the uses and character of adjacent properties. Valley Landfills has demonstrated that it cannot limit the release of toxic and damaging substances into our environment. Excessive METHANE emissions cause serious global warming damage to our broad region. Obnoxious ODORS released from the landfill reach surrounding properties miles from the landfill. LEACHATE contains high levels of toxic substances, including PFAs that are not removed at the waste treatment facility and end up in the Willamette River, affecting many residents and communities downriver. Valley Landfills says they have no enforcement notices for any of their permits, but reported occurrences of excessive levels of dangerous substances tell a different story—even if monitoring agencies choose not to take punitive action. We local individuals must act to preserve neighboring residential, farm, and forest uses and safeguard our local and regional environment—Valley Landfills has a poor record of doing so.
> If the landfill expansion is approved, the negative effects from these harmful water- and air-borne substances will become even more of a problem.

(Criterion 2) Landfill expansion will impose severe burdens on future improvements, facilities, and services provided by Benton County by increasing its FINANCIAL LIABILITY for eventual landfill closure and cleanup. Yearly revenue received by the county from Valley Landfills is being spent on county operations, and money being set aside for landfill closure and cleanup is woefully small compared to actual closure and cleanup expenses of other landfills.
> The county will eventually inherit an even larger and more limiting financial burden if the expansion is approved, negatively affecting Benton County residents and further limiting future options.

(Criterion 3) Landfill expansion is not a sustainable strategy. Long-term planning for Benton County should include maximizing the availability of the Coffin Butte landfill operation for the county and immediate neighboring counties over coming years. The amount of refuse generated within our region is fairly stable. By REMOVING LIMITS for the amount of refuse accepted yearly, we allow Republic Services to fill the landfill faster with refuse from distant regions—and thereby shorten the useful life of the landfill and adversely affect long-term landfill services for the Benton County region. Alternatively, retaining or reducing yearly

limits would improve the service life for our local region. Benton County should not be sacrificing its health and needs for the benefit of Republic Services and distant regions. We shouldn't let Coffin Butte grow unchecked and become the state's garbage pit.
> By NOT approving the landfill expansion, yearly limits can remain, which will provide more time to create a sustainable materials management system for local waste.

You probably already know about these issues. Now is the time to act for the benefit of the residents and environment of Benton County and the surrounding region. REJECT THE LANDFILL EXPANSION.

Full Name: Todd Thompson

Email: twthomp@gmail.com

Street Address: 1350 NW 14th St. Corvallis Oregon 97330

Written Testimony:

3/27/25
To Whom It May Concern,

When I first moved to Corvallis, 25 years ago, I would visit a friend near the dump and we would seldom smell it but today it's always very smelly and on frequent days too much to bear going outside. I've attended several of the landfill advisory groups and the fact that it processes 1/3 of the refuse in Oregon and the leachate can't be processed to remove contaminants I'm certain it's time to lessen the burden by opening another dump on the east side of the cascades where there's less rain which in turn causes less leachate and the opportunity to engineer it so it produces less methane as well. This will also give Oregon DEQ time to work out a better funding scheme now that the federal government and the EPA isn't as strongly supported as it has been in the past. I strongly request Benton county deny Republic Service's proposal to expand the landfill.

Thanks,
Todd Thompson

Date: Thursday, March 27, 2025 6:46:09 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To Benton County Planning Commission Chair, Nick Fowler,

This letter is about LU-24-027, the application to expand the Coffin Butte Landfill.
As a full time resident of Corvallis, Benton County, and an ardent recreational bicyclist I strongly oppose expansion of the Coffin Butte Landfill.

The traffic on Hwy 99 leading to the Coffin Butte Landfill has become untenable. Expansion of the landfill will encourage additional trash truck traffic on a road that is a major route taken by bicyclists heading north from town. This seriously interferes with the quality and character of the region. (Criteria 1) Currently there is a recorded 256,000 trash vehicle trips per year. This translates to 4923 trips per week, or 820 rips per day (with a 6 day workweek at Coffin Butte). No wonder we cyclists detest the riding experience along Hwy 99!
This current, and proposed, amount of trash truck traffic places undue burden on public services that struggles to maintain road conditions that assist with bicyclist safety.
(Criteria 2)

The expansion would transform use of Coffin Butte Road which is a popular route for cyclists to use as an access route to numerous gravel and paved routes in the Soap Creek basin. The quality and character of the region would be significantly and irreparably impacted. (Criteria 1)

Sincerely,
Eileen Tokuda
Member Mid Valley Bicycle Club
Corvallis resident of 33 years

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To Benton County Planning Commission Chair, Nick Fowler,

This letter is about LU-24-027, the application to expand the Coffin Butte Landfill.

As a full time resident of Corvallis, Benton County, I strongly oppose expansion of the Coffin Butte Landfill.

Landfill expansion would increase toxic pollution into the Willamette River further fouling municipal sources of drinking water and creating serious and negative interference with quality of life for us locals. *(Criteria 2)* Million gallons of leachate are pumped out of Coffin Butte and sent to wastewater treatment plants in Corvallis and Salem, where the leachate is passed through treatment plants not equipped to capture the hazardous contents. It is then dumped into the Willamette River, our drinking water source. These hazardous pollutants include mercury, lead, industrial solvents, and "forever chemicals" (PFAs)!

Some of the largest methane plumes in the Pacific Northwest emanate from Coffin Butte. In 2022 and again in 2024, studies done by the EPA found explosive levels of methane leaking from Coffin Butte, after Valley Landfill had reported only negligible leakage. **A landfill expansion will only exacerbate this problem at Coffin Butte**. This would seriously interfere with the health and well-being of adjacent residents and public lands within a four-mile radius, where widespread drift of noxious chemicals is regularly detected by residents and recreationists. *(Criteria 1)*

Coffin Butte already receives one-third of all of Oregon's garbage!
Benton County needs a far more serious Sustainable Materials Management Plan that provides a roadmap toward eventually closing, not expanding, Coffin Butte. The current status-quo approach to waste management violates the shift toward Sustainable Materials Management criteria endorsed by Benton County and the state of Oregon. *(Criteria 3)* **I believe Benton County should be realistically planning the *inevitable* closure of the landfill.**

An expansion of the landfill imposes the burden of increased risk and liability on Benton County, compromising the county's capacity for future public improvements, facilities, utilities, or services available to the area and to the residents of Benton County. *(Criteria 1)* In addition it will seriously interfere with current and future uses on adjacent proerty within the watershed, air-shed, and view-shed. *(Criteria 1)* It will seriously interfere with the character and identity of the area, making Benton County a dump site rather than a destination. *(Criteria 1)* It will violate the spirit and the mandate to shift from Solid Waste Management to Materials Management, a stated goal of Benton County and the State of Oregon. *(Criteria 3)*

Please vote NO on expansion of the Coffin Butte Landfill.

Sincerely,
Eileen Tokuda
Corvallis resident for 33 years

Subject of Testimony: LU-24-027

Full Name: Jean M Weisensee

Email: jweisenese76@gmail.com

Street Address: 1549 SW Birdie Drive Corvallis, 97333

Written Testimony:

I am re-submitting my testimony because when I sent it a few days ago, I did not receive any sort of confirmation that you received it, so I am not sure it went through. Please, can you confirm you got this. Thank you, Jean.

I am a retired RN living in SW Corvallis and strongly oppose any expansion of the Coffin Butte Landfill. Personally, I am grateful I don't live closer to it, as I would not want to put up with what its nearer neighbors have to. The proposed expansion is a bad idea no matter how you look at it. It would mean a definite increase in the truck traffic into the site which means more road damage. It would also mean more methane, PFAS and other noxious and toxic gases escaping into the atmosphere as well as more leachate, which ultimately ends up in the Willamette River. This is a disaster waiting to happen. The PFAS within that soup are known to be carcinogenic and therefore a detriment to safe drinking water and to the health of people who recreate in and on the river. The expansion will clearly place an undue burden on public facilities which include our airshed, watershed, and roadways, violating BCC 53.215 (2). "The proposed use does not impose any undue burden on the public improvements, facilities, and utilities or services available to the area." All these things require me to request that you deny this expansion.

Subject: Public Comment, Coffin Butte proposed expansion. File LU – 24–027
Date: Friday, March 28, 2025 11:09:50 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

My name is Diana Bernstein and I have resided at 10 NW. Edgewood Dr., Corvallis, OR for 23 years.

I am dismayed, disheartened, and disappointed that I even have to write this testimony for file LU – 24–027.

As I understand, the Republic Services CUP application for expansion of the Coffin Butte Landfill should only be approved if Republic Services demonstrates that it doesn't seriously interfere with uses on adjacent property; with a character of the area; or with the purpose of the zone (Benton County code 53215).

There are a number of such serious interferences as evidenced by the following:

1. Many many Benton County residents who live near the landfill have reported in numerous venues that they are clearly affected by the stench from the current Republic landfill. Expansion of the landfill increases these negative effects on them and impacts future residence to our county.

2. A 2023 EPA investigation documented excessive methane leakage. From my reading of the public record, I do not see that the excesses noted in this report have been taken seriously or addressed either by Republic Services or by Benton County. It is incompressible to me that expansion of the landfill would even be considered before the EPA concerns from two years ago have been completely addressed.

I'm asking that our community and Benton County residents not be sold out for the benefit of the rest of the western portion of the state whose landfill is being deposited in our backyard nor for the financial benefit of Republic Services.

Would you like to live near this mountain of trash and stench? If you lived there, would you want to see and smell even more trash or experience even greater environmental impacts on your property and neighborhood?

From: Seth Bernstein
To: Benton Public Comment
Subject: My comment on Republic Services application file number: LU-24-027
Date: Friday, March 28, 2025 11:20:32 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

My name is Seth Bernstein and I have resided at 10 NW. Edgewood Dr., Corvallis, OR for 23 years.

As I understand, the Republic Services CUP application for expansion of the Coffin Butte Landfill should only be approved if Republic Services demonstrates that it doesn't seriously interfere with uses on adjacent property; with a character of the area; or with the purpose of the zone (Benton County code 53215).

It does interfere and therefore the application for expansion of Coffin Butte should be rejected.

1. Many many Benton County residents who live near the landfill have reported in numerous venues that they are clearly affected by the stench from the current Republic landfill. Expansion of the landfill increases these negative effects on them and impacts future residence to our county.

2. A 2023 EPA investigation documented excessive methane leakage. From my reading of the public record, I do not see that the excesses noted in this report have been taken seriously or addressed either by Republic Services or by Benton County. It is incompressible to me that expansion of the landfill would even be considered before the EPA concerns from two years ago have been completely addressed.

3. The proposed expansion of Coffin Butte Landfill will place an undue burden on public facilities violating BCC 53.215 (2). There will be more truck traffic on local roads hauling garbage and more trucks hauling leachate away to locations unspecified.

4. The increased leachate from this new garbage cell is unacceptable. There is not a treatment for this alphabet soup of toxic materials and it is metered into the Willamette River to make it go away. That is in violation of Benton County Comprehensive Plan policy 6.5.5 (Benton County shall strive for the safe storage, collection, reduction, reuse, recovery, and appropriate disposal of hazardous waste materials.)

I'm asking that our community and Benton County residents not be sold out for the benefit of the rest of the western portion of the state whose landfill is being deposited in our backyard nor for the financial benefit of Republic Services.

Subject of Testimony: CUP for coffin butte expansion

Full Name: Lucille L Honig

Email: lucy@honeysw.com

Street Address: 27477 Writsman Creek Dr., Corvallis 97330

Written Testimony:

I live about 2.5 miles south of the landfill. I have lived here over 30 years. The smell and noise from the landfill have increasingly become worse. The environmental impact to this area must also be getting worse. Because we get so much rain, I also worry about the leaking of waste into the ground, both from the landfill and from the increased garbage truck traffic.

The water run off eventually makes its way to the Willamette river which affects drinking water for a growing population. This creates health problems as does the methane gas wafting through the air.

The number of people living around me has more than doubled in the last 10 years and I'm sure the entire NW portion of Benton County has had a large population increase. This means many more people are affected by the detrimental effects of the landfill. An expansion will only create more problems for increasing numbers of people.

Since almost half of the material put into the landfill is recyclable, more effort should be spent recycling rather than expanding the waste area. If I read the chart on your website correctly, some of the curbside recyclables go into the landfill. Certainly this material can be recycled properly rather than expanding the waste area.

I urge you to decline the expansion requested in this Conditional Use Permit. For the sake of many Benton County residents, please vote NO.

Thank you.

Dear County Planning Commission members,

This testimony is regarding LU-24-027, the application to expand Coffin Butte Landfill. I strongly oppose this expansion. When we moved here in 2019, I had no idea that on a routine basis, we'd be greeted with landfill odor at our home, and we live near OSU campus, not even right next to it.

We chose Corvallis when moving from Bay Area because it is a small city in what appears to be a relatively peaceful and also progressive setting and we've been very happy with our choice. Corvallis presents itself as a forward-thinking community that emphasizes protecting the environment and enhancing the wellness of its residents. The landfill odor fits neither the community image nor its stated objectives and policies from the values defined in Benton County's 2040 Thriving Communities Initiative's Core Values (in particular, the high-quality environment goal) to many policies and goals in the Benton County Comprehensive Plan – in fact, just about all of the landfill's practices and community effects are antithetical to what this community purports to represent. Why spend time, money and energy defining goals and making policy to achieve those goals when it appears the county has no real desire to pursue them?

The landfill gas contains many contaminants and I do not want to inhale them, nor do I want my family and friends inhaling them. In fact, friends of mine that lived in Adair Village, happy in their home, sold a couple of years ago knowing the smells and pollution would only get worse. It's sad that's where we've gotten to. It appears that the leadership in Benton County has let all of its residents down by not providing the leadership that holds operators like Republic Services accountable for their negative community impacts. Republic Services has not met conditional use requirements in the past, there is no reason to expect they would operate an expansion in any different way.

Landfill odor affects both my use of my property and the character of the area and thus the current use does not meet the criteria defined in Benton County Code 53.215 (1). This will only worsen with an expansion of Coffin Butte Landfill and this impact on air quality must be considered under Benton County Comprehensive Plan policy 6.1.4. Please use your power of discretion to protect this community and deny the permit for expansion of Coffin Butte Landfill as it would exacerbate existing landfill issues.

Sincerely,

Laurie Rappoport

Subject: Coffin Butte Landfill Expansion
Date: Friday, March 28, 2025 2:35:19 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Members of the Benton County Planning Commission:

As a longtime Corvallis resident and Willamette River kayaker who cares deeply about the health of our air, water, land, and nearby communities, I **strongly oppose the expansion of the Coffin Butte Landfill** and ask that the commissioners reject this application.

Rather than considering an expansion of this controversial landfill, Benton County should stand up to Republic Services' request, knowing that approval will be the beginning of even more counties sending their waste to our already inadequate facility. We should be realistically considering the inevitable closure of the current landfill when it has reached capacity by developing a plan that details a more modern and safer waste-recovery facility, an effective waste-reduction system, and realistic accounting of the cost of clean-up -- which will be a cost that Benton County residents will someday have to pay.

For the proposed expansion, there are many troubling problems, including:

- **Already gross under-reporting of methane pollution by Valley Landfills, Inc.** In 2023, satellite images showed large plumes of methane, a significant greenhouse gas, emanating from Coffin Butte. In 2022 and 2024, the EPA found explosive levels of methane seeping from the landfill, when Valley Landfill reported only negligible leakage. An expansion will surely exacerbate this problem, seriously jeopardizing the health and well-being of nearby residents, recreationists, and surrounding public lands where widespread drift of noxious chemicals is regularly detected. (Criteria 1)

- **Mercury, lead, industrial solvents, "forever chemicals" (PFAs) and other hazardous chemicals leach out of the landfill and end up in the Willamette River.** In 2021, 31 million gallons of leachate were pumped out of the landfill and sent to wastewater treatment plants in Corvallis and Salem, passing through systems that were not equipped to capture PFAs before dumping them into the Willamette River. With no plan to reduce leachates, this expansion would increase toxic pollution into the river. This would put increased burden on public utilities to remove these harmful chemicals and keep them from further fouling municipal sources of drinking water. (Criteria 2)

- **Coffin Butte already receives one third of Oregon's garbage,** much of it in large loads of unsorted solid waste. Little effort is made to encourage or enforce recycling and waste reduction, despite DEQ's mandate to shift from Solid Waste Management to Materials Management. A larger landfill would serve faraway communities that may choose to ignore the importance of this mandate, leaving an increasing burden of liability on Benton County. Even the current status-quo approach to waste management violates the shift toward Sustainable Materials Management criteria endorsed by Benton County and the state of Oregon. Expanding the landfill would make this violation even worse. (Criteria 3)

- **The environmental impact of Coffin Butte extends well beyond the landfill itself.** In addition to releasing methane into the air and leachate into the river, the odor of rotting garbage can often be detected throughout the northern part of Benton county. These odors contain vinyl chloride, ethyl benzene, toluene, benzene -- all toxic chemicals that can endanger public health. Expanding the landfill will most certainly expand the release of these toxins. In addition, the abundant litter that is spilled from more than 256,000 trucks per year on their way to the landfill is an eyesore. This unpleasant sight, as well as the smell and health threats damages the character of the area (Criteria 1)

- **Benton County is burdened by the unlimited long-term risk and environmental liability for the landfill** for future inevitable cleanup as well as future public improvements, facilities, utilities and other services to the area and to the residents of Benton County. (Criteria 2)

- **Expanding the landfill removes any volume restriction imposed by Benton County,** freeing Republic Services to immediately increase intake of waste from the region and beyond.

This Coffin Butte expansion will have long-lasting negative effects on water and air quality as well as to the climate and livability far beyond the local area. We all live downstream, as the saying goes. Your decision on this important issue will affect generations to come. Please understand the gravity in your deliberations and think about more than the immediate revenue that Republic Services brings in. The health of our community seriously depends on you.

Thank you,
Sandy Riverman

Subject of Testimony: Coffin Butte Landfill Expansion

Full Name: Kylie Tully

Email: 0012kbt@gmail.com

Street Address: 4202 NW Scenic Dr, Albany, 97321

Written Testimony:

Hello,

I am a resident of Benton County, having lived in North Albany for my entire life. When I learned about the dumping of leachate from the Coffin Butte landfill into the Willamette from the Corvallis water treatment plant (which is not designed to treat toxic metals, PFAs, or other hazardous liquids), I worry about how much exposure my family has from paddling and wading in the Willamette River. As someone who was diagnosed with Crohn's disease several years ago, I wonder how much damage has already been done. The proposal from Valley Landfill to expand Coffin Butte is a threat to me and other residents in terms of personal safety and ability to enjoy the area as it will further increase the amount of truck traffic and leachate, as well as a threat to the wildlife that live in and along the Willamette River. This proposal is in direct opposition to the Benton County comprehensive plan policy BCC 53.215 (1) that states "The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone" and BCC 53.215 (2) "The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area." Lastly I am concerned about my property value if this landfill expansion is allowed to proceed due to the impact to the character of the area and long-term financial liability to the county and its citizens. I strongly urge you to reject the expansion proposal for Coffin Butte landfill and support the rights of landowners in Benton County.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To whom it may concern,

I have lived in North Albany for over 25 years. Over that time, the activities at Coffin Butte Landfill and Republic Services have steadily degraded my ability to enjoy where I live. The increased truck traffic on local roads such as Independence Highway and Highway 99W have made bicycling a terrifying and dangerous experience. There is also an increase in garbage along the roads. It is routine to see material flying out of the garbage truck on its way to Coffin Butte. Depending on the wind direction, large areas of roadways stink badly and make riding in those areas very unappealing. We should not expand this landfill and, in fact, should reduce the collection area to our county. We do not want to be Portland's dumping ground.

I am also concerned about the leachate from the Coffin Butte landfill. Although much of it goes to the Corvallis water treatment plant, that facility is not designed to treat toxic metals, PFAs, or other hazardous liquids. I worry about my family's exposure from paddling and wading in the Willamette River. I also believe it is detrimental to the wildlife that live in and along the Willamette River and particularly tributaries adjacent to Coffin Butte such as Soap Creek and its tributaries in the E.E. Wilson Wildlife Area.

The proposal from Valley Landfill to expand Coffin Butte is a threat to me, other residents in the area, and wildlife that live in and along the Willamette River. It reduces our personal safety and ability to enjoy the area as it will further increase the amount of truck traffic, leachate, and odor. This proposal is in direct opposition to the Benton County comprehensive plan policy BCC 53.215 (1) that states "The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone" and BCC 53.215 (2) "The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area".

Lastly, I am concerned about my property value if this landfill expansion is allowed to proceed due to the impact to the character of the area and long-term financial liability to the county and its citizens. I strongly urge you to reject the expansion proposal for Coffin Butte landfill and support the rights of landowners in Benton County.

Regards,

Chris Beatty

Subject of Testimony: Opposed to Land Fill expansion

Full Name: Deanne J. Bruner

Email: deannebruner@gmail.com

Street Address: 1805 NW 14th St

Written Testimony:

I work hard to create less waste going to our landfill by recycling and adding household compost to my yard debris for pick up.

But what's the point of my efforts if Benton County and Republic Services are intent on increasing the size of the dump to accommodate the increased amount of garbage we receive from other Cities/Counties?

I am strongly opposed to landfill expansion!

Sincerly,
Deanne J. Bruner

Subject: LU-243-027 Application to approve expansion of Coffin Butte

Sent For: Board of Commissioners <bocinfo@bentoncountyor.gov>

Message Body:
Approving the expansion of Coffin Butte does seriously interfere with the uses and character of the area violating BCC 53.215(1), the County's Core Values "High quality environment and access" and "Equity and health" , and the County's Comprehensive Plan policy 6.5.5. I cannot walk in the EE Wilson Wildlife Area because of the frequent stench from the toxic landfill gases that affect my respiratory system. Leachate of toxic materials from Coffin Butte ends up in the Willamette River where my family kayaks. Will probable increased leachate delivered to the Corvallis water treatment plant increase my Corvallis City bill? Have Republic Services and Valley Landfill made actionable commitments to lessen their pollution of the river?

Approving the expansion of Coffin Butte does seriously impose an undue burden on public services violating BCC 53.215(2) and the Core Values "Vibrant livable communities" "Community resilience, and "Supportive people and resources". I drive on route 99W only to access Peavy Arboretum but never to travel north because of the heavy truck traffic that would inevitably increase with expansion of the landfill. The disturbing sight of the litter from the trucks is, I believe, a disgrace for Benton County.

With our federal government's current administration causing ongoing angst for us all, my hope is that you, our local community agents, will make a decision to give us hope for a future that supports the Core Values of a Thriving Community.

Subject of Testimony: Deny Coffin Butte Landfill

Full Name: Louise Marquering

Email: corvallismatters@aol.com

Street Address: 1640 NW Woodland Drive, Corvallis OR 97330

Written Testimony:

Please deny the application for expansion by Allied Waste.
The waste being deposited at Coffin Butte is from other places in the state. Waste disposal is a state problem. Why should Benton County be responsible for it?
The state should establish a waste disposal program that involves the entire state. Right now just a few counties are taking responsibility for all the state's waste. That is wrong. There needs to be a statewide plan.
There was a time when recycling in Benton County made a difference. What is the importance of our efforts when other places are not as responsible about reduce, reuse, and recycle as Benton County residents are?

March 30, 2025

Dear County Planning Commission members,

I write to you regarding **LU-24-027**, the application to expand the landfill. I **strongly oppose** an expansion.

The landfill already stinks. When I wake up in the morning to that awful smell, I have to shut my windows and change my plans for going outside in my own yard. I am not able to tend my garden or play with my dogs outside. I cannot take them for a walk around the neighborhood or even enjoy an outside chat over a cup of coffee with a neighbor. It is not just gross smelling air, it is an unhealthy, contaminated off-gassing. This unpleasant and concerning air quality is an undesirable quality for homeowners and lowers property values throughout our community.

This absolutely impacts my use of my property as well as the character of our area, so the landfill is already interfering with **Benton County Code 53.215 (1)**. If policies are already not being enforced, how can it be ensured that they will be going forward? **Benton County Comprehensive Plan policy 6.1.4** explicitly states impacts on air shall be evaluated in reviewing land use actions and steps will be taken to minimize degradation. An expansion will only continue to degrade our air quality.

I urge you in all good conscience to deny the permit for expansion of Coffin Butte Landfill in order to protect our community, our health, our home.

I oppose the expansion of Coffin Butte.

Approving the expansion of Coffin Butte does seriously interfere with the uses and character of the area for me in two significant ways. The stench of toxic gases – harmful to my lungs – from the landfill keeps me from enjoying the EE Wilson Wildlife Area. The probability that a large Coffin Butte will inevitably result in ever larger volumes of toxic leachates, delivered from Coffin Butte to the Corvallis waste management plant and then released into the Willamette River, makes me consider never kayaking on the Willamette River again. Have Republic Services and Valley Landfill made actionable commitments to lessen their pollution of this river that serves so many local residents?

Approving the expansion of Coffin Butte does seriously impose an undue burden on public services for me in considering how the Corvallis waste management plant will deal with the inevitable increase in toxic leachates from Coffin Butte – and how much the increased cost of that will turn up on my City waste water monthly bill! I drive on route 99W only to access Peavy Arboretum but never to travel north because of the (to me, frightening) already large volume of trucks coming and going from the landfill. Will that volume increase with an expansion of Coffin Butte?

With our federal government currently causing ongoing angst for us all, my hope is that you, our local community agents, will make a decision benefitting all the people who live here.

Sincerely,
Anne Filson

I oppose the expansion.

My family have spent many happy hours at E.E.Wilson, walking, cycling, picking blackberries. We take visitors there, sometimes on summer evenings, other times on cold, foggy days, to enjoy the area.

The smell from the landfill can be very unpleasant, and the landfill is an eyesore, I really object to it being expanded, which would increase the smell, the traffic to and from it and the larger volume of leachate it would generate. The leachate needs to be stopped, not increased. The generation of it violates BCC 53.215(2)

My husband hunts pheasant in season at E.E.Wilson, and the hunting experience is marred by the mountain of trash looming over the wildlife area, with the sound of heavy machinery detracting from what should be a peaceful morning.

Please do not let this expansion happen.

From: Joyce Loper
To: Benton Public Comment
Subject: Testimony on LU-24-027, the application to expand the landfill
Date: Monday, March 31, 2025 9:03:34 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I am writing to express my strong opposition to the proposed expansion of the Coffin Butte Landfill. My name is Joyce Loper and I live at 3524 NW Tanager Dr. in Corvallis, Oregon. I have been a resident of Benton County since 1987, and have seen the tremendous growth of the landfill over those years. There is no question that the landfill has a huge impact on the character of the area (BCC 53.215), certainly as an eyesore for anyone driving by it on Highway 99, by wear and tear on our roads from the large amount of truck traffic, the litter on the highway and county roads nearby, and the noise of trucks in and enroute to/from the landfill. In this way, the proposed landfill expansion poses a burden on public improvements and facilities (roads) (BCC 53.215).

I have always taken great joy from the beauty and pristine quality of the natural areas of Benton County. In past years, I enjoyed visiting and walking in the EE Wilson Wildlife area, but I go there infrequently now due to the noise of landfill traffic, the smell and the view of the landfill. Expansion of the landfill will further interfere with the environmental health of E E Wilson, the wildlife inhabiting it, and the experience of those of us who love this place. Most alarmingly, the expansion will remove an existing limit on the volume of waste that can be accepted at the landfill. With a larger landfill area and waste volume, the quality of other natural areas nearby, such as MacDonald forest where I walk several times a week, will also be diminished. These natural areas are unique treasures of our community, serving as wildlife habitat and enhancing the quality of life for all county citizens. Expansion of the landfill will certainly interfere with these precious ecosystems and the human experience in them. The landfill smells and exposure to airborne toxins will most certainly increase in these natural areas with the expansion. These examples provide another example of how the expanded landfill will interfere with the character of the area (BCC 53.215).

Already, Corvallis citizens are smelling the landfill in town, exposing ourselves and our environment to a mixture of toxic chemicals. Increasing the volume of waste and the area of the landfill will make this more common and more severe, again interfering with the character of the area (BCC 53.215).

My husband and I like to kayak on the Willamette River, another beautiful and precious feature of our area. I am alarmed by the release of leachates from the landfill into the river. I recognize that the leachates are treated, but the treatment plant designed for treatment of municipal waste does not remove all toxins present in landfill leachates. These chemicals will have a long term effect on the quality of water, riverbed, and river ecosystem, as well as downstream areas that will affect our area for decades, perhaps generations. In addition to these recovered leachates, which go through the municipal treatment plant, other leachates move directly into soil from the landfill and pose a risk to the quality of the aquifer. Increasing the volume of leachates, an obvious result of the landfill expansion, definitely interferes with the character of the area through the potentially serious pollution of ground and service water with toxic chemicals (BCC 53.215).

I vehemently oppose the landfill expansion. The landfill cannot expand without seriously diminishing the character and health of the area. Approving the expansion is counter to the core value stated in Benton County's Thriving Communities Initiative "Recognize & Will Address the Well-Being of our People by Including Health Considerations in all Policies, Practices, Activities, & Operations." Expanding the landfill and the volume of waste coming to Benton County will cause irreparable harm to our environment, health, and quality of life.

Sincerely, Joyce Loper

RE: Application LU-24-027, a Conditional Use Permit Application for Expansion of Coffin Butte Landfill

Dear Planning Commissioners,

I oppose the conditional use permit (CUP) application for expansion of Coffin Butte Landfill LU-24-027.

I am a property owner living on Soap Creek Road and submitted testimony in August 2021, during the last CUP application by Republic Services. At that time, I was most concerned about the closure of our primary evacuation road and the negative impacts on livability of Soap Creek Valley with increased "dump days" with its obvious air pollution, litter and potential for soil and water pollution. As small woodland owners, I could not fathom that forest conservation zoned land should be used for a landfill. It goes completely against the purpose of the zone, as indicated in Benton County Code criteria 53.215. My concerns on these topics and others have grown substantially as I've learned more about landfill issues broadly and specifically the history of Coffin Butte Landfill.

Since that time, I have participated in efforts to quantify and document our concerns. Even after the unanimous denial by the Benton County Planning Commission, Soap Creek Valley neighbors were dismissed as annoying NIMBYS. Only the Mid-Valley Bird Alliance (at that time Corvallis Audubon) and League of Women Voters took a stand against the landfill expansion CUP. Local sustainability groups were unwilling to work with us. Instead, it was three high school sophomores (15-year-olds, too young to even drive) and their science fair invention Oregon PAQMS (Personal Air Quality Monitoring Station) who first stepped up to help us address our concerns about the pollution we know we smelled. They custom designed a PAQMS that monitored for methane and hydrogen sulfide, in addition to their standard nitrogen dioxide, carbon dioxide and particulate matter. Over time, we got support from Beyond Toxics a non-profit from Eugene and researchers at the Pacific Northwest Research

Station and Oregon State University.

I was personally involved in a variety of air quality monitoring around the landfill with the Oregon PAQMS and Beyond Toxics teams and in collecting moss samples around Coffin Butte Landfill and Covanta/ReWorld incinerator. I have also provided support to researchers conducting water and moss analysis in other laboratories. One study published in the journal *Environmental Monitoring and Assessment* in 2024, documents signature heavy metal contaminants found in moss around the Covanta/ReWorld incinerator. The companion study focused on Coffin Butte Landfill has not yet been published. However, since Covanta/ReWorld incinerator ash was trucked to Coffin Butte Landfill for use as "alternate daily cover", it is a known link between these two "point source pollution" locations.

The next generation of Benton County residents, possibly including the students involved in these monitoring efforts, will live with the discretionary decision (criteria 53.210) you take now to approve or deny this CUP application. From the far-reaching implications of methane and other air pollutants to the toxic leachate diluted and released into the Willamette River, together seriously interfere with the character and quality of life in our community and all those who live downstream (criteria 53.215). Landfills are yesterday's technology and better solutions are being advanced in many municipalities. Allowing Republic Services to continue to expand, especially in such an ill-suited geography, delays their adoption of new technologies and practices while the impacts on our health, safety and climate continue to grow.

At four miles distant from the landfill, I am not amongst the most vulnerable. However, the more I have learned about Coffin Butte Landfill's the lack of compliance with past CUP conditions of approval, the more concerned I have become for all of Benton County with the growing long-term liabilities if this landfill is allowed to continue to grow, spew and leach pollutants, including known carcinogens and toxic substances, into our community. I recognize that Benton County gains significant revenues from Coffin Butte Landfill, but it is minor compared to the long-term liabilities that are piling up faster than the garbage at the dump. Your discretionary decision should not come at the expense of today and tomorrow's Benton County residents.

Thank you for giving me the opportunity to express my concerns about the Coffin Butte Landfill expansion application. I urge the Planning Commission to deny Application LU-24-027.

Sincerely,

Faye Yoshihara

Written Testimony:

I'd just like to say that enough is enough! The solution to the landfill "reaching capacity" soon is simple – only accept local trash. Since that is such a small percentage of what is dumped, this change should extend the life of the landfill significantly. The landfill is already too large!

Subject of Testimony: Opposition to any further expansion of the Coffin Butte Landfill

Full Name: Jane Helfen

Email: peonyor2@gmail.com

Street Address: 3169 NW Seneca Place, Corvallis OR 97330

Written Testimony:

I assert that Application LU-24-027 does not conform to Benton County Comprehensive Plan policies 5.1.2, 5.2.1, 5.7.4, and 5.9.4 and directly violates Benton County Code 53.215(1) and 53.215(2).
This expansion will cause further destruction to the environment and wildlife habitat in northern Benton County. The landfill encourages large flocks of predatory species which drive out smaller song birds in the area. A Great Blue Heron rookery located across from the landfill entrance has been abandoned likely due to landfill operations. E.E. Wilson Wildlife Preserve, located across Hwy 99 from the landfill may be affected by the further expansion as well.
The toxic leachates and methane releases are highly deleterious to the local homeowners and to wildlife – this is unacceptable.
I strongly oppose the landfill expansion and beseech you to stop this. Thanks for your attention.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I oppose the conditional use permit (CUP) application for expansion of Coffin Butte Landfill because Republic Services is already violating environmental regulations and they have been very slow to adapt new technologies for waste that are being used all across the country. Expanding the landfill rewards bad behavior and contravenes the Benton County Comprehensive Plan.

Date: Tuesday, April 1, 2025 5:10:49 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Board of Commissioners,

I am writing to formally express my strong opposition to the proposed expansion of the Coffin Butte landfill. As a concerned resident of Corvallis, I believe that this expansion would have significant negative impacts on our community, environment, and the health of future generations.

First and foremost, expanding the landfill would exacerbate the already substantial environmental challenges we face, including the potential for groundwater contamination from toxic leachate, the release of harmful methane gases, and the destruction of local wildlife habitats, as well as increased roadside litter. These long-term environmental risks are unacceptable, especially for those families that rely on well water as their only means to clean water in their homes. Coffin Butte should NOT be the landfill for the majority of the state.

Additionally, the expansion would place an undue burden on the quality of life for nearby residents. The increased truck traffic, noise, and odor associated with landfill operations would make our community less livable and decrease property values in the surrounding area. These impacts are particularly concerning given that the health of our local population, especially vulnerable groups such as children and the elderly, could be adversely affected by exposure to air and water pollution. As someone who used to live in California, I can attest that HWY 99W now looks as trashy as California. The roadside trash is far worse than when my job transferred me here 10 years ago. We should be ashamed for allowing this to happen.

Rather than increasing the capacity of the landfill, I urge local officials and stakeholders to consider alternatives that prioritize sustainability, reduce waste, and protect our environment. Oregon prides itself on being green and yet California's recycling program through Waste Management runs circles around the limited recycling from Republic Services. The recycling program here is abysmal. That said, Republic Services cannot recycle themselves out of the fact Coffin Butte receives a majority of the state's trash.

I respectfully request that you reconsider the landfill expansion proposal and instead explore more sustainable options that align with our community's values and long-term well-being.

Thank you for your attention to this matter. I trust that you will carefully weigh the potential consequences of this decision and prioritize the health and safety of our community.

Regards,

Ann Spediacci

From: Ann Brodie 3145 Seneca Corvallis OR 97330

Re: Republic Services' Conditional Use Permit (CUP) for Coffin Butte Landfill (LU 24-027)

I **oppose** the expansion for many reasons:

1. Data shows that Coffin Butte Landfill pollutes the local area by leaking methane. This is increasing the global climate changes that are destroying our world.

2. Leachates from the waste disposal site leak into nearby wells..

3. Leachates are also polluting our river. Thirty to thirty five million gallons of leachate are trucked per year to the Corvallis and Salem water treatment facilities. These treatment systems are not designed to process the chemicals.

Expansion will increase these three pollutants

4.With the expansion there will be no limit on the amount of garbage that can be put into the landfill which means it will be filled very quickly leading to another request for expansion.

5. When the site is closed, Benton County will be left with a huge financial liability.

I urge you to oppose the expansioin.

Thank you, Ann Brodie

Please accept our attached comments regarding the Coffin Butte Landfill Expansion Application and include them in the packet for the April 29th Planning Commission meeting.

Elisabeth Anderson, President
League of Women Voters, President

LEAGUE OF WOMEN VOTERS® OF CORVALLIS

Date: April 2, 2025
To: Benton County Planning Commission
From: Elisabeth Anderson, President, League of Women Voters of Corvallis
Re: Republic Services' Conditional Use Permit (CUP) for Coffin Butte Landfill

The League of Women Voters of Corvallis urges Benton County to deny Republic Services' Conditional Use Permit that would expand the Coffin Butte Landfill. We are very concerned with the health of the residents of Benton County, which depends on non-toxic air to breathe and unpolluted water to drink. The League has been addressing protection of health and the environment for many years, with established positions concerning air quality and water quality in relation to waste disposal facilities.

The League supports "regulation and reduction of ambient toxic air pollutants" [1:96-7]. Yet the data shows that Coffin Butte Landfill already pollutes the local atmosphere by leaking "explosive amounts of methane," according to an EPA investigation in 2022 and again in 2024 [2,3]. Republic Services and Valley Landfills have not solved the problem. With landfill expansion, methane in our atmosphere will become even worse. Methane contributes to forming ground-level ozone, "exposure to which causes a million premature deaths per year" and "over a 20-year period [methane] is 80 times more potent at warming than carbon dioxide" [4].

The League also believes that "[W]aste disposal facilities should be sited in areas that pose the least amount of risk to the public and to sensitive environmental areas… [with] stringent controls to protect the quality of current and potential drinking-water supplies, including protection of watersheds for surface supplies and of recharge areas for groundwater." [1:99]. We are concerned about the harm to residents due to the landfill's impacts on water quality. Leachates from the waste disposal site leak into nearby wells in an unpredictable fashion because of its base of fractured basalt [5] and because parts of the landfill are unlined or poorly lined [6]. In addition, the 30-35 million gallons of leachate trucked per year to Corvallis and Salem water treatment facilities pollute drinking water for all residents [7]. These treatment systems are not designed to process the chemicals that are washed from hazardous waste down into the soil [8].

The League of Women Voters of Corvallis strongly urges Benton County to oppose the expansion of the landfill for the sake of the health of Benton County residents.

Thank you for your consideration of our testimony.

This is my testimony against the expansion of Coffin Butte landfill for the Benton County Commissioners meeting on April 29.
Landfills need substantive regulation and robust monitoring. They emit mixes of biogas and bioaerosols, they are a breeding ground for disease vectors, and they can discharge leachate into the area ground water supply. Communities that host these facilities can see increased incidences of cancer and respiratory diseases. And then there are the environmental impacts.
I am firmly opposed to this expansion. There are many reasons, which I am sure you are aware of, but my major issue is that the landfill has not been adequately monitored or regulated in the past and is even less likely to be effectively monitored or regulated by the state now that the Trump administration is cutting funding to states and appears uninterested in protecting the health and welfare of our citizens. I hope that my county commissioners do care about our health and welfare and will reject this application.

I live in Benton County.
County government has responsibility for the health and safety of all citizens.
Will the Coffin Butte expansion improve the health and safety of Benton County citizens? Yes or No.
If the expansion is not approved how will that impact Benton County citizens?
What is the lifespan of the current landfill approval if geographic limits are placed on the source of materials? Is this expansion necessary if only Benton County is serviced by the site?
Does the kickback payment to Benton County from Republic Services increase the cost of trash collection to Benton County citizens?
The Coffin Butte landfill expansion should be denied.
Sincerely,
Alice Grucza

Dear Ms. Finger-McDonald

I am a longtime (40+ years) resident of Benton County. Over the years, I've had plenty of opportunity to haul yard waste (mostly) out to Coffin Butte and the old PRC facility. I've also watched our waste management companies morph from the old Corvallis Disposal, to Waste Management Services to Republic Services. Each of these companies has, in my opinion, done a reasonable job of dealing with Benton county garbage, a credit to past and present commissioners. In the past ten+ years, though, the scale of operations has exploded, reflected in the rapid mushrooming of Coffin Butte, and the steady stream of semis which line up from abroad to dump in Benton County.

Now, I'm not conversant with all of the operational and financial drivers behind the proposed expansion of Coffin Butte, but the urgency of an expansion on behalf of Benton County residents, or even our close neighbors in Linn and Polk counties, is far-fetched.

There's clearly a huge financial incentive for Republic Services to expand and rapidly 'harvest' Coffin Butte's capacity, and this serves perhaps the shorter term interests of other state residents. But Benton County cannot sustain this clown fest.The existing contract provides no recourse and no oversight to the county commissioners;

moreover, they're held hostage to a short term revenue stream. Meanwhile, garbage is being dumped in saturated soil, close to wetlands; no wonder methane gas is plentiful when refuse is moldering under the water table…trucked in from across Oregon and SW Washington.

I'm sure that Benton County Commissioners will do their best to improve this situation. And I doubt that they will approve an expansion. But they need help from the State of Oregon to rationalize & regulate waste management towards a sustainable future. No question that we all need to manage our consumer excess (and there should be a component to public policy to push on this rope), but we should be driving Republic Services (& other waste management entities) to upgrade recycling and reuse chains…AND there are better places (drier lands, for example) to bury waste from non-Benton County residents. Enough already!

Best regards,

Boyd Lyon

Subject: Coffin Butte Expansion LU-24-027
Date: Thursday, April 3, 2025 6:50:46 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

We are extremely concerned about Republic Services' attempts to expand Coffin Butte landfill.

This proposal is not in accordance with the Principles as defined in the **2040 Thriving Communities Initiative** which values:

-Vibrant, Livable communities: A landfill makes a mockery of the "vibrant, safe and livable community" which we should "strive to ensure" and is not "forward thinking". We should be implementing more long-term solutions for waste, including reducing the production of single use items and the expanding of recycling and reuse programs.

-High Quality Environment and Access: The landfill will be a toxic, environmental hazard for decades to come. Even if the existing standards, as defined by DEQ and state and local requirements, were enforced, (which is currently not the case) the plans proposed by Republic Services (including no cap on annual tonnage brought in) will only make matters worse. The current and future air, soil and water quality issues will not be resolved without enforcing current standards and limiting future expansion.

-Community Resilience: "Recovering from human caused disasters, threats and changes" is of course critical. But should we not also be preventing, or at least minimizing human caused disasters such as this land fill and Republic Services' disregard for sited emissions violations, methane leaks, PFAS dangers and pollution of the Willamette River?

Violations of BCC 53.215.1- "Interference with uses of adjacent property "

The far-reaching odors from the landfill site and the noise and destruction of Coffin Butte are ruinous of property values and make the EE Wilson Wildlife Area virtually unusable for recreating on many days.

Violations of BCC 23.325.2 – "Imposition of undue burden on public improvements, facilities, utilities or services"

Heavy truck traffic to Coffin Butte drastically increases deterioration of our roads, leaves

roadsides strewn with debris and creates more tailpipe emissions near homes and schools.

Leachate from Coffin Butte is dangerous to ground water and soil, creates even more truck traffic, burdens our water treatment facilities and pollutes a major recreational feature of the area, the Willamette River.

Please DO NOT LET THIS EXPANSION PROCEED!

RE. **LU-24-027**, the application to expand the landfill.

I strongly oppose the land fill expansion because there is a history of reckless management at the current site that includes gaseous emissions that not only noxious but, since they are of an unknown substances, may, in fact, be toxic and hazardous to my health. I live approximately 7 miles from the landfill and there are still days that I cannot tolerate being outside for more than a short time due to the smell. I wonder, too, if on days when the wind is blowing from the North if some of the dust that is landing on my property is not due to the machinery and equipment operating at the landfill. I have serious concerns that the dust may contain toxic materials that put my household in danger. This is a violation of BCC 53.215 (1): *The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the FC zone.*

RE. **LU-24-027**, the application to expand the landfill.

I strongly oppose the land fill expansion over concerns of how expansion will change the amount of heavy truck traffic on roads leading to the landfill from I-5 as well as on 99W. If the expansion is approved it is giving Valley Landfills/Republic Services carte blanche to haul as much material into the landfill as they like. Only a small portion of that material comes from Benton or Linn Counties which means large amounts of rubbish will be hauled to Coffin Butte from as far away as The State of Washington. Since the landfill is not adjacent to I-5 there will inevitably be more traffic passing through Albany and Corvallis as well as coming down 99W from the North. The roads are not adequate to handle increased large truck traffic and there is also the increased possibility that trucks carrying trash and possibly toxic material like ash will be involved in accidents dumping their loads on the roads and watersheds of the valley. This is a violation of BCC 53.215 (2): The proposed use does not impose an undue burden on any public improvements, facilities, utilities or services available to the area*

Subject: Reject Landfill Expansion

Message Body:

April 4, 2025

Nick Fowler, Chair
Benton County Planning Commission

Dear Chairman Fowler,

I am writing to express my concerns and objections to the proposed expansion of Coffin Butte Landfill and to urge the Commission to reject the proposal. I have multiple concerns including:

Expansion of the landfill presents serious dangers to the health and will being of residents and public lands due to the drift of noxious chemicals. Methane drift, the stench of garbage, toxic chemicals in our air and water are documented risks. Pollutants including PFAs, mercury, lead and industrial solvents leach out of the landfill and end up in the Willamette. Our wastewater treatment plants are not equipped to capture these pollutants, especially PFAs which present a serious health threat. Toxic pollution of the Willamette fouls our drinking water and impacts fish and the ecology of the river. Republic Services has not been responsible or truthful, and expanding the landfill serves their interests but not those of Bento County citizens.

Expanding the landfill is short sighted. It is the Commissioners' responsibility to consider the long term impact of their decisions. Expanding the landfill has financial, environmental, and quality of life impact which must be taken seriously.

Respectfully,

Patricia Berman
3414 NW Maxine Circle
Corvallis OR 97330

Subject of Testimony: Coffin Butte Expansion

Full Name: Jana Tindall

Email: jl.tindall@comcast.net

Street Address: 2135 SW Whiteside Dr, Corvallis, 97333

Written Testimony:

I am very concerned about the need to expand this facility. Apparently, it is accepting garbage from several cities outside of Benton and Polk counties. It seems that these counties should be responsible for their own garbage disposal.

Also, I have heard from reliable resources that despite the need to separate glass from our other garbage and recyclable materials, in fact this glass is treated just like other garbage and is not being recycled. It does make one pause to think how much other misinformation it being fed to the public and the decision makers.

I understand there is a financial advantage to the county that makes this a difficult decision for county commissioners. However, there should also be consideration for the quality of the environment and the quality of life for near-by residents.

Thank you for considering my concerns.

Sincerely,
Jana Tindall

I'm in opposition to increasing size of our landfill for many reasons: the landfill and all of its trucks and waste harms wildlife habitat, increases noise pollution and groundwater pollution, adds long term liabilities to our community.

I swim and paddle board on the Willamette River from Eugene down to Salem. This public resource has become a hazard to my health because of the leachate drained from Coffin Butte Landfill. The amount of leachate has continued and is expected to grow with this proposed expansion. It needs to stop immediately. This operational activity violates BCC 53.215 (2) and Benton County Comprehensive Plan policies 5.1.2, 5.2.1, and 5.7.4

My address is 4250 NW PINTAIL PLACE, Corvallis OR 97330

Subject of Testimony: Potential Expansion of Coffin Butte Landfill

Full Name: Kim K Jones

Email: k.jones.corvallis@gmail.com

Street Address: 1440 NW Menlo Drive, Corvallis OR 97330

Written Testimony:

The environmental effects of expanding the landfill have been well documented – impacts of the landfill operation on air, groundwater, surface water, land, wildlife, and roads. I personally spend at least 15 days a year at E.E. Wilson Wildlife area hunting (with dog), fishing, and birdwatching. I also hike multiple times per week in the MacDonald – Dunn Forest. So yes, this is a personal and backyard issue for me.

The expansion should be denied and waste acceptance must be restricted to adjacent counties to allow existing capacity to last as designed for another 30 years. Greater Portland area waste never was and never should be allowed in OUR regional landfill. The facility at Arlington in eastern Oregon was specifically developed to accept the waste (by rail) from the greater Portland metro area. Republic Services decided to increase their profits at their convenience and our expense by shipping Portland area waste to our site.

We, Benton County residents, will pay far more in out of pocket dollars and environmental costs should the landfill either be expanded or allowed to fill to current capacity by Portland area waste in the next few years.

I am submitting Resolution 2024-03 passed by the Central Committee of the Benton County Democrats on November 21, 2024 opposing the expansion of the existing landfill or the addition of a new landfill in Benton County.

"Be it resolved, that the Central Committee of the Benton County Democrats, in order to protect the Earth's climate, endorses the denial of any expansion request of the existing landfill and any new landfill in Benton County."

This resolution is being submitted as testimony in opposition of LU-24-027 by:

Virginia Scott
37016 Soap Creek Rd
Corvallis, OR 97330

BC Dems
Benton County Oregon

BC DEMS RESOLUTION 2024-03

WHEREAS, climate change is the pre-eminent Democratic Party issue; and

WHEREAS, the Democratic Party 2024 platform asserts "there is nothing more important than addressing the climate crisis;" and

WHEREAS, the Democratic Party platform asserts "We have no time to waste in taking action to protect Americans' lives and futures;" and

WHEREAS, methane is the most potent greenhouse gas, trapping 86 times more heat in the atmosphere than carbon dioxide over 20 years; and

WHEREAS, the time to reduce carbon emissions is time-limited to 10-20 years if catastrophic temperature rise is to be prevented; and

WHEREAS, Republic Services' Coffin Butte Landfill in Benton County is a methane super emitter because of numerous irremediable factors, including precipitation, waste intake volume type and quantity, and inadequate regulation, it is in the best interest of Benton County, and the planet, that the landfill reduce methane-producing waste-in-place; and

WHEREAS, by definition expanding the landfill will increase volumes of waste-in-place, not reduce those volumes; and

WHEREAS, Benton County has ceded control over waste intake volumes if the landfill is expanded; and

WHEREAS, any landfill expansion will increase methane output even without a removal of the existing waste intake volume cap; and

WHEREAS, methane-monitoring regulatory agencies such as the EPA are likely to be constrained in their abilities to effectively regulate emissions for the next near-, medium-, and long-term;

NOW, THEREFORE, BE IT RESOLVED, that the Central Committee of the Benton County Democrats, in order to protect the earth's climate, endorses the denial of any expansion request of the existing landfill, and any new landfill in Benton County.

Martha Truninger

1130 NW Overlook Dr

Corvallis, OR 97330

I OPPOSE the expansion of the landfill for the following reasons:

1. Air quality is impaired due to the dust and gases that are admitted from the landfill. I frequently bike in the woods in the Soap Creek valley and on Soap Creek Road. The dust and gases which are admitted from the landfill will only grow with the expansion and cause increased exposure during biking excursions in the area. The increased exposure will keep me from enjoying the area. I am also an avid gardener and worry about dust settling on my vegetables and contaminating my soil. These are all violations of BCC 53.215 (1).
2. Water Quality of the Willamette is impaired for everyone who uses the river. I kayak on the river and know that the expansion of the landfill will increase the amount of leachate that will be dumped into the river. This increase will deter me from spending time on the river because of the increase exposure to the toxins (PFAS and heavy metals). The activity of dumping leachate violates BBC 53.215 (2) and Benton County Comprehensive Plan policies 5.1.2 and 5.2.1.
3. The methane leaks from the landfill that have been found by the EPA inspections are unacceptable. This is cause for concern both from a climate change perspective and from a fire hazard perspective. The methane leaks could spark a fire and result in a major forest fire and a toxic plume of smoke. Expansion of the landfill will only exacerbate methane creation. This reduces the enjoyment of living in the area close to Coffin Butte and violates 60.220 (b)
4. Expanding the landfill will reduce air and water quality which has a very serious possibility of reducing the quality of life in this part of the valley and reducing our property values. This is of great concern to me and violates BCC 53.215 (1).
5. When driving home behind a Republic Services truck, the truck began spewing trash on the road. It was surprising and concerning that the trash would hit our car and other cars, precipitating an accident. I have included a photo to show how egregious this is, causing trash which is dangerous and unsightly.

6. The expansion of the landfill will erode the quality of life for myself and my family. Because of the unchecked pollution that it will cause it violates the Land Conservation and Development Commission's statewide planning goal 6 which states "Air, Water and Land Resources Quality: To maintain and improve the quality of the air, water and land resources of the state". Specifically, the expansion violates the Benton County Comprehensive plan 6.1.2.
7. There are many alternatives to dumping trash. Developing an Integrated Waste Management and Resource Recovery plan is critical to meet this time when the reduction of methane and toxic waste is paramount to protecting the environmental health of all life in Benton County.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I am writing to you today to voice my concerns regarding the expansion of the Coffin Butte Landfill.

I am a Corvallis resident that OPPOSES this expansion !!

Oregon is a big state, with many places where it is dry and uninhabited. Those are the places a dump should be located. The present dump is located very close to a residential neighborhood and in a wetter area, and its negative effects are many. If this dump were to be proposed today, it would never be permitted to be built so close to so many people.

I am concerned about the environmental effects this has on water, air pollution and wildlife in the area. I am an avid user of the Willamette River both for kayaking and enjoying swimming in and around the Corvallis area. This public resource has become a hazard to my health because of the leachate drained from Coffin Butte Landfill. The amount of leachate has continued and is expected to grow with this proposed expansion. It needs to stop immediately.

The operational activity violates BCC53.215(2) and Benton County Comprehensive Plan policies 5.1.2 ,5.2.1 and 5.7.4.

Please do not expand this Landfill!!

Dear BOC:
Please see attached letter regarding the expansion of the landfill.
Sincerely,
Maureen Beezhold

Virus-free.www.avast.com

Testimony about LU-24-027

From Maureen Beezhold

1680 NE Holly Oak Place

Corvallis, OR 97330

To the Benton County Board of Commissioners:

publiccomment@bentoncountyor.gov

I find it incredible to see the BOC is still considering this expansion of the landfill when it should be concerned with having the current landfill meet its environmental obligations.

I was a former chairperson of the Benton County Environmental Advisory Committee, back in the early 2000's, when one of the commissioners of that era tried to "sunset" the committee for actually being involved in environmental issues. I've worked as a sustainability consultant both here in Corvallis, Albany and the coast from 1999-2013.

Have we really made no progress?

Can you honestly and in good faith by pass the county's code regarding the landfill?

- *The proposed use does not seriously interfere with uses on adjacent property, with the character of the area*, or with the purpose of the zone [**Benton County Code 53.215 (1)**]*

Of course, it seriously interferes with the area both adjacent and neighboring. Habitat degradation, odor, dangerous emissions, leachate all threaten both humans and wildlife along with flora.

It appears the landfill is unable to meet EPA requirements for its operation. Why are we not focusing on this instead of enlarging Coffin Butte's capacity to pollute?

AND

- *The proposed use does not impose an undue burden on any public improvements, facilities, utilities or services available to the area* [**Benton County Code 53.215 (2)**]*

Does this expansion put a burden on public improvements? Of course, it does.

Who will pay for the roads destroyed by trucks coming from all over to add to the landfill?

Who will clean the air caused by an ever-bigger landfill?

Who will take care of people when they are ill from the increased emissions and contamination?

When I first moved to Corvallis in 1977, the landfill made headlines in the local paper when Wah Chang dumped radioactive waste there and very nearly killed a worker operating a bulldozer at the dump when it caught fire.

Now the pollution is a little more secretive but still very apparent. I, for one, resent the increased exposure, noise, traffic, habitat destruction that this landfill will create with an expansion.

Let's work on holding Republic Services accountable to meet existing EPA regulations at the very least and begin to actually showcase Benton County as one who actually "does" sustainability.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I am opposed to expansion of this landfill. It has been under scrutiny by the EPA for air quality compliance issues and OSHA for hazards to worker safety. Coffin Butte is a poorly-sited landfill near rural population centers. It's situated in a wet landscape, which increases environmental problems and harms quality of life. Please reject the expansion proposal based on its many harms, in particular air and water pollution, climate impacts, and wildlife impacts. The community deserves better and Oregon deserves better. Thank you.

This is the second letter I have sent in opposition to this project, and I am frankly shocked that the collective opposition to the Coffin Butte Expansion failed the last time. Why are we still considering this? The fact that this should not happen seems like a no-brainer to me. Corvallis and the surrounding area is such a beautiful place to live. Why would we want take trash from other communities and expand the landfill into other valleys, affecting wildlife, air quality, and people's farms and properties? I love to swim and kayak in the Willamette River and if toxins like Leachate are being poured into the river, I will not feel safe enjoying the river in the same way. This is a threat to our safety and to our tourism. The Willamette Valley is far too precious for this.

Please, please, please do not expand the Coffin Butte Landfill and thereby risk exposing residents of Benton County to increased environmental toxins that will no doubt leach into our soil and water! We want to live in a healthy environment.

Thank you,

Julianne Freeman

RE: LU- 24-027

Dear Benton County Planning Commissioners,
I strongly oppose the expansion of the existing landfill; any expansion, for that matter. The “Conditions of Approval" of *prior* landfill expansions, have not ever been enforced, and I have no confidence that they will be should you approve this expansion. Because there is no enforcement, our local environment is at risk for groundwater and watershed poisoning, not to mention the already-intolerable stench that the dump emits. I have hiked in the nearby area, and had to cut the hike short, due to the horrendous smell. How does this support Benton County's 2040 Thriving Communities Initiative, which aims to support "High Quality Environment & Access"?

I agree that this proposed expansion is a violation of both BCC 53.215 (1) and (2), and as a resident, I DO NOT SUPPORT IT.

Respectfully,

Barbara Grant

Street Address: 3825 NW Hayes/ Corvallis, 97330

Written Testimony:

I'm adding my voice to those of people with a history in the area who have seen the shocking conditions at the Coffin Butte landfill. I've lived in Corvallis for over fifty years. In the early years we took trips to Airlie to buy small trees for planting. As our children grew, we spent many Sundays at Wilson Wildlife Refuge, hiking and biking and picking apples for applesauce. We passed the Coffin Butte landfill, I guess, but it was just a local rural feature, a place locals sometimes took things that wouldn't fit in the trash can. "Going to the Landfill" was the name of a catchy song written by a local songwriter, celebrating the rural fun of going to the "dump." There was no smell associated, and the size was unremarkable.
For some reason, it was twenty years before we made a trip on 99W again in around 2015. I was shocked at the sheer size of the trash mountains there, as well as the stench. The road on both sides was littered with trash.
Although BCC 53.6.4.4 states that "Benton County shall provide for the safe, efficient, and sanitary storage, collection, and disposal of solid waste," there was so much more waste than before. I did a little research and discovered that most of the trash is brought in from other large communities throughout the state. The BCC does not indicate (BCC 53.5.8) that Benton County "shall assure safe, accessible, and environmentally sound disposal of solid waste" at the Coffin Butte Regional Sanitary Landfill" for communities outside the Benton County region.

Date: Tuesday, April 8, 2025 10:03:47 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

My name is Heidi Igarashi and I have been a resident of Benton County for the past 19 years.

I oppose expansion of the Coffin Butte waste facility because of negative impact the existing already presents to ground water contamination and poor air quality for residents. Expansion would make both conditions worse.

Although mitigation of leachates are in place, these system become overwhelmed and ineffective during big rain events. The impacts are significant. The amount of leachate is expected to grow with this proposed expansion. This operational activity violates BCC 53.215 (2) and Benton County Comprehensive Plan policies 5.1.2, 5.2.1, and 5.7.4

Please do what's right by your constituents and the environment. Resist the lure of the financial benefits and act to oppose the expansion. Ask yourself how you would explain your actions to the newest generation of Willamette Valley residents.

Respectfully,
Heidi Igarashi

Monmouth, OR 97361

Hello, I am Ken Kupperman, and my wife is Pei Kupperman. We live at 2101 NW Christopher Place in Corvallis and also have a farm approximately 5 miles northwest of the Coffin Butte Landfill on Sauerkraut Road, off of Airlie Road. We could not be more in opposition to any expansion of the landfill, in fact we would like to see the current operation with Republic transition to termination as soon as is possible. Why, because Republic's operation at Coffin Butte is polluting our environment, potentially a major environmental disaster waiting to happen, and it is creating an ever expanding financial burden for its future cleanup. At our farm we have be affected by toxic fumes on an ever increasing number of days and severity, to the extent we can't work outside during those events. We know from the experience of the 2020 wildfires that its related smoke taint caused loss of marketable crops. Ever increasing emissions from the landfill are detrimental, but at what threshold? Zero emissions should be required. One of our major concern is the potential for a catastrophic landfill fire. Each year in US there are over 8,000 landfill fires, it is common; it can happen. If we have a fire at the landfill, will we have a Chernobyl in our back yard, the risk is unimaginable and we must take steps to prevent it. Republic has proven to be non-compliant to safeguards and is a blatant polluter. Toxins being emitted into the air and groundwater from the landfill, waste particulates blown out of the trucks all along the Highway 99 corridor as they leave the landfill and the carbon footprint of waste transportation from far distances, plus their untreated sludge that is being dumped into the Willamette. What kind of stewards are we being for future generations if we let this expansion happen? The current operation is primitive, outdated and profiteering. We need to find a better solution for our waste management that is less polluting, safer with long term viable. Expansion must not be allowed.

Hello!

My name is Penelope and I'm a Willamette Valley resident.

I firmly oppose the expansion of the Coffin Butte Landfill.

We've been choking on more wildfire smoke every summer. Landfills are prone to fires, which can ignite from methane buildup or improperly disposed of lithium batteries, and once started, these fires are difficult to control, releasing harmful pollutants into the air and compromising public health.

The core values in Benton County's 2040 Thriving Communities Initiative include "high quality environment," and I believe this expansion cuts directly against this. The expansion poses a grave threat to our environment, it could contaminate nearby water sources, harm local wildlife, and disrupt our natural ecosystems.

I ride my bike up and down the country roads of the Valley, I love this place and our outdoor recreation. The expansion would degrade the landscape, making it less appealing for activities such as hiking and camping. The unpleasant odors and potential air quality issues from the landfill's operations will diminish the natural beauty that the community values.

The mitigation efforts would be ineffective because they fail to fully address the long-term risks like uncontrolled fires and water contamination, which can persist for decades. The scale and unpredictability of environmental damage would exceed the capacity of mitigation strategies to prevent widespread harm.

Thank you,
Penelope Pascal

Re: Opposition to Landfill

Count me in as one of many Corvallis residents who are opposed to landfill expansion.
You have lots of information at your disposal (no pun intended..). You know there has been disregard, or at least incompetence, on Republic's part regarding regulations. Toxic leakage has been happening for a while. The stink certainly is escalating. In the original agreement, Republic promised a long life to this landfill, and has subsequently broken all promises by accepting trash from far and wide in Oregon.
This landfill expansion will go on long after your terms end. Please don't set us up for a lifetime of stink, toxicity, and diminishing quality of life in this valley that we love. Other communities need to take develop their own methods of managing their refuse.
Thank you,

Judy Riggs

To: The Planning Commissioners of Benton County, Oregon
My opposition to LU-24-027 - Expansion Application for the Coffin Butte Landfill – 04.10.25

Landfills in general are far out-of-date by plan, design, and intent, and are dysfunctional facilities by default that were established historically to receive municipal, industrial, medical, construction and other forms of solid waste, aka, garbage, as generated by society, but without any plan or intent for matters of Public Health, Environmental Health, or Beneficial Reuse.
No matter the name or title of the waste sources or materials, or the intent of the disposer, land-disposal or land-filling of any form of solid waste into any landfill or water environment, damages any or all of air, soil, water and life forms, including Humans, for land-disposed solid waste is nothing other than land-disposal of toxic waste material.
Landfilling or any other form of land disposal of solid or other wastes represents an out-of-date practice based on expedience and convenience, rather than on the critical factors of Human and Environmental Health. Alternatives must be explored.
Benton County's "2040 Thriving Communities Initiative's Core Values, Based on the Principles of Equity & Health," strives to ensure a solid basis for the establishment and sustainability of vibrant, safe and livable Communities that foster a high quality of life, assuring careful attention to the core values of Human and Environment Health, biodiversity and sustainability, free from the risks, threat and harm that may be incited by natural or Human-incited practices or disasters that may threaten or compromise the well-being of communities, as a direct function of policies, practices and operations of communities, including landfills.
In this light, I strongly oppose LU-24-027, the application to expand Coffin Butte

Landfill, as it will surely compromise and otherwise seriously interfere with the character and quality of the landfill area, as well as of adjacent properties and the natural environment.

A landfill that may be extant or planned imposes an undue burden on opportunities for public improvements, facilities, utilities, or services that are available or that may be needed for future growth in the core or adjacent regions. Growth and expansion of communities and their essential infrastructure must be anticipated or forevermore precluded from realization.

Any landfill by any design or engineering principle interferes with immediate and adjacent lands by the very nature of its toxic, odorous and otherwise noxious gasses, disturbances of local wildlife patterns, highly toxic landfill leachates, and importantly, the endless disturbances incited by intense truck traffic that disrupts the local environment with its inherent pollution, noise, and noxious fumes. Such interference would be an added burden, compromising a fully earned and anticipated safe and comfortable lifestyle.

It is for certain that the proposed expansion of the Coffin Butte Landfill would be contradictory to, and in conflict with, the stated and approved criteria in the County's Comprehensive Plan and Development Code. It is clear, based on the toxic content of the waste materials in the current landfill alone, much less when considering the porous nature of the underlying aggregate geology, plus proximity to the critical waters of the adjacent Willamette River and connecting surface and ground waters, that an expansion of the Coffin Butte Landfill will impose an undue burden on life in Benton and surrounding counties.

Attached for your information is a document I prepared that includes two new and highly attenuated peer-reviewed science articles (Pages 1 and 24) with intent to enlighten the Planning Commision members on some of the toxic consequences associated with landfills anywhere on Earth. I edited the content of the attached file with intent to make it easier to explore and digest, hopefully to reveal just some of the toxic consequences associated with any landfill, much less with an aged active landfill that seeks expansion and continuance of the release of its toxic loads to the near and adjacent environments. The included references are attainable by the embedded URL links within the text.

If you may ever seek a full presentation on the core issues of landfill toxics, I will be pleased to make such presentation as may be desired.

Sincerely, Richard C. Honour, PhD
Environmental Scientist: Specialist in Wastewater Treatment Plants and toxic wastes, as well as Landfills, Landfill Leachates, Landfill Gasses and compromised adjacent environments.

Landfill Leachates:

The leachates from nearly all landfills are known to contain toxic chemicals, metals and infectious disease agents, both bacterial and fungal.

Recent studies (Presented as Numbers 1 and 2 below and on Pages 1 and 24) analyzed the hazardous components of landfill leachates, highlighting the toxic chemicals, heavy metals, and pathogenic microorganisms. Below are the brief summaries of thw two scientific articles that discuss the toxic content of nearly any landfill leachate from nearly any municipal landfill:

1. A 2023 comprehensive review published in *Environmental Technology & Innovation* details that landfill leachate contains toxic organic and inorganic pollutants, heavy metals, and ammonia. The study discusses the environmental and health problems caused by these contaminants and evaluates current biological and physiochemical treatment methods. ScienceDirect
2. A 2024 review in *Science of The Total Environment* explored the environmental and health risks associated with landfill leachate contaminants. It emphasized the presence of emerging contaminants, including microplastics and antimicrobial-resistant bacteria, and discussed their ecological impacts and potential interventions. ScienceDirect

These studies provide detailed analyses of the dangerous contents of landfill leachates and their implications for environmental and human health.

1. Hazardous wastes and management strategies of landfill leachates: A comprehensive review

https://www.sciencedirect.com/science/article/pii/S2352186423001463?utm_source=chatgpt.com

Mohamed T. El-Saadony [a] [1], et al. https://doi.org/10.1016/j.eti.2023.103150

Highlights:

- Leachate contains toxic organic/inorganic pollutants, heavy metals and ammonia.
- Landfill leachate (LFL) causes serious environmental, ecological, and health problems.
- Classification, composition and factors affecting of leachate production are described.
- Current treatment of biological and physiochemical treatments for LFLs are discussed.
- Future prospects of the methods/techniques for treating LFL are proposed.

Abstract

Leachate usually includes toxic organic and inorganic pollutants, heavy metals, ammonia nitrogen compounds, and other dissolved and suspended contaminants. Careful management of landfill leachate (LFL) is essential to reduce leachate quantity and prevent the unfortunate fate of leachate contamination. In contrast to the management of solid waste incinerators, LFL disposal has serious ecological and health impacts in most countries, mainly associated with groundwater, soil, and air pollution. This could be attributed to the absence of cost-effective treatment technology or ideal disposal guidelines by the cities/municipalities. Therefore, ecological evaluation and sustainable managing of LFL collection and disposal treatment are highly recommended. This review describes the classification and composition of leachates, the factors affecting leachate production, and the conventional (current) treatment options for LFLs. Procedures of aerobic and anaerobic biological treatment employing microbial operated separately or in combination along with physiochemical management processes are also

discussed. This review examines the prospects of LFL treatment methods/techniques, how to economize LFL treatment methods (e.g., waste pretreatment) using readiness level technology, and recycling sorting technology.

1. Introduction

Generation and management of waste have existed throughout human existence (Nanda and Berruti, 2021, Sun et al., 2022). The pollution of leachate results from the yearly rise in municipal solid waste (MSW) production, reaching 2.2 billion tons (Chen et al., 2020). Since the emergence of humans, primitive trash has been discarded in metropolitan places, contributing to urban pollution and development of fatal illnesses (Martin, 2008). To improve living conditions, municipal and town authorities have begun rubbish gathering and disposal in landfills or marine habitats. Landfill leachate (LFL) discharge is both an environmental problem and a threat to human health (Fig. 1).

At the turn of the 20th century, waste treatment procedures evolved, and garbage collection and disposal became commonplace in metropolitan areas (Herbert, 2007). The first landfills were intentionally created pits or trenches where trash was deposited and then covered with dirt (Rajoo et al., 2020). This method degraded the earth and neighboring soil through LFL. In the 21st century, the scientific and technological community began recognizing the hazards and negative environmental effects of landfilling (Quan et al., 2020, Sun et al., 2022). The trash output has shifted significantly from biodegradable resources to nonbiodegradable, artificial plastic, and hazardous garbage, each of which adds to environmental damage (Ward, 2011, Kumar et al., 2023). Multiple industrialized nations have enacted legislation to control landfills to avoid and reduce environmental degradation (Herbert, 2007, Abunama et al., 2021). When possible, reduce, reuse, and recycle waste to avoid disposing it in landfills (McCarthy et al., 2010, Can-Güven et al., 2021, Ishii et al., 2022).

Fig. 1. Landfill leachate pollution constitutes environmental pollution and human health hazard.

There was a lack of understanding of the activities taking place in landfills, such as the generation of gases from LFL and the potential environmental damage; waste management at landfills continues to be a source of concern around the world. In the European Union (EU), the waste industry is blowing significant transformations because of the adoption of waste treatment laws and regulations. Regardless of these developments, trash output in the EU is on the rise, with an average of 2.5 billion tonnes generated yearly; of this, 36% was recycled, while the majority was landfilled or burned (Sáez and Osmani, 2019). Unfortunately, only 600 million tonnes of this material could be recycled, indicating a fundamental flaw in current waste disposal processes. Fundamentally, a shift is necessary for understanding waste as a problem that must be eliminated. Landfilling has its environmental challenges and concerns. Landfills emit off-gases such as methane (CH_4) and hydrogen sulfide, negatively affecting air quality. By enhancing waste management procedures, greenhouse gas emissions may be reduced, reducing environmental and health issues and landscape damage (Giersc et al., 2018).

The most significant problem associated with landfilling trash is the creation of LFL, a kind of hazardous wastewater (WW) that can cause groundwater pollution, which can be treated by aerobic granular sludge (AGS) technology. This method collects mature AGS from a running AGS bioreactor, stores it in different forms and environments (depending on the techniques used), and reactivates the stored AGS when needed (McCarthy et al., 2010, Yan et al., 2021, Tanavarotai et al., 2022). Also, MSW LFL is a highly concentrated organic WW of complex composition. It is a major source of pollution that threatens groundwater and surface water quality. Leachates must undergo rigorous treatment before being discharged into the environment (Chelliapan et al., 2020).

The available technologies developed for treating LFL can be classified as physical, chemical, or biological. The current major leachate method combines aerobic, chemical, and physical treatments (Tanavarotai et al., 2022). Biological treatments of LFL using aerobic ponds have some drawbacks, such as low removal of organic matter (OM) and some toxic pollutants. On the other hand, anaerobic treatment of WW has gained wide attention among researchers and sanitary engineers, mainly due to its economic merits over conventional aerobic methods (Chelliapan et al., 2020).

This review explores the nature and categorization of leachates, the variables influencing leachate generation, and the conventional and contemporary treatment methods for LFLs. Future landfilling paradigm, and the economic pointview on how to optimize LFL treatment methods (trash pretreatment, readiness level technology, and recycling sorting technology) are discussed. This review also shed lights on the possible applications of processed LFL, including green energy and natural gas.

2. LFL

LFL is a chemical mix that presents a grave threat to health and the ecosystem (Bove et al., 2015). LFL is created from liquids in the trash and percolates through landfills, collecting suspended and soluble elements originating from or byproducts of garbage degradation (McCarthy et al., 2010, Hussein et al., 2019). Infiltration of groundwater, precipitation, and rain through uncapped landfills significantly influences LFL production (Couto et al., 2017).

The Landfill Directive presents the principles and rules for controlling LFL inclusion at landfill places (Giersc et al., 2018). Specifically, the directive stipulates that a leachate treatment system must be constructed before the onset of young LFL. A leachate treatment procedure should guarantee that landfill-generated LFL is confined inside the site. Additionally, McCarthy et al. (2010) stated that the system should have established measures to decrease seepage from the

landfill via the base or side in order to reduce the interaction between the leachate and the landfill linear to prevent an increase in the liquid levels to the point where the leachate overflows and causes uncontrolled release into the surrounding environment. Therefore, information regarding the likelihood of leachate production is required for both the concept of the landfill and the following leachate treatment methods (McCarthy et al., 2010).

All MSW landfills should be designed with extensive leachate harvesting and disposal processes. Crucially, leachate harvesting should be performed throughout the landfill's lifetime, regardless of the liquid treatment approach employed. This has to contain (a) a drainage layer composed of ecological granular or artificial drainage substance, (b) perforated leachate collecting pipes, and (c) LFL harvesting sumps or header pipes from which leachate may be eliminated (Timoney, 2009, McCarthy et al., 2010). As waste decomposition continues inside this natural internal bioreactor, the LFL generated by a MSW dump varies significantly over time (Renou et al., 2008). Therefore, the categorization of LFL is crucial for determining the possible impacts of an unintentional release on the surrounding environment (EUR-Lex, 2000, Renou et al., 2008). Because of the ever-changing fact of waste degradation and leachate structures, landfill operators view LFL generation and management as a serious challenge (Wang, 2013, de Almeida et al., 2020, Ribera-Pi et al., 2021).

2.1. Classification of leachates

The categorization of LFL mostly relies on the age of the landfill. Certain variables, such as waste composition, rainfall penetration, and temperature, might influence LFL characteristics (Kjeldsen et al., 2002, Renou et al., 2008). Recent/young, middle/moderate, and mature/old LFLs are categorized according to the landfill age in which they were created (Osra et al., 2021).

2.1.1. Recent LFL

Recent/young "fresh" LFL (5 years old) is produced at landfills that have recently begun accepting garbage and where waste decomposes rapidly. During the breakdown of OM, the pH is near to neutral (6.5), and O_2 contained in the waste is eaten by native microorganisms.

The biochemical oxygen demand (BOD) and the chemical oxygen demand (COD) characterizes current LFL values greater than 0.3 (Wu and Li, 2021, Gutiérrez-Mosquera et al., 2022).

2.1.2. Middle LFL

A middle/moderate landfill (10 years) often includes substantial amounts of biodegradable OM, which promotes rapid anaerobic fermentation and the formation of vast quantities of volatile fatty acids (VFAs) (Idowu et al., 2019). Renou et al. (2008) and Kamaruddin et al. (2015) stated that middle LFL was characterized by elevated levels of COD, total organic carbon (TOC), and BOD where the BOD/COD rate was 0.7 (Abdul Halim et al., 2010) and pH was 7.5 (Lee and Nikraz, 2014).

2.1.3. Mature LFL

As the landfill ages (>10 years), the methanogenic phase of trash decomposition begins. Within this stage, methanogenic archaea convert VFAs into biogas composed of 50%–60% CH_4, 30%–40% CO_2, and 1% H2S (Buchroithner, 2015). Torretta et al. (2017) stated that mature LFLs have considerable pH > 7.5 and NH_3 N concentrations of >0.4 g L^{-1} and decreased COD (4 g L^{-1} O2). Because of the presence of humic acid (HA), fulvic acid (FA), and nonbiodegradable, recalcitrant OM, a BOD/COD ratio between 0.05 and 0.20 is also indicative of this stage (Abdul Halim et al., 2010). Table 1 summarizes other leachate management performances on the base of landfill age.

2.2. Composition of leachates

Leachate has varied physicochemical characteristics, and trash has a highly variable composition (Gutiérrez-Mosquera et al., 2022). In addition, climatic variables influence the accumulation

degree of COD indices, where excess water helps attract OM and inorganic elements to the leachate, making their decomposition harder. At a given moment, the structure of a particular LFL is an excellent predictor of the biological processes' stage (Kjeldsen et al., 2002). LFL parameters include dissolved organic matter, inorganic macro material, heavy metals (HMs), and xenobiotic organic chemicals (XOCs). Other chemicals detectable in LFL include borate (BO_3^{3-}), barium (Ba), arsenate (AsO_4^{3-}), mercury (Hg), lithium (Li), and cobalt (Co), albeit their minute quantities (Kjeldsen et al., 2002, Kamaruddin et al., 2015).

2.2.1. Dissolved OM

COD, BOD, and TOC are the quantifying dissolved OM metrics. These criteria encompass a variety of OM, including VFAs, FAs, and HA-like compounds. Dissolved OM influences leachate structure concerning other constituents via the complicated characteristics of its large molecular weight (MW) components. Kjeldsen et al. (2002) found that a low BOD/COD rate denotes leachates with small VFA and comparatively elevated levels of HA and FA–like substances. However, this depends on the landfill's stability and phase/age (Kamaruddin et al., 2015).

2.2.2. Inorganic macro compounds

This category includes sodium (Na^+), ammonium ($NH4^+$), calcium (Ca^{+2}), potassium (K^+), iron (Fe^{+2}), manganese (Mn^{+2}), magnesium (Mg^{+2}), sulfate ($SO4^{-2}$), and hydrogen carbonate ($HCO3^-$) chloride (Cl^-) compounds. Like dissolved OM, the existence of inorganic macro molecules relies on the waste phase. Ca^{+2}, Fe^{+2}, Mn^{+2}, and Mg^{+2} concentrations are low in the methanogenic stage of LFL because of the increased pH and low dissolved organic material. At this point, $SO4^{-2}$ content is also low due to the microbial conversion of $SO4^{-2}$ to sulfide by communities in sequence batch reactors (SBR) (Kjeldsen et al., 2002, Kamaruddin et al., 2015).

2.2.3. Ammonia (NH_3)

High amounts of NH_3 and organic N, collectively called total Kjeldahl N (TKN), are present in LFL. High amounts of NH_3 are typical of LFL, with values significantly higher than the national discharge regulations of 4 mg L^{-1} for WW to water bodies (McCarthy et al., 2010). This poisonous gas is prevalent throughout the early phases of waste decomposition and rises during the transition and acid production phases. However, NH_3 diminishes gradually over the metrogenic phases (Schiopu and Gavrilescu, 2010, Last et al., 2015). Kjeldsen et al. (2002) showed that LFL NH_3 typically varies among 500 and 2000 mg L^{-1}.

In general, NH_3 levels are greater than 600 mg L^{-1} may negatively impact microbial growth in the aerobic environments, lowering waste treatment's efficacy (Li et al., 1999). $NO2^-$ and $NO3^-$ levels are low in mature landfills due to the constant anaerobic conditions. Nonetheless, $NO3^-$ concentrations are elevated during the methanogenesis phases of waste breakdown (Othman et al., 2010, Tsui et al., 2020). High $NO3^-$ levels harm aquatic ecosystems and human health (Xu et al., 2010a, Tsakiris, 2015). Similar to NH_3, $NO3^-$ is frequently observed in high quantities in MSW LFL (100 mg L^{-1}) and is strongly influenced by oxidizing circumstances, which can lead to volatilization and subsequent nitrification processes. Volatilization through processes generates free NH_3, which is changed to $NO3^-$ through nitrification (Hassan and Ramadan, 2005). Under lowering anaerobic circumstances, however, this causes the conversion of $NO3^-$ to NH_3 or N2 by dissimilatory $NO3^-$ reduction, hence decreasing $NO3^-$ levels and raising NH_3 levels (Hassan and Ramadan, 2005).

2.2.4. XOCs

XOCs are produced from artificial and ordinary chemicals, and are often present in trace amounts in LFL. Soluble XOCs can cause damage to soil and vegetation if they become

contaminated (Kjeldsen et al., 2002). The most abundant substances that reach landfills are home items, such as aerosol cleaners and diapers (Galvão et al., 2020, Kwarciak-Kozłowska and Fijałkowski, 2021). The availability of hazardous material in landfills also contributes to the occurrence of XOCs in LFL. Even though this technique is no longer permitted, its lasting effects continue to be noticed. Other XOCs include hydrocarbons (toluene, benzene, and xylenes), halogenated hydrocarbons (chlorobenzene and tetrachloroethylene), phenols (4-chlorophenol and cresols) and aromatic pesticides such as hexazinone and bentazon (Kwarciak-Kozłowska and Fijałkowski, 2021).

2.2.5. HMs

The bioaccumulation of HMs can produce toxicity in living creatures and threaten human and animal health if the soil and surface become contaminated (Sulaimon et al., 2014, Vaverková et al., 2018). LFL typically contains HMs, such as copper (Cu+2), zinc (Zn+2), cadmium (Cd+2), lead (Pb+2), chromium (Cr+3), and nickel (Ni+2) (Baun and Christensen, 2004, Christensen, 2010, Abd El-Mageed et al., 2020). Generally, their levels stay low; the rise in pH, accompanied by the methanogenic phases of waste decomposition, enhances the soil's sorption capacity, leaving the metals immobile (Christensen et al., 2001). Multiple investigations have shown that the presence of HMs in LFL is of little relevance. However, their disposal or management is required when the HM concentration of LFL exceeds national discharge regulations (Christensen et al., 2001).

2.2.6. Microbiology of landfills

Due to the availability of abundant OM and diverse substrates in these places, landfills are dubbed "microbial pools" (Yang et al., 2022). Generally, changes in physicochemical characteristics describe landfill decomposition, with low or no connection to the altering microbial environment (Song et al., 2015a). Research has shown that a landfill's ecological circumstances and substrate specificity considerably impact its microbiota structure (Song et al., 2015b). Microorganisms transform organic waste into low MW molecules, primarily CO_2, H2O, and HA–like chemicals, during the aerobic phase. The consequent high energy yields facilitate rapid microbial development (Antony et al., 2020, Mahtab et al., 2021). NH_3 is transformed to NO2− by NH3− oxidizing bacteria during nitrification, which is then lowered to NO3− by NO2− oxidizing microorganisms. Under anoxic circumstances, denitrifying bacteria use N2O to convert nitrogen (N) to nitrogen gas (N2). Without these aerobic and anaerobic processes, N cannot be successfully eliminated from landfills (Sang et al., 2012). Acidogens hydrolyze complex organic wastes such as carbohydrates, proteins, and fats into monosaccharides, amino acids, and fatty acids during the anaerobic phase. These bacteria convert these outputs into hydrogen, carbon dioxide (CO_2), and organic acids like lactate and acetate. These chemicals might be converted to CH_4 by acetoclastic and hydrogenotrophic methanogenesis under anaerobic conditions (Sang et al., 2012).

Numerous bacteria have been extracted from LFL to date. Wang et al. (2017) investigated the microbial composition of a municipal solid waste dump in Yangzhou City, East China, and discovered that Proteobacteria, Firmicutes, and Bacteroidetes were the major taxa. Similarly, Hale Boothe et al. (2001) discovered Gram-positive species (*Staphylococcus lentue*, *Staphylococcus delphini, Bacillus megatherium,* and *Bacillus pasteurii*) and Gram-negative species, the majority of which below the genera *Yersinia*, *Acinetobacter*, *Enterobacter*, and *Pseudomonas*. In addition, numerous Gram-positive bacteria, such as *Lysinibacillus, Bacillus, Brevibacillus, Staphylococcus,* and *Clostridium* spp., were recovered from LFL (Krishnamurthi and Chakrabarti, 2013).

3. Factors affecting leachate composition

The formation and composition of leachate are impacted by additional variables, such as meteorological conditions and waste makeup, which are briefly mentioned below. Other elements that impact leachate formation include the absence or the existence of hydrogen and oxygen gases, the retention period of MSW retention in the landfill, the covering material for the final LFL, and leachate recycling (Borglin et al., 2004, Hossain and Haque, 2009).

3.1. Weather differences

Alterations in room temperature and landfill equilibrium significantly impact the LFL features. For instance, landfills in hot, dry climates tend to accumulate tiny quantities of LFL, while those in tropical areas produce greater amounts of diluted LFL (Kamaruddin et al., 2015, Scandelai et al., 2020, Yuan et al., 2021). Tränkler et al. (2005) noted that landfill biodegradability is sluggish in regions with dry climates but significantly enhanced during wet seasons (Gautam and Kumar, 2021). More than 60% of LFL-generated precipitation can permeate landfill sites; this cannot be avoided while a landfill cell actively accepts garbage. The amount of moisture-rich OM wastes and liquids put into a landfill was also shown to boost LFL production (González et al., 2011, Cheng et al., 2020, Can-Güven et al., 2021). Due to increased microbial activity, biological decomposition happens more rapidly in warmer climes, accelerating the landfill's shift to acid production and methanogenic stages (Khattabi et al., 2002).

3.2. Waste structure

The structure of MSW and its consequent decay considerably influences the quantity and quality of LFL (Somani et al., 2019). Various garbage breakdown products combine with the moisture in the landfill during this process to create LFL. Because of the quantity of general rubbish and the organic and inorganic chemicals created during waste degradation, waste with a high organic and moisture inclusion, in particular, produces high-strength leachates (Barghash et al., 2021, Adaryani and Keen, 2022). However, researchers have reported that waste limitation tools, such as separation of the OM component of MSW, waste preprocessing, and reprocessing, can substantially affect the quality of LFL (Kamaruddin et al., 2017). Therefore, to reduce the production of high-strength LFL near the base of garbage structures, it is recommended that landfill operators examine the acceptance regulations at each site (Christensen, 2010). Scandelai et al. (2021) evaluated the intensification of super critical water oxidation (SCWO) process through ion-exchange with zeolite (SCWO/zeolite) for potential reuse of treated leachates depending on the municipal WW reuse rules. This technology was applied to raw leachate (RL) and the traditional techniques of pretreated leachate (PL) at the studied landfill. The continuous SCWO reactor operated at a temperature of 600 °C, a pressure of 23 MPa, and spatial time (τ) from 29–52 s without adding oxidants. A commercial zeolite (clinoptilolite) in a fixed-bed glass column was utilized for ion exchange. In addition, Scandelai et al. (2018) assessed LFL degradation using the innovative combination of SCWO with ozonation (O3/SCWO) and oxidation (SCWO/O_3). Ozonation occurred at different reaction times (30–120 min). Combining ozonation (30 min) with SCWO (O3-30′/SCWO) was considered the most efficient technique for LFL degradation, when compared with other treatments (Scandelai et al., 2018).

4. Impact of improper LFL management on the environment and public health

Determining and assessing the risks posed by LFL are essential to relieve the direct effects on the environment. It is important to stress the issue of proper landfill management to decrease leachate and landfill gas (LFG) emission. Although landfills are environmentally straining, precautions can be taken to alleviate negative impacts. According to the United States

Environmental Protection Agency (USEPA, 2016), the waste management company can close the landfill when ends and no longer can collect any waste. This is followed by a postclosure process of which the company is responsible for managing the landfill for another 30 years, taking into consideration that management proceeds because leachate and gases do not stop being produced. In addition, companies should have alternative uses for this land (USEPA, 2016). For example, companies can be engaged in the renewable energy industry by developing solar farms to help generate revenue. Enforcement of federal regulation of landfills can also lessen the effects of the landfill on air, soil and water (USEPA, 2016).

Well-designed and properly operated landfills ensure that the environment is contaminant-free; whereas proper construction and maintenance ensure that landfills are incorporated with environmental monitoring systems to track any gas release and groundwater contamination (USEPA, 2018). The United States Environmental Protection Agency Community-Focused Exposure and Risk Screening Tool (USEPA C-FERST, 2017) detailed proper designing/operating sustainable landfill management, and recommended that communities should be more involved in sharing this sustainable future by decreasing waste generation and alleviating the negative effects of landfills (USEPA C-FERST, 2017).

5. Regulations and considerations for hazardous waste management

Hazardous waste was first defined in the USA in the 1980s as unwanted materials that threaten humans and environment when poorly managed (Marinković et al., 2008). Rapid industrialization gives rise to hazardous waste generation associated with increased consumption of products and services (Duan et al., 2008). This requires great efforts to collect, transport, recycle, treat and dispose such waste. Thus, it is vital to take necessary safeguards and investigate novel methods for effective management (Marinković et al., 2008).

In Turkey, the expansion of its medical care infrastructure and the transformation of its industries into a developing country led to risks and challenges in hazardous waste management (HWM). As such, Turkey's environmental law in 1983, Basel convention on control of transboundary movement of waste in 1994 and HWM regulation in 1995 were introduced (Salihoglu, 2010). Although waste prevention and minimization have never been a priority at the national level for a long period of time, Turkey adopted regulatory practices in the European Waste Catalogue (2000/532). The transformation approach of the national waste management is based on prevention at source, reduction, recycling, incineration/energy production, and disposal (Salihoglu, 2010).

Safe transportation of hazardous waste from hazardous waste generators (HWG) to disposal sites, solving the costly and time-consuming hazardous waste transportation (HWT) problem and the selection of the hazardous waste carrier (HWC) are important subjects for decision makers (Zhao et al., 2016). Büyüközkan and Gocer (2017) indicated that on-site treatment can be done only for small quantities of hazardous waste compared to off-site treatment facilities. Large HWGs assign licensed HWCs to dispose hazardous wastes off-site. This requires special transportation, treatment facilities or designated hazardous waste storage and disposal sites (Orford, 2007).

Safe HWT, governed by strict HWT regulations, is vital to prevent potential contamination by hazardous waste and reduce threats to public health and environment (Orford, 2007). Governmental organizations inquire HWCs to have HWT licenses, to accept HWT with minimal spillage and risks. Therefore, HWG can assess different licensed HWC options and select the least cost one. This suggests that the selected HWC must operate legally to ensure quality, responsibility, safety and service (Ho, 2011).

Nowadays, multiple-criteria decision-making (MCDM) has become a “hot” topic, including different objectives or criteria and finding solutions to complicated problems (Lertprapai, 2013). MCDM methodologies such as analytic hierarchy process (AHP), the technique for order of preference by similarity to ideal solution (TOPSIS), and Višekriterijumsko kompromisno rangiranje (VIKOR), have been successfully applied to solve several types of decision-making problems (Lertprapai, 2013). However, most of these “standard MCDM techniques” are run with crisp numbers, and prove inadequate. The criteria for selecting the best alternative often rely on uncertain/fuzzy information. Therefore, these MCDM methods are used with fuzzy numbers (Lertprapai, 2013).

6. LFL different treatment technologies

LFL may differ depending on the content and age of landfill contents, the degradation procedure, and climate and hydrological conditions. Many treatments, including biological procedures (bioreactors, bioremediation, and phytoremediation), physicochemical approaches (advanced oxidation processes, adsorption, coagulation/flocculation, and membrane filtration (MF)), and others were used to treat LFL (Costa et al., 2019).

Membrane bioreactors and integrated biological techniques, including anaerobic NH4+ oxidation and nitrification/denitrification processes, have demonstrated high performance in NH_3 and N elimination, with >90% removal effectiveness (Costa et al., 2019). Moreover, improved elimination efficiency for suspended solids and turbidity has been achieved by coagulation/flocculation techniques. Combining different treatment techniques can improve removal effectiveness of metals by 40–100%. In addition, the combined techniques used for LFL treatment have been reported with good performance when they are linked with high COD and concentrations of NH_3 and low biodegradability (Costa et al., 2019). However, more research to improve treatment methods for maximum removal efficiency must be prioritized (Mojiri et al., 2021).

Various approaches are now employed to control LFL (Fig. 2), most of which have been modified from WW therapy procedures (Raghab et al., 2013). In general, a mixture of physiochemical and biological strategies is necessary to successfully manage LFL (Fig. 2), as it might be challenging to get satisfactory results with a single technique alone (Kargi and Pamukoglu, 2004). In addition, LFL produced by various facilities frequently differs substantially in structure and necessitates various forms of treatment. For instance, Gao et al. (2015) and Torretta et al. (2017) found that biological procedures can efficiently control LFL with an elevated organic inclusion, but LFL with a little organic inclusion is better fitting for physicochemical management (Gao et al., 2015, Torretta et al., 2017).

Conventional LFL treatments, including biological methods, physicochemical approaches or their combination, vary in their performance depending on the landfill age. In contrast, emerging treatments, such as C-based materials, are dependent on replacing activated C and other adsorbent materials using C-based materials (e.g., biochar or hydrochar). Photocatalytic, electrooxidation, and Fenton-like processes are an influential group of technologies that have been broadly tested for the degradation of different pollutants present in leachate (Bandala et al., 2021).

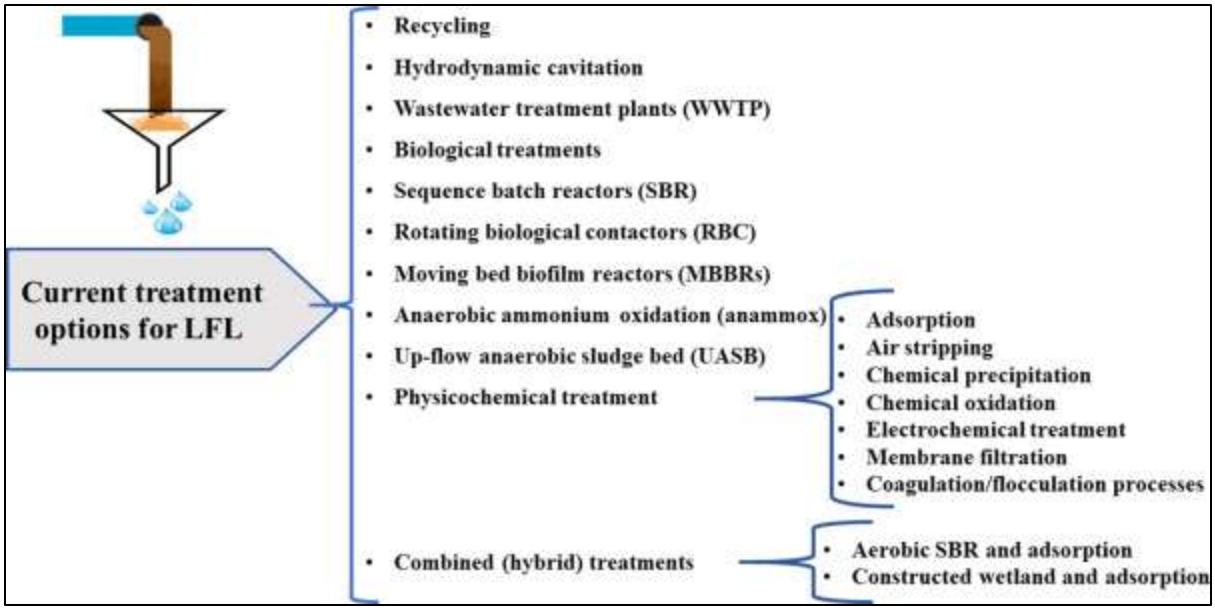

Fig. 2. Conventional and current treatment options for landfill leachates (LFL). Hybrids involve more than one treatment, mostly combining physiochemical and biological treatments.

6.1. Recycling

Since the 1990s, landfill sites have used LFL recirculation or recycling to manage LFL, generate and recover LFG, and generally improve the stability and sustainability of the dump (Lee and Jones-Lee, 1994, White et al., 2011). In general, this technique entails managing the biological, chemical, and physical processes of the landfill by reintroducing WW into the landfill, known as a landfill bioreactor at a specific time (Lema et al., 1988, Warith, 2002). After four years of LFL recirculation, the BOD/COD ratio of bioreactor-produced LFL reduced from 0.5 to 0.7 to 0.1, according to an analysis of the LFL's structure (Benson et al., 2007), which was studied by Warith (2002) in MSW landfill of Toronto, Canada, to improve organic waste decomposition over six months, including weekly leachate sample collection and analysis. Warith (2002) also noted a reduction in the LFL COD and BOD values from 9910 to 200 mg L^{-1} and 2055 to 200 mg L^{-1}, respectively.

In a 200 L bioreactor holding 2 tonnes of MSW trash and an LFL recirculation ratio of 2.2 L min^{-1}, Chugh et al. (1998) observed that high recirculation ratios boosted the solubilization of fresh garbage and accelerated the establishment of a methanogenic microbial culture, allowing waste stabilization within the bioreactor. Other investigations showed comparable outcomes (Šan and Onay, 2001). While the cycling of LFL at landfills has yielded favorable outcomes, extending the retention duration of LFL within landfills raises the risk of ground and surface infiltration and contamination, which are serious problems (Šan and Onay, 2001).

6.2. Hydrodynamic cavitation

The novel technical method of hydrodynamic cavitation can be employed to handle LFL WW. In the work conducted by Gutiérrez-Mosquera et al. (2022), all cavitation techniques resulted in a decrease of 23–51% in BOD, 30–53% in COD, 12–21% in TOC, and 99% exclusion in total suspended solids, with an elevation in the WW biodegradability indices from 0.16 to 0.25. In addition, they discovered that the ideal cavitation period was 30 min, which was sufficient to achieve chemical equilibrium and generate free radicals from water molecules separated by the

cavitation pressure pulse. In addition, no more hydroxyl radicals were produced, which was necessary to stop the cavitation process since aromatic condensation and humification reactions might trigger the formation of new, difficult-to-decompose compounds (Gutiérrez-Mosquera et al., 2022).

In addition, a 200 mg L^{-1} concentration of oxidizing agent showed the greatest results in lowering the quality indices assessed. Hydrogen peroxide (H_2O_2) dissociation increased the production of hydroxyl radicals, accelerating the decomposition of organic and inorganic matter. However, the influence of other significant variables, such as the speed and flow of the fluid, the operating temperature, the geometry of the cavitation device, the number of steps or cycles in the reactor, and the exploration of other oxidizing agents, should be investigated in future research to obtain the greatest benefits from the hydrodynamic cavitation of LFL WW (Korniluk and Ozonek, 2011, Gutiérrez-Mosquera et al., 2022).

6.3. Waste water treatment plants (WWTPs)

Co-treatment of LFL with household sewage in WWTPs is one of the most prevalent options (Gao et al., 2015). This approach entails either a continuous feed or a batch load of LFL into the WWTP influent. LFL contributes to the N-containing portion of this sewage flow, whereas sewage fulfills the P requirements of WWTP (Gao et al., 2015). Numerous opponents have questioned the dependence on this strategy because of OM with low biodegradability (polycyclic aromatic hydrocarbons, polychlorinated biphenyls, HA, and FA) and HMs in LFL, which may diminish management efficacy and raise the effluent levels from these facilities (Renou et al., 2008).

In Ireland, the applicability and cotreatment of LFL in WWTPs were recently evaluated (Brennan et al., 2016, Brennan et al., 2017a). These assessments revealed that LFL (99%) was accomplished through direct discharge to sewers or tinkering to WWTPs, while only 1% was accomplished through onsite treatment, including six landfills, only three of which meet the requirements for direct disposal to receipt bodies (Brennan et al., 2017b). In addition, 30% of the Irish WWTPs rejected to take LFL from 2010 to 2014, highlighting this argument (Brennan et al., 2016). Consequently, treating LFL in WWTPs is judged unsuitable, and other options must be found. Previous studies have outlined the benefits and drawbacks of utilizing WWTPs for treating LFL (Teixeirae Junior and Marinheiros, 2014, Lippi et al., 2018).

6.4. Biological therapies

Biological approaches are frequently utilized for treating LFL because of their ease, dependability, and cost-effectiveness (Renou et al., 2008, Hamdan et al., 2021). Biological management successfully approaches lower COD and BOD concentrations in LFL. Young LFLs (5 years) with COD/BOD ratios in the range of (0.4–0.6) are suitable to bio-management for older LFLs because of biodegradable organics in the former (Torretta et al., 2017).

When the COD/BOD rate is 0.2 or less, the landfill becomes less biodegradable due to the accumulation of HA, FA, and other organic materials resistant to decomposition (Tchobanoglous and Kreith, 2002, Lee and Nikraz, 2014). Microorganisms, primarily aerobic and anaerobic bacteria, accomplish biodegradation by converting OM to CO_2 and CH_4 (Wang et al., 2017). Aerobic techniques are generally inexpensive and efficient for decomposing BOD and COD in addition to organic contaminants (Bove et al., 2015, Lam et al., 2020, Shao et al., 2021). Kamyab et al. (2015) used microalgae to remove pollutants from palm oil mill effluent (POME).

Most biological techniques are based on a suspended growth system, like SBR, activated sludge methods, and aerated lagoons, biofilm reactors, with several scientific studies describing their use to treat LFL (Xu et al., 2010b). On the other hand, anaerobic alternatives are

more suited for addressing LFL with a high concentration. In contrast to aerobic, anaerobic treatments need small energy, generate fewer solids, and can work at reduced ambient temperatures (Christensen et al., 2011). Additionally, anaerobic methods may convert the garbage into biogas, a useful renewable energy source (H2, O2, N2, CO_2, CH_4, and H2S). The up-flow anaerobic sludge bed (UASB), the suspension growth method, and several SBR and anaerobic filters, such as hybrid and fluidized beds' reactors are examples of these anaerobic treatment alternatives (Kennedy and Lentz, 2000, Liang and Liu, 2008). Lin and Chang (2000) and Christensen (2010) outlined the benefits and drawbacks of both aerobic and anaerobic methods used to treat LFL. The benefits of aerobic biological treatment include the ability to achieve nitrification at low temperatures (5 °C), nutrient exclusion, simultaneous N2-fixation, denitrification onto microbial biofilms, high sludge retaining duration, low sludge production volumes, enhanced resistance to toxic shock, retention of active biological biomass inside the system, low hydraulic retention time (HRT), and active biological biomass retention within the system (Christensen, 2010). Table 2 summarizes advantages and disadvantages of aerobic and anaerobic biological treatments.

Denitrification in biofilm reactors requires high quantities of dissolved oxygen, forced aeration, mixing, high energy demand, and congestion difficulties associated with fixed bed systems (Table 2). Benefits associated with anaerobic biological treatment include small biomass production, low energy requirements, a small dose of P needed as a growth factor for anaerobic bacteria, increased organic loading rates (OLRs) combined with high removal of BOD and COD, and the ability to act as a net energy producer by producing CH_4 rich biogas. However, lengthy start-up period, temperature and pH variations susceptibility, and several hazardous chemicals, such as HMs and NH_3, are among of the drawbacks of the anaerobic biological treatment (Lin and Chang, 2000, Christensen, 2010, de Almeida et al., 2020). The efficacy of some organisms in removing leachate pollutants has already been documented (Salam and Nilza, 2021). Table 3 summarizes the removal rates of several leachate contaminants using aerobic biological treatment.

6.4.1. SBRs

Spagni et al. (2008) stated that SBRs are a technique for treating activated sludge that requires one or additional phases below nonstationary circumstances. Typically, the system utilizes aerobic circumstances and consists of four consecutive steps: filling, reacting, settling, and discharging. This management approach is very successful for the nitrification and denitrification of LFL because its functional approach permits simultaneous oxidation of organic carbon (C) and nitrification (Renou et al., 2008).

For instance, Diamadopoulos et al. (1997) demonstrated that using simultaneous LFL and municipal sewage treatment in an SBR removed 80, 95, and 85% of NH_3, COD, and BOD, respectively. In another study, treating LFL of solid wastes using SBR and membrane reactor removed NH_3, P, and BOD by 99.9%, 94%, and 82.2%, respectively (Timur and Özturk, 1999). They also studied the management of LFL utilizing SBRs below anaerobic circumstances. They employed this system to treat LFL from an MSW dump with COD levels ranging (from 3.8–15.9 g L^{-1}) and pH values (7.40–7.6). They reported that COD removal rates was found to be between 64–84%, with CH_4 conversion rate at 84% (Timur and Özturk, 1999). They demonstrated that SBR treatment was resilient and less susceptible to repeated variations in organic load or NH_3-N. This information is crucial for LFL management, as these concentrations might fluctuate substantially over time (Timur and Özturk, 1999). Nonetheless, this method has

certain flaws. C consumption during the aeration stage might result in inadequate C resources during the subsequent anoxic stage, leading to low TKN removal rates (Wei et al., 2012). NH_3 levels can be reduced based on these systems' organic anaerobic decomposition ratios; to modify SBR by adding a pre- and post-treatment phase, which may be necessary to achieve higher disposal rates (Elleuch et al., 2020, Ghahrchi and Rezaee, 2021).

6.4.2. Rotating biological contactors (RBCs)

The RBC is an oxygenated, fixed-film biological management technique comprising closely separated plastic disks mounted on a polycarbonate or polystyrene plastic shaft. Rotation submerges the disks with a large biofilm-forming surface area in the system liquid. This treatment's efficacy is determined by the HRT administered, the disk's rotational speed, temperature, and submerged surface area (Castillo et al., 2007). RBC systems were widely used to treat biologically treatable WW, including industrial WW (Cortez et al., 2008).

The primary benefits of RBC techniques are their straightforward operation and preservation, but they need a substantial primary asset and have high operating expenses (Spuhler, 2018). Different data have assessed RBC systems for LFL treatment (Nazia et al., 2021). In addition to nitrification, the extended maintenance period of biomass in RBC and the substantial biofilm density allow N removal. Nitrification oxidizes NH_3 to NO_3 and NO_2, which was seen in LFL with little biodegradable OM. In addition, they obtained an N removal rate of 70% (Wang et al., 2009). Also, Cema et al. (2007) investigated the elimination of NH_3 and NO3− from LFL using an RBC anaerobic ammonium oxidation (anammox) method throughout a six-month experimental period. The greatest NH4+ and NO3− removal rates were 0.56 kg N m^{-3} d^{-1} and 0.76 kg N m^{-3} d^{-1}, whereas the maximum rate of inorganic N removal was 0.93 kg N m^{-3} d^{-1}. Their research shows that RBC might be employed in anammox procedures to reduce N compounds from LFL. Additionally, RBC may be utilized to eliminate COD from LFL (Cema et al., 2007).

Castillo et al. (2007) presented the application of a perforated acetate disk coated with a polyester mesh for COD elimination at varying rotating rates, flow rates, and HRTs. It was possible to attain high COD elimination rates of 69–74%; nevertheless, operational concerns surrounding disk detachment significantly influenced these rates. However, these investigations demonstrated the potential of RBC for LFL therapy. RBC systems should be integrated with other processes to achieve optimal elimination rates for organic and inorganic contaminants (Cortez et al., 2008, Hassard et al., 2015).

6.4.3. Moving-bed biofilm reactors (MBBRs)

MBBRs are oxygenated containers comprised of polymeric composite carriers with high surface area onto which microbial biofilms can grow. This carrier material normally occupies around 50% of the reactor's volume and is fluidized within the bioreactor using aeration (Bove et al., 2015). The literature summarizes the benefits of this approach above other typical suspended growth methods as follows: (1) the MBBR utilizes the full tank volume for biofilm formation, resulting in extremely reduced head loss; (2) unlike the sludge system activation, it does not need sewage sludge valorization as the process's usage of a screen at the top of the reactor, biomass is preserved; (3) it is less sensitive to toxic compounds; (4) this system can eliminate organic and high NH_3 concentrations with a single method; and (5) the reactor can be utilized for aerobic, anoxic, or anaerobic progression (Chen et al., 2008, Renou et al., 2008). Different data have detailed the application of MBBRs for LFL therapy with different outcomes (Chen et al., 2008).

Disposing organic N from LFL using two-stage aerobic and denitrification systems removes 90% of both inorganic and total N (Welander et al., 1998). Chen et al. (2008) employed an MBBR system with an anaerobic/aerobic configuration for the treatment of LFL, which removed high COD by >90% for applied OLRs of 4–15 kg COD m^{-3} d−l inside the anaerobic treatment, while the aerobic stage acted as a COD-polishing and NH4+ removal phase (Chen et al., 2008).
The effect of different carrier substances, free-floating polyurethane particles, and granular activated carbon (GAC) was investigated in LFL treatment in the MBBR system (Loukidou and Zouboulis, 2001). The GAC provided a porous medium capable of adsorbing OM and NH_3 and a good surface for developing microbial biofilm. Both processes were utilized to degrade N and remove organic pollutants. GAC particles are better than polyurethane particles in removing COD by 81% versus 65%. However, the BOD and N removal efficiencies were comparable (Loukidou and Zouboulis, 2001).

6.4.4. Anammox

Jetten et al. (2009) described anammox as a microbial procedure adopted by strictly anaerobic autotrophs that predominantly use NH4+ and NO2− as substrates for their catabolism. The procedure has been utilized in several previously described applications, such as the SBR, MBBR, and UASB (Klaus et al., 2017), for managing NH4+ enriched WW, such as LFL (Gao et al., 2015). For instance, Ruscalleda et al. (2010) described the effective removal of NH4+ and N from LFL utilizing anammox and heterotrophic denitrification processes. Before being fed into an anammox SBR, LFL was originally treated via a partial nitrification procedure. Overall, their investigation suggested N removal efficiency of 87%, with the anammox process accounting for around 85% of this elimination (Ruscalleda et al., 2010).
Comparatively, Selic et al. (2007) utilized an SBR to treat LFL from Chinese and German landfills and reported a decrease of 90% in both COD and NH_3 contents. Wang et al. (2011) got comparable findings when treating LFL using a combined SBR and anammox method. They reported a COD removal efficiency of 21 to 45% and a total N reduction of 62 to 80%.
Anammox is an effective and long-lasting therapy option for LFL that may be combined with other treatment choices, as stated above. The anammox technique is also suitable for managing LFL from mature landfills with high NH_3 levels and low amounts of organic chemicals, like COD and BOD (Torretta et al., 2017).

6.4.5. UASB

The UASB is a single tank into which WW is driven upwards by hydraulic pressure through an intake at the foot of the bioreactor. The UASB bioreactors maintain metabolically active anaerobic granular sludge, allowing for the management of WW at high OLRs (Renou et al., 2008). The anaerobic granules include bacteria and methanogens, which lower influent WW anaerobic digestion (AD). The AD is the degradation of OM by bacteria without oxygen (Rogoff, 2014). This biological process generates a gas, commonly known as biogas, comprised mostly of CH_4 and CO_2 (Rogoff, 2014).
Kettunen and Rintala (1998) treated MSW LFL at low temperatures (13–20 °C) using UASB bioreactors injected with mesophilic biomass from a sewage treatment facility. The COD concentration of the LFL utilized in their investigation ranged from 630 to 2200 mg L^{-1}, and the bioreactors obtained COD removal efficiencies varying from 50 to 75%, with the maximum removal ratios recorded at 18 °C (Kettunen and Rintala, 1998).
Sun et al. (2010) examined the removal of COD from LFL utilizing two UASB bioreactors operating at low temperatures (10–15°C) and an SBR system. Both UASB bioreactors were inoculated with activated sludge from a WWTP in Heilongjiang, China, that treats brewery WW.

The COD content in the influent water varied between 7.856 and 22,500 mg L^{-1}. They showed a high COD removal efficiency (77%) in the first UASB bioreactor but a decrease in successive treatment systems. In addition, Lin et al. (2000) utilized UASB bioreactors to treat LFL mixed with sewage (septic tank sludge) in a 1:1 ratio. The applied OLR for these bioreactors was 7.73 kg COD m^{-3} d^{-1}, and HRT was 1.5 d. The total COD, NH_3, and P elimination efficiency percentages were 42, 47, and 44%, respectively (Lin et al., 2000).

Utilizing UASB bioreactors for LFL therapy has been practical, as seen in the cases above. However, the AD process's sensitivity to high NH_3 levels persists as a problem, rendering this therapy approach inappropriate as a stand-alone treatment for LFL (Torretta et al., 2017). In general, biological treatments are most potent in removing NH_3, BOD and COD from LFL (Torretta et al., 2017).

6.5. Physicochemical treatment

According to Kurniawan et al. (2006), when the concentration of pollutants significantly exceeds their national discharge regulations, physicochemical treatment of LFL is frequently required (Table 4). These treatment techniques are often employed to remove non-recyclable organics, such as HA and FA, HMs, and absorbable organic halogens (Abbas et al., 2009), and they are efficient for lowering color and colloidal particles (Torretta et al., 2017). Bio-refractory chemicals that typically hinder physicochemical procedures are, thus, most effective in pre- or post-treatment stages. Physicochemical therapies are frequently employed to treat mature LFL, with a BOD:COD rate of 0.2 and small concentrations of biodegradable chemicals (Kjeldsen et al., 2002). Adsorption, MF, chemical precipitation, and oxidation are the fundamental physicochemical approaches successfully used for LFL management.

6.5.1. Processes of coagulation and flocculation

In coagulation/flocculation, chemicals identified as coagulants or flocculants remove tiny, suspended particles from water by producing larger flocs, followed by physical separation or gravity settling. Despite its convenience, the approach is good for removing colloid pollutants, like trace metals, surfactants, and humic/fatty acids (An and Xu, 2013, Costa et al., 2019). The treatment of juvenile leachate using the lime coagulation technique significantly decreased many pollutants, including OM, turbidity, and mineral matter. This is because of Ca^{+2} coagulation, HM precipitation in carbonates, hydroxides, and phosphates (PO4−3), and their adsorption rates as pH rises (Hasna et al., 2020).

6.5.2. Retention

Adsorption is the process of precipitating (gas or liquid) solution-based compounds on a fit surface (Worch, 2012, Chen et al., 2021, Wang and Ding, 2022). Fixed bed adsorption has been a common physiochemical solution for many WW streams, mostly because of its ease and low cost (Biswas and Mishra, 2015). Activated carbon (AC) or another absorbent, like zeolite, pumice stone, and calcareous shells, can be adsorbed (Tsai et al., 2006, Abdul Halim et al., 2010, Chansuvarn, 2018). Few data have investigated the treatment of LFL (Huong et al., 2016); however, several adsorbents have been tried on WW (Song and Gao, 2013, Huong et al., 2016). In batch investigations, Martins et al. (2017) analyzed the usage of clinoptilolite (zeolite) to remove NH4+ from LFL. They predicted the adsorption characteristics using the Langmuir isotherm and found qmax (theoretical maximum adsorption capacity g^{-1} adsorbent) values between 2.61 and 17.68 mg L^{-1} ammoniacal N (NH4+-N) under various operating factors, like pH, adsorbent quantity, and LFL levels. The Langmuir isotherm is commonly used in adsorption tests to assess the type and quantity of adsorbed ions (Scandelai et al., 2020). Abdul Halim et al. (2010) evaluated the efficacy of AC, zeolite, and a composite material combining zeolite,

limestone, AC, and rice husk C to eliminate COD and NH_3 from LFL in batch tests. Langmuir isotherm determined that COD and NH_3 adsorption rates differed significantly across the various adsorbent substances evaluated. However, it is essential to realize that research based on batch investigations – as explained above – may be inaccurate over longer periods (Callery et al., 2016). Therefore, adsorption substances should preferably be evaluated in a fixed bed column process to assess whether or not LFL can be treated for an extended period.

Aziz et al. (2010) improved the SBR treatment option using powdered AC (PAC) adsorption for LFL treatment. With a standalone SBR control, 1.2 g of PAC was applied to six 2 L beakers, including 1.08 L of sludge and 120 CC of LFL from Kulim Landfill, Kedah, Malaysia. The COD and NH4+-N removal efficiency were measured throughout the trial. In the SBR, COD (influent 1655 mg L^{-1}) had a removal rate of 69.8%; whereas NH_3 (influent 600 mg L^{-1}) had a removal ratio of 74% but rose to 76% when PAC was added. Adsorption successfully treated LFL; removal rates depend on the adsorption materials utilized. This method is simple and economical (Lofrano et al., 2020). In addition, adsorption can be employed as a standalone management strategy or in conjunction with biological treatment alternatives, as stated previously.

The intensified system substantially enhanced RL properties by eliminating 89% of COD and 99% of NH_3-N. Except of arsenic (As) and molybdenum contents, contaminants in PL were under the limits for discharge and reuse (Scandelai et al., 2021). Thus, the high As contents in RL and PL requires more investigation on hazardous As properties in leachates. On the other hand, the intensified procedure was carried out without including oxidants or auxiliary compounds, resulting in a cheaper and more environment-friendly process that could be applied to treat leachates (Scandelai et al., 2018, Scandelai et al., 2021).

6.5.3. Air stripping

NH4+-N levels are frequently elevated in LFL (Brennan et al., 2017b). Air stripping, the technique of separating organic contents from a waste stream by exposure to air, could be utilized effectively to remove this contaminant known to elevate WW toxicity (Christensen, 2010). Until equilibrium is reached, volatile organic molecules are released from the liquid state into the gaseous state during the process. This process takes place in a stripping tower holding an LFL-filled aerated medium (Renou et al., 2008). Leachate is collected at the base of the tower, while gases ascend to the top. Before being released, NH4+ polluted air is dealt with sulfuric or chloric acid. Nevertheless, treated leachate needs further treatments to meet NH_3 discharge limitations (Renou et al., 2008).

Ferraz et al. (2013) examined the pretreatment of LFL using air stripping and NH_3 recovery via absorption. The oxygenated packed tower removed 88% of the NH_3 from 100 L of LFL. At the same time, absorption units containing 0.4 mol L^{-1} of deionized sulfuric acid solution recovered 80% of the stripped NH_3. In addition, Marttinen et al. (2002) stated that removing NH_3 in LFL at low temperatures (6°C and pH 11) was 30% lower than using a temperature of 20 °C by air stripping method. In addition, they noted that independent of pH or temperature, COD elimination using air stripping ranged from 4 to 21%, showing that the treatment was unsuccessful at removing biodegradable organics (Ferraz et al., 2013).

Silva et al. (2004) evaluated the elimination of NH_3 from NH_3-rich LFL (750–800 mg L^{-1}) that had pretreatments of coagulation, flocculation, and membrane fractionation, although neither pretreatment reduced the baseline NH_3 content. At pH of 12, 2 h aeration was sufficient to remove NH_3 by 72%; however, an additional 84 h aeration was required to achieve a 5 mg L^{-1} NH4+ level (Silva et al., 2004). This treatment method has several drawbacks and limitations, most notably the management and destruction of exhaust air, like NH_3 gas. If

discharged directly into the environment, these off-gases might create significant air pollution; hence, further treatment or NH_3 recovery stages are necessary (Abbas et al., 2009). In addition, the efficacy of this therapeutic method might vary depending on the composition of LFLs and may require further modification. This treatment method promises LFL therapy, but the technology must be developed further to obtain greater clearance rates of other current chemicals (Abbas et al., 2009).

6.5.4. Chemical precipitation

Chemical precipitation removes non-compostable OM, NH4+, and HMs from LFL because of the technique's ease and the necessary apparatus's low cost (Calli et al., 2005). During this process, chemical processes change dissolved ions into an insoluble solid state. Chemicals precipitate at varying pH levels (Kurniawan et al., 2010). Struvite formation, the most prevalent chemical precipitation process, is similarly influenced by pH, and Mg+2:NH4+:PO4−3 (MAP) ratios of WW. Struvite formation is highly effective in removing NH_3 from WW; however, it is less effective at treating LFL because of the lower amounts of Mg and P necessary to produce crystalline MAP. Consequently, LFL must be supplemented with these chemicals for MAP formation to be successful.

Li and Zhao (2001) employed struvite formation to treat LFL and studied the impact of three MAP combinations on effective precipitation: (I) disodium phosphate + magnesium chloride hexahydrate, (ii) magnesium oxide + phosphoric acid (85%), and (iii) monocalcium phosphate dihydrate + magnesium sulfate heptahydrate. The main level of NH4+-N in LFL was 5618 mg L^{-1}. When the first treatment was added to LFL samples, the quantity of NH4+-N decreased to 0.112 g L^{-1}, with Mg+2:NH4+:PO4−3 exhibiting a molecular ratio of 1:1:1 and MAP crystallizing in 15 min (Li and Zhao, 2001).

Meanwhile, Di Iaconi et al. (2010) assessed the effectiveness of MAP (1:1:1) precipitation in removing NH_3 from a mature LFL, which was accomplished by adding $H3PO_4$ and MgO as external sources of P and Mg, respectively. They reasoned that the poor solubility of MgO was attributed to the 67% NH_3 removal efficiency, which increased to 95% when the MgO ratio in the reaction mix was increased to (2:1:1) (Di Iaconi et al., 2010). Although this treatment approach is useful for NH_3 removal, it is insufficient for removing HMs, which render the effluent LFL and necessitate further treatment. When LFL was utilized to make struvite, the final product was impure and requires further purification (Song and Gao, 2013).

6.5.5. Organic oxidation

To manage polluted soil and groundwater, strong chemical oxidizers are immediately applied to a contaminated medium to destroy a wide variety of OM (Torretta et al., 2017). Oxidation and reduction reactions typically oxidize one of the reactants, reducing or gaining electrons in the other. Thus, the oxidizing agent reduces the dangerous pollutants into safe materials. Chemical oxidation is an extensively investigated process for treating WW effluents involving LFL (Rajasulochana and Preethy, 2016). The recent focus has been on advanced oxidation processes (AOPs) such as $O3$,H_2O_2, and electron or UV beams. However, the disadvantages of AOPs are briefed in the high energy requirements and the large amounts of antioxidants to degrade the pollutants, besides the high cost (Gao et al., 2015).

Fenton's reagent and ferrous sulfate catalyze $H2O_2$ more frequently than any other AOP. The Fenton procedure, which may eliminate hazardous chemical materials and enhance the decomposition of OM, is frequently utilized as either pretreatment or posttreatment for LFL (Torretta et al., 2017). The Fenton treatment of LFL involves reactions such as neutralization, oxidation, flocculation, solid–liquid separation, and reducing organic content, color, and odor

(Zhang et al., 2005). Zhang et al. (2006) found that the Fenton treatment removed 79% of COD (1 g L^{-1}) in a diluted LFL.
Furthermore, Lin and Chang (2000) examined the application of an electro-Fenton approach, a mix of an electrochemical process and Fenton's oxidation, for treating LFL produced in a MSW landfill in northern Taiwan. Two anodic and cathodic electrodes were put into LFL samples, and 500 and 1500 mg L^{-1} of H_2O_2 were added to the electrolytic cell before applying an electrical current. Fenton's reagent was produced by continuously adding $H2O_2$ to LFL; thus, a COD elimination efficiency of >85% was reported, with 67% attributable to the electro-Fenton method. The primary benefit of chemical oxidation is the quick and full mineralization of OM without producing hazardous byproducts. However, its downsides include high running costs and a need for the pH of the LFL to be lowered to 6 to be potent (Lin and Chang, 2000).
A previous study employing physicochemical techniques for LFL therapy has demonstrated promise (Braga et al., 2020). Nonetheless, this treatment approach is ideally suited for LFL formed in older landfills with low BOD:COD ratios and low amounts of biodegradable organics. In particular, physiochemical treatment techniques are optimal for removing NH_3, PO4−3, NO3−, and HMs from LFL but are inefficient for removing BOD and COD (Christensen, 2010, Kamaruddin et al., 2017).

6.5.6. Electrochemical procedure

Electrochemical therapy comprises electrocoagulation, chemical, and Fenton oxidation (Rahman et al., 2021). The metal plates used as sacrificial electrodes (anode and cathode) may comprise the same or various materials. Aluminum (Al+3) and iron (Fe+3) are the most typical electrode materials utilized in this method (Bouhezila et al., 2011).
The electrochemical dissolution of Al+3 or Fe+3 from their respective electrodes generates *in situ* coagulating reagents. When no external chemicals are employed, the amount of sludge generated is decreased. The generated coagulants destabilize suspended particles and adsorb dissolved pollutants (Siddiqi et al., 2022).

6.6. MF

The selective permeability of ions and molecules via a thin film barrier supports MF. The selective barrier removes contaminants from bulk fluids by permitting only specific molecules to flow from a liquid containing harmful molecules and ions (Luo et al., 2020).
The microfiltration procedures are MF, reverse osmosis, ultrafiltration, and nanofiltration based on the tiny particle sizes tolerated (Cancino-Madariaga et al., 2011, Teng et al., 2021).
MF removes contaminants from pretreated leachate effluents (Vaccari et al., 2019). Nonetheless, the process faces various construction and operation challenges, like pretreatment requirements; enormous energy costs due to the pressure-driven pumping scheme; membrane fouling and scaling by retained organics, inorganics, colloidal particles, molecules, and ions of HMs; foulant cleaning and retrofitting of the membrane; improper removal of concentrated brine, which poses environmental risks; and inappropriate disposal of concentrated brine (Hube et al., 2020).

6.7. Combination therapies

In certain instances, a combination of biological and physiochemical treatments for LFL was successful (Torretta et al., 2017). In addition, recent experiments propose that removing diverse substances utilizing each procedure leads to overall high removal efficiency (Gao et al., 2015).
As the structure of LFL is significantly impacted by several factors, such as the age of the landfill, the number of stages/sections in the landfill, the sorts of trash, and the moisture content,

the LFL produced may fall into two or more classes (Babaei et al., 2021). Consequently, certain therapy choices are appropriate, and a mix of therapies is typically necessary. This section will focus on beneficial therapies (Torretta et al., 2017). Table 5 summarizes the efficacy of physiochemical therapies and biological treatments in eliminating LFL.

Table 5. Efficiency of the combined physiochemical and biological treatments on the removal of landfill leachate.

6.7.1. Anaerobic SBR (ASBR) and adsorption

Lim et al. (2016) studied the treatment of LFL utilizing ASBR paired with adsorption into the zeolite. Initial levels of NH4+-N and COD in the influent LFL utilized in this investigation were 1800 and 3200 mg L^{-1}, respectively. The influent LFL was taken from an MSW dump site in Johor, Malaysia. The ASBR was inoculated with *Brevibacillus panacihumi* strain ZB1 and aerated at 1.0–1.2 cm s^{-1} up-flow velocity. After 7 d of operation, the bioreactor effluent was put into a zeolite column containing 10% by weight. The findings of their investigation demonstrated a 65% and 30% removal efficiency for NH4+-N and COD, respectively, during the 7 d ASBR experiment. Moreover, adsorption decreased by 96% for NH4+-N and 43% for COD, respectively. The biological and physical treatments removed Al, Cr, Mg, and vanadium from LFL (Mojiri et al., 2021).

6.7.2. Man-made adsorption and swamps

The LFL cotreatment with municipal WW (1:5) utilizing a constructed wetland (CW) and two adsorbents—ZELIAC composite (Portland cement, zeolite, rice husk ash, limestone, and AC). Three young, fresh, and healthy plants were placed in the CW with two layers of adsorbent substrate. The analysis of influent LFL samples showed high amounts of COD (2301 mg L^{-1}), nickel (4.6 mg L^{-1}), NH4+-N (627 mg L^{-1}), and cadmium (2.5 mg L^{-1}). The biodegradability ratio was low (BOD5/COD = 0.20), and the influent BOD5 concentration was 461 mg L^{-1} (Mojiri et al., 2016). The composite of influent LFL and WW was put into the CW, and sewage samples were recovered post varying contact durations (12, 42, and 74 h). All the investigated components, including Ni, Cd, COD, and NH_3, exhibited high clearance rates of 88–99% after 50 h of response. This technique proved effective in treating LFL mixed with WW; however, the removal rates dropped as the leachate concentration grew. This procedure can repair low-strength leachate but might not affect high-strength LFL (Reshadi et al., 2020).

7. Potential uses of treated LFL

By 2030, the global population is anticipated to exceed 8.5 billion, and solid waste output will reach 2.59 billion tons. This will exacerbate the already precarious state of ecology and climate. There is a pivotal need for technologies to recycle solid waste. New treatment methods have been investigated to treat solid waste, and assess the economic feasibility of changing trash into useful energy *i.e.,* electricity. For instance, CH_4 extracted from municipal solid waste buried in landfills in Delhi, India may power 8–18 million homes and generate 7140 gigawatt h (gWh), with a potential of 31,346 and 77,740 gWh by 2030 and 2060, respectively (Siddiqi et al., 2022). As animal feeds, valorizing solid/food waste by anaerobic digestion systems may replace 61.46% of natural gas and 38.54% of coal in the United Kingdom and reduce land usage by 1.8 million hectares. In addition, the levelized cost of electricity using solid and anaerobic digestion waste-to-energy systems of $0.04 kilowatt h^{-1} (kWh^{-1}) and $0.07 kWh^{-1}, with a payback period of 0.73–1.86 years and 1.17–2.37 years, respectively. Nonetheless, landfill waste treatment systems are still ineffective, particularly for handling food waste containing over 60% water (Ahmed and Lan, 2012, Siddiqi et al., 2022).

8. Applications of LFL solid waste

Transforming municipal food waste into products with added value offers great promise. However, effective conversion technologies are still absent, and the technical constraints are mostly owing to the variety of waste (Sindhu et al., 2019). Future researchers may have to use other approaches to prevent the inconsistent impacts of waste heterogeneity.
Integrated pyrolysis machines for decomposing municipal solid waste are environmentally benign despite being expensive and requiring a great deal of thermal energy (Hasan et al., 2021) The high ash content of agricultural solid waste, such as soy straw, makes biomass furnaces challenging to run. However, co-firing more biomass with lower ash concentrations may overcome this problem (Gonzalez et al., 2022). Processing agricultural solid waste lignocellulose also has the potential to generate a wide range of chemical and biological substances that may be used in textile, materials, biomedical, and pharmaceutical sectors. Further investigation on excessive water usage, energy consumption, hazardous chemicals, and collection, transport, and disposal of lignocellulose should be taken into consideration (Gonzalez et al., 2022).
Industrial waste has a significant potential for recovery, and extracting rare precious metals from trash is one option to alleviate the resource crunch. When extracting precious metals from solid waste, care must be given to minimize secondary contamination by managing crucial technical parameters in order to lower the amount of newly valuable trash and simultaneously not to lose valuable metals (Wu et al., 2022). According to Haile et al. (2021), paper mill waste can manufacture essential engineering materials, such as C fibers, bioplastics and fibers, cellulose nanocrystals, and biocomposites. Biomass or biomass waste for different engineering applications and biomaterials manufactured using appropriate and practical techniques may also be used to develop multifunctional bio-based products for a wide range of conventional, high-performance, and intelligent applications (Akor et al., 2021).
Future uses of municipal solid waste with added value will need to overcome technological limits and build integrated solar heating systems. The value addition and use of agricultural solid waste must also investigate novel chemicals and technologies to prevent resource waste (Akor et al., 2021). In addition, the parameter control of the present value-added technology for industrial solid waste must be strengthened, and applying the direction of bacterial culture must be investigated (Akor et al., 2021).

8.1. Methodologies for evaluating the economic viability

Solis and Silveira (2020) assessed nine technologies for the chemical treatment of household plastics via a technological readiness assessment approach, eventually selecting three technologies based on extensive research and development centers to investigate economies of scale. The authors concluded that the readiness level technology might evaluate data about LFL wastes for economic feasibility analyses. Moreover, the economic viability of investing in waste technologies with added value may be established by evaluating the return on investment and net present value (Solis and Silveira, 2020).

8.2. Solid waste processing

Solid waste processing systems cover all actions that seek to reduce the negative impacts on health, environment and economy. Recycling and sorting is the first crucial stage in LFL waste valorization and application (Yang et al., 2023). Policies and infrastructure should enhance the rate of trash recovery and sorting precision. Consideration might include the duty to recycle and segregate garbage into the citizens' code of conduct to achieve quick results and increase residents' sense of ownership. The government can also enhance and support businesses to implement recycling programs for marketed items related to trash recycling behavior of

customers. Thus, a particular type of industrial solid waste might be classified and characterized in depth (Yang et al., 2023).

According to Wiśniewska et al. (2022), the green desulfurization of scrap tires is consistent with the circular economy, and the manufacture of rubber-based materials for high-value end ground tire markets will increase according to current research trends. However, thorough sorting and characterization of scrap rubber before usage may considerably enhance the repeatability of the process and the performance qualities of the resulting recycled rubber products. Koskinopoulou et al. (2021) proposed that the installation of autonomous robotic systems for garbage recycling may be possible in the future with automated sorting and physical sorting of recyclables by material type. If artificial intelligence can be effectively applied to the field of waste recycling, the efficiency and accuracy of recycling will be greatly enhanced, and the garbage will be prepared for reuse (Wiśniewska et al., 2022).

9. Limitations and solutions for effective LFL management strategies

The operational difficulties associated with various LFL treatments are listed in Table 6.

9.1. Financial shortages and policy mismatches are limitations and major national challenges

All localities believe that the financial shortage and the mismatch of the policies are issues that encounter the policy implementation process in solid waste management. For examples, these represent limitations and major challenges for Vietnam. The population is densely populated, the per capita income is low, and a huge amount of waste is generated; therefore, extensive labor and operating costs are needed for the waste collection and the treatment system (Van Den Berg and Duong, 2018). Covering the full cost would be difficult for the government. Moreover, calling for investment is still limited in Vietnam. Localities also evaluate the policies as unsuitable to reality. National policies are announced and must be implemented throughout the territory of Vietnam. Each locality has; however, different developmental situations and natural, social, environmental, and human conditions. Vietnam is the 65th country in the world in terms of area, but its population ranks 15th.

In relation to the state management system, Vietnam is divided into 63 provinces or management units (Van Den Berg and Duong, 2018). Each province has its area, population, and management system. Therefore, using the same policy in various places offers practical challenges. It is essential to comprehend a locality's particular circumstances and create suitable programs. Nevertheless, implementing this strategy is particularly challenging in light of the current crisis. These limitations and challenges hinder the economic development of this country (Van Den Berg and Duong, 2018).

9.2. Policy implementation in certain countries

Some countries such as Malaysia and Brazil have been chosen to compare the implementation situation and draw lessons from the similarities in the context of waste management. Japan and Taiwan were also included to showcase how these countries overcome the difficulties associated with implementing waste management policies (Abas and Wee, 2014, Cetrulo et al., 2018). Abas and Wee (2014) argued that Malaysia has not implemented an effective policy in environmental management; thus, leading to a number of environmental and human health issues. Among others, there are four major reasons of poor governance, lack of commitment among stakeholders, ineffectiveness in monitoring and enforcement, and neglected of social dimension which are behind the issues of ineffective solid waste management policy implementation in Malaysia. Therefore, policy implementation for solid waste management has become a priority in Malaysia. To tackle this crisis, an institutional capacity building framework

which includes stakeholders of municipal authorities, administration, corporate bodies, non-governmental organizations and educational should be key players in implementing effective solid waste management policy (Abas and Wee, 2014).

In Brazil, waste management was ineffective because of inappropriate policies and national plans. Inefficiencies in policy implementation in Brazil can be related to several reasons, including financial shortage, inadequate professional training, lack of human resources, poor technology, weak awareness, low community participation, and mild punishment (Cetrulo et al., 2018). Strengthening strict supervision in policy implementation, providing adequate resources, enhancing the importance of the capacity of environmental managers, developing national programs for sanitary landfills, and waste minimization plans are some of the suggested solutions for Brazil (Cetrulo et al., 2018).

Japan has also experienced many years of deadlock in solving solid waste management. In the 1960s, swift industrialization occurred, and the waste increased rapidly. Immediately, Japan introduced strategies to improve this situation through the act on emergency measures concerning the development of living environment facilities (1963), the waste management act (1970), and the revision of the waste management act (1976) (Japan Ministry of the Environment, 2014).

These policies also faced various difficulties and had to be revised many times in the following years to suit the country's situation. Determining the right goals, direction, and implementation strategy from the government are important factors that helped Japan overcome the waste pollution crisis and become a model for sustainable development (Japan Ministry of the Environment, 2014).

10. Future development of LFL treatment

Leachates from landfills are a severe danger to the ecology. Numerous groundwater contamination instances have happened due to insufficient monitoring and effective remediation methods. The metrics tested at a landfill site are pH, alkalinity, electrical conductivity, COD, TDS, BOD, NH4+-N, chloride, nitrate, and sulfate. Additionally, it is essential to examine potentially dangerous compounds, such as polymers, halogenated chemicals, and poisonous HMs, among others (Lindamulla et al., 2022). In addition to their economic and ecological benefits, technologies based on microorganisms offer an attractive way to remove, treat, or detoxify leachate toxins (García-Pacheco et al., 2022, Lindamulla et al., 2022, Yan et al., 2023). Studying how microorganisms successfully remediate leachate has several advantages, but there is still much to learn in this area. Modern techniques (e.g., metagenomics) might be used to adapt new microorganisms that remediate leachate effectively. Biological remediation of leachates from middle-aged landfills has been proven to be effective in the past. Biological, physical, and chemical strategies can be used to boost the treatment efficiency of leachates from old landfill sites. In addition to phytoremediation and aerated lagoons, pollutants near landfills can be naturally eliminated through phytoremediation. Reuse and recycling must be closely studied to minimize the contemporary environment's solid and hazardous waste components (Fig. 3). Landfills must be meticulously designed. Proper monitoring, risk assessment, and leachate treatment utilizing cutting-edge technology are required to prevent major ecological harm and avoid leachate toxins from contaminating soil and groundwater (Yan et al., 2023).

Certain waste items must always be disposed of unless high concentrations of waste avoidance, reuse, biodegradable, safe goods, and recycling are attained (Fig. 3). Therefore, sustainable landfills should address this issue. When garbage is safely integrated into the ecosystem, it is considered that a landfill is entirely sustainable. Using this study's framework, built from a

comprehensive literature review, all stakeholders engaged in the landfill industry may analyze the environmental consequences of landfills.

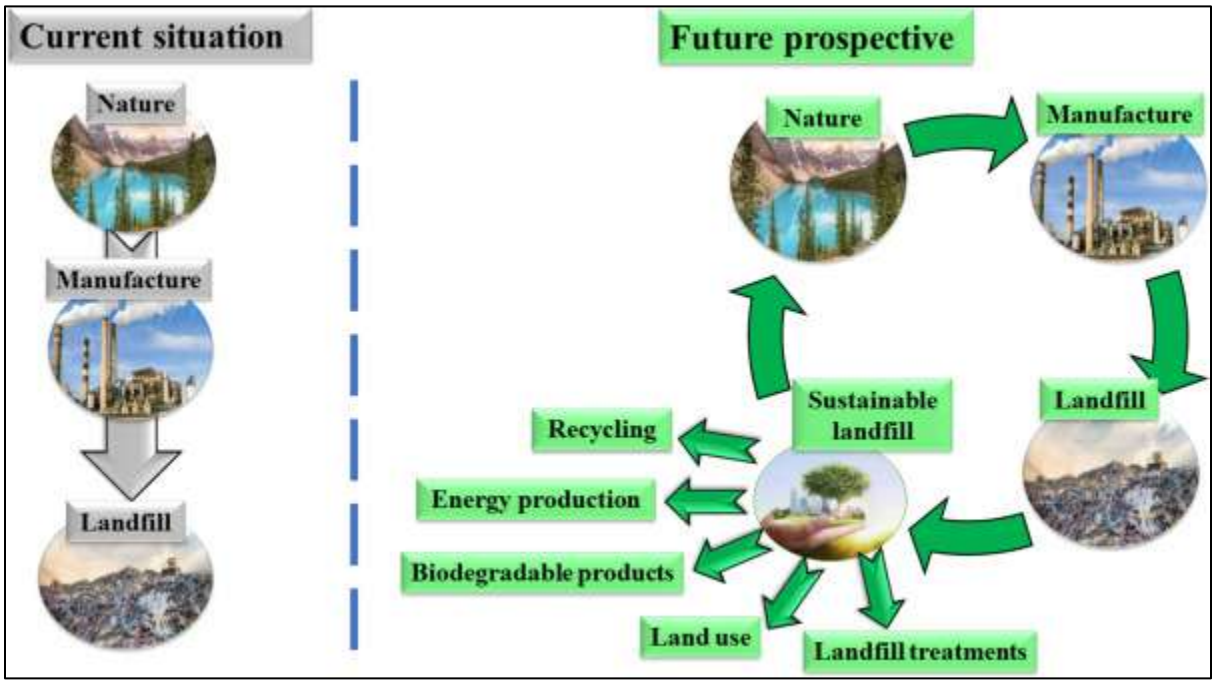

Fig. 3. Current situation and future prospects of landfilling. A sustainable landfill model can be implemented on waste materials safely assimilated into the surrounding environment after being reused, recycled or treated with biological, thermal or other processes and managing gas-related problems to minimize the environmental pollution impact.

11. Concluding remarks

Leachate pollution produces significant ecological and public health problems, especially in the developing countries with ineffective waste treatment strategies despite implementing minimum removal requirements. Leachate harms groundwater aquifers and terrestrial ecosystems, emitting dangerous pollutants and greenhouse gases. Therefore, innovative, cost-effective, sustainable, and eco-friendly leachate treatment technologies are required to reduce energy consumption, sludge production, and toxin formation and recover organic, inorganic, and xenobiotic chemicals in a harmless state to maximize their benefits for future use.

The optimal treatment for leachate is often decided by its characteristics, technical applicability, potential limits, needed effluent limit, cost-effectiveness, regulatory requirements, and long-term ecological effects. Using readiness level technology is essential for determining the recycling rate and net present value to undertake an exhaustive economic feasibility assessment of solid waste value addition and application. Moreover, recycling sorting technology can increase the rate of garbage recycling. A policy structure efficiently facilitates garbage recycling. Involvement of governmental, non-governmental and educational stakeholders is highly recommended for effective policy implementation in the ground.

2. Environmental pitfalls and associated human health risks and ecological impacts from landfill leachate contaminants: Current evidence, recommended interventions and future directions

Highlights

- Landfill and uncontrolled dumps increase the risk of hazardous leachate release.
- The environmental contamination by leachate and the consequent human health risks are investigated.
- The overall perspective of leachate contamination through living communities is discussed.
- Leachate pollution index, potential ecological risks of leachate and emerging contaminants are evaluated.

Abstract

The improper management of solid waste, particularly the dumping of untreated municipal solid waste, poses a growing global challenge in both developed and developing nations. The generation of leachate is one of the significant issues that arise from this practice, and it can have harmful impacts on both the environment and public health. This paper presents an overview of the primary waste types that generate landfill leachate and their characteristics. This includes examining the distribution of waste types in landfills globally and how they have changed over time, which can provide valuable insights into potential pollutants in a given area and their trends. With a lack of specific regulations and growing concerns regarding environmental and health impacts, the paper also focuses on emerging contaminants. Furthermore, the environmental and ecological impacts of leachate, along with associated health risks, are analyzed. The potential applications of landfill leachate, suggested interventions and future directions are also discussed in the manuscript. Finally, this work addresses future research directions in landfill leachate studies, with attention, for the first time to the potentialities that artificial intelligence can offer for landfill leachate management, studies, and applications.

1. Introduction

Municipal solid waste generation is mainly attributable to human activity advancements. The rapid explosion of the human population led to a significant expansion of industrial waste and municipal solid waste generation (Abdel-Shafy and Mansour, 2018; Adamović et al., 2018; Alobaid et al., 2018; Jouhara et al., 2017).

In the last 50 years, the world population has risen from about 3 billion to >7 billion. This figure is expected to reach about 8.6 billion by 2030 and 9.8 billion by 2050 (United Nations, 2023). Due to the population increase, the amount of waste generated is expected to increase from about 1.2 billion Mg in 2010 to about 2.2 billion Mg in 2025 (Di Maria et al., 2018a). Norbu et al. (2005) claimed that the municipal solid waste generated by Asians living in cities would be around 5.2 million m^3 or 1.8 million tonnes every day by 2025.

Municipal solid waste generation along with mismanagement is a serious and challenging issue concerning environmental pollution, social harmony, and sustainable economic advancement (de Souza Melaré et al., 2017; Kawai and Tasaki, 2016). Of particular interest are also effects related to environmental pollution, public health risks, social concern, and economic integrality worldwide (de Souza Melaré et al., 2017; Dolar et al., 2016).
Fig. 1 reports the projection of waste generation worldwide in 2016, 2030, and 2050, by region (www.worldbank.org). The global production of waste is anticipated to persist in its upward trajectory across the world in the coming decades. In 2016, the collective volume of waste generated in East Asia and the Pacific reached 468 million metric tons. Forecasts indicate that by 2050, the waste generation within this region is poised to surge to 714 million metric tons.

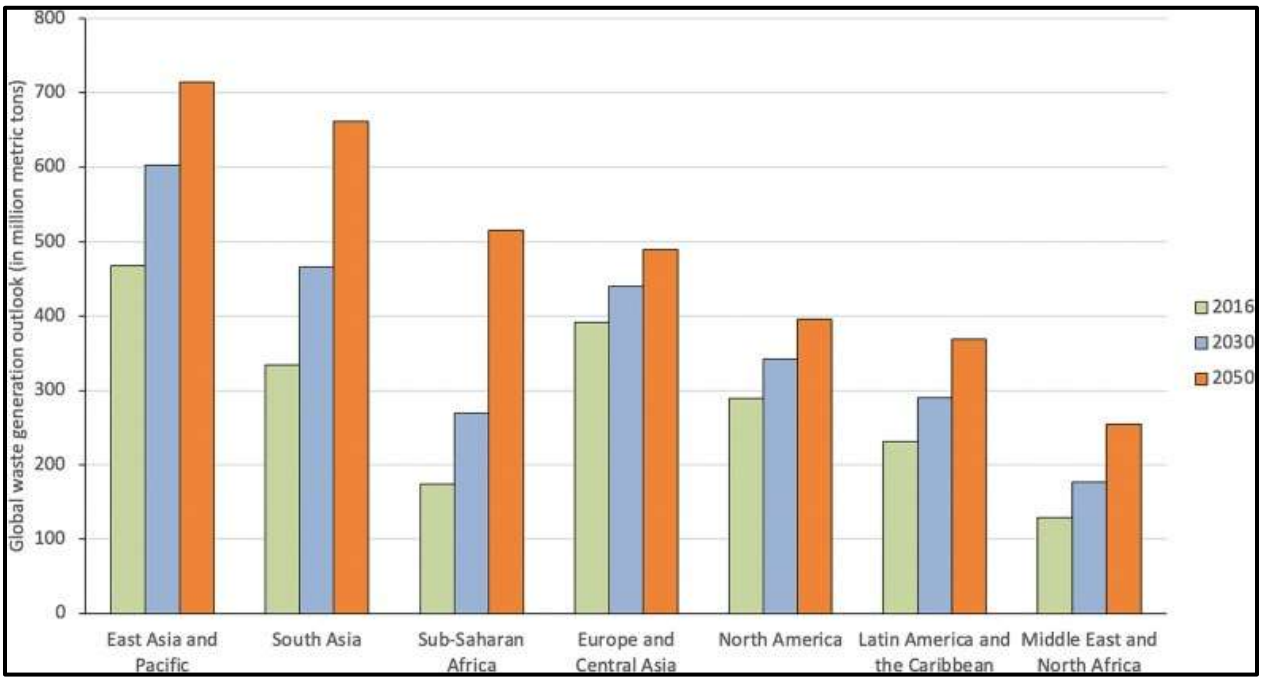

Fig. 1. Projection of waste generation worldwide in 2016, 2030, and 2050, by region (in million metric tons).

Almost half of the world's population, mainly in low-incoming countries, cannot have access to basic services concerning waste collection and disposal, with the consequence that a large amount of the world's generated waste is improperly disposed of. These landfills are unregulated, then they are often uncontrolled and located close to urban areas. In a recent report (STATISTA, 2023) it was estimated that about 60 million people live <10 km away from the 50 largest dumpsites in the world, with severe health and environmental consequences.
Once municipal solid waste has been arranged in a landfill, it continues to decompose. The main decomposition products are gases and leachate. In particular, the excessive moisture content in the wastes and their exposition to rainwater can overflow through the deposited wastes resulting in leachate generation (Anand et al., 2021). Then, leachate is a dark brown liquid mixture, with a foul smell, which can be formed of biodegradable and non-biodegradable compounds. Leachate generally accumulates at the bottom of a landfill.
It is considered hazardous wastewater, due to the presence of common and toxic chemicals, heavy metals, and inorganic compounds such as Ca^{2+}, Mg^{2+}, Na^{+}, NH_4^{+}, Fe^{3+}, Mn^{2+}, Cl^{-}, SO_4^{2-},

HCO_3^-, in large quantities (Anand et al., 2021). Moreover, landfill leachate may contain pathogenic microorganisms, and then promote virus migration in the environment, which may be critical during a pandemic (Anand et al., 2022). This was recently verified for COVID-19, with SARS-CoV-2 RNA fragments detection in landfill leachate (Mondelli et al., 2022).
In the landfill leachate, both aerobic and anaerobic degradation processes occur, and its composition mainly depends on the characteristics of the waste that is being dumped. Depending on the management practices, the thickness of the layer of waste placed and the age of the landfill, the degradation processes can be grouped into the following main four phases (Luo et al., 2020): aerobic phase occurring for shallow waste during the first days from their disposal; acid phase occurring for waste placed at higher depth in anaerobic/anoxic conditions; methanogenic phase lasting for several years, occurring after the acid phase in anaerobic conditions; stabilization phase, occurring after quite a long period once the larger part of biodegradable compounds was degraded. As reported by Teng et al. (2021), leachate pollutants such as chemical oxygen demand and biological oxygen demand can be decreased up to >90 % passing from a less than five-year-old to a more than ten-year-old landfill.
Uncontrolled dumpsites are open dumps where wastes are left uncovered and untreated, leaving the refuse open to the full effects of the atmospheric elements for example rain and water, without any proper management of gaseous and liquid emissions. In low-income countries, about 93 % of waste is burned or dumped on roads, open land, or waterways, whereas in high-income countries only 2 % of waste is dumped (see Table 1). Furthermore, no controls are performed on the amount and characteristics of the waste disposed of. Due to the absence of proper systems, the leachate generated by uncontrolled dumping represents a serious threat to the contamination of the water resource by percolation through the soil and surface runoff (Anand et al., 2021).
As a consequence, leachate generated from landfills can have significant environmental and health impacts (Essien et al., 2022; Gupta and Arora, 2016; Kooch et al., 2023). The major potential environmental impacts related to landfill leachate are pollution of groundwater and surface waters. The released leachate from landfills greatly affects the soil physicochemical, biological, and groundwater properties associated with agricultural activity and human health (Anand et al., 2021). The infiltration of leachate can negatively impact soil quality and fertility. The accumulation of contaminants in soil can hinder plant growth and disrupt terrestrial ecosystems. Moreover, landfills can emit volatile compounds and odorous gases into the atmosphere. These emissions can contribute to air pollution and potentially affect the health of nearby communities (Jayawardhana et al., 2019). The impact on human health is related to exposure to pollutants in drinking water, which can lead to various health problems, including neurological, respiratory, and gastrointestinal disorders. The inhalation of odorous gases and volatile compounds can irritate the respiratory system and cause discomfort for people, for example living in proximity to landfills. Contaminants from landfills can enter the food chain when crops and livestock are exposed to polluted soil or water. This can lead to the consumption of contaminated food products, posing health risks to consumers (Parvin and Tareq, 2021).
Engineering and sanitary landfills are designed and managed to minimize emissions. In these facilities, the prevention of leachate formation and material dragging effect due to wind are pursued by several management practices such as the daily cover of the disposed waste, optimization of the waste placement and waste compaction. Furthermore, sanitary/engineered landfills are also equipped with proper systems for both gas and leachate collection and treatment (Di Maria et al., 2018b) and tight controls are performed on the amount and characteristic of the waste placed. However, some minor risks concerning water contamination can also occur for

engineering and sanitary landfills due to the cracking of the natural and artificial barrier systems causing some leakages of both leachate and landfill gas. Such events can happen during the whole life of the landfill with a probability higher than expected and can be caused by many factors such as waste settlement, bad design and/or choice of materials, installation damage and ageing (Pivato, 2011).

Over the years, advanced concepts of sanitary landfills management have been also proposed based on past experiences and according to the new environmental challenges as the "sustainable landfills" (Cossu and Stegmann, 2018). The sustainable landfill is functionally designed to accelerate the degradation of waste to an inert state in the shortest possible period, generally <30 years, for achieving a lower and possibly sustainable impact on the environment. Enhancing the degradation processes also affects the amount of pollutants in the leachate by decreasing, among others, the chemical oxygen demand and biological oxygen demand content. Currently, most of the literature available focuses on the contaminants typically encountered in landfill leachate and are included in national regulations. However, there is little information on emerging contaminants eventually present in this waste.

This paper offers a comprehensive examination of landfill leachate, its origins, and distinctive characteristics. Furthermore, it presents, for the first time, a comprehensive analysis of the global distribution of various waste types in landfills and their evolving patterns over time. This analysis offers insights into the potential pollutants that could be encountered in respective areas and their likely trajectories in the future. The work's primary objective is to underscore the critical need for a more thorough evaluation of the environmental and health ramifications linked to leachate originating from diverse disposal methods. In light of the absence of specific regulations and in light of the escalating concerns about environmental and health implications, particular attention is dedicated to emerging contaminants. While considering the existing body of literature on the risk assessment of landfill leachate contaminants, this paper seeks to provide a broader perspective. The work also aims to give an overview of the possibilities to fit the modern needs of the circular economy, by proposing some reuses of landfill leachate. Finally, it presents the challenges and perspectives for landfill leachate management, offering for the first time a vision of the future perspectives offered by artificial intelligence (AI).

2. Geographical distribution of landfill waste

Many activities such as municipal solid waste recycling performed by the informal sector, for example, waste scavengers and keepers, domestic and open burning, littering, and open dumping cause serious and challenging problems with potentially adverse environmental and health consequences. Globally, a large percentage of municipal solid waste is disposed of in open dumpsites or sanitary/engineered landfills, as shown in Table 1. In particular, for developing economies, >61 % of waste is still not collected (Kaza et al., 2018), up to 93 % of waste is dumped or openly burned and <3 % is disposed of in engineered landfills (Maalouf et al., 2020). It is evident that waste disposal methods exhibit notable disparities based on both income levels and geographical regions. In lower-income nations, open dumping is widespread due to the absence of established landfill facilities.

At the world level, the presence of waste on open land, roads and waterways due to improper and uncontrolled waste management and disposal, for example, open burning, dumping, and littering, has been estimated on about 35–40 % of the whole waste generated affecting a population of about 3.5–4 billion peoples (Atlas, 2014). The 50 largest dumpsites in Africa, Asia and Latin America affected the life of about 64,000,000 people in the area, and manifest waste and leachate go virtually into the rivers and the sea as 38 of these dumpsites are built in coastal areas (ISWA,

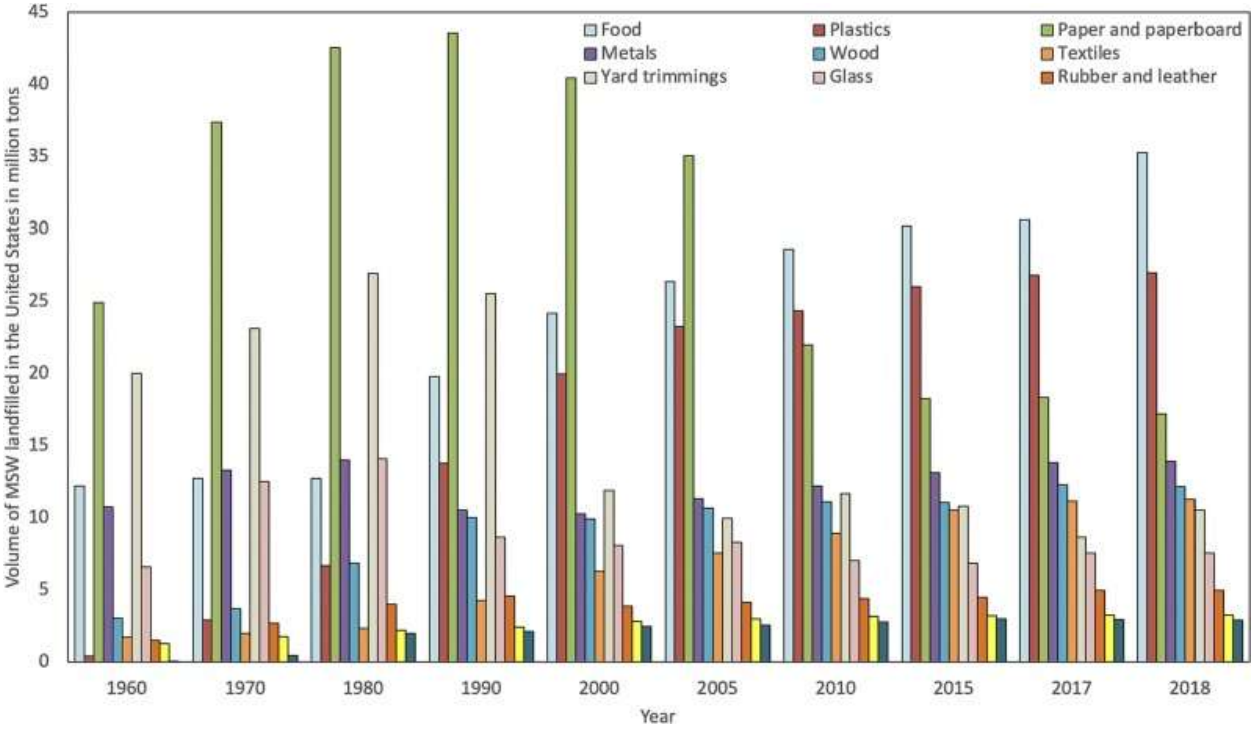
2016). In India, Indonesia, and the Philippines, about 9,000,000 people were at high risk of exposure to hazardous chemical pollutants released from about 370 dumpsites (Chatham-Stephens et al., 2013). All of this represents a serious environmental risk and a possible source of disease outbreaks.

Fig. 2 reports a ranking of some of the world's largest dump sites as of 2019, showing their size in acres (Worldatlas, 2022). Data are available in the Supporting information (S1). Xinfeng landfill site in China, is one of the largest landfills in Asia, receiving daily 7000 tons of generated waste. This landfill has a leachate collection system. Deonar landfill site, located in Mumbai, India, receives daily approximately 5500 tons of waste and the Puente Hills landfill site, located in Los Angeles, California, USA, could daily take up to 13,200 tons of waste. The leachate head exceeded 8 m in the Laogang landfill in Shanghai (Touze-Foltz et al., 2021).

The Apex Regional site in Las Vegas is the largest existing landfill, covering a land of about 2200 acres.

Unfortunately, several of the existing and unregulated landfill sites are often located in the proximity of urban areas. Then it was estimated that about 60 million people in the world live <10 km away from the largest dumpsites. All the data, concerning the largest landfilling sites and the population in their proximity, are available as Supporting information (S1).

Among the largest landfills in the world, about one-half receive both municipal solid waste and hazardous waste. This can have deleterious consequences on human health, considering that larger sites involve a high population, as shown in S1. For example, Williams et al. (2019) estimated that 0.4–1 million people die each year in developing nations because of diseases caused by improper waste management. Similarly, Kodros et al. (2016) found that uncontrolled waste burning is responsible for about 270,000 premature deaths of adult individuals whereas Vaccari et al. (2019) quantified that the death of about 9,000,000 people is directly related to several diseases caused by emerging pollutants that are released from municipal solid waste every year. Uncontrolled dumping and engineered/sanitary landfilling are still likely to remain the most common waste disposal option and remain so for the foreseeable future (Table 1).



3. Characteristics of leachate in municipal solid waste landfill

3.1. Leachate generation and characterization

Leachate is heavily polluted wastewater, mainly generated by the penetration of precipitated water through the municipal solid waste body. Also, the water originally contained in the waste contributes to leachate composition (Teng et al., 2021). The amount produced leachate can be greatly influenced by several factors including waste composition; climatic conditions; landfill management system; landfill liners and structure; and age (Renou et al., 2008).

As shown in Table 1, landfill and uncontrolled dump remain the first disposal option for waste. However, separate waste collection is realized in many countries, even if at different levels. This is expected to promote a better waste recovery strategy in the next future. At present, data about the specific volume of different wastes destined for landfilling (see Fig. 3) can help to have an idea of the potential pollutants that may be found and their possible trend. For example, the data evolution concerning landfill, available in the USA, shows that food is the most landfilled waste, with 35.3 million tons discarded in 2018, with a continuously increasing trend. Plastic volumes about doubled in 2018, corresponding to 26.97 million tons, if compared to data from 1990, corresponding to 13.78 million tons, but their trend is almost constant, and it is expected to decrease due to an increase in separate collection of packaging waste and the restriction about

the use of petroleum-derived materials. However, this has several implications in terms of released contaminants, such as microplastics.

2. Download: Download full-size image

Fig. 3. Volume municipal solid waste landfilled in the USA from 1960 to 2018, by material (Source: Environmental Protection Agency (Environmental Protection Agency, 2021)). It is possible to highlight the decrease in paper and paperboard waste generation, with an increase in food and plastic waste. In 2018 the municipal solid waste generated in the USA was about 292 million tons. Of the landfilled wastes, most are plastics, inorganic waste, yard trimmings, and food waste. Last year's loss of landfill capacity with the consequent decrease in landfilling sites represents a problem for the USA, with detrimental effects on the environment.

Along with landfill gas, leachate represents the main pollutant stream generated from waste disposal (Brennan et al., 2016; Koda et al., 2017; Shen et al., 2018). Indeed, a series of potentially toxic compounds based on the original waste composition can be introduced into the landfill: for example, organic nitrogen, aromatic and sulfurous compounds, and hydrocarbons, including chlorinated, bromated, and fluorinated hydrocarbons. Due to the increasing use of a wide variety of new drugs and chemicals, nanoparticles and other microcontaminants can also be found in the waste. Some of these pollutants are partly or completely degradable and may end up in landfill leachate. It is extremely important to highlight that in some cases the degradation compounds are more toxic than the original products (Erythropel et al., 2014).

Common chemical pollutants found in leachate can be grouped into the following classes:

- -Organic compounds detectable by the chemical oxygen demand or the total organic compounds, the volatile fatty acids and the fulvic-like and humic-like compounds resulting in more resistance to biological degradation;

- -Macro inorganic ions as Ca^{2+}, Mg^{2+}, Na^{+}, NH_4^{+}, Cl^{-}, SO_4^{2-}, HCO_3^{-};
- -Heavy metal as Cd, Cr, Cu, Pd, Ni, Zn, Hg, Fe, Mn, Co;
- -Organic compounds, such as polyfluoroalkyl substances, polycyclic aromatic hydrocarbons like persistent organic pollutants and volatile organic compounds;
- -Emerging contaminants include xenobiotic organic compounds such as aromatic hydrocarbons, phenols, chlorinated aliphatics, and pesticides, plasticizers, antibiotics, microbial contaminants;
- -Microplastics.

The composition of the landfill leachate depends on the country/region, waste type, and age of the landfill. Table 2 reports the contaminants and their concentrations in landfill leachates concerning the country and waste type. Landfill age becomes a determinant factor in leachate composition due to the degradation phase that leachate goes through.
Furthermore, a great amount of unsorted wastes arising from different activities such as wastewater treatment sludge, personal and absorbing hygiene products, health care waste, drugs, faeces, electronic waste, oils, batteries and chemical products are often disposed of in dumpsites (Yukalang et al., 2018; Zhao et al., 2018). Such waste represents a major anthropogenic load of different classes of antibiotics and antibiotic-resistant bacteria (Liu and Wong, 2013; Threedeach et al., 2012). Notably, leachate can be an important source of antibiotic resistance genes and contains a plethora of emerging contaminants such as lincomycin, bisphenol A, caffeine, gemfibrozil, crotamiton, sulfamethazine, acetaminophen, diclofenac, salicylic acid, N, N-diethyl-m-toluamide and clofibric acid as well as perfluorinated chemicals into the environment (Eggen et al., 2010; Masoner et al., 2016; Yi et al., 2017).
Due to the degradation processes occurring in the waste mass, the age of the landfill is a major factor in characterizing the quality of leachate and is broadly categorized into three parts (Foo and Hameed, 2009): <5 years old, i.e. young, 5–10 years old, i.e. medium, and >10 years old, i.e. highly mature. Additionally, landfill leachate characteristics are also highly dependent on physiochemical parameters such as alkalinity, total Kjeldahl nitrogen, chloride, biological oxygen demand, suspended solids, conductivity, chemical oxygen demand, total dissolved solids, phosphorus, temperature, pH, temperature, as shown in Table 3.
There are several case studies available discussing the contaminants present in landfill leachate. One recent study conducted in China investigated the occurrence and distribution of emerging organic contaminants in landfill leachates and their ecological risks in the surrounding environment (Wang et al., 2021). This was the first paper reporting the role of landfill leachates in the emerging organic contaminants presence in both aquatic and soil environments in East China. The results suggested that the individual emerging organic contaminants posed medium to high risks to aquatic organisms in groundwater while negligible effects were found for human health through consumption of vegetables. Another study conducted in Iran analyzed the impact of landfill leachate on groundwater quality and identified heavy metal concentrations, COD, BOD5, TOC, EC, NO3-, Cl-, TDS, and pH as sources of contamination, by using a special statistical approach including a main factor (age of leachate) and a subfactor (distance from the source of pollutant) (Vahabian et al., 2019), showing that a high variation in the contaminants (i.e., organic compounds, salts, and heavy metals) can be related to leachate age. A case study conducted in Kuwait examined the chemical characteristics of leachate and the mechanism of leachate formation in two unlined municipal solid waste landfills (Al-Yaqout and Hamoda, 2003). The authors proposed a water balance at the landfill site with a dedicated model designed

to account for leachate generation due to the rising water table, capillary water and moisture content of the waste.

Hence, landfill leachate composition is tremendously heterogeneous and remarkably variable. Consequently, numerous strategies such as waterproofing layers, cover layers and lining are being used to control water entry into the landfill and thus the amount of leachate produced (Dajić et al., 2016). Since leachate is a complex mixture of diverse contaminants, the characterization of the quality of landfill leachates is a challenging task (Boonnorat et al., 2018), particularly for emerging pollutants such as the ones discussed in the following paragraphs.

3.2. Composition of leachate/fate and transport of contaminants in landfill leachate

3.2.1. Dissolved organic matter

Landfills can be considered bioreactors in which chemical, biochemical, and physical processes take place. These mainly depend on the incoming waste composition, moisture, and climatic conditions. The municipal household solid waste is constituted by some substances, which are very similar worldwide, although they vary in amount. Approximately 75–85 % of the refuse destinated for landfill is biodegradable, as shown in Fig. 3. Biodegradable waste can be divided into two fractions: the readily biodegradable part, corresponding for example to food and garden wastes, and a moderately biodegradable portion, for example, wood, paper, and textiles. In a landfill, organic waste is largely degraded under anaerobic conditions. Fig. 4 shows the chemistry of major organic material anaerobic degradation pathways (Renou et al., 2008) occurring in a sanitary landfill, which can be divided into four phases: hydrolysis, acidogenic fermentation, acetogenic fermentation, and methanogenesis.

The first phase of biochemical degradation is fundamental for the reduction of complex organic matter, such as lipids, carbohydrates, and proteins into fatty acids, glycerin, saccharides, and amino acids. The hydrolysis phase is the process with the lower rection kinetics, then it regulates all subsequent reactions, slowing down the entire process.

In the second phase, which is defined as the acidogenic phase, biodegradable organic matter supports anaerobic fermentation, which produces volatile fatty acids as the main fermentation products. The process is enhanced by water presence, due for example to waste moisture or rainfall events, leading to the production of high quantities of volatile fatty acids, as much as 95 % of the organic content. In the acetogenic phase, methanogenic microorganisms develop, and the volatile fatty acids are converted to biogas. i.e., CH_4, CO_2. Aromatic hydrocarbons can be converted into acetic acid if they contain oxygen. The leachate organic part becomes dominated by refractory non-biodegradable compounds such as humic substances. The last phase of anaerobic degradation is methanogenesis: methane and carbon dioxide are produced, starting from hydrogen and acetic acid as a substrate. The presence of water vapor depends on the process efficiency.

Several microbial groups take part in the rate-determining steps of fermentation and methanogenesis. In these chemical reactions, organic parts are the main electron donors (predominant in the landfill environment). Carbon sulfate and dioxide are the major electron receptors.

Degradation of organics needs more long time if the process occurs in the solid phase in comparison to the liquid one, as the organic compounds need to migrate from the solid phase into the liquid phase by means of diffusion and dissolution. The dissolved organic matter in the leachate represents the organic matter fraction that can be passed through a 0.45 μm filtration membrane. It includes organic compounds with a wide range of molecular weights and sizes. As explained, this organic matter generally includes fats and compounds with a nature similar

to humic acids and fulvic acids serving as the abundant source of microbiological processes, thereby considerably influencing the fate of organic contaminants in their vicinity (Lyngkilde and Christensen, 1992).

Therefore, the composition of leachate reflects a typical condition of the dominant biological processes in a given period. Then, the experimental determination of individual organic compounds in leachate is hard to realize and hence properties such as biological oxygen demand, chemical oxygen demand and total organic carbon and volatile fatty acids are typically used to characterize leachate samples (Luo et al., 2020; Wijekoon et al., 2022). Generally, the elevated levels of biological oxygen demand and chemical oxygen demand suggest the presence of high concentrations of dissolved organic matter in leachate. Further, a low biological oxygen demand/chemical oxygen demand ratio indicates a low amount of volatile fatty acids and higher amounts of humic and fulvic-like compounds (Adhikari and Khanal, 2015; Wijekoon et al., 2022).

Leachate analysis of the Mavallipura landfill in India with an intermediate leachate age (5–10 years) showed high chemical oxygen demand concentrations corresponding to ~2000–3000 mg/L (Naveen et al., 2017). Also, a study conducted by Vithanage et al. (2017), for the analysis of dissolved organic carbon fraction in the leachate of Gohagoda dumpsite, Sri Lanka, showed recorded maximum values of 56,955 and 28,493 mg/L respectively for total organic carbon and dissolved organic carbon. They have extracted and purified the dissolved organic carbon fraction including humic acid, fulvic acid and hydrophilic fractions with the use of resin techniques. Recorded maximum values for total organic carbon and dissolved organic carbon were 56,955 and 28,493, respectively. It has been shown that the age of the landfill and the precipitation as the main factors which control the concentrations of the chemical oxygen demand and biological oxygen demand (Ma et al., 2022). Humic and fulvic-like substances can form complexes with metal ions. Therefore, recent attention has been paid to investigating the transport and complexation of toxic heavy metals with dissolved organic matter fractions (Wijekoon et al., 2022; Wijesekara et al., 2014).

3.2.2. Antibiotics and antimicrobial resistance

Antibiotics are extensively used as medicine to treat infections, livestock food additives in the management of animal husbandry (promoting growth in animal farming), and to prevent and treat plant and animal infections (Cabello, 2006; Singer et al., 2003; Zhou et al., 2013). As a result, the demand for antibiotics is exponentially increasing to confer all these applications, consequently leading to the release of huge amounts in the natural environment (Kokoszka et al., 2022). In recent years, the occurrence of antibiotics in the environment has gained the highest attention due to the leverage on the blooming of antibiotic resistance potentiating a global threat to public health (World Health Organization, 2015). An in-depth assessment of municipal solid wastes suggests the potential impact on the environmental settings at different amplitudes, as shown in Fig. 4.

Globally, the emergence of antibiotic-resistant bacteria and antibiotic resistance genes among microbial communities imposes a major threat to humans and the environment (Bengtsson-Palme and Larsson, 2015; Berendonk et al., 2015; Larsson et al., 2018; Martinez et al., 2015; Pal et al., 2015; Topp et al., 2018). Rather than the accumulation of point mutations, horizontal gene transfer plays a pivotal role in the propagation, multiplication, and progression of antibiotic resistance genes in the environment (Amaro and Martín-González, 2021; Anthony et al., 2020; Baquero et al., 2019; Baquero et al., 2021; Buta-Hubeny et al., 2022; Vrancianu et al., 2020). Improper, overused or poorly controlled usage of antibiotics without proper medication

resulted in the development of antibiotic-resistant bacteria (Frieri et al., 2017) and the emergence of antibiotic resistance genes both in the human gut upon initial intake and into the environment after release (Bound and Voulvoulis, 2004).

Several studies over the past few years showed that antibiotics are hardly metabolized and then directly released with excreta into the environment which ultimately goes into the landfill (Dolliver and Gupta, 2008). Surprisingly antibiotics are regarded as both emerging contaminants (Das et al., 2019) as well as food pollutants (Cabello, 2006; Martinez, 2009). To date, the widespread occurrence of antibiotic resistance genes has been observed in plenitude directions including natural ecosystems and engineered ecosystems, like air, surface water, soil, wastewater treatment plants, resulting in the potential spread of antibiotic resistance genes in the environment and human microbes (Buta-Hubeny et al., 2022; Guo et al., 2017; Hubeny et al., 2021; Levin-Reisman et al., 2017). Although landfills play the central character in the management and treatment of solid wastes (Buta et al., 2021a; Chakravarty and Kumar, 2019), the leachate generated during the waste decomposition process is regarded as a major hotspot for transmission of antibiotic-resistant bacteria and antibiotic resistance genes and necessary efforts are to be taken to control it (Wu et al., 2015) for the betterment of the environment and society. Although remarkable/noteworthy relationships have been found among municipal solid waste leachate, antibiotics, and the levels of antibiotic resistance genes associated, very limited research has been carried out in the light of their potential relation at the metagenomics level. Moreover, the composition, toxicity level, diversity, and identification of mobile genetic elements and antibiotic resistance genes in municipal solid waste landfill is still largely unexplored. Hence, research in this domain must be elucidated since municipal solid waste harbour a great number of different classes of anthropogenic compounds and antibiotics in large quantities (Anand et al., 2021). As a result of this, discarded antibiotics and the development of new antibiotic resistance genes significantly pass into the leachate which ultimately greatly pollutes nearby environments, as reported in Table 4. For instance, the study by Threedeach et al. (2012) showed 80.8–87.5 % of *Escherichia coli* isolates from leachate of anaerobic and semi-aerobic landfills in Thailand were highly resistant to four common antibiotics, tetracycline, doxycycline, cephalothin, and minocycline.

Moreover, discharge of treated landfill leachate is also chiefly correlated with antibiotic resistance genes introduction to the downstream ecosystem/surroundings as effluent receiving water, which ultimately leads to accelerating the increase and spread of antibiotic resistance genes concentration (Wang et al., 2020b). Surprisingly, the increase in the humic acid content greatly impacts the accumulation of the antibiotic resistance genes vitally (Yu et al., 2016). Besides, mobile genetic elements also harbour a greater degree of correlation/connectivity to antibiotic resistance genes in leachates (Wu et al., 2017). It has been documented that the numbers of bacterial 16S ribosomal RNA gene copies including *sulII*, *tetO*, *sulI*, *intl1*, *tetW*, and *dfrA* in landfill leachate have a strong positive correlation to developing antibiotic resistance (Wang et al., 2015; Yi et al., 2017).

According to the findings of Song et al. (2016) numerous physicochemical factors, including nitrate concentrations and moisture content in landfill waste, exhibited strong correlations with antibiotics and antibiotic resistance genes, claiming that chemical conditions significantly influence antibiotic and antibiotic resistance genes delivery in landfill settings. Recently, several studies have discovered that depositing waste containing fluoroquinolones and β-lactams into landfills could have a remarkable impact on the dissemination of antibiotic resistance genes and

antibiotic-resistant pathogens (Su et al., 2017a; Wu et al., 2017; Wu et al., 2015; You et al., 2018).
Biocide utilization also contributed to the rise of multidrug resistance (Pal et al., 2015). As many studies indicated that antibiotic introduction has been found to influence the increased frequency of mutation and recombination in bacteria through SOS response (Blázquez et al., 2012; López et al., 2007). Therefore, the release of environmental bacteria to various concentrations of antibiotics is likely to create modifications with a high rate of genetic reorganization and this higher rate enables bacteria to quickly acquire favourable mutation and associated genetic modification, and upon contact with antibiotics may lead to the high frequency of genetic reorganizing bacteria establishment in the environment (Gillings and Stokes, 2012).

3.2.3. Microplastics

Undoubtedly, plastics are one of the most widely used materials globally. It has become an inextricable component of the material world, permeating everything from plastic packaging (bags and bottles), clothing, and equipment parts to construction materials. The world's plastic generation exceeded 348 million tons in 2017 from 2 million tons in the 1950s (Plastics Europe, 2018) and 359 million tons in 2018 (Plastics Europe, 2019). The generation of plastic waste is really blooming throughout the world and is a leading environmental problem as well as an emerging issue. Worldwide, microplastics are arising as a potential pollutant and received the highest attention from the municipality, public audience, and major research societies. Microplastics and large microplastics are classified as particles of plastic waste material that have the highest size from 1 μm to 1 mm (Eerkes-Medrano et al., 2015; Koelmans et al., 2015; Marchesi et al., 2023) and from 1 mm to 5 mm, respectively (ISO, 2023). Recently, microplastics originating from municipal solid waste landfill leachate have been recognized as an emerging threat to the natural ecosystem (He et al., 2019). Solid waste landfills responsible for the release of a total of 17 types of microplastics from different landfill sites were recently documented (He et al., 2019). Moreover, several studies claim that microplastics have been enormously found in marine waters, freshwater bodies, and globally (Auta et al., 2017; Cole et al., 2011; Novotna et al., 2019). However, the concentration of microplastics in the leachate ranged between 0.42 and 24.58 items/L (He et al., 2019).
When compared to other emerging contaminants, such as pharmaceuticals and personal care products (PPCPs), per- and polyfluoroalkyl substances (PFAS), and nanomaterials, microplastics have several unique characteristics and importance: 1) Ubiquity and persistence, 2) Wide range of sources, 3) Regulatory action (Some regions and countries have introduced regulations and bans on microplastic-containing products, reflecting the growing recognition of their environmental and health risks), 4) Challenges in management (Unlike some emerging contaminants that can be effectively removed or treated through conventional water and wastewater treatment processes, the removal of microplastics from the environment poses significant challenges due to their small size and ubiquity (Anand et al., 2023)).
The source of microplastics in the leachate was the resultant of polythene $(C_2H_4)_n$ degradation after being buried in the landfill. Several studies in the recent past have mainly focused on the size of microplastics in different habitats which ranged from >1 μm (81–92 %) (Pivokonsky et al., 2018), <20 μm (96 %) (Triebskorn et al., 2019), <300 μm (61 %) (Leslie et al., 2017), <2000 μm (80 %) (Wang et al., 2017), and <500 μm (Yuan et al., 2019). The formation, accumulation, and transport of microplastics at the landfill site are long-term phenomena. Their study concluded landfill sites as the potential source of release of microplastics rather than serving as a sink for polyethene.

It has been reported that huge quantities of plastics are dumped into landfills every year. Landfilling, globally recognized as the most common waste management technique, was projected to store 21–42 % of the global plastic waste generation (Nizzetto et al., 2016). Currently, increasing awareness is also oriented to emerging contaminants, for example, antibiotics and flame retardants, in municipal solid waste landfills that are still not regulated and for which specific thresholds are not defined yet.

3.2.4. Macro inorganic contaminants

Macro inorganic components represent one of the four major groups of constituents in landfill leachates (Kjeldsen et al., 2002). Macro inorganic compounds in leachates mainly comprise different ions including Na^+, K^+, Ca^{2+}, Mg^{2+}, Fe^{2+}, Zn^{2+}, Al^{3+}, NH_4^+, Cl^-, HCO_3^- NO_2^-, NO_3^-, SO_4^{2-}, and PO_4^{3-} (Chakrabarty et al., 2016; Robinson, 2007; Shehzad et al., 2016). However, Li^+, Ba^{2+}, Co^{2+}, Hg^{2+}, BO_3^{3-}, S^{2-}, SeO^{2-}, and AsO_4^{3-} could also be found in leachate as macro inorganic contaminants in minute concentrations and thus have less importance (Robinson, 2007). Macro inorganic contaminants typically appear in higher concentrations in leachates. However, the current stage of landfill stabilization, the composition of wastes, and other leachate characteristics affect the concentration of some macro inorganic compounds (Adhikari and Khanal, 2015; Wijekoon et al., 2022). For example, methanogenic leachate associated with elevated pH values favours the sorption of cations such as Fe^{2+}, Ca^{2+}, and Mg^{2+} into organic components that reduce the concentrations of cations together with the formation of precipitation with anions. Similarly, the concentration of SO_4^{2-} is decreased in the methanogenic phase since the reduction of SO_4^{2-} to S^{2-} via microbial activities (Adhikari and Khanal, 2015).

Some macro inorganic contaminants such as Cl^-, Na^+, and K^+ are considered conservative pollutants due to their negligible reaction abilities for removal through complexation, precipitation, or sorption (De et al., 2016). Chloride shows insignificant reactions for complexation, precipitation, and sorption (Kjeldsen et al., 2002) while Na^+ is not removed by complexation and precipitation (Erses et al., 2008). Other than being a conservative pollutant, K^+ is identified as a dilution indicator (Demirbilek et al., 2013).

Moreover, Fernández et al. (2014) indicated the usefulness of the concentration of macro inorganic compounds as indicators to access groundwater contamination with leachate plumes. In this study, strong distribution patterns of leachates in groundwater were identified with macro inorganic compounds such as sulfate, chloride, and iron.

3.2.5. Heavy metals

The municipal solid waste landfill leachate containing an unacceptable level of hazardous inorganic contaminants including metals and metalloids may eventually affect the nearby soil profiles, groundwater (O'Shea et al., 2018; Regadío et al., 2012), and the surface water environment. The mobilization of metals was influenced by the characteristics of leachate, in addition to the redox status and pH of minerals present in aquifers. Øygard et al. (2007) have shown the immobilization of unbound heavy metals present in landfill leachate to some extent after aerobic storage of 48 h. The rapid sorption of cations occurred because of increased pH nevertheless, there was little adsorption of arsenic and antimony at such elevated pH indicating the enhanced mobilization of these metals from pore water to the nearby aquifer system. However, arsenic as the inorganic contaminant of landfill leachate was recently presented by (Hu et al., 2019). The fate of leachate containing arsenic was assessed using a suitable extraction process and the overall content of arsenic in the landfill ranged from 15.26 to 38.41 mg/kg. There was an increase in the arsenic content downstream of the landfill up to 19 m. However,

subsequent zones displayed a decrement in the amount of studied metalloid. The content of arsenic varied significantly in different fractions like F1, defined as the exchangeable part, F2 corresponding to the oxidizable one, F3 which is the reducible fraction, and F4 the residual part. The allocation of arsenic in different fractions was affected by the presence of nitrate, carbonate, oxygen availability, the content of ferrous and ferric ions as well as crystalline forms of different mineral species.

3.2.6. Emerging organic contaminants

Leachates originating from different domestic and industrial landfills comprise a diverse array of potentially toxic recalcitrant organic contaminants (Hu et al., 2019) with ample chances of transport into nearby aquifers and subsequent contamination, if not managed properly. Organic pollutants in landfill leachate are found to be diverse in types. In general, the municipally derived landfill leachate consists of increased content of xenobiotics of organic origin apart from the organic materials resulting from the breakdown of landfilled organic components.

Persistent organic pollutants such as albendazole, lincomycin, acetaminophen, diclofenac, naproxen bisphenol A, endosulfan and 2,4-Di-tert-butylphenol have been detected in landfill leachate (Aziz et al., 2018; Wu et al., 2021).

The utilization of organic components via microbial activities and transport of leachate from one region to another region of the aquifer may create different conditions varying from anaerobic like methane produced in the proximity of landfilled location, S, Fe, Mn, and NO_3^- reducing followed by oxidizing environment prevailing at the plume. The occurrence of different anaerobic and aerobic environments beneath the landfilled site is regarded as an important characteristic for evaluating the fate of organic contaminants present in the plume of leachates. The breakdown of little content of organic contaminants derived from landfill leachates is attributed to the microbiological processes and availability of electron acceptors in aerobic and anaerobic zones of plumes. Based on the analysis of leachate plume from a total of 75 points, Lyngkilde and Christensen (1992) concluded the contribution of microbe mediated biodegradation, in addition to adsorption in the different reduction-oxidation environments as the key factor regulating the fate of organic contaminants. Most of the contaminants could not be identified up to 100 m of the plume, however, one of the agrochemicals (herbicide) mecoprop ($C_{10}H_{11}ClO_3$) was observed to transport for long distances. Overall, the study signified the role of the ferrogenic environment in regulating the fate of contaminants.

Disposal of waste containing polyfluoroalkyl substances into landfills has been started a few decades ago however, increasing in quantities every year (Wei et al., 2019). Per- and polyfluoroalkyl substances are considered a major threat due to their environmental and human health-related concerns. The polyfluoroalkyl compounds in landfills potentially leach out and contaminate adjacent soil and groundwater resources (Wei et al., 2019). Among >5000 man-made polyfluoroalkyl compounds, perfluoroalkyl carboxylic acids and perfluoroalkyl sulfonic acids belong to the perfluoroalkyl acids group and are frequently reported in landfill leachates (Rahman et al., 2014). Abiotic leaching such as desorption and biotic leaching processes involves for release of polyfluoroalkyl substances from solid wastes (Allred et al., 2015). Short chained perfluoroalkyl acids consist of 4–7 carbon atoms that are highly soluble and persistent in aquatic medium thus, predominant in leachates compared to the longer chain perfluoroalkyl acids (Benskin et al., 2012; Hamid et al., 2018). The complex nature of the matrix, low biodegradability, high thermal stability, and high water solubility cause the removal of polyfluoroalkyl substances through conventional techniques ineffective (Yu et al., 2009).

Therefore, additional, and expensive treatment technologies are required to remove polyfluoroalkyl substances from leachates.

Besides, local differences in the transformation of organic contaminants of aliphatic nature were also observed. Although the transformation of organic contaminants was observed for both in situ and laboratory-based experiments, in some instances, the in-situ transformations were more prevalent. The environmental conditions prevailing in leachate plume were identified as methanogenic, ferrogenic and nitrate-reducing (Lyngkilde and Christensen, 1992). The conversion of nitrophenol with a reduced lag phase was rapid under a reducing environment in the proximity of the landfill site, however, the transformation was remarkably slower in the oxidizing zone of the investigated plume.

In contrast, the conversion of phenol, C_6H_5OH, with very little, which was much prevalent for up to two months in the distal part of the plume characterized by nitrate-reducing, ferrogenic and manganogenic environments. The conversion of dichlorophenol was noticeably prominent under a highly reducing environment represented by reducing conditions, in the vicinity of landfill sites, having a lag phase reaching up to after 9 days. The differences in the transformation of the study's organic contaminants under in situ and laboratory experiments may be due to changes in the redox environment (Borch et al., 2010; von der Heyden and Roychoudhury, 2015).

The contaminant transformation may also be regulated by the presence of other ions in plumes, the chemistry of contaminants, the nature, and diversity of microorganisms involved as well as the reducing and oxidizing environments prevailing in the plume, aquifer, and sediments. Apart from the biological factors, abiotic factors may also participate actively in the transformation of contaminants (Kotthoff et al., 2019). The natural remediation of recalcitrant organic contaminants stemming from landfill leachate is presented by Baun et al. (2003). Reinvestigation of a previously studied landfill site, for a total of 49 groundwater samples with references to redox responsive substances and organic contaminants, surrounded by the leachate plume was carried out (Baun et al., 2003).

The characteristics of the studied plume were unchanged even after 10 years except for minor alterations in the content of chloride, organic contaminants, and non-volatile organic carbon. Most of the contaminants present in the leachate plume were susceptible to degradation except the mecoprop, benzene, and non-volatile organic carbon. In the leachate plume, toluene was degraded to benzyl succinic acid. The assessment of toxic organic contaminants in the plume could provide insight into the mechanistic details of the natural attenuation process. Reductions in the concentrations of perfluoroalkyl acids in landfill leachate as compared to raw samples during biological treatment have been reported by Yan et al. (2015).

Interestingly, the loss in perfluoroalkyl acids content was not the result of the biodegradation process, as the contaminant was recalcitrant to microbiological activities (Higgins et al., 2007). Since the vapor pressure of perfluoroalkyl acids degradation products was very little, the reduction in its concentration through volatilization was not possible. The decrease in perfluoroalkyl acids content was attributed to the sorption by activated sludge materials.

4. Environmental impacts, risks, and their assessment

Landfill leachate is a very complex high-strength wastewater, which contains suspended and dissolved materials such as heavy metals, inorganic salts, nutrients, microbial contaminants and various organic compounds removed from the decomposing waste in the landfill body (Arunbabu et al., 2017; Wdowczyk et al., 2022). The mixing of landfill leachate into groundwater, surface water bodies and soil undoubtedly generates environmental risks (Ashraf et al., 2019). The main categories that can be directly or indirectly affected are several: land, soil,

water, air, climate, biodiversity, material assets, cultural heritage, landscape, and population and human health. Therefore, this section deeply discusses the adverse effects of landfill leachates on ground and surface water, soil physicochemical and biological properties, development of antibiotic resistance as well as risks of microplastics in leachates and negative impacts on ecology. Moreover, this section points out the important aspects of the Leachate Pollution Index, which has been recognized as a valuable tool to estimate the pollution threats from landfill leachates generated from different landfills/open dumps thus, an important implementation for policymaking.

4.1. Effect of municipal solid waste landfill leachates on groundwater and surface water bodies

Municipal solid waste landfills are considered to be important sources of groundwater contamination due to the leakage of leachate, a complex mixture of pollutants having high chemical oxygen demand, high ammonium nitrogen content, high heavy metal content and lasting toxicological characteristics (Li et al., 2014; Teta and Hikwa, 2017). Many studies have indicated that the main pollutants from landfills found in groundwater include chloride, sodium, and ammonium ions, total hardness, total dissolved solids, organic matter such as chemical oxygen demand, heavy metals (Azizi et al., 2015; Cheng et al., 2013), and phosphate (Milosevic et al., 2012; Smahi et al., 2013).

Hepburn et al. (2019) determined a maximum concentration of 5200 ng/L of per-and polyfluoroalkyl substances, which was the sum of 14 compounds, in a landfill site in Australia. The same study found that PFHxS has the highest concentration (2.6–280 ng/L) among 14 per-and polyfluoroalkyl compounds followed by perfluorooctane sulfonate, perfluorohexanoic acid, and perfluorooctanoic acid, resulting 1.3–4800, 0 ≤ −46, and 1.7–74, respectively. A positive correlation was reported for per-and polyfluoroalkyl substances and leachate contaminants like ammoniacal nitrogen and bicarbonate. Especially in unlined landfills, leachate can contaminate groundwater with potentially hazardous chemicals at concentrations that violate drinking water standards (Reyes-López et al., 2008).

Municipal solid waste landfill leachates can contaminate water resources through groundwater underflow, runoff, infiltration, and precipitation (Mor et al., 2006). Leachate disperses in both horizontal and vertical pathways due to dilution and advection (Abiriga et al., 2021a). After contaminants reach the groundwater, the pollutants in leachate can mix with the aquifers. For example, many simply constructed or non-standard landfills have resulted in groundwater contamination to different extents in developing countries; these landfills include the Henchir El Yahoudia landfill in Tunis (Marzougui and Mammou, 2006), Matuail landfill in Bangladesh (Azim et al., 2011), Ondo landfill in Nigeria (Akinbile, 2012), Mediouna site in Morocco (Smahi et al., 2013), Matang landfill in Malaysia (Zawawi et al., 2012), and the Suchi landfill in India (Bhalla et al., 2012).

About 75 % of the 55,000 landfills in the USA have polluted the water resources close to them (Lee and Jones-Lee, 1993). Moreover, in Spain (Regadío et al., 2012), Denmark (Milosevic et al., 2012) and Greece (Fatta et al., 2002), the groundwater near some landfills has been contaminated by nitrate, nitrite, and ammonium. The studies investigation revealed the availability of different organic wastewater contaminants in groundwater samples. The cholesterol was identified at a site upstream of the landfill sites and documented for its presence at all locations. The leachate plume generated from landfill sites was also noticed for the existence of insecticides and flame retardants. The sampling locations nearby were observed to have higher concentrations of contaminants as compared to those located at distant positions.

The number of organic contaminants at sampled locations varied from a minimum of 4 to a maximum of 17. The presence of hazardous organic contaminants even after long-duration examination of landfill sites revealed the persistent nature and long-range transport of targeted contaminants in groundwater.

The toxic byproducts of the leachate are manifold, of which the heavy metals play a significant role as a contaminant of water pollution (Ebadi Torkayesh et al., 2019). Studies show that it is challenging to evaluate the behavior of heavy metals in leachate-polluted groundwater as they are strongly bound to microscopic colloidal matter and organic molecules (Matura et al., 2012). The effect of landfill leachate on groundwater characteristics concerning size and heavy metal content in colloids has also been investigated by (Zhai et al., 2019). The size of metal-bearing colloidal particles in groundwater downstream of the landfill site was >200 nm, however, at upstream locations, the size was <10 nm.

Furthermore, the concentration of iron was higher in downgradient sampling locations as compared to upgradient sites, suggesting the transport and storage of colloidal materials in an aqueous environment. The study revealed the contribution of colloids in controlling the fate and transport of particulate as well as inorganic contaminants. The analysis of collected leachate samples had higher values of electrical conductivity, nitrate, chloride, biological oxygen demand and chemical oxygen demand during dry environmental conditions. The biological oxygen demand and chemical oxygen demand values of water samples were higher than the prescribed limits indicating the employment necessity of appropriate remedial procedures to make the contaminated water suitable for intended purposes. The increased electrical conductivity and enhanced concentrations of important cations and anions in groundwater collected near the landfill site are also demonstrated by Ahamad et al. (2019). Overall, previous studies have claimed that leachates have four chief components which include heavy metals, nutrients, toxic organic compounds and volatile organic compounds (Arunbabu et al., 2017; Budi et al., 2016; Kumarathilaka et al., 2016; Moody and Townsend, 2017).

Moreover, the water resources are observed to be contaminated with high levels of leachate during the wet seasons of the year. The leachate contamination is often propelled by rainy weather through surface runoff and infiltration (Alemayehu et al., 2019). Furthermore, the leachate flow increases linearly with increasing precipitation (Yu et al., 2021). Therefore, the changes in the rainfall highly affect the amount and characteristics of the leachate (Abunama et al., 2021b). Usually, the contamination levels in the groundwater reduce with increasing downstream distances, from the landfill (Sharma et al., 2020). Compared to the proximity of the landfills, there is less influence of other attributes such as topography, type, and state of the landfill to the degree of leachate contamination of water bodies (Akinbile and Yusoff, 2011).

4.2. Effect of landfill leachates on soil physico-chemical and biological properties

The concentrated leachate that reaches the bottom of the landfill infiltrates through different soil layers before reaching the groundwater system. The infiltration of leachate not only contaminates the soil but also alters the physico-chemical and biological properties of the soil layers through which it passes (Ingle, 2022). Studies show that the surrounding soil environments closer to landfills are directly contaminated by leachate when the leachate is not properly treated (Gu et al., 2022). The passage of landfill leachate through soil layers can negatively affect the soils' engineering properties including factors like shear strength, and volume changes as well as chemical properties such as adsorption and retention of heavy metals (Emami et al., 2019; Ingle, 2022).

Industrial and household metal garbage such as light bulbs and electrical equipment are the major sources of heavy metal pollution in landfills (Adelopo et al., 2018; Jaishankar et al., 2014) which are major anthropogenic sources of soil contamination through landfill leachates (Ojuri et al., 2016; Pohrebennyk et al., 2017; Pohrebennyk et al., 2016). Hussein et al. (2021) indicated the impacted soils in landfills contained high concentrations of heavy metals compared to the natural soils and the soil samples taken from non-sanitary landfills were moderate to strongly polluted. A case study in Pune, India highlights that the soil samples near the MSW dumpsite are highly contaminated with heavy metals and organic pollutants when compared to the farthermost soil samples (Ingle, 2022). As landfill leachate undergoes both horizontal and vertical migration through the soil and it consequently contaminates multiple layers of soil (Gu et al., 2022). Landfills are significant contributors to microplastic contamination in the environment, and the presence of microplastics in landfills is independent of the age of the landfill (Puthcharoen and Leungprasert, 2019). Microplastics are produced in landfills mainly due to the accumulation of large quantities of plastic waste from municipal and industrial sources in landfills (Kabir et al., 2023). The impact of microplastics transported via leachate in soil systems remains a largely unexplored (Bharath et al., 2022). The primary origins of microplastics in landfill leachate stem from two key sources: solid waste and by-products of wastewater treatment plants (Golwala et al., 2021). The distinct characteristics of microplastics can bring about changes in soil texures and structures, ultimately affecting the physico-chemical properties of the soil (Guo and Fei, 2023; Wan et al., 2019).

A recent study conducted by Wan et al. (2022) observed drastically high microplastics contamination in the soil underneath the landfill than the microplastics in leachates and groundwater. This study found 570 to 14,200 items/L of microplastics underneath soil while 3 to 25 items/L of microplastics in leachates and 11 to 17 items/L in groundwater in the landfill site. The majority of microplastics documented in this study belonged to polyethylene, polyethylene terephthalate, and polypropylene. Microplastics presence in the soil can reduce the soil adsorption characteristics, leading to increased bioavailability of hazardous inorganic and organic contaminants in soil (Hüffer et al., 2019). Studies further show that microplastic contamination reduces the residual moisture content of compacted soils, independent of microplastic size and concentration and the impact of microplastics on air-entry pressures in soil varies depending on the size of the microplastics (Xie et al., 2023). The modification of physicochemical properties in microplastics as they age in landfill leachate is a critical reservoir for both microplastics and antibiotic-resistant genes (Anand et al., 2021). The microbial community residing on microplastics includes antibiotic-resistant genes (Liu et al., 2023). Compared to the leachate, the bacterial community on microplastics displays a higher capacity for biofilm formation and pathogenic potential. Moreover, quantitative data on antibiotic-resistant genes indicates that microplastics exhibit a selective enrichment of antibiotic-resistant genes at ratios ranging from 5.7 to 103 times higher than leachate, and the ageing process of the leachate (and microplastics) further enhance the enrichment potential of antibiotic-resistant genes (Su et al., 2021).

Research findings revealed that the introduction of antibiotics has altered the microbial denitrification process, a dominant pathway in reactive nitrogen removal (Hinshaw and Dahlgren, 2013). The study by Wu et al. (2017) strongly supported the hypothesis that the acquisition of antibiotic resistance genes in the form of the mobile genetic element by antibiotic-resistant bacteria influences the denitrification process affecting nitrogen intermediates, causing nitrogen imbalance in the soil.

4.3. Antibiotic resistance and antimicrobial resistance

Most antibiotics are poorly absorbed in the guts of humans and animals and remain unchanged when excreted, resulting in as much as 30 %–90 % of compounds discharged via manure or urine and ultimately released into the soil environment. The prolonged usage of agriculturally important antibiotics likeazithromycin, tetracycline, aminoglycoside, and streptomycin, inducing the development of resistance has attracted national and international concerns (Topp et al., 2018). Illegal supplementation of antibiotics with animal feed also contributes to the excessive release of antibiotics into the environment through animal manure (ur Rahman and Mohsin, 2019).

The majority of antibiotics are released into the environment from the defecation of livestock and humans as their waste contains either non-metabolized antibiotics or active metabolites (Marx et al., 2015). The persistence of released antibiotics, antibiotic-resistant bacteria, and antibiotic resistance genes are noted to be responsible for their environmental dissemination. For instance, Buta et al. (2021b) emphasize the risk of antibiotic resistance gene accumulation in plants. Therefore, it is necessary to use the required doses of antimicrobials for livestock and human being to reduce the onset and spread of antibiotic resistance genes and antibiotic-resistant bacteria in the environment (Pruden et al., 2013; Williams-Nguyen et al., 2016).

According to previous studies, the overall concentration of antibiotics in municipal solid waste landfill leachate is comparatively higher than the total content of antibiotics at wastewater treatment plants (Wu et al., 2015). Thus, landfill leachate can be considered as a “sink and source” for antibiotics and antibiotic resistance genes posing a potential hazard to humans and surrounding ecosystem health. These antibiotics and antibiotic resistance genes diffuse to the surrounding soils and water bodies through a range of physical, biological, as well as microbial processes (Liu et al., 2022a).

Sanitary landfilling is the most frequent waste disposal method, and it involves disposing of antibiotics from various sources like pharmaceuticals, personal care products, and toilet papers from hospitals and households (Eggen et al., 2010; Threedeach et al., 2012). Municipal refuse and landfills released into the soil via leaching caused by environmental events such as rainfall cause their massive dissemination (Salleh and Hamid, 2013). The landfill leachate flow bearing antibiotic resistance genes and metals ultimately disseminate into the environment posing high risks to the ecosystem and human health (Xie et al., 2014). Young leachates could exhibit higher antibiotic concentrations, whereas old leachates may contain a greater amount of antibiotic resistance genes due to the high stability of physicochemical characteristics of older leachates (Wu et al., 2017). A case study in Shanghai, China reveals that sulfonamides, quinolones, and macrolide were found in higher levels in MSW leachate and all leachate samples examined consisted of antibiotic resistance genes (Wu et al., 2015).

Recent studies by experts provide evidence of the propagation of antibiotic-resistant bacteria and antibiotic resistance genes in a landfill area through horizontal gene transfer (Wu et al., 2017; Yu et al., 2016). Studies have concluded that the production and transmission of soil antibiotic resistance genes are affected mainly by the half-lives of antibiotics and their potential sorption to soil particles, which can induce selective pressures (Lau et al., 2017; Xie et al., 2018), the co-selection of antibiotic resistance genes with metal- and biocide-resistance genes in metal or biocide contaminated environments (Imran et al., 2019), and mobile genetic elements (Von Wintersdorff et al., 2016). Wu et al. (2015) showed that the presence of antibiotic resistance genes significantly correlates with heavy metal levels such as Cd and Cr in MSW leachate contaminated soils.

The release of antibiotics in soil and the formation of degradation products rely on the physicochemical properties and microbial activity of the soil, hence antibiotics may exert constant, longer periods of selective pressure among soil microbes (Pan and Chu, 2016). As an example, in the Great Lakes Basin of humid- temperate regions, the applied antibiotics were enriched, leading to their availability for several months and possibly for more than a single crop growing season (Marti et al., 2014). The environmental risk further increases when the treated wastewater or landfill leachate is mixed with river/canal water and reused for agricultural irrigation at places where freshwater availability is under scarcity (Pina et al., 2020). Some studies have indicated that the waste treatment plant may help to partially eliminate the antibiotics, antibiotic-resistant bacteria, and antibiotic resistance genes (Le-Minh et al., 2010; Michael et al., 2013).

Antimicrobial resistance is an emerging threat to human health as it results in significant challenge to a plethora of antimicrobial treatment regimens in use (McGowan Jr, 2001). Studies show that expired medicines and pharmaceuticals mostly are disposed municipal solid wastes (Okeke et al., 2022; Rogowska et al., 2019). Experiments conducted in Ghana have revealed that, when subjected to screening with certain antibiotics, Enterobacteriaceae, along with specific *Bacillus* and *Listeria* species isolated from soil and leachate samples from MSW landfills, exhibited resistance to antibiotics (Borquaye et al., 2019).

Besides, the emergence, survival, and proliferation of antibiotic-resistant bacteria carrying mobile genetic elements can present the risk of dissemination of antibiotic resistance genes within the diverse pool of soil bacteria and ultimately to human pathogens is now one of the prime concerns worldwide (Xu et al., 2021). Therefore, all management practices including manure-derived amendments should be taken into consideration during the development of policy and practice for mitigating the spread of antibiotic resistance in the natural environment.

4.4. Risk of microplastics

Landfills and open dump sites receive a substantial volume of plastic waste from industrial and household sectors, accounting for approximately 42 % of global plastic waste (generated in 2018) (Hahladakis et al., 2018). Plastic waste generation is accelerated throughout the world contributing more and more plastic waste to landfills. Microplastics originating from municipal solid waste landfill leachate are recognized as an emerging threat to the natural ecosystem (He et al., 2019). Microplastics released from municipal solid waste sites could potentially pose risks to both human and environmental health due to the capacity of microplastics to adsorb toxic and long-lasting hazardous chemicals (Silva et al., 2021). The concentrations of microplastics in leachates can vary, and the diversity of microplastic types in leachates is often linked to the kinds of plastic waste present in the respective landfills (Shen et al., 2022). The study conducted by Sun et al. (2021) detected respectively 11.4 μg/L and 235.4 item/L of microplastics mass and concentration in landfill leachates. A similar study from South East Europe revealed microplastic concentrations ranging from 0.64 mg/L to 2.16 mg/L in landfill leachate (Narevski et al., 2021). The concentration of microplastics in young landfills is higher than in old landfills, and specific polymers such as polypropylene, polystyrene, nylon, and polycarbonate contribute significantly to microplastic contamination (Singh et al., 2023). Because of the hydrophobic properties, microplastics have the potential to act as carriers of persistent hazardous chemicals. If not treated well (in the landfills or leachate), microplastics can easily contaminate the surrounding environment (Hartmann et al., 2017). Despite being an emerging contaminant, research on the levels of microplastics in landfill leachates remains limited (Silva et al., 2021).

The buoyancy effect resulting from low density coupled with uneven shapes of microplastics causes challenging situations when removing them through the sedimentation process. Therefore, contamination of groundwater and surface water sources with microplastics resulting from leachate leakages and environmental disposal of treated leachates is inevitable. Natesan et al. (2021) detected 2–80 items/L of microplastics in groundwater resources around Kodungaiyur and Perungudi municipal solid waste landfill sites in India. Microplastics in groundwater possibly create human health-related consequences over long-term use.

Microplastics occur in landfill leachates together with high concentrations of other contaminants including organic pollutants and heavy metals. Therefore, other pollutants could bind with microplastics while making it a vector and carried away into the natural environment with leachate discharge creating harmful environmental impacts (Su et al., 2019). Weathering of microplastics further increases their surface area and hydrophilic activity permitting the binding of wide varieties of organic and inorganic pollutants (Duan et al., 2021). Weathered microplastics can adsorb heavy metals and metalloids by creating hydrogen bonds, electrostatic interactions, and ion complexation (Dong et al., 2020; Wang et al., 2020c). Similarly, electrostatic interactions and hydrogen bonding permit the binding of hydrophilic organic pollutants into weathered microplastics (Liu et al., 2019; Wu et al., 2020). This binding process of organic and inorganic contaminants into microplastics induces environmental threats via increasing bioavailability and distribution of contaminants.

Studies showed the positive involvement of microplastics for antibiotic resistance genes in soil and aquatic environments. Su et al. (2021) found out bacterial communities associated with microplastics exhibit greater pathogenic potential and high biofilm formation compared with the microbial communities in leachates. The same study discovered a positive correlation between microplastics ageing with antibiotic resistance gene enrichment. A similar study conducted by Shi et al. (2020) observed an extended enrichment of antibiotic resistance genes in microplastics particle sizes between 200 and 500 nm. Furthermore, prolonged exposure to microplastics driven bacterial communities to be closely associated with antibiotic resistance genes. Exposure to microplastics further induces the generation of reactive oxygen species which alters the membrane permeability of bacteria making them susceptible to receiving antibiotic resistance genes through intra-bacterial community transferring of genetic materials. Therefore, thorough investigations of the presence of microplastics in leachate and factors affecting their mobilization would help mitigate the associated risks.

The removal of microplastics from leachate is a challenging process due to the diversity of leachates as well as microplastics (Chamanee et al., 2023). In addition to the existing microplastic removal methods, there is a pressing need to develop innovative technologies for microplastic removal. These approaches should be backed by rigorous data collection and supporting evidence and then integrated into waste management systems to effectively reduce the presence of microplastics (Rafiq and Xu, 2023). To address the environmental impact of microplastics in leachates, it is imperative to minimize the disposal of plastics in landfills. This can be accomplished by prioritizing strategies such as reduction, recycling, and waste-to-energy conversion. Furthermore, public awareness campaigns should be launched to encourage changes in consumer behavior, specifically emphasizing the avoidance of short-lived items, like single-use plastics (Silva et al., 2021).

4.5. Ecological risk

Leachate can pose ecological risks if not properly managed. As shown, leachate can contaminate surface water, groundwater, soil, and ecosystems due to the presence of various pollutants. For

example, landfill leachate when accumulated at high levels can have consequent negative effects on the ecology and food chains such as genotoxicity in living organisms (Mukherjee et al., 2015). The genotoxic effects of leachate on DNA molecule alterations have been proven by many studies (Gajski et al., 2012; Phoonaploy et al., 2016; Promsid et al., 2015). Genotoxicity arises as a consequence of the presence of various contaminants in leachates and the continuous interaction among these contaminants (Kwasniewska et al., 2012). A recent study related to the genotoxic and oxidative stress potential of landfill leachate in rats has revealed alterations in the antioxidant status within the liver, kidney, and testes of rats subjected to landfill leachate exposure. Furthermore, the study detected the presence of specific toxic chemicals, elevated levels of heavy metals, and an increased concentration of microbes in the rats exposed to landfill leachate, thus showing the potential of genotoxicity to living organisms (Arojojoye et al., 2022). Some prohibited chemicals like the organophosphate insecticide methamidophos were found in concentrated leachate (Wang et al., 2020a). Methamidophos affects the nervous system of living organisms and is therefore banned in many countries in the world (Tosun et al., 2001). Through long-term bioaccumulation, the emerging organic contaminants such as per- and polyfluoroalkyl substances found in the leachate may pose threats to aquatic organisms, plants, and subsequently to humans (Gunarathne et al., 2023; Wang et al., 2021).

On the other hand, the heavy metals present in the leachates could cause detrimental effects on soil and aquatic organisms. Heavy metals including, Cr (VI), Cd, As, Hg and Pb are considered non-threshold contaminants due to their highly toxic nature toward organisms and can produce lethal impact even at small concentrations (Jayanthi et al., 2016; Rahman and Singh, 2019). Their non-biodegradable nature and bioaccumulation through food chains provoke long-lasting ecological risks. Disruption of natural biological equilibrium and retardation of self-purification processes in nature were reported in response to heavy metal contamination through landfill leachates (Gworek et al., 2016; Öman and Junestedt, 2008; Talalaj, 2015). Findings from several studies concerning the ecological risk assessment of exposure to leachate highlight the significance of ongoing research into landfill leachates and the cumulative environmental risks they pose to neighboring ecosystems, as well as the health of humans and other organisms (Gholampour Arbastan and Gitipour, 2022; Qi et al., 2018; Rouhani et al., 2022).

The study conducted by Gu et al. (2022) in an informal landfill site in southwest China found altered microbial composition and co-occurrence patterns in vertical and horizontal surface soils impacted by landfill leachates compared to the uncontaminated soil. The microorganism communities involved in carbon, nitrogen and sulfur cycles in contaminated soils showed a significant shift compared to the uncontaminated soil. The anammox and denitrification microbial communities dominated the contaminated soil while retarding the growth of aerobic chemoheterotrophy, and cellulolysis communities resulting hindered nitrogen fixation process. This kind of microbial community shift highly affects the typical ecological function in soil. Furthermore, the microbial communities of aquifers altered drastically due to the contamination of landfill leachate (Abiriga et al., 2021b).

In summary, the ecological risks include:

a) Water pollution: if leachate is not properly collected, treated, and managed, it can potentially contaminate surface water bodies, such as rivers, lakes, and streams, as well as groundwater resources. This can have detrimental effects on aquatic ecosystems, including fish and other aquatic organisms, by disrupting their habitats, impairing water quality, and affecting their survival and reproduction.

b) Soil contamination: leachate can also seep into the soil, potentially contaminating nearby soils and affecting the health of plants and other organisms in the soil ecosystem. Contaminated soil may lose its fertility, and pollutants in the soil can be taken up by plants, potentially leading to bioaccumulation and biomagnification in the food chain.

c) Ecological habitat disruption: leachate can impact the ecological habitats around landfill sites. Surface runoff from leachate-contaminated areas can potentially disrupt the natural habitats of nearby ecosystems, leading to changes in plant and animal populations, as well as alterations in nutrient cycling, soil structure, and other ecosystem processes.

d) Biodiversity loss: leachate pollution can negatively impact biodiversity by contaminating habitats, reducing the availability of suitable food and shelter, and causing direct harm to plants and animals. This can lead to changes in species composition and abundance, loss of biodiversity, and disruption of ecosystem functions and services.

e) Accumulation of persistent pollutants: some pollutants in leachate can persist in the environment for a long time and accumulate in the biota, leading to long-term ecological risks. This can affect the health and survival of organisms in affected ecosystems and potentially impact the overall ecological integrity of the area.

7. Conclusions: This paper presents an overview of the composition, environmental impact and ecological risks associated with landfill leachate, which includes a global overview of the main landfilling sites and the characteristics of the waste that generates leachate. Some of these technologies have shown potential in removing contaminants from landfill leachates, with the possibility of increasing the removal efficiency through a combination of different methods. However, none of these technologies are reduced to practice as of this date.

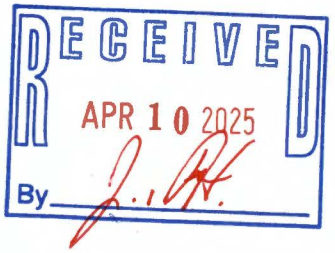
Dear Commissioners,
I am writing in hopes you deny the application for Republic Services to expand the landfill.
There are too many toxins in our air, water and soil.
Without more investigation into these hazards, one should be very concerned.

Did you know Soap Creek Valley has a cancer cluster.
I have lived in the valley for over 35 years and have seen many neighbors die from cancer.
We have and had blood, breast, brain, gall bladder, lung and bladder cancers.
A number of years ago I made an unofficial map (attached) of a section of the valley near to where I live.
Since I drew it, we have had other cases of cancer.



Can Republic honestly tell us that the toxins coming from the landfill have nothing to do with the cancers?
Until tests can show all our air, water and soils are free from these hidden dangers, I would not like to see any expansions.
Please deny Republics application ~ for the sake of our health.

Thank you for your time,
Vicki Idema

Hello, I am Ken Kupperman, and my wife is Pei Kupperman. We live at 2101 NW Christopher Place in Corvallis and also have a farm approximately 5 miles northwest of the Coffin Butte Landfill on Sauerkraut Road, off of Airlie Road. We could not be more in opposition to any expansion of the landfill, in fact we would like to see the current operation with Republic transition to termination as soon as is possible. Why, because Republic's operation at Coffin Butte is polluting our environment, potentially a major environmental disaster waiting to happen, and it is creating an ever expanding financial burden for its future cleanup. At our farm we have be affected by toxic fumes on an ever increasing number of days and severity, to the extent we can't work outside during those events. We know from the experience of the 2020 wildfires that its related smoke taint caused loss of marketable crops. Ever increasing emissions from the landfill are detrimental, but at what threshold? Zero emissions should be required. One of our major concern is the potential for a catastrophic landfill fire. Each year in US there are over 8,000 landfill fires, it is common; it can happen. If we have a fire at the landfill, will we have a Chernobyl in our back yard, the risk is unimaginable and we must take steps to prevent it. Republic has proven to be non-compliant to safeguards and is a blatant polluter. Toxins being emitted into the air and groundwater from the landfill, waste particulates blown out of the trucks all along the Highway 99 corridor as they leave the landfill and the carbon footprint of waste transportation from far distances, plus their untreated sludge that is being dumped into the Willamette. What kind of stewards are we being for future generations if we let this expansion happen? The current operation is primitive, outdated and profiteering. We need to find a better solution for our waste management that is less polluting, safer with long term viable. Expansion must not be allowed.

Date: Thursday, April 10, 2025 4:41:42 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission Members:

I write in opposition to the proposed expansion of Coffin Butte Landfill.

I am an avid walker and biker, and use the area often, especially the Dunn Forest 400/420 gravel road loop that has the landfill directly in view (and about a half-mile away). I also use other trails in nearby McDonald Forest. Increasingly over the 40 years I have lived in town and recreated in the general area, the smell from Coffin Butte has grown. This really spoils my recreation experience, and I am sure cannot be good to breathe.

I am also concerned about the leachate, and its effect on humans, animals and plants that use nearby wetlands and the Willamette River. Often the heavy metals that leach can be deleterious in extremely low concentrations. What are the plans for monitoring and mitigation? Without a lot of data and engineering specifics, the proposed expansion should not even be considered. I have not seen these data and plans, and wonder if they have been examined in depth by qualified toxicologists and engineers who have no conflicts of interest? As an OSU professor who has taught a toxicology course for years, I can recommend some to you if that would be helpful.

Thanks much for considering my concerns.

Subject: Coffin Butte Landfill Expansion
Date: Thursday, April 10, 2025 10:08:38 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To Whom It May Concern:

My name is Nancy Yialouris. I have an Albany address but I am a Benton County resident. I'm writing because our neighborhood is affected by the odors that are emitted from the Coffin Butte Landfill. Our neighborhood is east of Independence Highway, between that highway and Scenic Rd. Any time there is a stagnant air alert or a heat inversion, we smell the gases that are emitted from the landfill. The odor is so strong we can smell it inside our house. In the summer, we often have to close the windows at night because the stench permeates the area. During the fall and winter, if the winds are blowing from a westerly direction we smell the odor inside the house with the windows closed. I have smelled the dump, not only in our neighborhood, but clear into Corvallis proper as well as down along the Ellington Street area in Albany. I have filed several complaints with the DEQ and have received contact from that office regarding these concerns.

Having lived in watershed areas previously I'm familiar with how pollution from refuse can leach into the water table or run off during rains, polluting creeks, rivers and ponds. I also understand that methane gas is a byproduct of the decomposing waste at the landfill and fear that if a fire got started there, it very probably would burn toward our area, threatening our subdivision along with other homes in the subdivisions on the east side of Scenic Rd. The air and water pollution resulting from what used to be a local dump site has grown as the landfill has expanded to take waste from cities and towns far from Benton County.

It is for the above stated reasons that I feel strongly that this landfill should be closed and relocated away from watershed areas and populated areas with care taken to select a site that can contain the pollutants that result from decomposing waste and gaseous byproducts along with leaching that accompanies such an operation. At the very least, the proposed expansion of the landfill should be denied since the site has grown beyond its capacity and, from my understanding, is a major source of air and water pollution.

We all want to live in a place where the air and water are clean. To my mind, those elements are basic to good health and a thriving community. So I'd like to thank you for taking the time to consider my concerns.

Sincerely,

Nancy Yialouris,
2717 Quince St. NW
Albany, OR 97321

Re: application file number: LU-24-027

Peter Adamczyk
3949 NW Clarence Circle
Corvallis, OR 97330

I am a resident of Corvallis writing to declare my STRONG OPPOSITION to the proposed expansion of the Coffin Butte Landfill.

There are so many reasons that this expansion makes no sense, but I will focus on just one: the negative environmental impacts of the landfill on the surrounding community. The combined population of the Albany-Corvallis metropolitan area is some 230,000. All indications are that this number will continue to grow. If a new landfill were to be proposed today on the Coffin Butte site, in one of the most congested areas in Oregon, it would be immediately rejected, and for obvious reasons:

- the **immediate impacts** of odors, and the noise and traffic impact of numerous large trucks in the area, as well as the garbage spilled regularly on the roads by these trucks. I often drive between Corvallis and Albany and frequently encounter foul odors as I pass Coffin Butte - the proposed expansion would make this problem much worse. I have personally witnessed Republic Services trucks with garbage falling out of them on the way to the landfill on several occasions.
- The very real concerns about **future impacts** from leachates, microplastics, toxic chemicals such as lead, arsenic, cobalt, and copper, and greenhouse gases, particularly methane. My family and I enjoy the many recreational opportunities available in this part of the Willamette Valley and the Willamette River. This proposed expansion would negatively impact all of these options.
- **Republic Services has a very poor record,** both in Benton County and in other sites that they manage, including in Sylmar, CA https://lapublicpress.org/2025/03/sunshine-canyon-landfill-smell-complaints-violations/ of maintaining their sites and in responding to and correcting violations.

There are so many potential sites in Oregon that are in less wet climates with far lower population density. Any of these would do a better job of providing this necessary service to Oregon while dramatically decreasing the impact on the surrounding communities.

The proposed use violates Benton County Codes 53.215 (1) and 53.215 (2) as well as Benton County Comprehensive Plan policy 6.5.5. **I strongly urge the Planning Commission to deny this proposal.**

Sincerely,
Peter Adamczyk

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

Our names are Kamal and Carol Islam and we own a rental house at 1115 NW 35th St., Corvallis, OR.
We are writing because we strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. We urge the Planning Commission to deny this application.
The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health
- **Traffic increases** that pose safety risks on nearby roads and pathways
- **Odor and noise issues** that degrade quality of life for residents and visitors
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences** for future generations

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management. We believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities!

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Kamal & Carol Islam

Thank you,

Richard Llewellyn

April 10, 2025

Re: **Coffin Butte CUP, LU-24-027 with respect to PFAS in Landfill Gas Emissions**

Dear Benton County Planning Commission,

I have family residing in Benton County, and have lived and worked in the Corvallis area. However, the experiences I wish to relate to you are those of having a landfill sited next to our family home near Boise, Idaho in 1972, and after it expanded in the 1990s into a major regional landfill.

The original cell did not use an impermeable liner, because, although it was widely understood at that time that unlined landfills were likely to contaminate groundwater, it was not until several years later that the federal Resource Conservation and Recovery Act (RCRA) of 1976 required the practice.

After that original cell received waste for twenty years, at least one neighbor's drinking water well was contaminated. Around that time the county decided it needed to either prepare to close the landfill, as it was approaching its expected life, or expand it. The latter was chosen, with plans to operate the landfill for another century.

However, the original cell still accepted most of the county's waste for another two decades, growing so large that the 'Hidden Hollow Cell' became the largest ridge in the area, blotting out our view of the Boise Mountains. By the time the cell closed several years ago, it had accepted more than a half century of waste perched, unlined, above our neighborhood aquifer – compounding a long term liability that would have been mitigated had common sense prevailed in 1972 rather than obeisance to outdated regulations.

I call attention to my neighborhood's experience because a similar situation has developed with respect to chemicals collectively known as per-and-polyfluoroalkyl substances (PFAS), or informally as 'forever chemicals,' due to the highly stable nature of the many carbon fluorine bonds that characterize this large group of chemicals – chemicals that we are increasingly finding toxic at minute exposure levels.[1]

Industrial, medical, and consumer wastes that generally end up either in sewage treatment plants or landfills, often contain 'forever chemicals,' so that in many communities, these represent the major local repository of PFAS. Until recently, the primary risk of PFAS release from municipal solid waste landfills has been thought to be in the liquid leachate or 'garbage tea' that accumulates as water percolates through the landfill layers. Leachate now requires careful handling in part due to the PFAS risk – it is not uncommon for this to be shipped at considerable cost to hazardous waste facilities when onsite collection ponds fill.

[1] Human Health Toxicity Assessment for Perfluorooctanoic Acid (PFOA) and Related Salts. EPA.gov 2024. From https://www.epa.gov/sdwa/human-health-toxicity-assessment-perfluorooctanoic-acid-pfoa

Less attention has been given to the PFAS released in air emissions, either as uncontrolled 'fugitive' gases or upon being burned in flares or even upon combustion to drive electricity generation, as it is unlikely that the conditions in flares and engines are adequate to fully mineralize PFAS and prevent its escape into the local airshed.[2] Neighbors of landfills could tell the Commission much about the occurrence of odors from the fugitive gases, and although officials generally downplay the smell as a mere nuisance, these odors likely contain volatile PFAS as well.

Until a year ago, the general consensus was that the landfill gas emissions contained about a third as much PFAS as was found in the leachate.[3] However, recent research that specifically measured the neutral, more volatile PFAS known as fluorotelomers found 'stunning' concentrations in three municipal solid waste landfills.[4] The findings made headlines in the American Chemical Society,[5] and science[6] and industry newsletters.[7,8]

The most prevalent type of fluorotelomer found in landfill gas is especially troubling due to its relationship to one of the two types of PFAS that are now federally classified as hazardous substances in drinking water. The 8:2 fluorotelomer has eight fully fluorinated carbons, and two that are not – so that these latter two are not protected by the shell of fluorine, and are readily lost either by metabolism upon inhalation of the fluorotelomer, or through environmental degradation. The result is often the highly stable and highly toxic eight carbon type of PFAS

known as PFOA[9] which accumulates in human blood upon repeated exposure due to its half life of longer than one year.[10,11]

PFOA, is one of the two PFAS mentioned above now classified as hazardous. It was voluntarily phased out of production by industry more than a decade ago due to its known toxicity – the current federal standards in drinking water are 4 parts per trillion (4 ng/L). The precursor chemical, 8:2 FTOH, in one of the three landfills in this recent study, had a calculated concentration of 740,000 parts per trillion escaping in landfill gas (740,000 ng/cubic meter).

Common sense would suggest that landfills should also treat the gaseous component of PFAS, and prevent the contamination of local air, soils, and eventually, waterways. However, no such regulations enforce this common sense protection on the federal level, and Oregon's recent proposed expansion of its hazardous substance list to include PFAS will not extend to airborne emissions.[12]

Like the unlined cell near my family home, a landfill that expands today in Benton County may contribute another half century of toxic contamination and liability, even though today we too should know better. No major landfill, especially one near residential homes, organic farming, critical waterways, and a wildlife refuge should be allowed to expand without fully addressing this major pathway of PFAS contamination. If this common sense action is not taken before expansion, the problem may never be addressed.

Please deny the requested Conditional Use Permit.

Sincerely,

Richard Llewellyn

Subject: Oppose/Deny LU-24-027
Date: Friday, April 11, 2025 5:36:24 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

With all my being I urge you to deny LU-24-027.

My husband and I moved to the property of our dreams in Soap Creek Valley ten years ago. When we considered buying we of course noticed the landfill, but were told it was *near capacity and would be closing soon.* If you went to the Coffin Butte Landfill's website at the time, they would not have dissuaded you from this "closing soon" idea - instead they offered a comprehensive page that walked you through all the detailed steps that would be taken when the landfill closed. That page no longer exists; now they have only this brief explanation under Q&A:

> "Once the Landfill is filled to capacity, a final landfill capping system will be installed that consists of a Geomembrane welded to the bottom liner geomembrane, an engineered soil liner, cover soils, and a vegetation layer. At that time the site could be used as an open green space, parks, wildlife viewing area, or nature trails. The site will also be maintained for an additional 30 years in post-closure care after the final closure. This care includes continued groundwater monitoring, leachate management, and compliance reporting until such time the Oregon Department of Environmental Quality approves the site for final closure."

Setting aside the numerous environmental and health concerns for the moment (because they are not negligible!), when we moved here it was a reasonable expectation that this ugly, out of place, industrial eyesore would probably within 5-10 years look more like the hills surrounding it if closed and revegetated the way Republic Services led us to believe. A few more years of ugly was acceptable — but an ever-expanding monstrosity, on the other hand, would seriously interfere with the character of the area, a violation of BCC 53.215 (1).

And "the area" — especially when it comes to "character of" — is not restricted to properties immediately adjacent to the landfill site zone. This landfill impacts the character of the area for miles around now. To say it sticks out like a sore thumb is an understatement.

When the original owner built the house we live in - in 1983 - the 1977 Solid Waste Management Plan was in force (it still is! It has not been updated). And in that SWMP, the landfill *was going to close by the year 2000.* And back then it was infinitely smaller then than it is now. Instead it grows like a cancer on the landscape.

In summary, you *might* live or build near a landfill if you knew the timeline for its closure and could weigh that in the balance of your decision-making (i.e. if you knew for a fact that the disruption to the character of the area was temporary). But there's no question that this now huge landfill — already starkly out of place in this otherwise gorgeous part of north Benton County — will indeed seriously interfere with this area's beautiful character if it is allowed to

get even bigger.

Please STOP this landfill expansion. You have the power of discretion in this decision. Use it to deny LU-24-027.

Sincerely,
Debbie Palmer

Dear Benton County Planning Commissioners,

With all my being I urge you to deny LU-24-027.

My husband and I moved to the property of our dreams in Soap Creek Valley ten years ago. When we considered buying we of course noticed the landfill, but were told it was *near capacity and would be closing soon.* If you went to the Coffin Butte Landfill's website at the time, they would not have dissuaded you from this "closing soon" idea - instead they offered a comprehensive page that walked you through all the detailed steps that would be taken when the landfill closed. That page no longer exists; now they have only this brief explanation under Q&A:

> "Once the Landfill is filled to capacity, a final landfill capping system will be installed that consists of a Geomembrane welded to the bottom liner geomembrane, an engineered soil liner, cover soils, and a vegetation layer. At that time the site could be used as an open green space, parks, wildlife viewing area, or nature trails. The site will also be maintained for an additional 30 years in post-closure care after the final closure. This care includes continued groundwater monitoring, leachate management, and compliance reporting until such time the Oregon Department of Environmental Quality approves the site for final closure."

Setting aside the numerous environmental and health concerns for the moment (because they are not negligible!), when we moved here it was a reasonable expectation that this ugly, out of place, industrial eyesore would probably within 5-10 years look more like the hills surrounding it if closed and revegetated the way Republic Services led us to believe. A few more years of ugly was acceptable — but an ever-expanding monstrosity, on the other hand, would seriously interfere with the character of the area, a violation of BCC 53.215 (1).

And "the area" — especially when it comes to "character of" — is not restricted to properties immediately adjacent to the landfill site zone. This landfill impacts the character of the area for miles around now. To say it sticks out like a sore thumb is an understatement.

When the original owner built the house we live in - in 1983 - the 1977 Solid Waste Management Plan was in force (it still is! It has not been updated). And in that SWMP, the landfill *was going to close by the year 2000.* And back then it was infinitely smaller then than it is now. Instead it grows like a cancer on the landscape.

In summary, you *might* live or build near a landfill if you knew the timeline for its closure and could weigh that in the balance of your decision-making (i.e. if you knew for a fact that the disruption to the character of the area was temporary). But there's no question that this now huge landfill — already starkly out of place in this otherwise gorgeous part of north Benton County — will indeed seriously interfere with this area's beautiful character if it is allowed to

get even bigger.

Please STOP this landfill expansion. You have the power of discretion in this decision. Use it to deny LU-24-027.

Sincerely,
Debbie Palmer

Subject: LU-24-027 Coffin Butte Proposed Expansion Written Feedback
Date: Saturday, April 12, 2025 9:48:42 PM

Subject of Testimony: Coffin Butte

Full Name: Alice Evans

Email: mikeandbron@comcast.net

Street Address: 3902 NW Clarence Cir

Written Testimony:

I am support the expansion. People do not seem to understand that this is a regional landfill and we in Benton County have relatively low garbage rates because we do not have to absorb the huge infrastructure costs of a landfill by ourselves. Ask Republic or some neutral party what our tipping fees would be without taking trash from other Counties and let folks ponder that. The people that live near the landfill (it was there before they were) are the loudest voices.
The tonnage cap could be reinstated as a compromise perhaps.

Testimony for the Benton County Planning Commission

Purpose: This testimony regards LU-24-027, the application to expand the landfill

From: Bruce and Donna Cowger, 37194 Helm Drive, Corvallis, OR 97330

We oppose this application and strongly urge its denial. Republic Services has failed to prove that its proposed expansion won't further impact northern Benton County. We are gravely concerned about what is known and what isn't known about the Coffin Butte landfill and Republic's proposal.

What is known:

- When we moved to our current Soap Creek Valley home in 1985, we never smelled the dump unless we were right on Coffin Butte Road. Starting about 15 years ago, the dump's odor at our house is apparent whenever the wind blows from the east or north. This squarely contravenes Benton County's goal of "maintaining and improving the quality of the air, water, and land resources."
- The outdoor entertainment area we created 20 years ago at our home is unusable on days when Soap Creek Valley smells like the dump. This has significantly degraded the character of our property.
- The sooner Coffin Butte closes, the better. Western Oregon is a poor location for a landfill as rainfall soaks contributed garbage, leading to huge volumes of toxic leachate and climate warming methane.
- The emitted gas and aerosol cloud from Coffin Butte is massive and continuously spewing into our air, 24 hours a day. I have seen evidence that the detectable plume is over a mile long; imagine the commotion if this continuous eruption were visible. And it's spewing right now! Again, this massively undercuts our County's Comprehensive Plan regarding our natural resources.
- Republic's assertion of no impact from expanding the Coffin Butte landfill is laughable, given the scale of current impact.

What isn't known:

- What evidence does the Environmental Protection Agency have that instigated the January 2025 request to Republic for its environmental compliance records? Republic has yet to share what it knows about the EPA's request.
- What are the long-term effects of chemical aerosols from Coffin Butte settling onto our property, onto us, and into our well water? How much will our health and that of our children be compromised? How much will residents and Benton County have to pay to remediate the effects of "forever chemicals" borne by the plume constantly emanating from the dump? Allowing the landfill to expand will increase both our health risks and the future remediation burden on the County.
- What are the long-term effects of dumping millions of gallons of toxic leachate into the Willamette River? How much will remediation cost taxpayers? Allowing the

landfill to expand will increase the undue burden on Oregon and federal government.

- Republic has suggested that an expanded landfill will somehow be less harmful than its existing operation but has offered nothing to substantiate this claim. If Republic actually has a plan to reduce the adverse impacts of Coffin Butte, why wasn't that implemented prior to this request for expansion?

While Republic Services alleges their proposed expansion of the Coffin Butte landfill won't further degrade the character of northern Benton County, the company has fallen far short of meeting the burden of proof. On the basis of what is known about the landfill and the many as-yet answered questions, please deny this expansion and thereby affirm Benton County's core value of protecting all its residents.

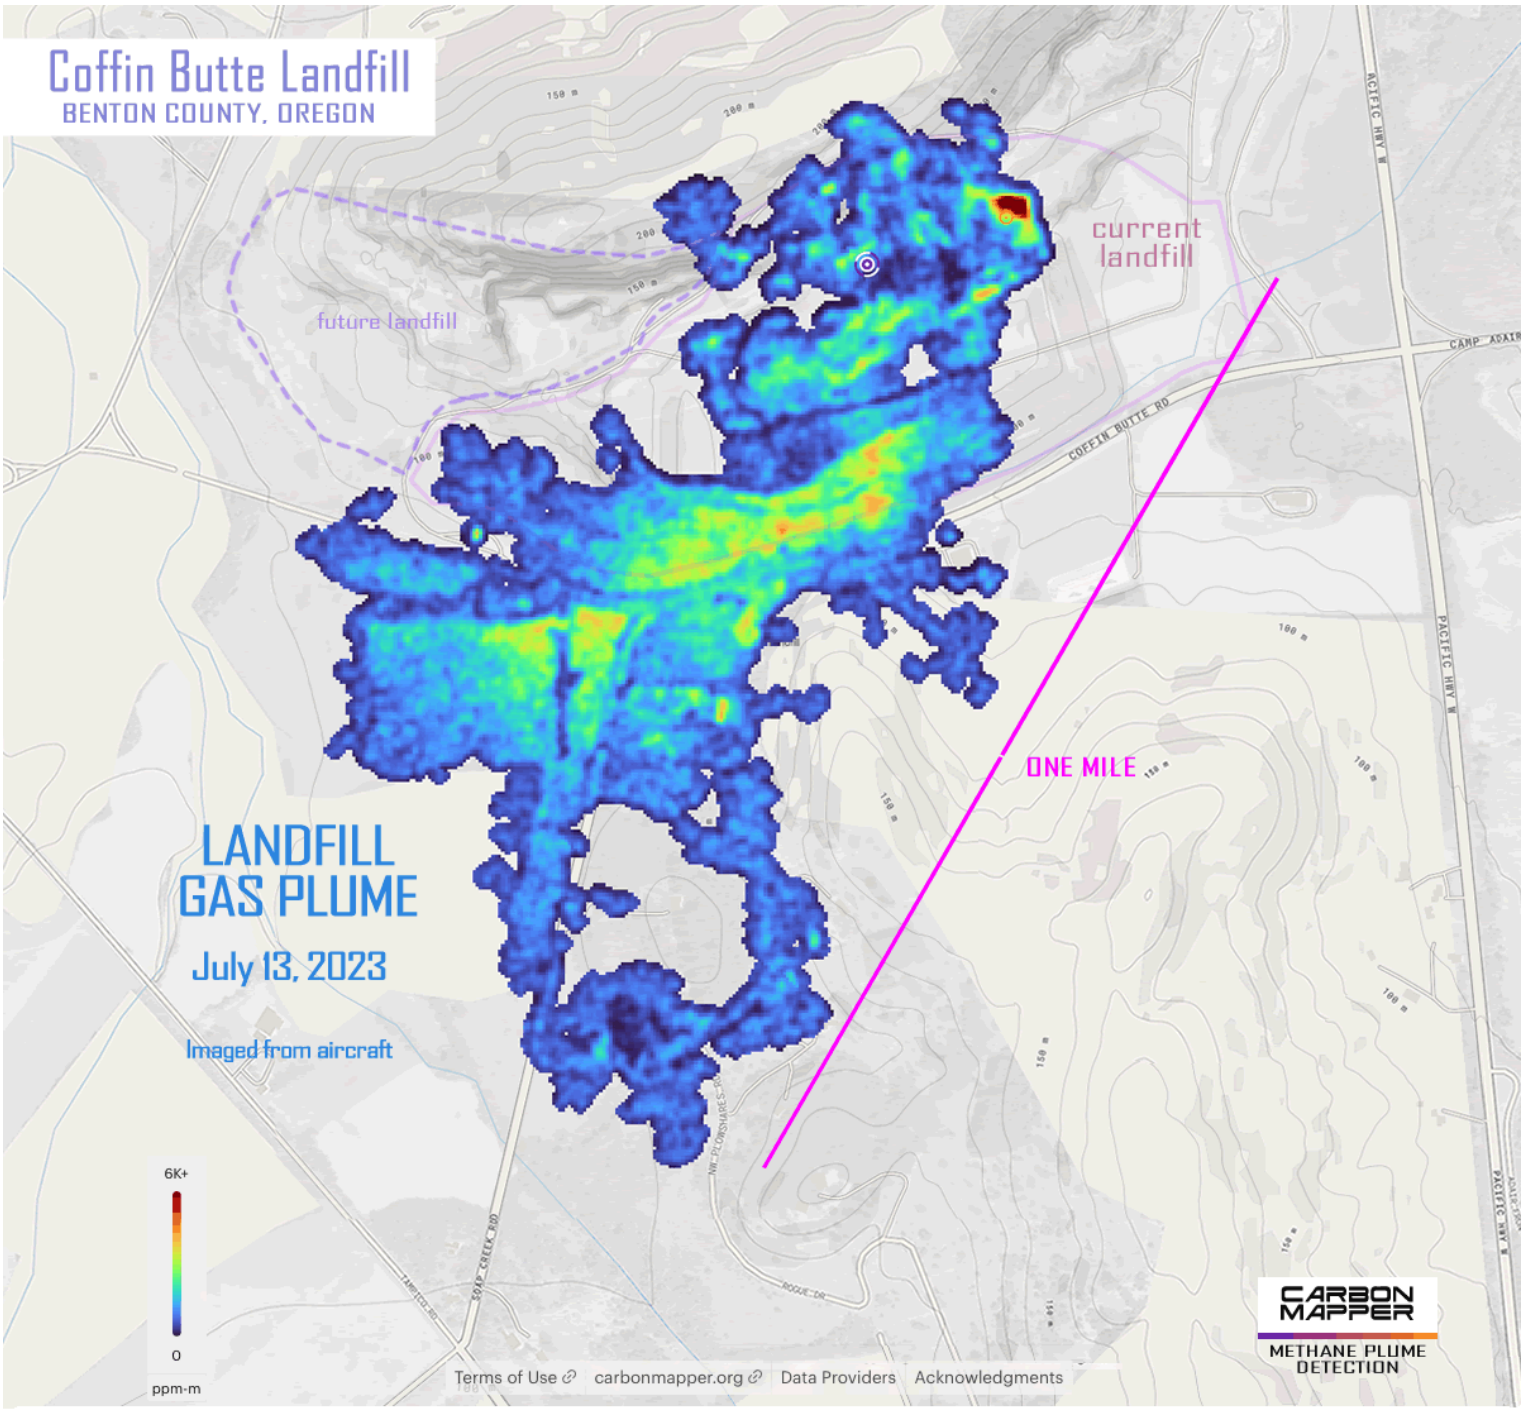
TO: Benton County Planning Commission

FROM: Susan Dornfeld, 6005 NW Vineyard Drive, Corvallis, OR 97330

This testimony is about LU-24-027, the application to expand Coffin Butte Landfill.



I strongly oppose this application, and I urge you to deny LU-24-027.

The proposed expansion of Coffin Butte Landfill (the landfill) would violate BCC 53.215 (1), which states "The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone." The character of the surrounding area is public recreation and rural residential, both of which rely on clean air. I live over seven miles from the landfill, and gases from the landfill negatively affect my health; when there is a temperature inversion my eyes burn, my throat hurts, and I have headaches. An inversion can last a week or more. This interferes with daily activities in my neighborhood like dog-walking, hiking, gardening, and children playing outdoors. Expansion of the landfill would further degrade air quality and impair public health. EE Wilson Wildlife Area is adjacent to the landfill, and offers wildlife watching, hunting, and fishing. How can these activities be enjoyed along with poor air quality, trash along the roadside, and increased garbage truck traffic?

I know that methane and other greenhouse gases are released from the landfill, because I have seen a map of the landfill gas plume, which is about a mile in length. I have attached a copy of the map, and you can see more information at https://data.carbonmapper.org/register/?location=Coffin+Butte+Road%2C+Corvallis%2C+Oregon+97330%2C+US&details=CH4_6A_500m_-123.23207_44.70070%3Fstatus%3Dnot_deleted#11.88/44.70214/-123.21962 .

The landfill emits 1.4 metric tons of methane per hour. This is 10.4 times greater than 100 kg/hr, which is a "super emitter event" under guidelines established by the Environmental Protection Agency (EPA). In January this year, the EPA initiated an action against the landfill. This strongly suggests that the EPA has cause to believe that the applicant is misrepresenting their environmental compliance. Given the serious nature of this action, I feel the Planning Commission must reject the application to expand the landfill, which relies on the same environmental record that the EPA is investigating.

Thank you for considering my testimony.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Sarah Goode and I am the Secretary for Bit by Bit, a local non-profit located at 38578 OR-99W, Corvallis, OR 97330. We are an equine therapy non-profit that provides care for clients, volunteers and over 600 people community members in Benton, Linn and Lane counties on an annual basis.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health
- **Traffic increases** that pose safety risks on nearby roads and pathways
- **Odor and noise issues** that degrade quality of life for residents and visitors
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences** for future generations

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. As we strive to continue our work at the non-profit, we find the expansion a threat to our continued work in the community. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management. Our non-profit does therapy outdoors for our clients just a few miles from the current location of the landfill, however with this possible expansion we are concerned we would need to relocate if this expansion goes through because the health of our clients, therapy horses and volunteers would be harmed.

I believe this plan to expand the landfill places a long-term burden on local communities, and could force us to relocate out of the county, removing a source of therapy for over 600 community members.

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Sarah Goode

Street Address: 5995 NE Hwy 20 Corvallis,OR. 97330

Written Testimony:

I am writing for my support for the landfill expansion. If this does not pass our current rates will double or triple when they are forced to haul our garbage away (probably to eastern Oregon). the amount of fuel they will use to just haul away our garbage away and the amount of trucks used to haul it away would double or triple what they are currently using. If Benton county truly cares about the environment then I'm curious why your trying to harm it by doubling the emissions and doubling the trucks on our roads? This makes no sense to me. You say your for the environment yet this is one of the more harmful things you can do. Nobody seems to look at the future and how much more damage you will be causing in the future if this does not pass.

Hi Nick, it's been a long time. I'm happy to see that you and Sheila are enjoying your beautiful family. I love the Christmas card I get every year! Please give her my best. Thanks. Yvonne

Below is my letter to the planning commission:

Dear Commissioners,

I oppose the expansion of the Coffin Butte Landfill.

It has not been managed well, allowing methane gasses and other chemicals to leach into and contaminate our air and water systems. Not only is this just plain bad, it is a violation which has not been adequately addressed. If you approve "with conditions," who will monitor and enforce those conditions? With the reduction of federal funds to the EPA, Oregon DEQ will have more work to do, so monitoring will only decrease. This will allow Republic Services to get away with even poorer management and further damage the land, air and water nearby and downstream.

I hear the county is making a lot of money on this. Is this what it comes down to? What about livability? This area could be used for housing instead of other county's trash. If you're going to allow expansion, why not instead encourage more residential and business building, which provides jobs and brings in people and taxes income?

By allowing the landfill expansion, the horrible smell, as well as air and water concerns, trash, traffic…all will decrease property values and make people want to move away from Corvallis and Adair Village. I don't live near there, but I hike, drive, and have friends close by and it stinks! Have you smelled it? And have you seen the trash along the highway leading up to the landfill?

Finally, as a hiker I value that I can hike so close to home in beautiful surroundings with wildlife and fresh air. I do not want to see more of our beautiful local forest torn up to be replaced by a mountain of trash.

If you approve this, I believe you would be doing this beautiful town of ours a terrible disservice.

Please do not approve the expansion.

Thanks for your consideration and hard work.

Respectfully,
Yvonne Uribe-Lomnicky

Benton County Planning Commission - re **LU-24-027**

Hello Commissioners-

I am strongly opposed to any expansion of the Coffin Butte landfill.

I have lived in Benton County for more than 50 years and appreciate the quality of life that derives from our natural environment and the commitment of its inhabitants to maintaining a healthy sustainable community.

The landfill is, and will continue to be, a toxic waste site. For generations this site will be producing and leaking climate changing methane gas, odors that affect neighbors and travelers, and leachate that contaminates ground water and the Willamette River.

Good management practices could reduce, but not eliminate, the adverse effects of the landfill on our community. The history of management at Coffin Butte landfill has not indicated compliance with best practices. Even if contractual obligations are met, maintenance would not be guaranteed for the decades and centuries that the landfill will be leaking toxic and noxious materials.

Ultimately, Benton County, and the region which depends on Coffin Butte landfill, need to develop waste management plans that do not include land-filling. Alternatives may be difficult and expensive, but they will be cheaper than the growing environmental costs of continuing the current landfill practices.

Expansion of Coffin Butte would allow the region to avoid and delay the development of waste management plans that are consistent with long-term sustainability. Please do not allow this expansion, which would delay appropriate planning for a sustainable human future.

To: publiccomment@bentoncountyor.gov

Subject: Oppose/Deny LU-24-027

Dear Benton County Planning Commissioners,

My name is Julia Bradshaw and I live at 645 NW Calloway Drive, Corvallis, 97330. My home is approximately 2.5 miles away from the Coffin Butte landfill.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution**. I am particularly concerned about the air quality issues due to the methane and the water quality issues knowing that the leachate is dumped into the Willamette River. I am concerned that the regulation of these issues seems to be not as optimal as needed for community health reasons.
- **Roadside Trash.** I cycle the roads leading to and from Coffin Butte landfill as they are close to my home. It is very clear that the roadside trash is greater on the side of the road leading to the landfill, than away from it. Clearly, the trash-trucks are contributing to the trash in the countryside.
- **Traffic.** As a cyclist, the number of trash trucks passing at speed is disconcerting. I am also concerned about the state of the roads with heavy trucks coming from great distances to Coffin Butte landfill.
- **Odour Issues.** Living 2.5 miles away, the odour does travel to my home, particularly on hot days and on days when the cloud cover is low. This affects quality of life.
- **Long-term climate and environmental consequences** for future generations. This landfill is very close to the water table. We need to be cognizant of the impact of this landfill in the very long term as well as the short term of the life of the landfill.

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

I believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on

local communities!

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Julia Bradshaw

To: Benton Public Comment
Subject: Deny LU-24-027
Date: Tuesday, April 15, 2025 9:50:10 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Anna Delaney, and I live at 330 SW 10th Street in Corvallis. I also volunteer with *Bit By Bit*, a therapeutic equestrian center that serves children and adults throughout Benton County.

I am writing to express my strong opposition to Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would significantly interfere with the character of our community and place an undue burden on public infrastructure, in direct violation of Benton County Code 53.215 (1) and (2). It raises serious concerns, including:

- Air and water pollution that threaten the health of local ecosystems and residents
- Increased traffic that would endanger the safety of children, families, and animals on nearby roads
- Persistent odor and noise pollution that would disrupt both daily life and therapeutic programs
- Harmful impacts on property values, wildlife habitats, and outdoor recreation
- Long-term environmental damage and climate consequences

At *Bit By Bit*, we provide horse-assisted therapy to children—many of whom are neurodivergent or coping with trauma—and our work depends on a peaceful, clean, and safe environment. The noise, smells, and traffic from an expanded landfill would be deeply disruptive to our sessions, jeopardizing both the effectiveness of our program and the well-being of the children we serve.

Moreover, this proposal directly conflicts with Benton County's 2040 Thriving Communities Initiative. Rather than expanding landfills, we should be investing in smarter, more sustainable solutions like waste reduction, recycling, and circular economic practices that support a healthier future for everyone.

Please reject LU-24-027 and stand with our community, our children, and our shared environment.

Thank you for your time and consideration.

Sincerely,

Anna Delaney

Date: Tuesday, April 15, 2025 10:40:45 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I submit this as testimony to express my strong opposition to LU-24-027. Please deny the application to expand the landfill.

Just this morning a Statesman Journal article titled “This [Corvallis] is the best college town in Oregon, according to World Atlas” left me feeling proud of the city that our family adopted as home in 1990. We moved to Corvallis because its stated values were just what we were seeking for the long term; but when I consider the landfill expansion proposal, my feelings change to angst and sadness.

Our fair city and county have already been negatively impacted by the current landfill so I am incredulous that there is ANY consideration to allowing further expansion. In no way can it live up to Benton County’s 2040 “Thriving Communities” values. For example, Corvallis could easily become “the dump town.” That would have a definite negative effect on the ability to attract and keep citizens, including our “temporary” OSU citizens. The expansion would violate both BCC 53.215(2) and BCC 53.215(1). Our quality of life would degrade.

I imagine you must feel unappreciated in your role at times, but you have the chance to become a hero in your community’s eyes by seeing this issue clearly for what it is: an opportunity to do the right thing.

Thanks for your commitment of time and energy. Please vote NO.

Commissioners:

I strongly oppose any expansion of the Coffin Butte landfill.

As forty-year residents of Benton County, we have always appreciated and, in many ways, come to rely on the natural beauty of the area. That beauty stems from a healthy environment, and we have always contributed to the community effort to sustain that environment.

Coffin Butte is a threat to that environment--our environment--and a blight on its beauty. Its effluent leakage is toxic to our groundwaters, and its methane emissions contribute to climate change. It should be closed, not expanded.

Republic Services has profited, and Benton County has benefitted, from using Benton County as a dumping grounds for other counties as disparate and distant as Multnomah, but clearly enough is enough! Hence the "need" for this expansion. Other counties should look to their own waste.

Please reject any expansion of Coffin Butte landfill.

Dear Benton County Planning Commission

My name is Gregg Olson and I now live at 5394 Davidson St, SE, Albany, 97322. Until this February 2025 I lived in Corvallis since 2007.

I am writing because I strongly oppose Republic Services Conditional Use Permit application LU-24-027 to expand Coffin Butte Landfill. I urge the Planning Commission to deny this application.

First, I think it is greatly unfair that Coffin Butte takes the vast majority of waste from other counties. One source says that 24 of 36 Oregon counties send their waste to Coffin Butte. They should be taking care of their own waste or depositing it somewhere safer than Coffin Butte. Butte County should not be Oregon's waste bucket!

The Coffin Butte area is one of the wettest parts of the Willamette Valley, with 50-60 inches of rain per year. This greatly increases methane production and leakage, as well as contamination of groundwater and rivers. Fractured basalt on the hillsides make it very difficult to monitor well contamination. In January of this year over 41 sites of escaped methane were found. Methane is 80 times more heat absorbing than carbon dioxide. Coffin Butte came under a formal complaint last year for excess methane.

Are there options? Columbia Ridge Landfill near Arlington and Eastern Oregon Waste Management in Pilot Rock are in areas of less than 10 inches of rain per year. Much less problems with methane and groundwater pollution. This sites are easily accessed by railroads, which are are an environmentally better and cheaper way of transport, and connect with most of Oregon.

Please reject LU-24-027. Thank you for protecting the health and future of Benton County,

Sincerely,

Gregg Olson

Catherine Stearns
29138 Tampico Road
Corvallis, OR 97330
Statement in opposition to Republic Services request to expand Coffin Butte Landfill .

It is amazing to me that ever since the first Earth Day in the '70's, there has not been a consistent program to change our society to buy less, need less and recycle more.
I fear that until someone finds a way to make a profit from reduction of "stuff ", we will continue the madness of endlessly filling holes in the ground with refuse
Other cultures have found viable alternatives to the ceaseless piling on of solid waste and still their societies thrive safely. We cannot wave a magic wand and make these human caused problems disappear. We can and must do better NOW.

We now have an opportunity to change the poisonous insanity of Coffin Butte Landfill into something less harmful to people, the earth , our water, air and wildlife of all forms. There is no need for a vast plume of lethal explosive methane gas to continuously poison our skies. There is no need for leachate to permeate soil and contaminate groundwater. There is no need for residents to continue to have their outdoor time fouled by "dump days" odors.

Rather, I prefer to focus on encouraging Benton county to make a historical decision and deny Republic services application for a conditional use permit. If all of the above mentioned "costs " of having Republic services in our county isn't enough to convince you, maybe the scientific, documented data from other county residents will.

In my opinion, the platitude of "if they check all the boxes then you cannot legally deny their application" is a manipulative strategy to deny you Commissioners the power to take a stand for our county's health and safety. Please do not be cajoled into doing business as usual. Please heed the concerns and warnings from hundreds of Benton County residents and deny Republic Services' application for a conditional use permit. Future generations will applaud your wisdom.

Attn: Benton County Planning Commission

Re: Proposal to Expand the Coffin Butte Landfill

Dear Planning Commissioners:

I am writing to urge the Benton County Planning Commission (BCPC) to deny Republic Services' request to expand the Coffin Butte Landfill (CBL) located near Adair Village in northern Benton County.

As a PhD toxicologist, former EPA employee, former OSU faculty member, and cancer researcher for many years, I was greatly alarmed to learn of the unprecedented exceedance of methane concentrations from the CBL currently spreading throughout the Valley. Several studies have verified that methane levels are greatly exceeding allowable limits. Methane emission levels are tightly controlled for human health and safety reasons, and due to their adverse impacts on the environment.

The EPA has previously cited Republic Services for worker health safety violations. In January of this year the EPA issued a subpoena to Republic Services for a detailed record of the amount of trash the landfill is accepting, its gas collection and emission control systems, its surface monitoring of pollutants, etc. It is clear that the EPA considers these violations to be serious.

Given that Republic Services is currently under investigation for violations of the Clean Air Act and other environmental laws, it is EXTREMELY inappropriate and reckless at this time to grant an expansion of this operation. It is clear that Republic Services is either incapable of properly operating the landfill or, even more disturbing, is not concerned about the effects of toxic releases into our community. In addition, given that the expansion will only add a few more years of operation to this facility, it makes no sense to move forward with ANY future plans for the CBL until the current problems facing the CBL are addressed and corrected.

In the last 7-8 years it is also clear that Republic Services has not been complying with EPA regulations with respect to the proper handling of liquid toxic wastes generated by the landfill. In addition to the methane problem, there are profound concerns about the handling of leachate generated by the landfill. The leachate contains many chemicals that are extremely toxic to human health and the environment, including polyfluoroalkyl substances (PFAS) and other heavy metals. PFAS chemicals, which are being discharged into Oregon waterways, are

some of the most dangerous chemicals on earth. Referred to as “forever chemicals” because of their extreme longevity and consequent accumulation in the environment, PFAS chemicals cause a myriad of health effects, including cancers, reproductive effects, thyroid disease, liver disease, etc., in concentrations as low as parts per trillion. People and animals can be exposed by eating food grown or raised in PFAS-contaminated soil or water, including agricultural products, and wild fish and game.

Further, I would like the BCPC to also consider that, given the CBL is in close proximity to many homes in the area, as well as several national wildlife refuges and the Willamette River, these current emissions are not to be tolerated. Both the BCPC and the Benton County Commissioners (BCC), who hold the ultimate responsibility for the decision whether or not to expand the CBL, must prioritize the health of its citizens, as well as the dangers to wildlife and the environment, in making this decision. As a citizen who has lived in the Willamette Valley for over 50 years, it is my belief that allowing these emissions to continue, let alone to decide to increase the size of the CBL given the current state of its poor management, is not in keeping with the longstanding respect and stewardship of the Oregon people and their commitment to the environment. It is, in fact, willful misconduct and gross negligence.

In addition, the problem of Republic Services’ long-term lack of attention to proper handling of the CBL is being felt, not just in the immediate vicinity of the dump, but in other counties miles from the site. As each year passes the impact of this mismanagement is being felt further and further away. This is unfair to the communities that surround Benton County, and they should not be required to suffer the consequences of poor decisions made by us. These people are our neighbors and our friends, and they deserve our/your respect and support.

I strongly urge you to vote NO on the Coffin Butte Expansion. Lastly, I want to point out that, as a representative of the citizens of this community, your responsibility lies in the PROTECTION of the citizens of Benton County and the state of Oregon. Our citizens do not want or deserve this toxic mess. We deserve better.

Respectfully,

Shelley A. Su, PhD
Oregon State University (ret.)

To the Benton County Commissioners,

I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.
I feel you must vote NO on the (Oppose/Deny LU-24-027) because the landfill DOES NOT even now meet current emission standards. See recent EPA air quality inspection*.
An expansion would not align with the below stated in *Benton County's 2040 Thriving Communities Initiative.*
The proposed expansion would seriously interfere with the character of the surrounding area and impose an undue burden on public resources, in violation of Benton County Code 53.215

6.1.4 In reviewing land use actions, Benton County shall evaluate potential impacts on air, surface water, groundwater, noise and glare levels, and land quality, where possible utilizing existing studies and prioritizations such as the County's Environmental Assessment Pri ority List. Appropriate steps shall be taken to minimize degradation.
6.1.5 Benton County shall work with local citizens and appropriate local, state and federal agencies to establish partnerships to achieve enforcement of air, land, and water quality standards

NOTE*In June 2022, the Environmental Protection Agency (EPA) conducted an ANNOUNCED air quality inspection event at Coffin Butte landfill. During the inspection, the EPA found a massive number of leak locations where the methane emissions exceeded the air quality standard; so many leaks that the EPA inspector ran out of flags available to mark them.

SINCERELY-
Benton County Resident and Home Owner for 41 years!

Dear Benton County Commissioners,
My name is Joel Weinstein and I am a
Benton County Resident and Home Owner for 41 years!
I live at 2063 Rosecrest Dr, Philomath, OR 97370.
I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would seriously interfere with the character of the surrounding area and impose an undue burden on public resources, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution threaten our local ecosystems and community health**
- **Traffic increases that pose safety risks on nearby roads and pathways**
- **Odor and noise issues that degrade quality of life for residents and visitors**
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences for future generations**

Please reject LU-027.
THANK YOU, Sincerely,
Joel Weinstein

Subject of Testimony: Please don't expand Coffin Butte Landfill

Full Name: Nathan W. Looney

Email: nlooney4@aol.com

Street Address: 2645 NW Kingston Way, Albany OR 97321

Written Testimony:

Dear Planning Commission,

I want to write to express my opposition to the expansion of the Coffin Butte Landfill. I'm concerned about the landfill polluting local ground water sources nearby. I'm also concerned about noxious and unpleasant smells that come from the landfill. I don't think they are benign as Republic Services suggests. Too much garbage is coming into the landfill. It's not surprising that there are such terrible smells coming from it. Please don't allow Republic Services to expand things so they can just bring in more garbage.
Lastly, I'm sure Republic Services would say they own the landfill, they can do what they want, but it's not right for so much garbage from other counties to come to Benton County. It doesn't help Benton County. It hurts Benton County. The waste needs to go to a drier area of Oregon where there isn't so much rain. If Coffin Butte isn't expanded, then it won't be able to take in more garbage, which will be a good thing for Benton County. Thank you for listening.

Sincerely,
Nathan Looney

RE: Trash Land Use Expansion

April 13, 2025

Dear Benton County Commissioners,

Please do not approve any expansion of the Coffin Butte landfill. The Republic Services trash dump presents an existential threat to life in this valley. Any one of several disasters, awaits us in the future.

The badly situated dump emits toxic gas, endangering the health of every resident who draws breath. The filthy fluids seeping into the surrounding areas spoil the land and the water. A poorly timed spark and a high wind may burn uncontrollably as it ravages the forest and then our homes and businesses. There is no conceivable amount of money Republic Services could pay the county, that would pay for the remediation of this valley, when our air, water and soil have been poisoned beyond where it is safe to live. Who will make the residents whole? What parent will fund their child's University education here, if the water is neither safe to drink or bathe in? Why has our small county become the dumping ground for trash from around the Pacific Northwest. Why are our land, water, air and roads, being sacrificed in order to enrich Republic Services.

The time left before the current dump is full should be use to find a more favorable location for a new dump site for Benton County. Preferably land that is not next to a nature preserve, located over a significant water aquafer, on productive farmland. Such locations do exist. Republic Services has more than enough money to afford to find less dangerous locations. Their record profits could be used to improve recycling, but as they have told their shareholders, there is no profit in recycling. Promises they have made to the county in previous years have not been kept.

Please do not allow Republic Services to increase the amount of trash they heap onto our county.

Respectfully,

Kathleen Van Camp and Michael Sovereign

Hello,

I'm writing to oppose the expansion of operations at Coffin Butte. Arsenic has shown up in local wells, and PFAS get sucked out daily by fleets of tanker trucks that deliver it to various facilities, most if not all of which aren't equipped to remove PFAS, and so end up flushing these (and other) toxins into the river. In addition, there are leaks in the liners, so we don't even know what's going directly into the water table. I'm really hoping you will do the right thing and prevent the expansion of operations.

Best regards,

Attachments: KEklund Petra Schuetz letter 1-2025 methane.pdf

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I have three primary concerns:

1. Landfill gas impact on health of my family, which includes an infant and a 5-yr-old
2. Effluent concerns since I have a well
3. Impact on how I use my land

My property shares 1580 feet of fence line with the NW corner of the landfill and the topology brings the smell right to us anytime there's a south component to the wind direction. When we bought our land 35 years ago, we were told by a Valley Landfills, Inc. representative that the original deposit location, called Cell 6, was closed so all future garbage would always be moving away from us. Since Republic moved all the refuse out of Cell 6 and Knife River blasted to remove more of the Butte at that NW corner, we've already experienced more odor and picked up more airborne garbage that blows over the fence. The quarry blasting has caused structural shifts in our house, broke a window, and we now have major cracks in concrete slabs in out-buildings. Understandably, we're very interested in the outcome of the expansion discussion.

I am becoming increasingly concerned about my family's exposure to toxic gasses every time a breeze comes from SE to SW. The gas being comprised of methane, carbon dioxide, plus other aerosols including toxic PFAS (per- and poly**fluoroalkyls**) was just last year measured by the EPA to exceed the maximum allowable emission level by 219 times. I have not seen any evidence that the ongoing problems in the existing methane collection system have been corrected since the last EPA visits, just continued gas emissions indications from satellite images and my own nose. This clearly violates BCC 53.215 (1) and makes me wonder why it doesn't get the attention it deserves by Benton County and EPA officials.

I haven't complained about the odor because, hey, I live next to a dump. But the **increase in odor** is also raising my awareness to the apparent lack of mitigation and potential long-term damage from toxicity exposure. I hosted business associates once and the stench forced me to cancel the meeting and everyone left – I haven't been able to host events since then. Before there's any expansion allowed, I'd like to see Republic get a handle on what they already have to manage. I'd also like to see evidence that they are actually solving the problem instead of dismissing complaints.

My family's well is located 500 feet from the landfill property. The migration of effluent

carrying toxic levels of arsenic to the east is alarming. When Republic starts filling Cell 6 with garbage and takes advantage of the newly exposed hillside there, I'm hoping that there won't be a westward flow of escaped effluent into the aquafer that feeds my well. Its depth is roughly 250 feet (130 ft ASL) below the bottom of the closest corner of Cell 6.

I used to have a small pond on my place, on the east side of the landfill. Water from the pond fed a small livestock tank downhill from the pond. A few years back the pond dried up. It turns out that even before Cell 6 was excavated and the quarry blasting began, the landfill decided to divert surface and shallow water flow off the Butte away from my property without discussing it with me. They did call me prior to that and offered to buy that portion of my land because they said that there was a chance that my field would experience "brighter areas" caused by runoff from the landfill. So my intended use of the pond for a livestock reservoir has been permanently curtailed.

There's no easy solution for waste, but how about accountability? It's pretty clear to me that the practice of hiding violations in the past has turned into a standard operational procedure. It's unlikely that Republic can change its practices to be transparent with the County, and the county's contract representative (legal counsel) is not negotiating on behalf of the stakeholders in our county. Ken Eklund, past Chair of the Disposal Site Advisory Committee, has been closely following the connected issues of climate damage through methane and odor impacts, both of which come from excessive leaks of landfill gas. The letter he wrote (attached) to the Planning Official and her consultant, Winterbrook Planning, does an admirable job of summarizing several areas of concern that mirror my own and highlight a lack of accountability.

I see first-hand how the landfill disregard for environmental and local land use impacts my family. I encourage our county commissioners to visit a neighborhood downwind of the landfill and think about the long-term impact when they stand there breathing in the potpourri of nasty gasses. It might be several years before science solidly connects these gasses to human health issues – even if Republic is still a viable company at that time, the expected class-action lawsuit will certainly target Benton County. The short-term financial benefits might look nice now, but the future impact will destroy Benton County and that legacy will be tied to the people making decisions today. I vote no for any expansion and would prefer that landfill operations cease. It's time for another county to carry the load.

William J. Briskey, PE
39101 Military Road
Monmouth, OR 97361

Dear Petra,

I have some notes for you, as you consider the final Application by Republic Services in order to make an official determination about its completeness as Planning Official.

1. The missing 2024 EPA Inspection Report.

> A final report from the 2024 EPA inspection is not yet available, but Applicant is aware that the inspectors found exceedances while conducting surface emissions monitoring.
>
> – Jeff Condit, Burden-of-Proof-Revised-January-15-2025.pdf, p. 102

This final report of the 2024 EPA Inspection is available, and was available prior to January 15. (I received a copy third- or fourth-hand on January 14; more about this report and its implications here). **A discussion of this report is vital to an honest narrative about methane emissions at the landfill.** A reminder that when the EPA released its inspection of the landfill in 2022, Republic similarly did not relay its report to the County, but suppressed it instead for over a year.

In the 2024 report, as in the 2022 report, the inspectors narrate a process where they find an exceedance, document it, walk a short distance (often very short), find another exceedance, and so on. They are finding another exceedance three minutes later or fifteen feet apart. In each report they cover a remarkably small proportion of the landfill surface yet find a similar high level of exceedances. The photo documentation in the 2024 report shows visually obvious problems that have been problems for some time, i.e., tears in the tarp with weeds growing out of them that are three feet high. Most notably, the 2024 report includes an instance where *a gas well was uncapped entirely*.

The 2024 report casts doubt on the Applicant's "we were upgrading the gas collection system" narrative of their 2022 report, suggesting instead a narrative where the Applicant is in a perpetual state of system "upgrade" because of deferred maintenance. The "we were upgrading the gas collection system" account does not explain why every time that an entity that is not paid by Republic has pointed a methane detector at Coffin Butte Landfill in the last two years, that entity finds excessive landfill gas emissions :

- in June 2022, the first EPA inspection uncovers 61 exceedances, including several that flamed out/approached or exceeded the lower explosive level of methane;
- in July 2023, Carbon Mapper aerially surveyed the landfill for a ten-day period and mapped multiple landfill gas plumes from multiple sources, with a combined average leak rate of approximately 3.4 metric tons of landfill gas *per hour*;

- in July 2024, the EPA's return inspection again found multiple exceedances, including one with a methane concentration over 110,000 ppmv (the EPA threshold for reporting is 100 ppmv and for remediation is 500 ppmv);

- in September 2024, Carbon Mapper surveyed the landfill from space and found the landfill was still super-emitting methane with an average leak rate of approximately 1.8 metric tons of landfill gas per hour.

In no instance did a survey fail to find dozens of leaks, including leaks with high and very high methane concentrations (EPA) or leaks that are super-emitters many times over (Carbon Mapper). The narrative that these independent sources establish is one where Coffin Butte Landfill's condition has not been maintained properly and now landfill gas emissions are burgeoning out of control of the operator.

2. DEQ's notification of investigation, August 2024.

> In August 2024, members of Oregon's congressional delegation called for the U.S. Environmental Protection Agency to complete an investigation into concerns about the landfill. Also in August 2024, DEQ issued a formal warning to Coffin Butte for not complying with new requirements to reduce methane emissions from the state's landfills.
>
> – Tracy Loew, Salem Statesman-Journal, January 10, 2025

Several DEQ officials accompanied the EPA inspectors on their 2024 inspection, and when the EPA prepared its report in August 2024, DEQ issued the formal warning highlighted above. **A discussion about this warning from DEQ is necessary for the application to be deemed complete.** The formal warning from DEQ calls into question the Applicant's narrative that it is in compliance with federal and state regulations; instead it seems that Applicant is in a recurring state of being out of compliance with regulations, and successful only at keeping one step ahead of being fined.

Side note: the Applicant's Environmental Manager, Ian Macnab, resigned in fall 2024, after the second EPA inspection, the formal warning from DEQ, the calls for the EPA to take action about the landfill's non-compliance, and the release of the Carbon Mapper quantifications of its methane emissions data.

3. The rapid decline in the efficiency of the Applicant's gas collection system.

> The US Environmental Protection Agency estimated in 2019 that Coffin Butte Landfill's methane collection system converts 57% of its methane to CO2, as compared to other Oregon landfills such as Columbia Ridge (85%) and Dry Creek (80%)[90] … Republic Services' notes that data it submitted to the EPA for inclusion in its 2021 greenhouse gas report estimates that Coffin Butte's landfill gas collection system has a collection efficiency of 91.2 percent.
>
> — The BCTT report, page 669

In the January DSAC meeting (link), methane was on the agenda, a continuation of questioning begun in DSAC's December meeting. CBL's new Environmental Manager, Paul Koster read these notes (with landfill General Manager Bret Davis chiming in):

> [begins around 1:23:22]
>
> PK: So, our last gas model was completed in 2023, and we'll be completing a new gas model spring of this year. So, looking at the gas model from '23, our efficiency was estimated about 70% for '24, and 73% in 2023. This is the total amount of methane generated 2024 – was about 3,923 to 4,100 scfm throughout the year, on average, every day, every minute. The loss in flow was largely due to – we did lose some flow between '23 and '24, was largely due to the commissioning of the new and closed flare construction project. So we had some changeover. We did lose a little bit on that.
>
> BD: Thank you for [adding]. We do a – we added wells, and so on. And so yeah, the system's not able to collect it a hundred percent. When we're adding wells or more collection.

So, to summarize, the landfill's gas collection system, which Republic reported was operating at 91.2% efficiency in 2021, by 2023 had declined to 73% and sagged further in 2024, to 70%, according to Republic's own gas modeling. **This is a critical consideration for any honest narrative about the landfill's methane emissions level**, as each decline of 1% in gas collection efficiency signifies a commensurate rise in fugitive emissions of landfill gas (by my calculations, each 1% decline in efficiency =

approximately 1.2 more metric tons of landfill gas released per day). The Applicant's representative, Paul Koster, stated this information became known to the Applicant in 2023, and was updated in 2024, and so it was well-known to the Applicant when they were preparing their application.

Note that the data is converging regarding this decline in gas collection efficiency: EPA inspectors have found it on the landfill surface, Carbon Mapper has surveyed and quantified it from the air and now from space. More data is imminently forthcoming, now that methane-detecting satellites pass over Coffin Butte Landfill several times a day. The decline in gas mitigation efforts requires a honest conversation about how low efficiency will go and what environmental impacts will be happening at that level.

4. Surging methane emissions equals surging landfill gas odors.

Methane is a pollutant and a potent greenhouse gas, and well deserves its focus in abatement efforts. The landfill gas from Coffin Butte Landfill is generally about 50% methane, 40% carbon dioxide, and 10% a mixture of many other gases, including odorifics and toxic gases such as aerosolized PFAS. So the unregulated releases of methane detected in EPA and Carbon Mapper surveys of Coffin Butte Landfill are evidence of increasing amounts of toxic and odorific gases being released by the landfill (the lead inspector for the EPA specifically mentions landfill odor in the 2024 report).

Odorific gases accompany methane, but they also occur in the pre-anaerobic phase of landfilling, and processes such as soil cover that oxidize methane do not necessarily reduce odorific gases.

The application should not be considered complete without a discussion of the relationship between the increasing amounts of landfill gas being released and the increasing number and duration of "dump day" odor events in the landfill region. As we've seen, over the past three years the Applicant has normalized a steep decline in its gas collection efficiency, so this discussion should include what measures if any the Applicant will implement to reverse the increasing odor impact upon other land uses in the region where they're occurring.

These are my first observations about the Applicant's revised application; I will likely be adding more. I'm happy to answer any questions, and hope this information will be of use to you and your consultants.

Respectfully,

Ken Eklund

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Matt Delaney, and I live at 38674 Harrington Drive in Lebanon, Oregon. I am writing to express my opposition to Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would significantly interfere with the character of the community as well as create harmful impacts on property values, wildlife habitats, and outdoor recreation.

Rather than expanding landfills, we should create more sustainable solutions like waste reduction and recycling.

Sincerely,
Matt Delaney

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I strongly OPPOSE the approval of LU-24-027 expanding the Coffin Butte Landfill.

Republic Service's proposed expansion of the landfill violates the following Benton County Codes (BCC):

it would "significantly interfere with the character of the area," [53.215(1)]; and it would
"create an undue burden on public improvements, facilities, utilities, or services in the area." [BCC 53.215(2)]

I have worked and lived in Benton County for 30+ years. I appreciate the quality of the environment, the vibrant and livable community, the robust and diverse economy, and the diverse efforts to improve health and equity for all — all values claimed by the county in their 2040 Thriving Communities Initiative.

I hold the county commissioners, citizen participants, and staff all accountable for defending those values. Allowing the dump to expand, however, would violate every one of them, not to mention the Benton County codes cited above.

Among all the reasons to oppose expansion, the following stand out:

1. Benton County urgently needs homes that lower income folk can afford (37.1% of renter households spend over 50% of their income on rent, making us the most rent-burdened city in the state). Republic Services purchased Rural Residential property abutting the landfill, land that could house a subdivision and ease the housing shortage. Instead, it lies fallow. North County is a prime area to develop new homes, yet young families who have moved to new subdivisions there report such noxious dump odors that they regret their decision to buy. For the same reasons, other property owners have been hindered in their efforts to sell property in the area. Odor and loud truck traffic, and subsequent loss of property values will clearly limit development in this area, hinder the construction of badly needed housing, and reduce much needed tax revenues. Obviously, all these "interfere with the character of the area" [BCC 53.215(1)] and "impose an undue burden on public improvements" [BCC 53.215(2)].

2. The public improvement of roads is also unduly impacted by large heavy trucks not only carrying trash in, but taking toxic leachate out; these costs are borne, unfairly, not by the corporations that hire and manage the trucks, but by Benton County residents.

3. The Republic Services dump property yields less tax revenue than

would be collected were those acres to be devoted to housing.

4. Portland, which has stated values similar to those of our Thriving Communities Initiative, refuses to send its trash to any facility in the Willamette Valley, simply because high rainfall and porous soils in our valley produce more of the most damaging of landfill effects, which are methane (a more potent greenhouse gas than CO2), and leachate (full of the toxic “forever chemicals” known as PFAS). This is obviously bad — for our city, our county, and our good earth herself.

5. The landfill is already an ugly first impression of Corvallis for anyone coming in on Hwy 99 from the North. If allowed to expand, Republic plans to take out three Empire State Buildings worth of soil from the south side of Coffin Butte Road and replace it with more trash — trash that will not come from Benton County, but from all over the state, as well as out-of-state — another violation of both BCC 53.215 (1) and BCC 53.215(2).

6. The PFAS in the leachate that the landfill now trucks "away" have been deemed a health hazard at any concentration. This toxic soup, steeped in all our rainfall, ends up in our Willamette River.

7. Not all the toxic leachate gets trucked out. We don't know how much simply infiltrates the water table, but we do know that other poisons leach out of the landfill, one of which, arsenic, has increasingly been showing up in local wells at levels well above anything considered safe.

8. The landfill produces enormous amounts of methane which not only warms the climate more that CO2 does, but which is also highly flammable and the source of regular fires that landfill staff are often unable to control — and which, in our dry and increasingly fire-prone summers, pose an enormous threat to the entire valley.

All these effects make Benton County itself into an enemy of the very values it claims to hold dear. Literally and in every other way, the dump toxifies my home county. I would call that "significant interference with the character of the area."

Finally, and obviously, the dump is only the most visible tip of the iceberg. Underneath is our shared responsibility for producing all this waste in the first place. If we really want to live up to our values, we need to reduce our need for enormous holes in which to bury all the stuff we don’t want or can’t use.

Other communities who are doing a much better job of this than we are. If we really want to live up to our values, we need to put the energies of our planning commission into looking upstream for ways to prevent problems, instead of just trying to manage problems that Republic Services seeks to exacerbate.

Lane County, for example, is building a state of the art facility that offers a better strategy for capturing more recylables, reducing emissions, and diverting material away from landfilling.

Another avenue would be to follow the long-standing and successful example of the community-owned consumer cooperatives that provide light, power, phone and financial services, as well as food, insurance, and

even, in some countries, housing and health care. A waste management cooperative, owned and managed by the community it serves, would have no incentive to increase the amount of trash it accepts. Instead of looking for more trash to generate more revenue, it could offer practical incentives to reduce trash and produce less waste. And it would be able to work with the citizenry, because it would be of the citzenry.

We can do better, but not if we expand the dump.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

This is testimony to express my strong opposition to LU-24-027. Please deny the application to expand the landfill.

I oppose this expansion request for myriad reasons, but this submission is about health issues. An expanded landfill will DEFINITELY be detrimental to the statewide goals promoted in the Benton County Comprehensive Plan: “maintaining and improving the quality of the air, water and land resources of the state.”

I worry that our air quality is already worsened by having the *existing* landfill (dangerous particulate matter, heavy metals, VOACs and sulfides and the use of toxic fly ash as daily cover). All of us are harmed by this (whether or not we know it). And issues with air quality don’t stop at the landfill borders. Our water quality is also degraded. Dangerous leachate is produced and sent to our wastewater treatment plant (which *isn’t even designed to process* leachate). The remaining leachate is threatening local soil and groundwater. What part of this can be considered OK? The fact that other counties have shut down their own polluting waste facilities tells us something. ANY effort to increase these harmful effects is the opposite of protection. Please don’t fail us, your county’s residents, in the way that some government agencies (OSHA, DEQ and EPA) as well as Republic Services have done. Let’s try to remediate the existing damage of the landfill.

“We recognize and will address the well-being of our people by including health considerations in all policies, practices, activities and operations” (as stated in the 2040 Thriving Communities Initiative, Health in All Actions). Please protect our health by doing just that: by voting a resounding NO to this request to expand the landfill.

We’re counting on you.

With sincere thanks for your efforts on our behalf,

Mary Devine

Corvallis, OR 97330

Re: : LU-24-027

To whom it may concern:

My name is Debi Estill. My husband and I reside at 39000 Trillium Lane, Corvallis, OR, two miles southwest of the Coffin Butte Landfill, where we have lived for 12 years. I appreciate you taking time to listen to my gradiences regarding the proposed landfill expansion.

I (Debi) was born and raised in Corvallis and have lived her for most of my 65 years. Growing up in southwest Corvallis, I have fond childhood memories of going to the landfill with my father; it was an adventure! However, the landfill was very different in those days. It was, of course, much smaller, and absent was the stench since the smaller size was more manageable. Today, the landfill loom large on the horizon, has totally disfigures the natural beauty of the Coffin Butte/Adair area, and emits a horrific stench on most days and an intolerable stench on others. The scene and stench are especially bad when compounded by the dust raised by the endless flow of big trucks entering and exiting the landfill, that I see as I drive east on Tampico Road to attend to my daily responsibilities away from home.

Today, in stark contrast to my past idyllic memories of a pristine western Oregon, the roads leading to the landfill are now littered with trash and garbage which has blown out of trucks on their way to empty their load at the landfill. It is unclear whose responsibility it is to pick up this unsightly debris but, clearly, Republic Services is not doing it and the debris is sporadically removed by local volunteers. Feeling powerless, and at a loss as to what to do to mitigate this situation. So, in an effort born of desperation, I had yard signs made with the words DON'T TRASH CORVALLIS, in bold letters with some more subtle subtitles, and distributed to like-minded neighbors to display on their property and make their objections to landfill expansion available for passersby to see. The public reaction has been uniformly positive.

It is my contention that both surface streams and ponds and underground water in the area surrounding the landfill, and perhaps even miles away, extending all the way to the Willamette River as being contaminated with toxic chemicals and" forever compounds" from the landfill leachate. This poses a serious health threat to all living creatures in the area as well as severely reducing the recreation opportunities on our waterways due to fear of negative health consequences resulting from exposure to the leachate.

I am well aware that Benton County residents and businesses need a place to dispose of refuse. In the past, the Coffin Butte was managed very well and adequately met the county needs. But I am compelled to ask why Benton County should be the dumping ground for areas tens and more miles away. These other counties and municipalities should be responsible to find their own solution for refuse disposal rather that make Benton County their dumping ground. Frankly, I find this totally irresponsible and disgusting.

In summary, I totally reject an oppose the expansion of the “new” landfill. There is a long history of failure to meet air quality and other EPA mandated water regulations and I do not expect compliance to improve and likely will become even worse. Republic Services in a billion-dollar industry and readily absorbs and fines imposed and keeps on polluting our beloved environment. I stand united with my neighbors and vehemently oppose the landfill expansion and we will do all in our power to see that the area we call home is not further spoiled by the greed Republic Services is known for. It is time for Republic Services to consider more than their bottom line and do the right thing and be in compliance with the BCC 55.215 Benton County Comprehensive Compliance Plans for the sake of our county and state and future generation of Oregonians.

Sincerely,

Debi E. Estill

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Commissioners,

The waste management situation in Benton County has gotten to the point where we need a change and we need to stop pursuing a failing strategy. The situation is not improving, on the contrary, it is getting progressively worse.

The Coffin Butte Landfill is a poor solution to our waste management challenges. The landfill continues to generate a huge volume of leachate that will continue well past the day it is finally closed. The landfill is in the wrong climate to work effectively. There is just too much rain and to top it off Corvallis is no longer going to process the leachate by the end of 2025. The leachate contains PFAS and heavy metals that cannot be removed with present-day wastewater treatment processes. They just get dumped into the Willamette river. The land around the dump is being contaminated by the leachate that leaks out of the landfill. The bigger the landfill, the more leachate is generated. This is in direct conflict with the Benton County Comprehensive Plan (BCCP) sections 6.1.4, 6.1.7, 6.5.4 & 6.5.5.

Although Republic Services is responsible for the maintenance of the landfill for 30 years after it closes, the long term financial and environmental liability for current and future generations will continue long after Republic Services is no longer maintaining the landfill. This ongoing liability will cost the county, and therefore taxpayers, an incredible amount of money and the environmental damage may not be recoverable. We need to reduce and minimize this never-ending liability by cutting our losses and STOP THE EXPANSION.

As I live miles away from the Coffin Butte landfill, I feel little personal effect from the landfill other than the scar it leaves on Benton County. However, the folks who live adjacent or nearby Coffin Butte are affected by the stinky, polluted air on a daily basis. This is a terrible situation that needs to be addressed to improve their quality of life. Let's not make it worse by expanding the landfill.

Expanding the Coffin Butte Landfill is the wrong answer. It only propagates an unmanageable situation. We need a different solution to our solid and hazardous waste problem. I think that we should investigate a waste management approach similar to Polk county's, i.e. a garbage transfer station next to a rail line (as proposed in Rickreall). The Portland & Western Railroad (PNWR) could meet this need for Benton County. This supports BCCP sections 6.3.1(reducing vehicle miles traveled (VMT)) & 9.1.11 (continuation and expansion of rail service).

Please put an end to the status quo by stopping this expansion and moving forward with a new approach. Vote NO and STOP THE EXPANSION of the Coffin Butte landfill.

Thank you for your consideration.

Sincerely,

Scott Lesko

To: Benton County Planning Commissions
RE: LU-24-027

My name is Cynthia Clapp and I am officially submitting my strong request to OPPOSE LU-24-027.

I live on Brenneman Lane at the base of Tampico Ridge, aka Poison Oak Hill, that directly borders the proposed expansion. I have lived in my home for over 40 years and have witnessed firsthand the massive change of the landfill and its "interference with the character of the area" and have personally experienced the demise regarding the quality and use of my home which "seriously interferes with uses on adjacent property" BCC 215(1), supportive example below. Approving the expansion proposal will only exponentially continue the deterioration of this area and increase the safety and health risks.

- Water contamination from the landfill is one of the many concerns. My property uses a spring fed system located on Tampico Ridge to supply water for our livestock and to irrigate our garden and plants and a well for drinking and household use. The risk of groundwater contamination from the landfill leachate is evident.
- I've seen the printed documentation of the methane gas plume extending over a mile above our property. The stench alone is enough to drive us indoors and even then the toxic odor finds it way inside. What are we breathing?
- I pick up a pile of garbage on the hill weekly that not only is an eyesore but threatens the wildlife and grazing cattle.
- Plans for my son and his family to take over the property have been called off as the risks for their health and safety are already too high. Selling my home instead will be wrought with obstacles let alone my own struggling conscience.

The concerns of the Coffin Butte Landfill as it exists now, let alone with the impending expansion, are numerous, complicated, and filled with unknowns. We need to act responsibly and finally call an end to the misuse of this land. I would gratefully appreciate your devout consideration to OPPOSE the expansion, once and for all.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Esteemed Commissioners-

I'm writing to express my opposition to the proposed landfill expansion of Coffin Butte by Republic Services.

This is a land use issue that has major environmental consequences. The Coffin Butte landfill generates excessive methane and leachate, a problem that is in large part due to its location in an area that receives more than 20 inches of rainfall a year, and it's underlying slope. This is not an ideal foundation or location for a huge, regional landfill. This excessive runoff and off-gassing is effecting our waterways and air quality. Republic Services would like to continue making Coffin Butte a profitable expansion of their business in the Pacific Northwest, but ultimately it will be the citizens of this area who bear the cost of environmental degradation and the lasting legacy of this waste site.

I think that our best option would be to say, "Thanks, but no thanks." The EPA is investigating methane leaks and compliance issues with Republic Services, so as a responsible government and it's citizens, we should let these issues be settled by the agencies with the proper jurisdiction while we call Coffin Butte Land***full*** and wind down it's active influx. A Benton County approval of expansion to this site would not be helpful to any future EPA demands that might be enforced against the operations at this site.

Ideally we should be partnering with counties in Eastern Oregon and aid them in managing landfills as well as access to them. The people of Oregon need to know that we (Benton County) have considered options for the future of their non-recyclable, non-compostable, unable to be repurposed trash that doesn't rely *solely* on the corporate strategy of Republic Services. An Eastern Oregon landfill option/partnership would have much less methane and leachate problems, due to its lower rainfall and more arid topography. That's good for future generations of Oregonians. We can do better than an old Army quarry and its surroundings. This is a site that was never intended to become a solid waste dump for millions of citizens in the Pacific Northwest.

Subject: Oppose/Deny LU-24-027, ENRAC comments
Date: Thursday, April 17, 2025 8:00:50 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I have just read ENRAC's recommendation to the county regarding the question of whether or not to approve expansion of the Coffin Butte Landfill.

While I think the recommendation provides ample reason to deny LU-24-027, some of those reasons deserve comment:

1. The issues caused by VOCs and odor contaminants are, in fact, not unknown. Complaints have been ongoing and numerous, for a long time. Citizen analysis has found high levels of hydrogen sulfide, which is toxic, corrosive, flammable, and harmful to human health. Trace amounts have a characteristic foul odor of rotten eggs. Also documented are high levels of nitrogen dioxide, due to methane combustion. Chronic exposure can increase the risk of chronic lung disease. Concentrations were found as high as 60–80 parts per billion — more than double what the EPA considers safe. The county has a duty to investigate.

2. Methane Emissions have been documented at a scale far exceeding anything considered acceptable.

3. The question of water pollution is, in fact, settled. Testing of local wells shows unsafe (and growing) levels of arsenic, and PFAS are not only leaching into the groundwater thru breaks in the liners, but are also being trucked out for inadequate treatment prior to being flushed into the Willamette River.

4. Odor is not a "NIMBY issue." Rather, it is clear evidence that Republic Services is failing to comply with its contract. It is also information that could be related to higher local rates of birth defects and cancers.

Benton County has a stated commitment to citizen participation. To ignore the concerns of neighbors would constitute a denial of that commitment, as well as willful avoidance of what could be a major public health issue. Denial of the conditional use permit is only the obvious first step.

All these matters demand further investigation, and proactive, ***regional*** planning to reduce what we put into the waste stream, and better manage what we can't.

From: Vicki Lynne Druliner <tvrowland1@msn.com>
Subject: Planning Commission Application LU-24-027

Sent For: I Don't Know <webmaster@bentoncountyor.gov>

Message Body:
I strongly OPPOSE the approval of LU-24-027 expanding the Coffin Butte Landfill. I have been a Benton Co. resident for 52 years and lived in the Soap Creek Valley 36 years. Approval of the proposed expansion would violate BCC 53.215(1) and BCC 53.215(2) as well as conflict with the Benton Co. Comprehensive Plan policies 5.9.4, 5.1.2, 5.2.1 and 5.7.4, which protect the natural areas in Benton Co. The landfill has grown from an almost accidental location used by Camp Adair over 70 years ago for burning garbage to a regional landfill located at a site ill-suited for any type of waste disposal. As other landfills continue to close down and Republic Services continues to accept further garbage, this will only increase the danger to wildlife and the surrounding environment. Currently the EPA has filed a "Section 114 Information Request" to force Republic Services to reveal their (self-declared) compliance records, suggesting that there are areas of concern they wish to investigate, however I urge you to not defer to the EPA for their review to carry the burden of proof, but look at all the testimony being submitted by your constituents, as well as environmental groups such as Beyond Toxics and the Mid-Willamette Bird Alliance, identifying the numerous and valid concerns. The great blue heron rookery across from the dump entrance that once held over a dozen nests has been abandoned since Republic Services developed the land right next to it, including the flaming burn-off plume (since enclosed) that appears to have been the last straw for the herons. The contamination of air and water continues to be a growing concern for many. There are no easy solutions for problems of this magnitude, but allowing further expansion of this facility seems to be adding to the problem rather than stopping it or trying to solve it. Ultimately it will be the problem of Benton County and their taxpayers to pick up the pieces in the coming years, after Republic closes down.

Re: File Number LU-24-027
Comments regarding Conditional Use permit proposal to expand the Coffin Butte Landfill,

From my perspective, it is not in the best interest of Benton County nor my adjacent property to support the expansion proposal. The impact of the landfill on adjacent property uses and the overall character of the area has become more and more significant since the site was changed from local to regional. Dramatically increasing the annual intake of refuse is not the answer. In addition, an increasing burden is being imposed upon the local infrastructure, primarily regarding state and county roads and emergency services, but also including habitability of the local region for humans and wildlife. An expansion of the landfill will only exacerbate this situation.

My commentary in no way is to be construed as an affront to the talents and work performed by the operators of the landfill. They perform their work in a very professional manner. It is not their fault that this landfill is in an inappropriate location for expansion and actually should be capped and terminated. Having a major landfill in an area with significant rainfall - immediately upstream and adjacent to a wetland wildlife refuge for aquatic flora and fauna is not in the best interest of future generations. We can do far better!

The vastly increased intake of refuse has already negatively impacted the value of my property. Refuse is apparent on Hwy99W in increasing amounts from improperly secured transport vehicles. Odors that were uncommon for decades are on the increase and noise from the vehicular operations is heard more as the landfill height increases. In addition, the observation by passing motorists on Hwy99W is now one of sheets of plastic instead of grassy green slopes.

There is a great deal of inertia regarding refuse disposal. Work is underway to move us in the direction of less need for landfills, but at a minimum one could locate landfills in regions far superior to one which is adjacent to a wetland and has a moderate to high level of rainfall. Long ago, Oregon commenced development of a means to utilize a landfill located in an arid region of our State for refuse including the use of public funds to build transfer stations on railway systems. It is time we utilize this form of conveyance and also take steps to further encourage compost operations and reclaim. By not supporting an expansion of the existing landfill, the movement toward such a future would be encouraged.

Observations:

1. The air quality at my residence and all the others on the North side of the Butte seems to be increasingly affected by odors believed to be emanating from the landfill as it is now growing at a far greater rate than it was in prior years. It is suspected that this is due to the increased elevation and change of the location of the dumping sites, but may also be impacted by covering practices. This last year, I have noticed many days in which an odor is present, however I have been remiss in reporting each day of an odor event as they are so frequent. Once I am indoors, the filtering in my HVAC system reduces the intensity. I do not measure the composition of the emissions detected. These odors are those of decaying organic matter.

2. Airborne debris are being deposited on my property from the landfill at a rate that has been increasing during the last few years. I can supply photos of such material should these be necessary. The majority are plastic films such as bags and wrappers commonly discarded in refuse streams.

3. The view from the apex of the Butte is now being occluded by portions of the landfill. The ramifications are a lack of the ability to view Hwy99W at this time. The horizon view has not been occluded to date, however in the event the landfill and any structures reach a height approximately 50 feet below the location of the telecommunications systems, their presence will negatively impact the site viability for such operations.

4. In addition, the ambient audio noise at the hilltop due to the vehicular and equipment operations at the landfill during operating hours is significantly greater than it was when fewer vehicles were traversing the area and when the landfill dump site was not as elevated. This does reduce the quality of the conditions at the geodesic dome.

5. The noise floor (a technical term related to telecommunications) has increased from S1 as measured by radio apparatus in 1990 to S6 as measured this year. This represents an increase in the local electronic noise from radio sources of approximately 30dB, or a factor of 1000. This increase has reduced the quality of the site for telecommunications operations. It is unclear as to the source of this radio noise, it is under investigation. The noise floor at my residence on the North Side of the Butte has remained at S1 and not increased.

6. Property value estimations (Zillo) have been declining over the last few years. While uncertain of the precise reasons for such declines, the net result is that the absolute value of the property I and others on the North Side of the Butte own may be further at risk if expansion is supported.

Recommendations:

1. Monitoring and reporting of the air quality including both Greenhouse gas emissions (Carbon Monoxide, Carbon Dioxide, Methane, etc.) and known odor compounds (such as Sulfides and Non-methane organic compounds) with alert notifications to the public and any personnel that can take actions toward abatement if levels exceed either emission standards for public areas or significant odor detection levels. Monitors should be placed at the periphery of the landfill properties. A minimum of four such monitors downwind from the landfill in the top four prevailing wind directions.

2. A means to eliminate the airborne debris.

3. Public dissemination of the water quality of all test wells on a website that is easily accessible with appropriate comparison to similar regions beyond the local landfill area.

4. Testing and reporting of the water quality for all local residential drinking water wells performed at a minimum annually with comparison to Oregon standards for Drinking water.

5. Covering of all areas of the landfill deemed "filled" with an appropriate layer of local fill dirt and nurturing of appropriate grasses on this fill that will not penetrate the polymer layers below and provide a more pleasing view to motorists passing the landfill along Hwy99W. It is important not to import fill dirt that may contain invasive species seeds from remote locations.

Following are some details of the impacts I have experienced, many of which are increasingly interfering with my intended uses and can be construed as becoming a burden for the public as well.

I have owned and resided on 40 Acres of land on the north side of Coffin Butte since 1980. My property extends from Military Road Southward and over the crest of Coffin Butte and contains the summit. A portion of my property extends on the south face of Coffin Butte and adjoins the landfill properties. I chose this property based on its qualities for residence, agriculture, forestry and radio telecommunications. These uses have been identified in the legal documents I prepared regarding my land use. I have supplemented the forest through planting and maintained its integrity to the present day. I had a road constructed that reaches the top of the Butte. Along that road, there are several test wells. Water samples are drawn from these wells by Republic or its representatives on a periodic bases. Reports of the water quality have not been received by me so I am uncertain of even my own water well quality.

Radio Telecommunications:

The apex of Coffin Butte is one of the best sites for radio telecommunications in the local area. This is one of the primary reasons I selected the property. I have made significant capital improvements to the hilltop to enable the telecommunications:

- a 35-Foot geodesic dome
- three 50-foot self supporting towers
- two smaller self supporting towers
- a self-supporting 50 foot rotating mast
- Solar panels to harvest electric energy
- Storage batteries
- Radio Telecommunications electronic hardware
- Antennas for communications
- Remotely operated amateur radio communications equipment
- There is a well situated on the hill crest

Soap Creek valley is the secluded valley immediately West of Hwy99W and South of the Landfill area. My property is the site of an amateur radio emergency services radio relay (repeater) station for that valley as it is the ideal location for such a communications gateway. The repeater is powered via solar panels with battery storage and is fire hardened as it is buried below its antenna tower. It is in place to facilitate emergency communications to and within the Soap Creek valley. This emergency communications system is an adjunct of the Benton County Emergency Services network. It is owned

and maintained by the Soap Creek valley Amateur Radio community, a volunteer group composed of local citizens within the valley. They have also connected non-amateur radio citizens in the valley through the use of FRS (Family Radio Service) communications tools.

I am an amateur radio operator, having been first licensed in 1966 and continually hence. I am a member of the Amateur Radio Relay League and president of the Oregon Chapter 108 of the Quarter Century Wireless Association. While these are not professional employment activities (amateur radio operators and communications are stipulated by law to be non-commercial), they enable me to aid my fellow citizens in times of natural and other disasters when other forms of communication are not available or unreliable. I have been a Benton County Emergency Services volunteer since 1980.

The Quarter Century Wireless Association Oregon Chapter has installed a remote amateur radio transceiver system within the dome I own on the hilltop. It is powered by solar panels with battery storage. There is a wireless communications control link to this system to one of the Amateur Radio operators in Soap Creek Valley. These types of communications links operate in the 3 to 5 GHz region of the radio frequency spectrum and are considered "line of sight". This means if something blocks the path, communications are not possible.

As long as the landfill surface stays at a minimum 50 feet below my lower property line, it should not deleteriously affect signal transmissions to the site. At the present time, increased radio and audio interference is present for signal reception. At this point is it more of a nuisance than a major issue, however it does reduce my ability to utilize my property in the manner I have been using it since 1980. The earlier local (not regional) landfill was not increasing in size at a rate that would significantly alter my use for radio communications for the foreseeable future, but with the increase from 40KTons to 1MTons annual input, the time to potential interference was reduced by a factor of 25 to roughly 6 years instead of 150 years.

Forestry:
The property was purchased with timber remaining in 1980. Harvesting was performed prior to my purchase, but probably no later than in the 1940's. Trees spanning up to 40 – 50 years age were on the property. To improve the forest, I have planted hundreds of tree starts on the North side of the Butte. The trees on the North side now range in age up to at least 100 years and many exceed 100 feet in height. This year I am in the process of improving the forest further through the removal of invasive species and possibly some selective thinning. The trees do not seem to be affected by the proximity to the landfill, however significant quantities of plastic film-like materials have been found throughout the property. These were not present when I acquired the property in 1980 and are likely the result of a modest amount of material being lofted by wind from the landfill. As the height of the landfill operation level increases, more such material will be lofted and deposited on the North side of the hill. This type of deposit is primarily a nuisance. It does degrade the quality of the property from my perspective and for anyone that might be considering acquisition of it after me.

Agriculture:
The property at the top of the hill and at the bottom on the north side are suitable for pasture use. The land quality is adequate for fruit trees and berry bushes, but not very suitable for row crops. Currently, the hilltop has not been employed as pasture for livestock in part due to its remote location. Odors from the landfill will probably not affect use of this nature unless there are toxic elements to the emissions. It is unknown if toxic or otherwise dangerous emissions exist from the landfill as no monitoring of the emissions is evidently taking place. The odors detected by personal observation seem to be from the landfill, but the composition of these is unknown for the above mentioned reason.

Since some odors may stem from sulfides that could be toxic, it would be appreciated if monitoring were in place. Whether or not an expansion takes place, it is likely emissions will increase as the landfill active area is elevated and hence such monitoring is increasingly important to ensure safety both for personnel living near and utilizing or working at the landfill.

Residence:
I have resided at 39125 Military road the majority of the time since 1980. While the landfill was a small county facility, I had a close and friendly relationship with Mr. Weber and his operations. I was well aware of the landfill and was of the understanding that it was to focus on local refuse. The rate of landfill deposition was far lower until the change to a regional landfill. While I am a local landholder, I was not aware of any opportunity to comment regarding the change to a regional landfill. That change has affected my quality of life, property use, and the character of the region. In spite of this, my relationship with Valley Landfills and Republic has been friendly. I have happily cooperated with access to the monitoring wells and other items. It is not them that are creating the issue, it is the location and geology of the site.

Odors and audio emissions from the landfill have been on the increase over the last several years. While odors have been present frequently, I have not sent in very many notes regarding odors or audio emissions. At this time, odors are present frequently, and do detract from the ambiance of my residence. Odors are present even during periods in which the landfill is closed. Noises (back-up beepers, etc.) are heard more often lately during the operations, disturbing the ambiance as well.

As the landfill increases in extent, the market potential for my property diminishes. Should the landfill be completed and closed, my property value will likely stop diminishing, odors and emissions will reduce and the view from the apex of the butte would be of green grass instead of black plastic. Due to our climate, rainfall permeates the landfill and enables materials to migrate through runoff beyond the confines of the landfill, either as surface water or even possibly penetrating and entering the aquifer.

No matter what takes place, I shall remain committed to my term of participation in the Benton County Disposal Site Advisory Committee. We have recently worked as a team and developed a plan towards increasing the preparedness of the site in the event of a wildfire entering or emerging during the fire season. Thanks go to Republic and the Adair Rural Fire Department on this matter!

Sincerely, Dr. David Hackleman

Date: Thursday, April 17, 2025 11:09:22 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Mai Kiigemagi and I live at 2660 NW Linnan Circle, Corvallis, Oregon.

I am writing because I strongly oppose the expansion of the Coffin Butte Landfill. I urge the commissioners to vote NO.

The landfill at its current size negatively impacts wildlife habitat in the area. It will only get worse with the expansion. The landfill attracts great numbers of scavenging birds such as crows, ravens, gulls, and starlings. These birds compete for nesting cavities with endangered songbirds, and also predate on eggs and nestlings. Two species of concern, the Oregon Vesper Sparrow and the Streaked Horned Lark, could live in this area, but don't, due to the large numbers of scavengers. Additionally, Great Blue Herons have been nesting in the area for many years. The proposed expansion extends into their current nesting area, which would have a serious impact.

These concerns relate directly to the Benton County Comprehensive Plan 5.9.4: "In making land use decisions, Benton County shall protect identified sensitive wildlife habitat types and wildlife corridors from adverse impacts."

Benton County Code 53.215(1) states "The proposed use does not seriously interfere with uses on adjacent property, with the character of the area." Providing wildlife habitat is certainly one of the characters of the area, with which the landfill expansion would most definitely interfere.

Please reject LU-24-027.

Sincerely,
Mai Kiigemagi

To whom it may concern,

The coffin butte landfill has been a growing problem for our community. The unpleasant odor, high levels of methane, and seemingly unregulated dumping of hazardous material is unsafe for neighboring communities.

Republic Service's trucks litter the roads and are cleaned up on the taxpayers dime. It is unclean for us and the wildlife sharing our beautiful state.

Until Coffin Butte cleans up it's act, the landfill must not expand. We should not be taking in so many other counties trash or paying to clean up their mess. Please stop the expansion of the landfill.

Thank you for understanding mine and many others concerns.

Becky Merja
Corvallis, OR

April 17, 2025
To: Planning Commissioners
Re: LU-24-027

Please DENY LU-24-027.
I bought property in Soap Creek Valley in 1979. For 46 years I have watched this area evolve from rural countryside, with farming and forestry activities to a massive industrial complex that generates noise, traffic, litter and a stench that permeates the air for miles. The proposed new landfill will be a mirror image of the current landfill operation which **Does seriously interfere with the character of the area (BCC 53.215(1).**

The Benton County Comprehensive Plan Goals are "The Big Picture" that the Development Codes are based on. The Comp Plan goals reflect the values of our community. ***The following are goals I feel are being violated by the proposed expansion and current landfill operations***.

Goal 3 "Preserve and maintain" Agricultural land.
The applicant has purchased agricultural land ***(as a buffer to landfill operations)*** and pretends to farm. I approached one of the contract farmers about buying hay off landfill property. He informed me that the nitrates in the hay were so high nothing would eat it, rendering that crop useless.

Goal 4 "Preserve and maintain" Forest lands
The applicant proposes to use Forest Conservation land that is currently a buffer to the landfill, as the future location of the leachate ponds. This activity will disturb wildlife, impact adjacent properties and ***further*** diminish recreational experiences in neighboring EE Wilson (BCC 53.215(1)).

Goal 5: "Protect and maintain" Natural Resources, Scenic and Historic Areas, Open Space
The applicant has altered the historical shape of Coffin Butte beyond recognition and proposes to do the same to Tampico Ridge. The basin between Coffin Butte and Tampico Ridge is the natural entrance to Soap Creek Valley. Approving this new landfill will result in further defacing of local landmarks and drastically change the historic landscape and view shed of the area (BCC 53.215(1)).

Goal 6: "Maintain and improve" air, water and land resource quality
Air: "Dump Days" If we can smell it, we know air quality has deteriorated. Landfill gases permeate the air for miles.

Water: ALL Landfills LEAK, (let's assume this one IS leaking, ***because we sure don't know that it is not***). Ground water supplies 90% of rural residential drinking water - near by Soap Creek drainage is part of the Luckimute Watershed that feeds the Willamette River. Our water resources are in harms way.

Land: “Bio Solids”, from the Corvallis Wastewater Treatment Plant settling ponds, are spread on agricultural lands. Those “Bio Solids” contain whatever toxins settle out of the dump leachate (“garbage juice”) that is trucked to that facility.

Goal 7: “Protect people, property & environment from” Natural Hazards.
Wildfires are becoming more common; the current landfill emits explosive levels of methane creating fuel for a catastrophic fire event.

Earthquakes, when the “big shake” hits, it won’t matter how well engineered the landfill cells are, there will be contamination that will impact water, air, and land for generations.

Goal 10: “Provide” Housing.
The applicant has purchased Rural Residential properties ***(as a buffer)*** to landfill operations. This removes RR land that was once available to families who would like to live close to town yet in a rural setting.

Goal 11 Public Facilities & Services:
The landfill, all its heavy traffic and explosive levels of methane, are in Adair Rural Fire and Rescue District jurisdiction. This District is primarily staffed by volunteers who have day jobs. The bigger the landfill gets the bigger the burden is on emergency services. (BCC 53.215(2))

Goal 12: “Provide safe, efficient, cost-effective” Transportation
The applicant proposes to create a new landfill on Tampico Ridge (South of Coffin Butte Rd.), while continuing operations to the North of Coffin Butte Rd. The combined Construction and Landfill traffic will impact user safety and ***further*** degrade the travel surface. Camp Adair Rd. and Independence Hwy have already been heavily impacted by landfill site preparation. The burden of repair falls on taxpayers. (BCC 53.215(2))

Goal 15: “Protect, conserve, restore, enhance” Willamette River Greenway.
More than 30 million gallons of dump leachate (“garbage juice”) is trucked to two wastewater treatment plants (that are not equipped to filter out the toxins) and released into the Willamette River. How does this practice “protect, conserve, restore, enhance” this resource?

LU-24-027 is not supported by any of these goals. In Benton County, we pride ourselves on being environmentally conscious and progressive, will our actions on this issue reflect those community values**? Please deny LU-24-027 conditional use permit.**

I originally tried to send this via the County's form on April 11 (the form has fields for address etc), but the body of my testimony got truncated without warning, so I re-sent it via email… but realized just this morning I neglected to include my address (apologies!). So I am re-submitting it one more time, below, with my address included. - Debbie Palmer

---

Dear Benton County Planning Commissioners,

With all my being I urge you to deny LU-24-027.

My husband and I moved to the property of our dreams in Soap Creek Valley ten years ago. When we considered buying we of course noticed the landfill, but were told it was *near capacity and would be closing soon.* If you went to the Coffin Butte Landfill's website at the time, they would not have dissuaded you from this "closing soon" idea - instead they offered a comprehensive page that walked you through all the detailed steps that would be taken when the landfill closed. That page no longer exists; now they have only this brief explanation under Q&A:

> "Once the Landfill is filled to capacity, a final landfill capping system will be installed that consists of a Geomembrane welded to the bottom liner geomembrane, an engineered soil liner, cover soils, and a vegetation layer. At that time the site could be used as an open green space, parks, wildlife viewing area, or nature trails. The site will also be maintained for an additional 30 years in post-closure care after the final closure. This care includes continued groundwater monitoring, leachate management, and compliance reporting until such time the Oregon Department of Environmental Quality approves the site for final closure."

Setting aside the numerous environmental and health concerns for the moment (because they are not negligible!), when we moved here it was a reasonable expectation that this ugly, out of place, industrial eyesore would probably within 5-10 years look more like the hills surrounding it if closed and revegetated the way Republic Services led us to believe. A few more years of ugly was acceptable — but an ever-expanding monstrosity, on the other hand, would seriously interfere with the character of the area, a violation of BCC 53.215 (1).

And "the area" — especially when it comes to "character of" — is not restricted to properties immediately adjacent to the landfill site zone. This landfill impacts the character of the area for miles around now. To say it sticks out like a sore thumb is an understatement.

When the original owner built the house we live in - in 1983 - the 1977 Solid Waste Management Plan was in force (it still is! It has not been updated). And in that SWMP, the landfill *was going to close by the year 2000.* And back then it was infinitely smaller then than

it is now. Instead it grows like a cancer on the landscape.

In summary, you *might* live or build near a landfill if you knew the timeline for its closure and could weigh that in the balance of your decision-making (i.e. if you knew for a fact that the disruption to the character of the area was temporary). But there's no question that this now huge landfill — already starkly out of place in this otherwise gorgeous part of north Benton County — will indeed seriously interfere with this area's beautiful character if it is allowed to get even bigger.

Please STOP this landfill expansion. You have the power of discretion in this decision. Use it to deny LU-24-027.

Sincerely,
Debbie Palmer

Dear Planning Commissioners,

And now for something completely different. You've possibly waded through hundreds of LU-24-027 testimonies at this point and could use a break? Please take two and a half minutes to watch this delightful little music video of beloved Corvallis singer-songwriter Neal Gladstone's song "Goin' to the Landfill". It's short, and will hopefully put a smile on your face.

https://www.coffinbuttefacts.org/song/

As you're listening/enjoying… I hope you will pay particular attention to the lyrics of the final stanza...

…and then note that *this was written nearly 25 years ago.*

Maybe… just maybe, *this time around* things could be different(?)

Please deny this expansion.

Submitted with heart and sympathy for your enormous undertaking in this hearing,
Debbie Palmer

Dear Gabe Shepherd,

I oppose LU-024-27, the expansion of Coffin Butte Landfill, because of the negative impacts such an expansion would have on the environment and because it will seriously interfere with the mostly rural character of the area. If approved, this expansion will also diminish sustainability efforts in the region, and derail alternative waste management initiatives needed to protect Oregon residents. The extent of the landfill?s negative impacts are only now beginning to be known. These impacts include unacceptable health effects from polluted air, ground, and water; PFAS and other toxics that flow from the landfill; a weakening of alternatives to waste creation; and a hastening of climate change, to name a few. It would be irresponsible to assert that expanding its operations would not seriously interfere with the air, water, wildlife, and other natural resources that we all share. For these reasons I'm urging you to deny LU-024-27.

Sincerely,

Subject of Testimony: Oppose expansion of Coffin Butte Landfill

Full Name: Ellen Tappon

Email: tappons@gmail.com

Street Address: 1454 Northwest 17th Street

Written Testimony:

I oppose the expansion of the Coffin Butte Landfill. The hazardous waste, air pollution, climate damage, degradation of the environment and ecosystem far outweighs the money the county receives and cost of mitigation efforts. It is not only a health danger, but an eyesore. The County should be looking out for the well being of the county and not the income from providing an unrestricted dumping ground for the NW's hazardous waste. What we need is a waste management plan with efforts to reduce waste and manage the input of toxins into our air and water.

TESTIMONY AGAINST THE PROPOSED COFFIN BUTTE E

DEBORAH WOLF

Thank you, Commissioners, for your service and for allowing this testimony.

I am joining my fellow citizens of Corvallis in saying no to the proposed expansion of the Coffin Butte garbage site. Republic has demonstrated a callous lack of reasonable monitoring of the leachate and methane emissions already. There are large tears in the covering daily which allow these substances to escape. Republic's practice of dumping leachate into the river puts us all at risk of higher rates of cancer, liver damage and developmental problems with children. Not only does Republic have no accountability with our waste, it brings in garbage from nine other major sites as far away as Washington State—only 10% of this mess is local.

According to the 2020 Franchise Agreement between Republic Services and Benton Country stipulated that is this expansion is approved, there will be NO LIMIT to the amount of garbage they can dump there. I'm afraid that our children and grandchildren will bear the brunt of us not stopping the expansion of this huge toxic stew, which unchecked could fill an entire valley. (6.1.2.In cooperation with appropriate agencies, Benton County shall manage its air, water and land resources to insure their protection, conservation, restoration or enhancement.) Now is our chance I urge a vote for no expansion.

Submitted via email to publiccomment@bentoncountyor.gov

Subject: LU-24-027

Dear Chair Fowler and Commissioners,

On behalf of 350 Salem, Beyond Toxics, Oregon Chapter Sierra Club, and Valley Neighbors for Environmental Quality and Safety, we are submitting the following testimony regarding LU-024-027, Republic Services' application for a Conditional Use Permit to expand Coffin Butte Landfill. We recommend that Benton County deny this application. As you may know, we promote the responsible use of the earth's ecosystems and resources, strive to protect and restore the quality of the natural and human environment, and defend our rights to a healthy world. Approving this application would be a decisive step in the opposite direction.

We understand that approval of this land use application would have to come from your findings that: the expanded landfill would not seriously interfere with uses on adjacent property, or with the character of the area, or with the purpose of the zone, and that the expanded landfill would not impose an undue burden on any public improvements, facilities, utilities, or services available to the area; and that further, you must find that an expanded landfill will not force a significant change in, or significantly increase the cost of, accepted farm or forest practices on any surrounding lands devoted to farm or forest use; and that further still, you must find that an expanded landfill would not significantly increase fire hazard or significantly increase fire suppression costs or significantly increase risks to people engaged in fire

suppression. Finally, our testimony may refer to relevant provisions in the Benton County Comprehensive Plan or Development Code that the landfill expansion would contravene.

From our experience with and research into landfills in general and Coffin Butte Landfill in particular, we assert that you cannot find support for any of the application's criteria, because an expanded landfill inherently runs counter to all these concerns and to the values of the residents of Benton County, and the members of the undersigned organizations. We will set out some of the arguments supporting our statement in the continuation of our testimony below.

An expanded landfill increases methane leakage and climate change impacts

There have been many disclosures about large-scale methane leaks at Coffin Butte Landfill in recent years (EPA inspections 2022 and 2024), which have led to an ongoing investigation of the landfill and recent legal action by the Environmental Protection Agency, and concurrent inquiries by Oregon DEQ. The landfill has also come under observation by organizations promoting accurate and actionable climate science, who have produced images in which the landfill can be seen leaking huge plumes of methane-laden landfill gas into the surrounding region (Attachments A, B, C, D). Methane is a pernicious greenhouse gas: each ton of methane vented into the atmosphere will add the equivalent of over 80 tons of carbon dioxide over the course of 20 years. Estimates of this leakage show this landfill's outsized impact upon the climate: Attachment E1 shows the landfill owner's own estimate of the cumulative small-scale methane leakage; Attachment E2 shows the climate damage from large-scale leaks caused by infrastructure failure, as quantified by the climate science non-profit Carbon Mapper.

Climate change is "everything change," and the science documenting its potential disruptive impact is too vast to recount here. The undersigned are gravely concerned about these impacts on the quality of natural and human systems – from entire ecosystems down to the health and survival of our local forests, farms and homes and the safety of our local firefighters. We refer you to the statewide goals promoted in the Benton County Comprehensive Plan, which are to maintain and improve the quality of the air, water and land resources of the state; to protect people and property from natural hazards; to maintain and improve the variety of economic and social activities that are so vital to the health, welfare, and prosperity of Oregon's citizens. These County goals map very well to the goals of the undersigned, and an expanded landfill is incompatible with them.

The next decade is critical to averting the worst impacts of the climate crisis. Floods, fires, storms, food shortages and other unnatural disasters are becoming more frequent and more extreme. We must do everything in our power to ensure a safe, livable climate for future generations.

An expanded landfill increases unacceptable community health effects in air quality

The impacts on human health on the people who live, work, travel or recreate in the vicinity of a landfill are well known. The expansion of Coffin Butte Landfill will continue and magnify those impacts.

Although methane is the most commonly traced pollutant in landfill gas, due to methane's flammability and severe and immediate impact on global warming, landfill gas contains other pollutants as well, many of

them toxic and odorous.[1] Air quality reports for Coffin Butte Landfill tell us that its landfill gas contains methyl ethyl ketone; methylene chloride; ethyl benzene; hydrogen sulfide; hexane; isopropyl alcohol; perchloroethylene; toluene; vinyl chloride; xylene – all released at the landfill in quantities over a quarter ton per year. All these chemicals have either been identified as Hazardous Air Pollutants or assigned a Risk Based Concentration, or both, by the EPA.[2] The landfill exceeded its air quality limit for these non-methane volatile organic compounds in late summer 2024, and notified Oregon DEQ.[3]

Recent published research indicates that PFAS, the toxic "forever chemicals," become aerosolized and airborne in landfill gas plumes.[4] These plumes drift for miles, as documented by aerial imaging and a growing stream of landfill odor complaints by the public. Scientific studies have shown that exposure to PFAS in the environment may be linked to harmful health effects in humans and animals. Since PFAS and other toxics flow from the landfill and accumulate in surrounding areas, we suggest you cannot find that an expanded landfill would not seriously interfere with uses and practices on area properties, such as homes, farms, forests, wildlife and recreation areas, especially as the impacts of landfill gas are not yet fully understood, but they will be extremely long-lasting. This uncontrolled exposure to and contamination of the area is of great concern to the undersigned organizations.

An expanded landfill increases unacceptable community health effects in water quality

Republic Services sends leachate untreated to the Salem and Corvallis wastewater treatment plants, which then discharge this unremediated effluent into the Willamette River, a drinking water source, a source of agricultural irrigation, and a natural water system. Not all leachate is pumped out of the landfill, however – what remains threatens local soil and groundwater.

Municipal landfill leachate is created when rain filters through solid waste, leaching out chemicals, metals, organics, etc. Landfill leachate, laden with harmful chemicals like PFAS, enters municipal wastewater treatment plants (WWTPs). Municipal WWTPs are not designed to treat leachate, so many toxics including PFAS pass unremediated through the plant and are discharged into the Willamette River. The 16 million gallons of leachate sent to the Corvallis plant in 2021, for example, was discharged upstream of the Adair Village, Sherwood, and Wilsonville drinking water intakes, as well as many agricultural irrigation

---

[1] Landfill air pollution may be as unhealthy as it is unpleasant, study finds: https://hpdp.unc.edu/2011/07/landfill-air-pollution-may-be-as-unhealthy-as-it-is-unpleasant-study-finds/

[2] Air Toxics Emissions Inventory for Coffin Butte Landfill, Oregon DEQ, 2020.

[3] Earlier this morning we notified the Oregon Department of Environmental Quality that Coffin Butte Landfill exceeded its threshold for non-methane organic compound emissions (NMOCs), as stipulated in its Title V Air Quality Permit. NMOC emissions between September 2023 and August 2024 were 51.33 tons; our existing permit allows for 49 tons during a rolling 12-month period. We notified the Oregon Department of Environmental Quality (ODEQ) of this development within an hour of obtaining the numbers, as required by our air permit." Letter to Benton County government, September 30, 2024

[4] Landfill Gas: A Major Pathway for Neutral Per- and Polyfluoroalkyl Substance (PFAS) Release – https://pubs.acs.org/doi/10.1021/acs.estlett.4c00364

withdrawal points. Salem's WWTP took in over 21 million gallons of leachate from Coffin Butte landfill in 2024.[5]

An expanded landfill would increase its rainwater footprint by about 45%, and increase its leachate generation proportionally. This additional leachate would also end up in the Willamette River, creating additional pollution that downstream drinking water treatment facilities and other downstream users would be subjected to or would be burdened to remove.

An expanded landfill also poses a greater risk of groundwater contamination. Fractured basalt, not clay, underlies this dump, and water moves unpredictably through fractured basalt. Parts of this dump are unlined, and the lined areas may already be leaking (the possibility that contaminants have already reached the main Willamette basin aquifer has not yet been investigated). Proximity to the Corvallis Fault further complicates the understanding of local groundwater. Extreme weather in the form of flood rains (atmospheric rivers) pose the possibility of overwhelming the leachate collection system and overflowing into groundwater. Landfill contamination of groundwater leads to health impacts.[6]

Protecting our water resources is an important directive of both the undersigned organizations and the Benton County Comprehensive Plan. Operating a landfill in a rainy region is asking for trouble, as it's a given that its liners have either failed or will fail at some point, and the timeline and severity of that eventuality will be in direct proportion to the footprint of the landfill.[7] An expanded landfill would thus increase this risk. We note that, in its geologic analysis, Republic states that the hydrogeology of the expansion area has not yet been investigated.[8]

An expanded landfill undermines alternatives to waste creation.

Oregon prides itself on recycling and environmental stewardship. Benton County declares itself to be "dedicated to protecting natural resources through sustainable practices, ensuring a healthy environment for current and future generations." These are also key resolutions for the undersigned organizations.

Landfilling, however, is not a sustainable practice, does not ensure a healthy environment, nor does it promote a circular economy. Landfilling, especially for-profit landfilling, continues to facilitate a wasteful, throw-away culture.

---

[7] Hudson and Mohawk Leachate Collaborative published a major report, "The Threat of Landfill Leachate to Drinking Water in the Hudson and Mohawk Rivers" https://docs.google.com/document/d/1M5W0-GJ3umRlqMKHNa_FPCL-qSqrSeCpUOTv3JCApHA/edit?tab=t.0#heading=h.v33rxnwu8b2v

[8] For the development area south of the road, investigation reports are in preparation for submittal to the DEQ as part of the permitting process." Coffin Butte CUP – Environmental Summary https://library.municode.com/or/benton_county/munidocs/munidocs?nodeId=7cbbdcc58f44e

Both the state of Oregon and Benton County have set aggressive goals for waste reduction. More locally, the Climate Action Advisory Board for the City of Corvallis is urging several waste reduction initiatives, including a No Wasted Food ordinance. There are similar measures being proposed throughout the wasteshed for Coffin Butte Landfill, which now extends across 16 counties and comprises 30% of the municipal solid waste generated in Oregon. We suggest you cannot find that an expansion of the landfill will not pose a significant threat to initiatives like these and will imperil the considerable gains in material reuse, pollution control and energy efficiency.

Coffin Butte Landfill does not need to expand

On Coffin Butte Landfill's website, on the day we write this (April 9, 2025) Republic states: "Today, there is approximately 1 year of airspace remaining in the active disposal cell (aka cell 5E.) There are no other cells ready for disposal operations." Republic's statement is false: the landfill has, and indeed is already using, other permitted space (cell 6A), the former rock quarry. Republic's statement is also misleading: Republic Services is attempting to create a narrative that the landfill expansion is needed locally, or else the company will stop its services.

This false narrative is an attempt to justify the environmental threats and harms that we have discussed in our letter. Any landfill expansion would also free Republic from their current contractual intake limit, magnifying those threats and harms. We suggest that you cannot make a finding that expanding the landfill is in any way "necessary." It is not necessary for the residents of Benton County, whose trash comprises only 7% or so of the intake and who have a signed commitment that Republic Services will dispose of Benton County's waste to the year 2040.

Summary: By any criteria, the application to expand the landfill should be denied.

We believe that expanding Coffin Butte Landfill would risk seriously interfering with the natural value and functional ecosystem in the E.E. Wilson Wildlife Area; would risk seriously and permanently degrading the character of the area, which has been rural farmland, residences and timberland for over a hundred years; would risk imposing undue burdens on the area's public infrastructure; would risk the current state of, and our common efforts to improve, the quality of the air, water and land resources of the state; would increase and accelerate the environmental hazard that the landfill poses to people and property; would degrade the quality and variety of economic and social activities vital to the health, welfare, and prosperity of Oregon's communities; would increase the burden to public infrastructure by increasing leachate flow into the Willamette River; and many other risks and harms as stated in this letter.

We believe that expanding Coffin Butte Landfill would force a significant change to the farm and forest practices in the area; would increase fire hazard and risk to firefighting personnel; would undermine regional efforts to use our resources and materials more sustainably; and would subvert the will of the people to live cleaner, more responsible, less trash-filled lives.

In addition to risks to the area, the expansion's contribution to climate damage would pose risks to human systems and ecosystems elsewhere. Exporting these risks is unacceptable to the values of Benton County government, the State of Oregon, and the undersigned organizations.

We recommend the Planning Commission deny Republic Services' application to expand the landfill. Expansion is not needed, and denial will be an important step toward addressing our common responsibility to the natural and human systems we depend on by protecting the air, water and land resources that we love.

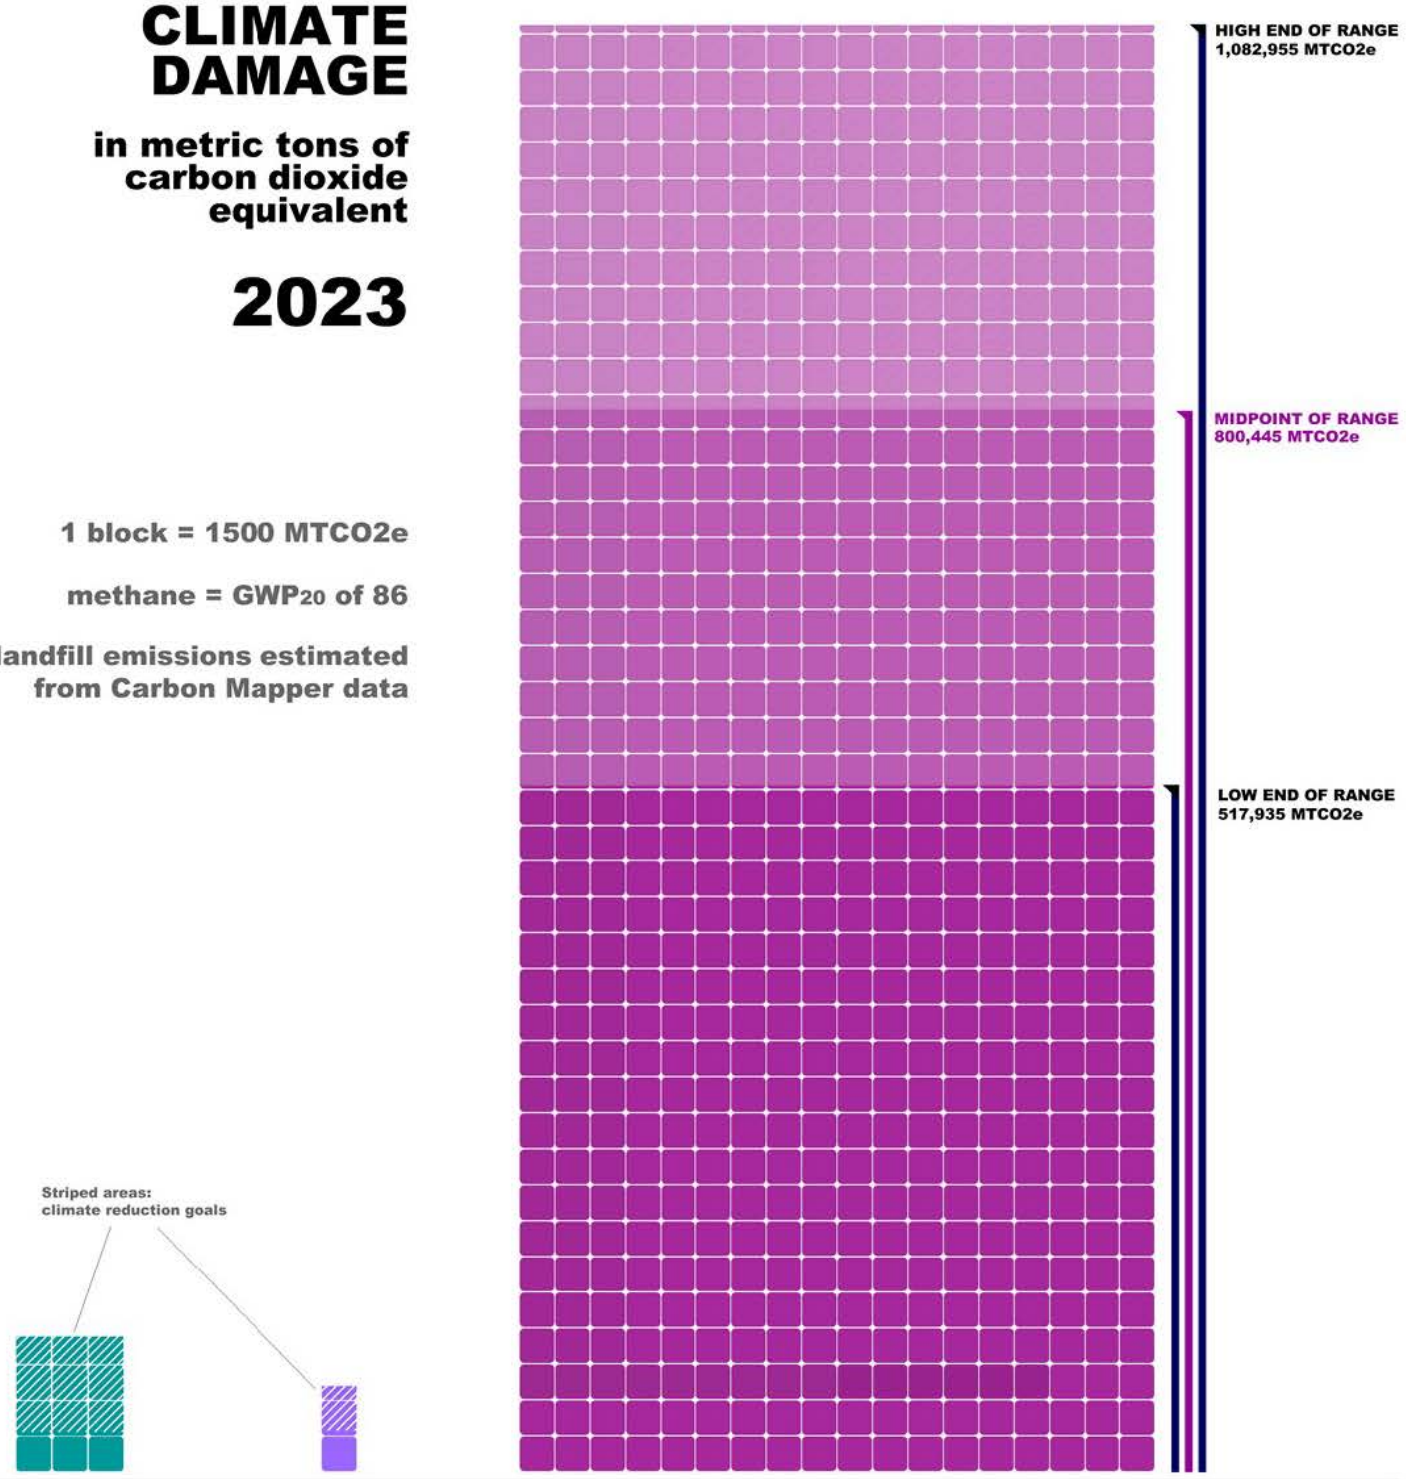
ANNUAL CLIMATE DAMAGE



in metric tons of carbon dioxide equivalent

2023

1 block = 1500 MTCO2e

methane = GWP_{20} of 86

landfill emissions estimated from Carbon Mapper data

Corvallis City Government
17,004 MTCO2e (2022)

Benton County Government
3550 MTCO2e (2022)

Coffin Butte Landfill
800,445 MTCO2e, with confidence interval between 517,935 and 1,082,955 MTCO2e (2023)

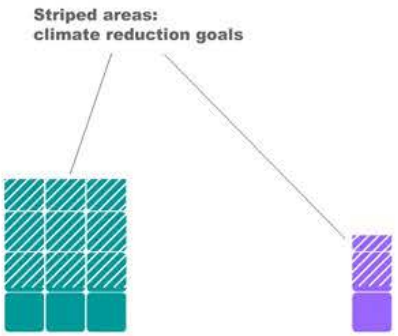
All figures are approximations from most recent data available. Methane MTCO2e uses GWP_{20} = 86

Data sources: greenhouse gas inventories self-published by City of Corvallis (2022), Benton County (2022); striped areas show climate action reduction goals. Carbon Mapper data from aerial surveys (2023).

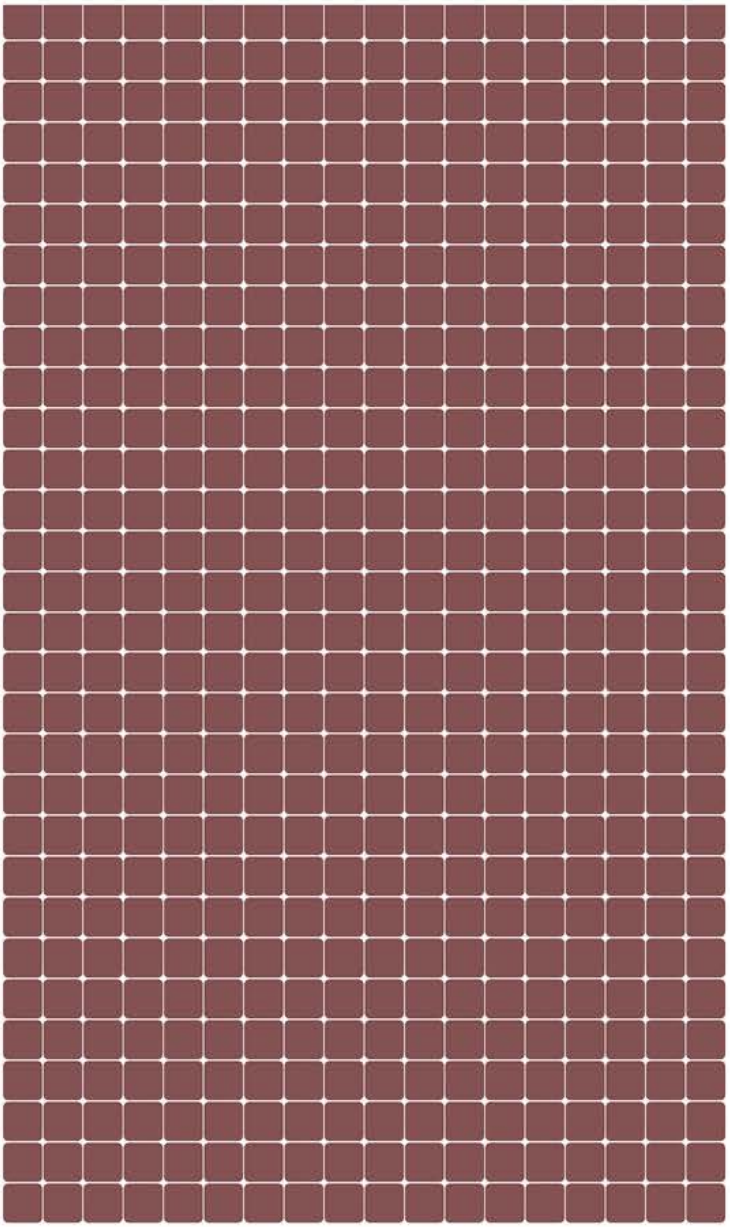
Carbon Mapper super-emissions from four point sources derived from six remote sensing surveys of 16 methane plumes over a ten-day period in June 2023. Methane quantification by Carbon Mapper: 1.7 metric tons of methane per hour, plus or minus 0.6 metric tons

For simplicity, scenario assigns equal share in output to each point source and varying durations to each: Point Source 1 = 3 months, PS2 = 6 months, PS3 = 9 months, PS4 = 12 months

ANNUAL CLIMATE DAMAGE



in metric tons of carbon dioxide equivalent



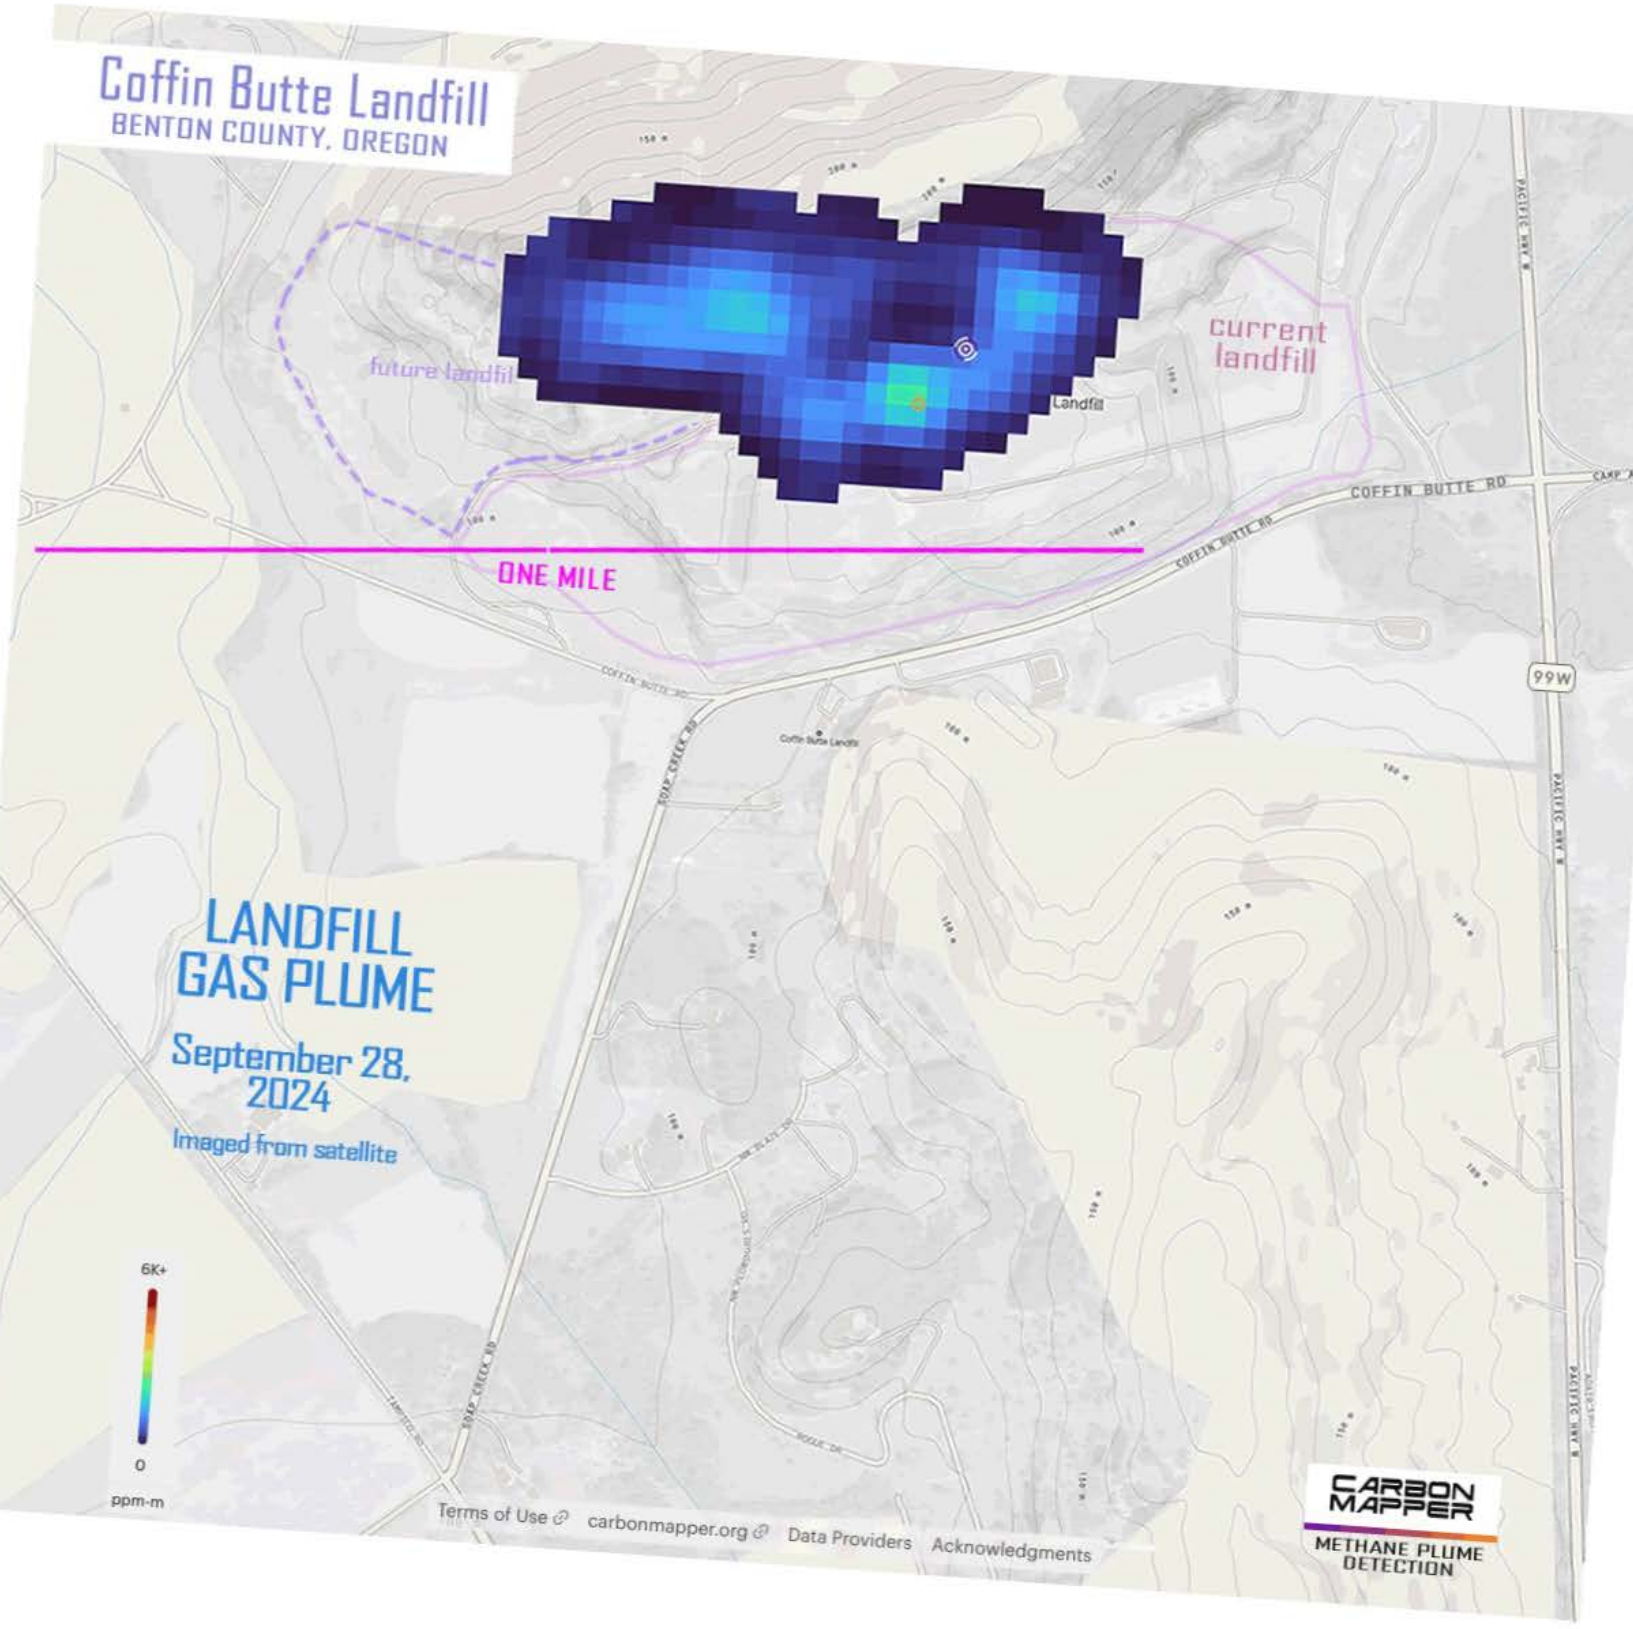
2024

based on Republic Services data

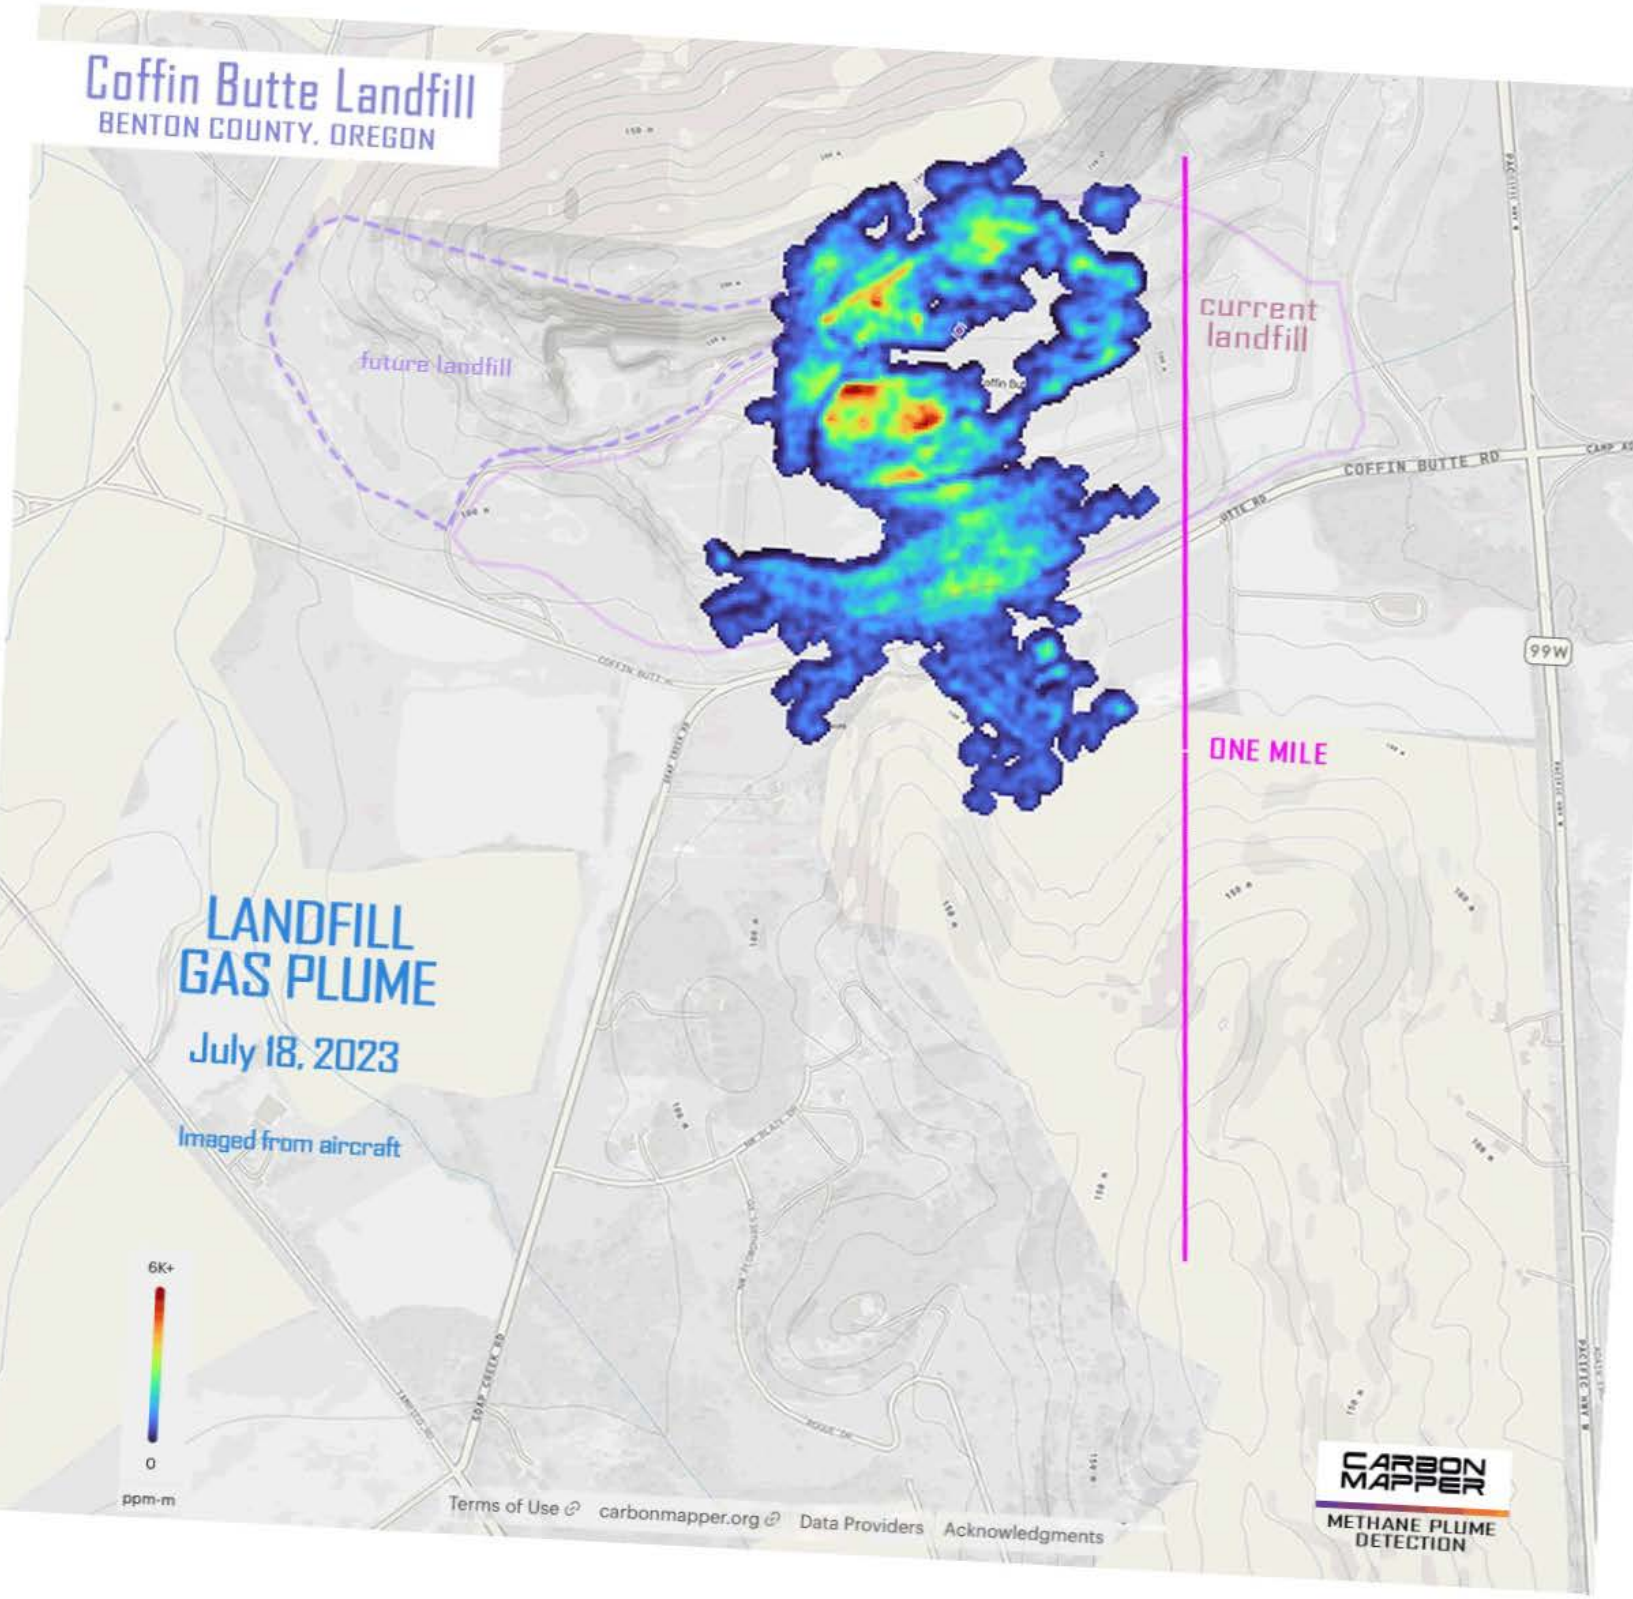
1 block = 1500 MTCO2e

methane = GWP_{20} of 86

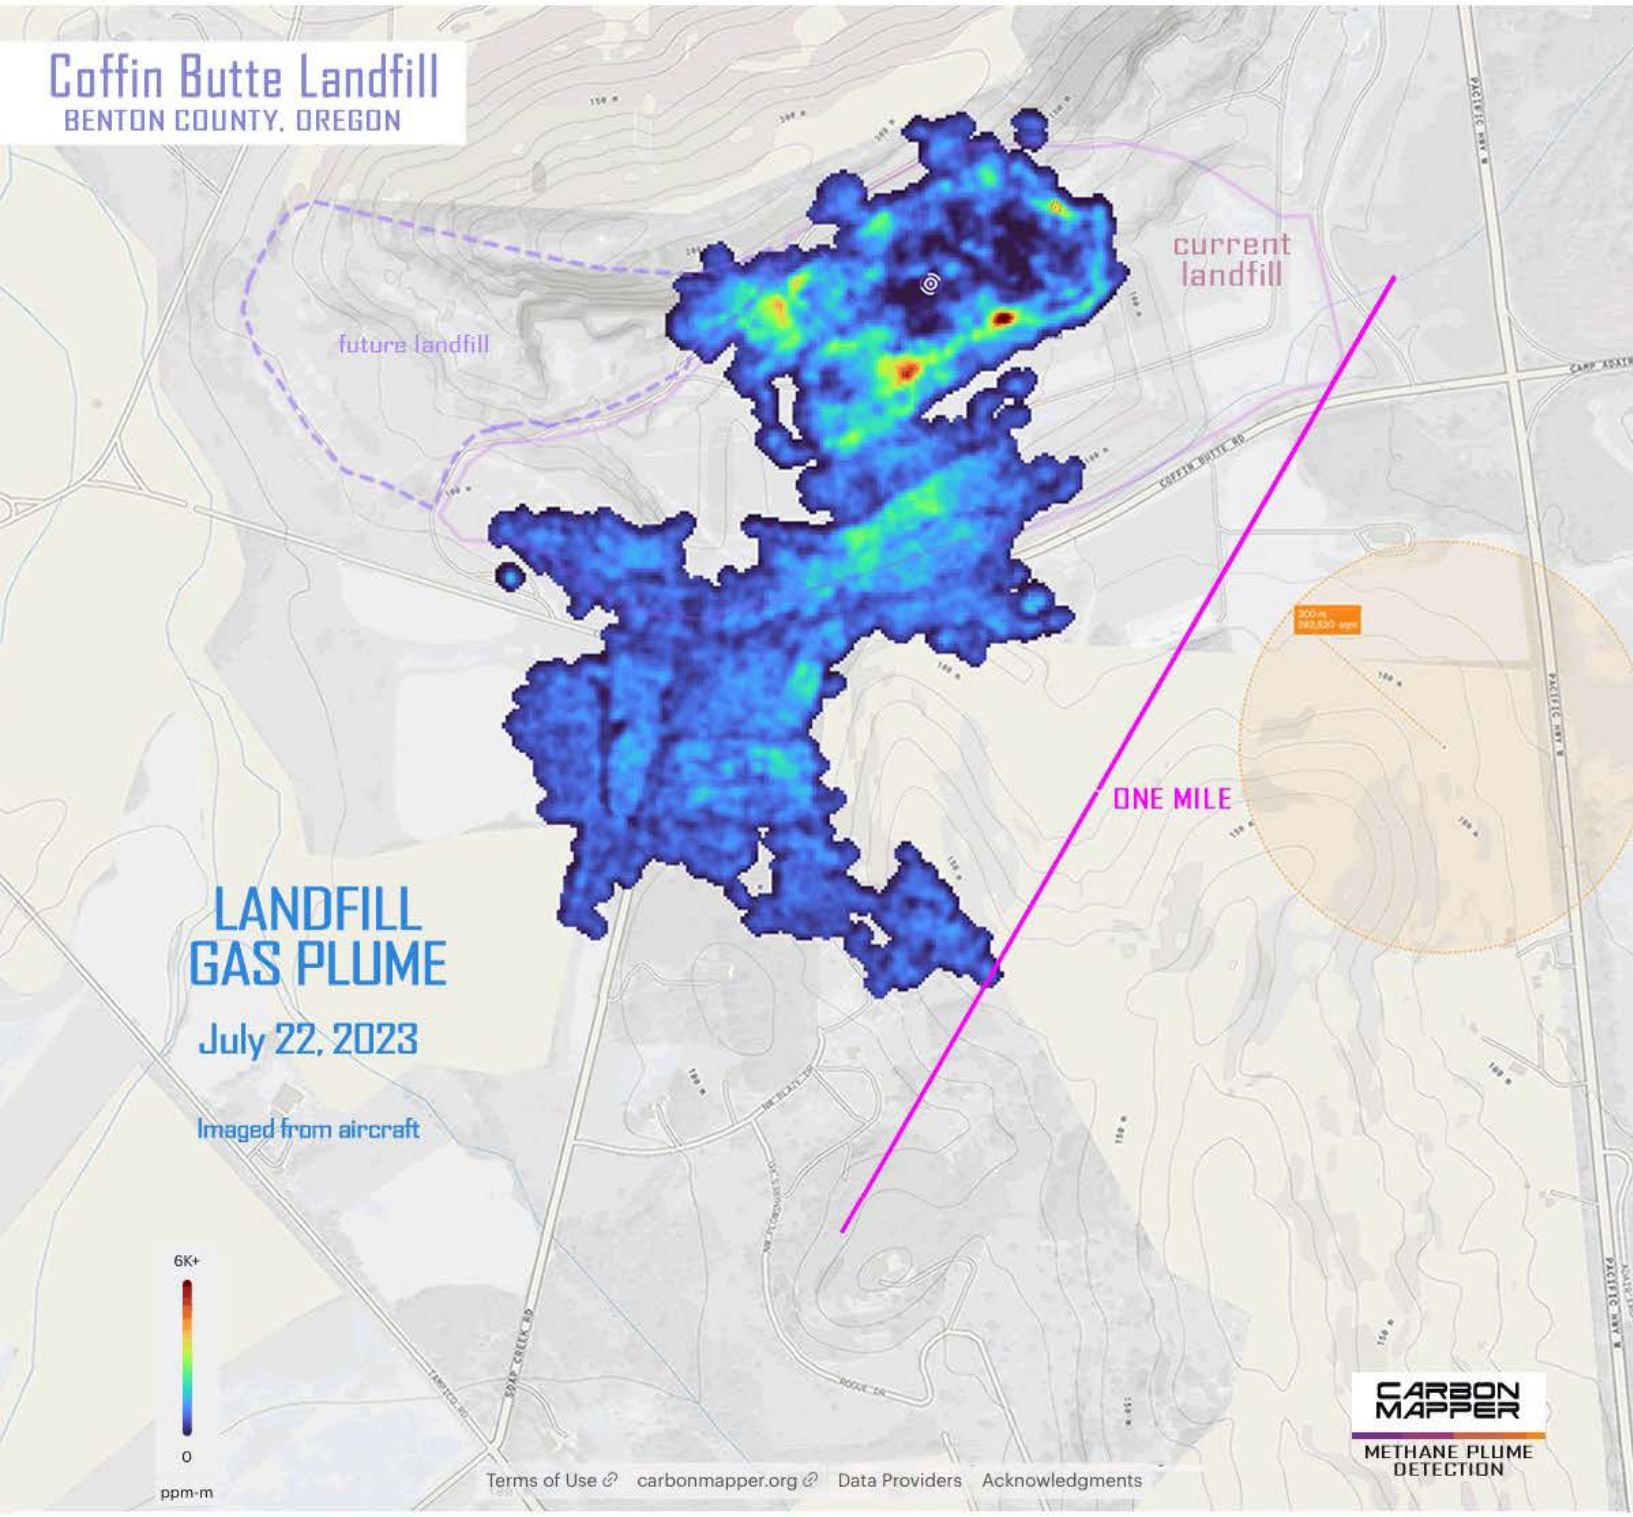
Corvallis City Government
17,004 MTCO2e (2022)



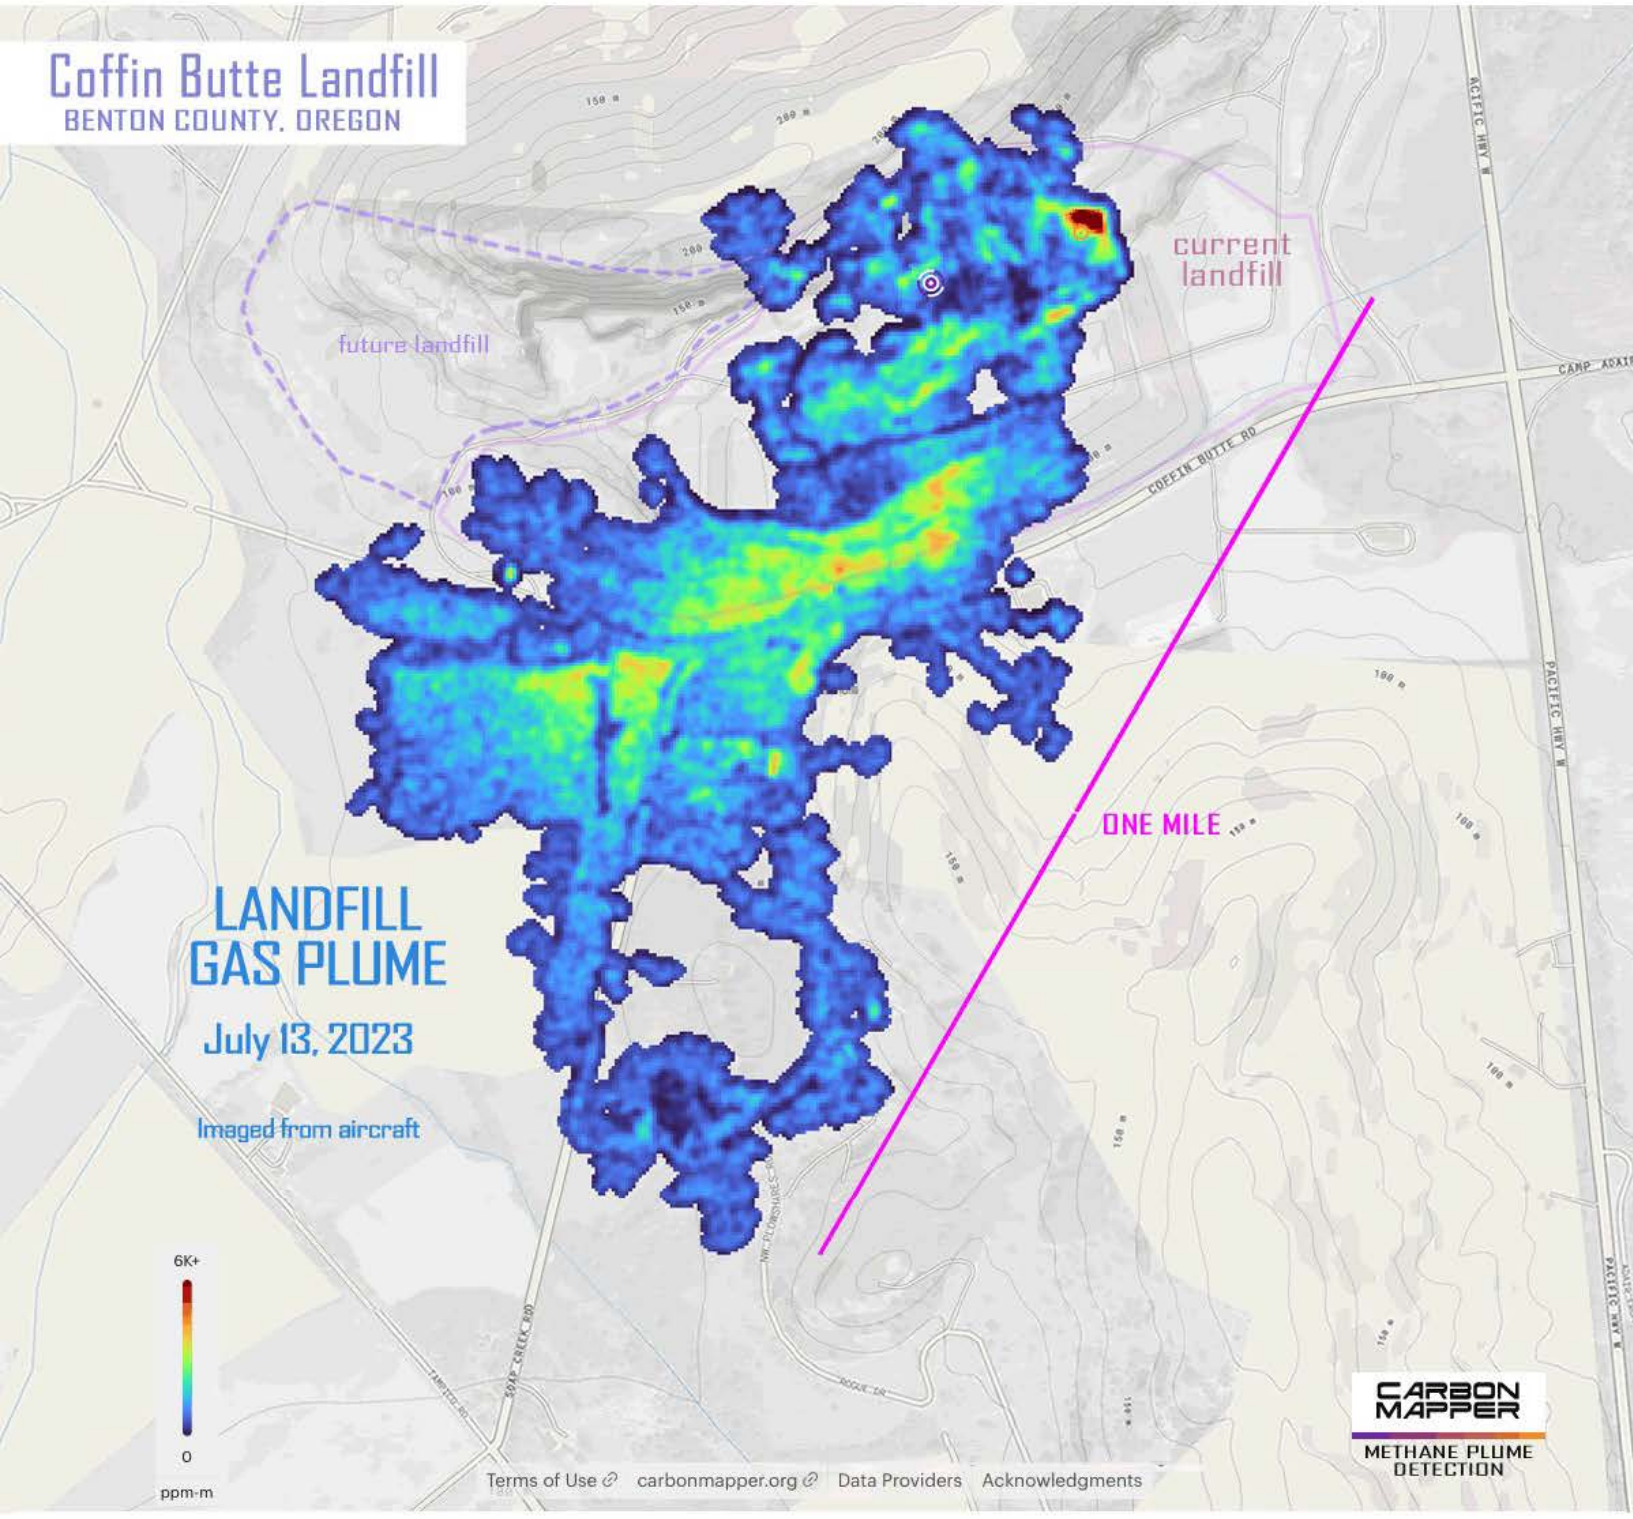
Benton County Government
3550 MTCO2e (2022)



Coffin Butte Landfill
807,409 MTCO2e (2024)



All figures are approximations from most recent data available. Data is self-reported. Methane MTCO2e uses IPCC standard GWP_{20} = 86



Data sources: greenhouse gas inventories self-published by City of Corvallis (2022) and Benton County (2022); striped areas show climate action reduction goals. Republic Services inventory by gas collection efficiency estimate (2024)

For simplicity, the Coffin Butte Landfill estimate assumes continuous optimal gas collection of 4100 scfm; actual gas collection ranged from 3923 to 4100 scfm, so actual emissions are likely higher.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To: publiccomment@bentoncountyor.gov
Subject: Oppose/Deny LU-24-027
Body: Dear Benton County Planning Commissioners,
My name is Barry J. Allen; my wife Jana and I live at 8512 Willings Way, Fair Oaks CA 95628.
I am writing because we strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. We urge the Planning Commission to deny this application.
The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2).
Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health
- **Traffic increases** that pose safety risks on nearby roads and pathways
- **Odor and noise issues** that degrade quality of life for residents and visitors
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences** for future generations

My stepdaughter Erin Bradley, her husband and their two daughters have lived on the west side of Hwy 99W for 15 plus years, less than a half mile south of (down-slope, and often down-wind, from) Coffin Butte Landfill. Her mother and I usually visit them a couple of times a year, staying on their property in our travel trailer for several days each visit.
Over the last few years, we have become very aware of noxious odors from the landfill when there is a north breeze. This is a significant concern, as both my wife and her daughter are highly allergic to environmental toxins which cause respiratory issues for both of them.
Over the years her family has lived on the property, our daughter (and both our granddaughters) have suffered increasing health issues, none of which have readily identifiable causes, but all of which have gradually increased in severity as the landfill has expanded.
Groundwater contamination is among their significant concerns – worry that that their well is affected has forced them to absorb the expense of using only bottled water for drinking and cooking. As they have horses and cattle on the property (the horses are assets of our daughter's equine therapy foundation, Bit By Bit) there's also concern for the health of their animals, as their well is the animals' only water supply.
In recent years, we've noticed a significant increase in the amount of debris blowing onto their property from the landfill. We have also been aware of an increasing number of trucks hauling trash to the landfill passing in front of their house, with a

concomitant increase in the amount of litter (paper, plastic bags and other lightweight debris) along 99W that has blown out of those trucks.

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

I believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities!

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,

Barry & Jana Allen

To: publiccomment@bentoncountyor.gov

Subject: Oppose/Deny LU-24-027

Dear Benton County Planning Commissioners and all others concerned,

My name is Douglas Bilsland and I live at 37645 Govier Place, Corvallis, Oregon 97330.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would **seriously interfere and degrade the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health
- **Traffic increases** that pose safety risks on nearby roads and pathways
- **Odor and noise issues** that degrade quality of life for residents and visitors
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences** for future generations
- **Pose serious long and short term threats** to the health and well being of residents of Benton County
- **Reduce Benton County revenues** by lowering property values and resulting property tax revenue.

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

Benton County should instead invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities.

Western Oregon is an exceedingly poor location for a regional landfill of this magnitude. Residents of Benton County and all of Western Oregon will be paying the price for Coffin Butte Landfill for decades to come. We should not make it worse by allowing its expansion and continued operation.

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,

Douglas Bilsland 37645 Govier Place Corvallis, Oregon 97330

re: Butte Landfill

April 16, 2025

Benton County Planning Commission
Nick Fowler, Chair

Re: Coffin Butte Landfill

We urge the Benton County commissioners to reject the expansion of the Coffin Butte Landfill.

The landfill is a threat to the health and safety of Benton County residents and others in nearby areas. Methane leakage has been under -reported by Valley Landfills. The EPA has detected explosive levels of methane on more than one occasion. Other hazardous pollutants, including mercury, lead and PFA "forever chemicals" have leached into the Willamette River creating a threat to all of the downstream Willamette Valley. Wind drift of noxious chemicals is easily detectable miles from the landfill. An expansion of the landfill can only increase these environmental threats in direct opposition to Sustainable Materials Management criteria endorsed by Benton County and the State of Oregon.

The long-term impact of an expansion of the landfill will be costly to Benton County in terms of Public Health, Water Treatment, mitigating air pollution, and eventually clean-up. It will constrain the county's capacity to invest in more positive public improvements. The landfill has already proved detrimental to recreationist tourism in Benton County.

There is no good reason for Benton County to continue to be the dumping ground for one-third of Oregon's solid waste--and every reason not to allow that to expand. For our public health, for the safety of our drinking water and the purity of the air we breathe, for the fiscal ability to create an attractive future for Benton County, please do not allow this expansion to take place.

April 18, 2025
To: Planning Commission
Re: **LU-24-027, Conditional Use Permit application to expand Coffin Butte Landfill.**

AREA OF IMPACT:
This application proposes to expand an operation that **seriously impacts the character of the area as well as neighboring communities and counties (BCC 53.215(1)).**

ODOR-
(BCC 53.215(1))

- **Seriously Interferes with Uses on Adjacent Properties**
- **Seriously Impacts the Character of the Area**

Landfill emissions produce an unbearable odor that significantly impacts the lives of nearby residents, preventing them from going outside, working their farms, engaging in normal outdoor enjoyment and *even tanking a land sale*.

Emerson Vineyard land sale fell through because of dump stench.

Emerson Vineyard is 4 miles North of the landfill. Below is an excerpt from a March 2, 2023 article in the *Polk County Itemizer-Observer* titled:

Ill wind sours plans to sell Emerson Vineyards
by David Hayes

... the Johns [Emerson Vineyard owners Tom & Jane Johns] *put the entire property on the market as acreage and a vineyard, hoping to get a $1.5 million offer.*
Two weeks ago, they had their buyers. A couple offered to buy the property but not the winery. The Johns accepted, decided to shut down and let all their employees go. Then a literal ill wind scuttled the deal.
"The day they decided to quit was the day a south wind blew up from the dump. He was allergic to it and got violent migraines. They cried about it, just couldn't make it work," Tom said, totally understanding, not wanting the potential buyers to discover the ailment after he and Jane were gone. "So, we're back to square one." (Link to the full article at the end.)
"Dump Days" are in direct conflict with Benton County's 2040 Thriving Communities Core Values of:

- High Quality of Life
- High Environmental Quality
- Well-Being and Health
- Easy Access to the Outdoors
- Stimulating Local Business

This landfill was never planned or anticipated to grow to this scale. Please **deny LU-24-027**

April 18, 2025
To: Planning Commission
Re: **LU-24-027, Conditional Use Permit application for:**
A BRAND-NEW LANDFILL ON TAMPICO RIDGE, South of Coffin Butte Rd.

I have been a resident of Soap Creek Valley since 1979, Coffin Butte Landfill lies 5 miles North. Please note that in most cases, the impact of new development to an area is uncertain, because the use does not yet exist. However, in this case the expected impacts of an expansion, which is really a NEW landfill, are relatively well-defined, mirroring those of the existing landfill facility.

AREA OF IMPACT:
Is much larger than the Benton County Code or the applicant defines.
The applicant has fallen WAY short of identifying the geographic area the current landfill, and proposed new landfill, impacts. This application proposes to create a new landfill on Tampico ridge, to expand an operation that **seriously impacts the character of the "immediate" area (BCC 53.215(1)),** *as well as a much broader swath of neighboring communities and counties.*

ODOR-
(BCC 53.215(1))

- **Seriously Interferes with Uses on Adjacent Properties**
- **Seriously Impacts the Character of the Area**

Each year, more and more, residents for miles around the landfill experience "dump days" – days when the odor from the landfill gasses prevents them from being outside their homes, working their farms, or otherwise enjoying the outdoors. To name a few locations; I have experienced "landfill gas stench" at my home (5 miles from landfill), in Airlie (Polk Co. 6mi.), at Good Samaritan Hospital (8 mi.), North Albany (7 mi.).

Whenever the weather creates an inversion over the area, the landfill gas generated by the 17 + million tons of garbage in the landfill is trapped, sometimes these inversions last for days.

"Dump Days" are in direct conflict with Benton County's *2040 Thriving Communities Core Values* of:

- High Quality of Life
- High Environmental Quality
- Well-Being and Health
- Easy Access to the Outdoors
- Stimulating Local Business

TRASH – ALONG ROADSIDES AND BEYOND
(BCC 53.215(1))

- **Seriously Impacts the Character of the Area - “And Beyond”.**

Approximately every 90 seconds, a truck arrives at Coffin Butte Landfill to dump trash, 256,000 round trips a year. Inevitably these vehicles spew trash into surrounding areas either on their way in or on their way out. Every road leading to the landfill has an accumulation of trash that migrates into waterways, front yards, natural areas and onto farmland; trash and farm equipment don’t play well together (BCC 53.215(1) **Interferes with the Purpose of the Zone EFU**.

LANDFILL TRUCK TRAFFIC
(BCC 53.215(2))

- **DOES Impose an Undue Burden on Public Improvements**

Traffic generated by the landfill creates congestion on roadways; dangerous intersection experiences, obstacles on roadway that have fallen off dump bound loads; physical damage to roadways from heavy use by garbage and leachate trucks. Coffin Butte Rd, Camp Adair Rd. and Independence Hwy are worse for wear.

In 1979 when I purchased my property the landfill was supposed to reach capacity and close in the year 2000. Never was this landfill intended to or expected to become an operation of this magnitude. **Please “just say NO” to LU-24-027**

Respectfully,
Rebecca Merja

From: Steve Michaels

Re: LU-24-027

The application to expand Coffin Butte Landfill does not meet county code decision criteria and must be denied. Operational problems at Coffin Butte Landfill are known to include methane emissions, widespread odor complaints, air borne particulates and a toxic soup of leachate. Groundwater contamination cannot be ruled out as well. The applicant has submitted voluminous information intended to demonstrate that the landfill expansion will not repeat the existing problems. The applicants state that landfill environmental and related livability issues are subject to state jurisdiction.

The application does not meet BCC 53.215(1). Coffin Butte Landfill currently has an adverse effect on surrounding permitted uses. Methane leaks, odor & air borne particulates are known to effect surrounding permitted uses through numerous complaints to the County and governing governmental agencies. These issues remain unresolved. The applicant would have you believe that the landfill expansion will not replicate these adverse impacts. No amount of prospective research can prove there will be an absence of adverse impacts. In fact, it is well known that landfills age badly. Case in point, Chiquita Canyon Landfill in Castaic, California is smoldering deep inside the pile of trash evaporating toxic chemicals including benzene and compromising the stability of the nasty leachate stew. The best landfill engineering practices cannot be counted on to protect surrounding uses or the public from a deteriorating landfill. It is reasonable to expect that an expanded landfill will continue to have an adverse effect on surrounding permitted uses.

The application does not meet BCC 53.215(2). Trash needs a home, but a landfill is a hazardous land use. The existing landfill is more than problematic. And the reality is Coffin Butte could evolve into an even greater public health and land use problem. An expanded landfill adds to the potential hazard. At the present, the existing landfill may be functioning without imposing an undue burden on public improvements and services. In the future, that will not be the case. A failing, toxic landfill will impose an undue burden on public improvements, facilities and utilities. An expanded landfill will make it worse. The County cannot accept that risk.

I recognize the need for proper collection and disposal of trash. I have been a Republic Services customer for many years and appreciate the service they provide. However, the opportunity to establish a regional solution to a regional trash problem is now, before the landfill is expanded. LU-24-027 does not meet Benton County Code criteria and must be denied.

To: Benton Public Comment
Subject: LU-24-027, CUP Application for Expansion of Coffin Butte Landfill
Date: Friday, April 18, 2025 11:27:49 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commission--

I strongly oppose the conditional use permit (CUP) application for expansion of Coffin Butte Landfill, and urge the Planning Commission to deny Application LU-24-027. The proposed use seriously interferes with uses on adjacent properties, with the character of the area, and with the purpose of the zone. These impacts are SIGNIFICANT, and I urge you to use your discretion in seeing them as such.

Oregon land use laws were an important reason I moved here. In the mid-1990s I settled in Soap Creek Valley, much of which is zoned as Rural Residential. Coffin Butte was a small, locally owned landfill at the time I bought my property. I certainly never expected my home to fall under the influence of a large nearby industrial development. My most immediate concern is with landfill odors that are being imposed on myself and other residents. Despite living several miles from the landfill, the odors can at times be so offensive as to cause me to retreat indoors, close windows, refrain from outdoor projects on my property, and deter me from hiking on nearby roads and trails. At times this has caused me to be depressed enough to consider moving away, but I love this beautiful place and community and have put down roots.

There has been nothing but denial from Republic Services that odors are a problem, despite repeated reporting by many residents to Republic Services, Benton County, and Oregon Dept. of Environmental Quality (DEQ). The landfill has had ongoing, documented releases of methane that have vastly exceeded permitted limits, and they are under active investigation by the U.S. Environmental Protection Agency (EPA).

Thus far, there has been NO ENFORCEMENT of ANY of the conditions of approval for the current landfill, nor of other environmental regulations, that would mitigate odors and other issues (noise, traffic, litter, etc.). There is no reason to expect there will be compliance in the future. Problems with this landfill cannot be 'fixed' using conditions of approval. Please DENY this request for expansion.

re: Butte Landfill

April 16, 2025

Benton County Planning Commission
Nick Fowler, Chair

Re: Coffin Butte Landfill

We urge the Benton County commissioners to reject the expansion of the Coffin Butte Landfill.

The landfill is a threat to the health and safety of Benton County residents and others in nearby areas. Methane leakage has been under -reported by Valley Landfills. The EPA has detected explosive levels of methane on more than one occasion. Other hazardous pollutants, including mercury, lead and PFA "forever chemicals" have leached into the Willamette River creating a threat to all of the downstream Willamette Valley. Wind drift of noxious chemicals is easily detectable miles from the landfill. An expansion of the landfill can only increase these environmental threats in direct opposition to Sustainable Materials Management criteria endorsed by Benton County and the State of Oregon.

The long-term impact of an expansion of the landfill will be costly to Benton County in terms of Public Health, Water Treatment, mitigating air pollution, and eventually clean-up. It will constrain the county's capacity to invest in more positive public improvements. The landfill has already proved detrimental to recreationist tourism in Benton County.

There is no good reason for Benton County to continue to be the dumping ground for one-third of Oregon's solid waste--and every reason not to allow that to expand. For our public health, for the safety of our drinking water and the purity of the air we breathe, for the fiscal ability to create an attractive future for Benton County, please do not allow this expansion to take place.

An expansion's increased environmental harms would damage Corvallis' civic reputation

I strongly OPPOSE the approval of LU-24-027 expanding the Coffin Butte Landfill. The address of the Coffin Butte Landfill is Corvallis, OR. As such, we residents of Corvallis and Benton County are affected by the negative connotation of hosting a landfill. Particularly because our area is extremely unsuitable for a landfill. The high volume of rainfall and the porous soils induce greater volumes of the most lethal of landfill affects, methane and leachate. This is very bad, not just for our city and county, but for the entire population of our earth.

We see ourselves as good stewards of our beautiful area and, as such, we must protest this expansion which is diametrically opposed to our values.

Coffin Butte Landfill is already an eyesore and a particularly unappealing first impression of Corvallis when approaching from the north on Hwy 99. If this CUP is approved it will be a monumental tower of ugliness…this is not hyperbole. Republic's plans indicate a removal of soil on the south side of Coffin Butte Road equal to three Empire State Buildings. In this respect, the expansion request violates both BCC 53.215 (1) and BCC 53.215(2).

Landfill expansion would be contrary to Benton County's urgent need for housing

I strongly OPPOSE the approval of LU-24-027 expanding the Coffin Butte Landfill. The Coffin Butte dump interferes with the character of the area BCC 53.215(1) and imposes an undue burden on public improvements in the area BCC 53.215(2). Corvallis has an extremely tight housing market (most rent-burdened city in the state of Oregon with approximately 37.1% of renter households spending over 50% of their income on rent). Republic Services purchased property abutting the landfill that is zoned Rural Residential. This land could house a subdivision that would ease the housing shortage. Instead, it lies fallow. The northern part of Benton County is a prime housing development area. Yet, young families who have moved to recently built subdivisions report that the odor from the dump is so pervasive on some days that they question their decision to buy. This reputation of odor and loud truck traffic will limit the development in this area, will lower property values, and therefore further reduce tax revenue that we need for county services. Most importantly, it will hinder the construction of badly needed housing.

An expansion would be contrary to Benton County's own "Thriving Communities" values

I strongly OPPOSE the approval of LU-24-027 expanding the Coffin Butte Landfill. I have been a Benton County resident for the past 18 years. I moved here because its stated values closely aligned with my own…the values of environmental quality, vibrant and livable community, a diverse robust economy, and health and equity for all. These values are stated in the Benton County 2040 Thriving Communities Initiative. I expect my county commissioners and staff to respect those values which are held by the vast majority of Benton County residents. Expanding the dump would be detrimental to all those values that I hold dear and that drew me to purchase a home in southwest Corvallis. All these values strike a deep chord with many Corvallis residents. Therefore, expanding the dump violates BCC 53.215(1) by interfering with the character of the area by running counter to my values.

Attn: Benton County Planning Commission

Re: Proposal to Expand the Coffin Butte Landfill

Dear Planning Commissioners:

I am writing to urge the Benton County Planning Commission (BCPC) to deny Republic Services' request to expand the Coffin Butte Landfill (CBL) located near Adair Village in northern Benton County.

As a PhD toxicologist, former EPA employee, former OSU faculty member, and cancer researcher for many years, I was greatly alarmed to learn of the unprecedented exceedance of methane concentrations from the CBL currently spreading throughout the Valley. Several studies have verified that methane levels are greatly exceeding allowable limits. Methane emission levels are tightly controlled for human health and safety reasons, and due to their adverse impacts on the environment.

The EPA has previously cited Republic Services for worker health safety violations. In January of this year the EPA issued a subpoena to Republic Services for a detailed record of the amount of trash the landfill is accepting, its gas collection and emission control systems, its surface monitoring of pollutants, etc. It is clear that the EPA considers these violations to be serious.

Given that Republic Services is currently under investigation for violations of the Clean Air Act and other environmental laws, it is EXTREMELY inappropriate and reckless at this time to grant an expansion of this operation. It is clear that Republic Services is either incapable of properly operating the landfill or, even more disturbing, is not concerned about the effects of toxic releases into our community. In addition, given that the expansion will only add a few more years of operation to this facility, it makes no sense to move forward with ANY future plans for the CBL until the current problems facing the CBL are addressed and corrected.

In the last 7-8 years it is also clear that Republic Services has not been complying with EPA regulations with respect to the proper handling of liquid toxic wastes generated by the landfill. In addition to the methane problem, there are profound concerns about the handling of leachate generated by the landfill. The leachate contains many chemicals that are extremely toxic to human health and the environment, including polyfluoroalkyl substances (PFAS) and other heavy metals. PFAS chemicals, which are being discharged into Oregon waterways, are

some of the most dangerous chemicals on earth. Referred to as "forever chemicals" because of their extreme longevity and consequent accumulation in the environment, PFAS chemicals cause a myriad of health effects, including cancers, reproductive effects, thyroid disease, liver disease, etc., in concentrations as low as parts per trillion. People and animals can be exposed by eating food grown or raised in PFAS-contaminated soil or water, including agricultural products, and wild fish and game.

Further, I would like the BCPC to also consider that, given the CBL is in close proximity to many homes in the area, as well as several national wildlife refuges and the Willamette River, these current emissions are not to be tolerated. Both the BCPC and the Benton County Commissioners (BCC), who hold the ultimate responsibility for the decision whether or not to expand the CBL, must prioritize the health of its citizens, as well as the dangers to wildlife and the environment, in making this decision. As a citizen who has lived in the Willamette Valley for over 50 years, it is my belief that allowing these emissions to continue, let alone to decide to increase the size of the CBL given the current state of its poor management, is not in keeping with the longstanding respect and stewardship of the Oregon people and their commitment to the environment. It is, in fact, willful misconduct and gross negligence.

In addition, the problem of Republic Services' long-term lack of attention to proper handling of the CBL is being felt, not just in the immediate vicinity of the dump, but in other counties miles from the site. As each year passes the impact of this mismanagement is being felt further and further away. This is unfair to the communities that surround Benton County, and they should not be required to suffer the consequences of poor decisions made by us. These people are our neighbors and our friends, and they deserve our/your respect and support.

I strongly urge you to vote NO on the Coffin Butte Expansion. Lastly, I want to point out that, as a representative of the citizens of this community, your responsibility lies in the PROTECTION of the citizens of Benton County and the state of Oregon. Our citizens do not want or deserve this toxic mess. We deserve better.

Respectfully,

Shelley A. Su, PhD
Oregon State University (ret.)

We strongly oppose the application to expand the landfill, and urge the BC Planning Commission deny the application. Please refer to our enclosed letter of testimony for your consideration.

Jeff and Lesli Uebel

To: publiccomment@bentoncountyor.gov

Subject: Oppose/Deny LU-24-027

Dear Benton County Planning Commissioners,

My name is Jeff Uebel. My wife and I live in Corvallis. We are writing because we strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. We urge the Planning Commission to deny this application.

My wife and I regularly enjoy hiking, hunting and bird-watching with our extended family members at the EE Wilson Wildlife Area, as well as on the OSU MacDonald-Dunn Research Forests adjacent to the landfill. The noise and stench from the landfill, along with the traffic and escaped trash from haulers on the roadways approaching the landfill have greatly increased over the years we have visited there. These factors greatly impact our experience and our enjoyment of those areas, and they have begun to reduce both the time we spend in those areas as well as the number of visits we make each year. We feel that the proposed expansion will only exacerbate and extend these impacts. Expansion would **seriously interfere with the character of the surrounding area**, in violation of Benton County Code 53.215 (1). Increased heavy truck traffic hauling garbage to the landfill and leachate for treatment in wastewater plants impacts our local roads, increasing road maintenance needs, costs and negative effects to residents throughout Benton County. We feel this imposes **an undue burden on public resources**, in violation of Benton County Code 53.215 (2).

We are also deeply concerned about other environmental impacts that would result from the expansion of this operation. We are especially concerned about the community health impacts that could result from expansion. There has been ongoing, unaddressed air pollution (methane leakage) and groundwater pollution by leachate leakage from existing operations. Toxic materials in leachate treated at our wastewater treatment plant are metered out into the Willamette River. These effects will only increase with expansion of the landfill. This appears to violate Benton County Comprehensive Plan policy 6.5.5 *(BC will strive for the sate storage, collection, reduction, reuse, recovery and appropriate disposal of hazardous waste materials.)*

The proposed expansion does not align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

We believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities! Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Jeff and Lesli Uebel

Written Testimony:

The Benton County landfill pollution is absolutely out of control. I live five miles from the dump and I smell it daily, and I see it every time I drive the highways. I can't even go outside today because the rancid smell is so strong. The roads are covered in litter. Oregon used to be so pristine and beautiful and over the last five years it's definitely gone downhill quickly, and now it feels like I'm living in a wasteland. It's terrible for our physical health, mental health, the beauty of the land, the plants and animals, and our property values. Please STOP this greed driven expansion!

Written Testimony:

Vote no on the Coffin Butte Landfill expansion. Benton County should not be the dumping ground for the state. An expansion would directly negatively impact the local residents, nearby cities and the county as a whole. Additional waste brings additional risk of soil and water contamination, air pollution and an eyesore. An expansion would eliminate Coffin Butte Rd, further limiting access to residents in the Soap Creek valley and increasing traffic on remaining roads.

4500 Research Way
Corvallis, OR 97333-1139

My name is Beverly Clark. I live at 4925 SW Dresden Ave, Corvallis, OR 97333. **I strongly oppose the expansion of the Coffin Butte Landfill.**

The proposed expansion of Coffin Butte Landfill will place an undue burden on public facilities violating BBC 53.215 (2). There will be more truck traffic on local roads hauling garbage to the landfill and more trucks hauling leachate away to locations unspecified. Benton County already faces pressure from a growing population and the access into and out of the county are already at a maximum.

I have watched the landfill mountain grow very quickly in a very short period of time. Why is Benton County and Corvallis on the receiving end of the refuse from other communities. Approval of this expansion will only magnify the issues with methane pollution, leachate of hazardous pollutants like mercury, lead, industrial solvents, noxious gases causing air pollution that is intolerable. I see the present land fill use and an expansion as violating Benton County's 2040 Thriving Communities Initiative's Core Values 53.215 (2),

Dear Benton County Planning Commissioners,

My name is Joe Crockett and I live at 37609 Soap Creek Road, Corvallis, 97330

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

I would like to point out to the Commission that on March 8, 1983*, forty two years ago, the Benton County Planning Commission, the Benton County Solid Waste Advisory Council, and the North Benton Citizens Advisory Committee all made an approval for the expansion of Coffin Butte on the condition that there be "No disposal of municipal solid waste on the 59.23 acre parcel south of Coffin Butte Road." They went on to state that the Staff has recommended …"The property south of Coffin Butte Road cannot be utilized for landfill unless approval is granted by the Planning Commission at a Public Hearing."

Also, in that document, it states that:
"The Coffin Butte site shall be designated as a regional landfill serving a geographic area including Linn, Polk and Benton Counties."
and…
"The Benton County Planning Commission and Board of Commissioners shall not allow any new expansion of the present Coffin Butte landfill service area."

Other important insights are part of the document:

- Valley Landfill, Inc., Corvallis Disposal Company and all waste related service providers should submit an annual plan or status report and continue to work toward a waste reduction and recovery system through education.
- A designated percentage of the annual County franchise fee should be used for educational and promotional programs on waste reduction and recycling emphasizing methods in which individuals and businesses can reduce, or utilize recoverable materials whose present destination is the landfill.
- Periodic public agency or private industry reports shall be made to the Board of Commissioners reviewing Coffin Butte and the Corvallis demolition landfill environmental conditions.

Since the previous expansion request, thousands of dollars have been spent trying to revisit the challenges of having a landfill in Benton County's backyard. But these challenges have been here for decades and solutions where addressed in writing years ago but never implemented. Those in power have never done the hard work of bringing the ideas that were written down to fruition. We had a solution to expanding the life of the landfill 40+ years ago. Because of our inaction, we are now left dealing with the threat that we're running out of room.

The expansion crises has been manufactured by profits and greed not sound waste management decisions. We have no one to blame but ourselves. We came up with solutions decades ago but kept kicking the can down the road. We've finally come to a dead end.

Forty two years ago, the Planning Commission made the expansion of the landfill south of Coffin Butte Road off limits. Their written recommendations for managing waste, funding education, and periodic reporting were only hollow words without action. The answer to these problems is not expansion. The answer is to deny expansion and to implement and enforce the actions that were identified 4 decades ago. Putting conditions on an expansion approval will be just more words on paper. Deny the expansion and move forward with actions that will protect the health and future of Benton County. Please reject LU-24-027.

Sincerely,

Joe Crockett

Hello Benton County Planning Commission,
Attached as a pfd is my testimony towards the land use application.
I hope you will read my heart felt letter.
Sincerely, Dale Draeger

Public Comment
Application LU-24-027. ConditionalUse Permit
Application for Coffin Butte Landfill

I oppose the conditional use permit (CUP) application for the proposed use permit because it seriously interferes with the uses of adjacent properties. As I understand it, any approval of this land use application would have to come from yhour judgement that th4e expanded landfill would NOY seriously interfere with uses on adjacent property, with the character of the area or the the purpose of the zone.

The Benton County Comprehnsive Plan promoted a statewide goal to including, “to aintain and improve the quality of the air, water and land resoiurces of the state; to protet people and property from natural hazards; to maintain and improve the variety of economic and social activities that are vital to the health, welfaire, and prosperity of Oregon’s citizens.”

Our family moved down the road from the dump 26 years ago when the landfill wasn’tfairly small. We bought a house with acreage and put much love, care and effort into making it our home over the years!. We restored the property, which had been logged and over grazed and covered with black berry vines. The house and little cow shed were unattractive. With constant effort, love and money we changed our beloved property from an ugly, logged, overgrazed pasture with a run down cow shed,to a retored wetland, boardering Soap Creek, a vibrant pasture and a barn with a new roof. We replanted acres of trees and established a yard and garden.

26 years ago, the house was dated and unfinished. It now has all new windows, roof, deck, floors, carpets, paint, skylights, doors, and more. It isn’t a showplace. It is a HOME in the happiest sense of the word. Every change was lovingly thought out. Our daughter, who grew up here, would like to have her family grow up here when we move on.

But wait! The stench of the nearby landfill sometimes permeates the air! The leachate is poisonous to the air and land and water! Not only will our land be unsafe, and our ability to enjoy hiking, bicycling and horseback riding be unavailable, and also, the value of our house property will be much, much less! Our beautiful country home willmean very little.

The changes to the landfill are in violation to rules: BCC53.215 (1) Very little is monitored in it’s daily addition of poisonous and unnecessary waste.

Also, the statewide goals promoted in the Benton County Comprehensive Plan include “to maintain and improve the quality of the air, water and land resources of the state, to protect people and property from natural hazards, to maintain and improve the variety of economic and social activities that are vital to the health, welfare, and prosperity of Oregon’s citizens.”

Public Comment
Application LU-24-027. ConditionalUse Permit
Application for Coffin Butte Landfill

I realize that the city of Corvallis is given money from the Landfill, however, years from now, when that company has moved on and left Corvallis with the cost of cleaning up the garbage and toxic waste left behind, that money will be a fraction of the cleanup costs and the possible burden of lawsuits over the health hazards it creates.

I started out writing to you about our home. We are not the only family that could describe the love and care we have infused in our home and surrounding property. There are many of us with dreams of passing what we have created with hard work on to our children. We hope that this may still be a place they would want to live in the next few years. It is a place of profound beauty and sweet neighbors. I pray that it can stay that way.

I sometimes tell visitors staying overnight that the only sounds they will hear at night will be the hooting of the great horned owl. And in the morning, the call of so many birds and the screaming of the belted kingfisher as it flies down Soap Creek. However, now in the early hours of the morning we hear large trucks as they dump their loads at the landfill. The kingfisher hasn't been much of a presence lately.

Please help us change this.

Attached is comments regarding LU-24-027. Please include in the staff report. Thank you.

My name is Ken Kenaston and I live at 2870 SW Morris Ave, Corvallis, OR 97333. I am opposed to the Landfill Expansion, LU-24-027.

This proposal fails to meet the criteria for conditional use 53.215 (1), 53.215 (2) and a number of important Benton County Comprehensive policies. The Benton County Planning Commission must deny this application.

I used to hike in Soap Creek Valley in the area of Poison Oak Hill. I've watched elk wandering in the fields below. Deer routinely traveled through that area towards EE Wilson game management area to the east. Building a landfill cell, as proposed, will keep the wildlife from that area and cause them to divert somewhere else. **This change in grazing habitat and migration corridor seems to be in violation of BCC 53.215 (1) (*The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the FC zone.)* and the Benton County Comprehensive Plan policy 5.9.4 (*In making land use decisions, Benton County shall protect identified sensitive wildlife habitat types and wildlife corridors from adverse impacts*).**

I boat, fish, and swim on the Willamette River from Eugene down to Salem. This public resource has become a hazard to my health because of the leachate drained from Coffin Butte Landfill. It is currently transported to Corvallis and Salem's waste water treatment plants where is is released untreated into the Willamette River. The amount of leachate has continued and is expected to grow with this proposed expansion. It needs to stop immediately. **This operational activity violates BCC 53.215 (2) and Benton County comprehensive plan policies 5.1.2, 5.2.1, and 5.7.4**

The increased leachate from this new garbage cell is unacceptable. There is not a treatment for this alphabet soup of toxic materials and it is metered into the Willamette River to make it go away. That **is in violation of Benton County Comprehensive Plan policy 6.5.5 (*Benton County shall strive for the safe storage, collection, reduction, reuse, recovery, and appropriate disposal of hazardous waste materials.*)**

I visited EE Wilson the other day. I grew up around Adair and used to walk in the management area hunting pheasants, bird watching, and running the dogs. Boy has that changed! There is a mountain of trash dominating the view now. It is no longer the scenic natural area it once was. The sound of earth moving equipment, the big trucks grinding up the hill, the smell, all destroyed the once beautiful experience it once was. **That is a huge change in the character of the area. This landfill expansion proposal seems to violate BCC 53.215(1).**

Thank you for your consideration in this application. Please include these negative findings in your decision to deny the application. Explicit negative findings will become important when this decision is appealed to the Benton Board of Commissioners

Summary--Avoidance of risk of irreversible negative consequences with groundwater, noxious gas releases

My name is Ken Kenaston and I live at 2870 SW Morris Ave, Corvallis, OR 97333. I am opposed to the Landfill Expansion, LU-24-027.

There is an important concept in environmental decision making that is important in this discussion; the importance of **avoiding irreversible negative consequences** of your decision. There are several irreversible consequences in this decision you face.

Risk to groundwater contamination is very real, irreversible, and unacceptable. One of the below surface liners beneath the landfill has already ruptured and leachate was thankfully captured by the secondary liner. What prevents the backup liner from failing? Contamination in the groundwater cannot be fixed and is a forever problem.

Methane releases and other noxious gasses released from this operation are dooming our future. These gaseous releases have been documented already from the landfill and will continue despite the ineffective mitigating actions proposed with past and proposed conditions of approval. These gasses have already contributed and continue to contribute to the climate crisis we are in. The poor air quality from the landfill operation are a suspect in the high occurrence of cancers in the Soap Creek Valley reported by others. Have Republic Services proven the releases are safe and not responsible? The condition of approval proposed to control releases has been proposed before. Largely unmonitored, and when inspected by the jurisdictional agencies, failed miserably. If it didn't work before, why would it work now?

The Benton County Planning Commission must deny this expansion application to avoid these irreversible negative consequences. There are no mitigation strategies that can avoid this risk and those strategies that have been proposed earlier have not worked and won't work this time either.

Summary --Planning Commission is our community voice, this proposal doesn't meet Conditional Use crliteria to approve (same as last one), too much risk of irreversible negative consequences to air quality, groundwater contamination, and toxics in the environment violating Benton County policies.

My name is Ken Kenaston and I live at 2870 SW Morris Ave, Corvallis, OR 97333. I am opposed to the Landfill Expansion, LU-24-027. I was on the Benton County Planning Commission for many years and was serving when Republic Services floated an expansion proposal in 2021. We unanimously denied the expansion proposal then.

I write as a believer that the Planning Comission speaks for our community; helping to guide our community in the direction we want it to develop. We want the Planning Commission to help us achieve the vision we want for our community, not the vision of Republic Services has proposed in this first of many expansion proposals.

This proposal does not meet the criteria for approval in 53.215 (1) and (2), even with the weak or ineffective proposed Conditions of Approval and must be denied.

The previous expansion proposal (LU-21-047) was unanimously denied by the Planning Commission. That was a different proposal that was larger in scope and involved a controversial road closure. The road closure is not in this proposal but the 2021 denial was based on numerous testimony with other violations of the conditional use criteria. Those impacts have not changed with this proposal and you cannot make those concerns go away with the proposed conditions of approval. If the conditions of approvals don't solve the problem, you must make findings to deny this application.

Enough is enough Nearby neighbors have been living through the nuisance concerns of odor and noise. These nuisances have become **serious interference** with their use of their property as it has expanded operations over the many years, The **character of the area has certainly changed** as the rural countryside has become an industrial site of noise,

odors, visually impacts, and traffic. This proposal is only the first of many more to come. This proposal must be denied.

The Risk is too Great The risk of groundwater contamination is too great and we have barely avoided catastrophe up to this point. A leak from a tear in the liner under one garbage cell was captured by a backup liner. When and where will the next leak happen?

The gaseous releases of noxious fumes and particulates with their potential for human harm, has become unacceptable and will only continue to increase. The public airshed is impacted by operations at the dump. Those toxic releases may already be responsible for the high frequency of cancers documented in area residents.

The concentration and volume of toxic leachate released untreated threatens people enjoying our public waterways and impacts our public fish and wildlife resources. **Our community desires for the protection of these public services are laid out in Benton County Comprensive Plan policies 5.1.2, 5.2.1,5.7.4, 5.9.4, and 6.5.5. This proposal must be denied as this operation threatens those protections.**

There is adequate evidence that the proposal cannot meet the criteria for approval and I ask the Planning Comission to deny the application. **I strongly suggest the PC summarize the findings for the decision with sufficient detail to convey to the Board of Commissioners the rationale for the denial.**

Summary --request to include record from previous expansion proposal, screening site is impossible.

My name is Ken Kenaston and I live at 2870 SW Morris Ave, Corvallis, OR 97333. I am opposed to the Landfill Expansion, LU-24-027

I request the public testimony from LU-21-047 be included in the record for this proposal. Several hundred letters and days of oral testimony was presented in 2021. Most of the testimony was from concerned citizens testifying about the impact the dump has on their homes and surrounding community. Although the controversial road closure is not included in this proposal, the impacts of the dump on their use of their property and their neighbors land, and the character of the area are still germaine and should be included.

Criteria for conditional use in the Landfill Zone BCC 77.310 Conditional Use Review. (1) (c) Provisions for screening of the site from public roads and adjacent property; cannot be met. The staff discussion in the staff memorandum in the previous hearing (LU-21-047) concluded that screening is appropriate for this application (and I concur here) and proposed screening mitigation activities (tree planting), but even those would not be adequate to address screening of the site from public roads or adjacent property. It will be impossible to adequately screen the view of this mountain of garbage. Since no mitigation is possible, this concern cannot be met, and you must deny the application.

To whom it may concern,
My name is Will and I am a student and resident of Corvallis, OR. I am opposed to the Coffin Butte Landfill expansion because it endangers the way of life here. I have enjoyed swimming in the river, drinking fresh water, breathing fresh air, and eating the fruit of the land. Most of these simple pleasures are threatened by increasing an already heaping pile of garbage.
I know that a landfill is also a form of protection or insurance. And yet, it encourages us to continue throwing things into the heap. Many of these things would be re-used, repaired, or composted without the comfort of a landfill. I don't understand why we, in all our wisdom, cannot choose a new and better way of dealing with waste. There are other paths, and I hope we take them.
-Will

Benton County Commissioners April 19, 2025

4500 SW Research Way, Corvallis, OR 97333

Re: Landfill Issues and Expansion.

Dear Commissioners,

I am writing to you to express my serious and urgent concerns about Coffin Butte Landfill. We live only a few miles from this public hazard, and we have several concerns.

Air quality

Water Quality

Truck Traffic

Pollution

Air Quality: We smell the stench of this rotting mass quite regularly. The methane smell and the smell of rotting garbage cannot be good for our health, our neighbors, visitors or the community. As we all know, Republic Services has violations of air quality now that they cannot deal with effectively. How would we expect them to do so in an expansion?

Water Quality: I am very concerned about our water quality. With all the leachates being generated from the landfill, it is only a matter of time before our and other wells are contaminated. This will make many square miles of areas unlivable for your community members.

Truck Traffic: It is one thing to have the truck traffic required to serve the needs of our own community, but the number of trucks coming from all over the state, bring a level of congestion, pollution and added danger to our local roads and Highway 99. On my way to amd from work I see litter flying out of the back of so many trucks. Worse, it is rarely picked up. Republic Services takes no initiative to do so either.

Pollution: The amount of litter that spills out of the trucks heading to the landfill is mind boggling. Highway 99 is of course the worst, but so our other roads of approach, Granger Road, Arnold, and other roads in and around Adair Village. The litter is rarely picked up. It is a blight on our neighborhoods and our community at large. Nothing like saying welcome to

Corvallis or Welcome to Benton County than a litter strewn Highway, truck traffic and a large pile of stinky garbage.

I implore you to please not expand the Landfill. There is no amount of money Benton County could make on this endeavor that will not be eaten up by the lawsuits associated with well water and surface water contamination, excess methane emissions, and loss of property value. These lawsuits will be aimed at Republic and Benton County. Wiping out the ability of our local government to effectively operate and likely increasing property taxes. Inviting other counties to utilize this dump is inviting environmental disaster. Landfills are better suited for dry climates, not our extremely wet one. The Coffin Butte Landfill is like the County owning a ticking timebomb of pollution, well contamination, degradation, and lawsuits. Please put people ahead of corporate profits. Please show that you care for your constituents. Please care for human life and health. Stop the Expansion!

Sincerely

Joseph Majeski

Hello Planning Commision,

I am writing to state my opposition to the application file number: LU-24-027, the expansion of Coffin Butte Landfill. Thank you for taking the time to consider this difficult conversation.

In addition to sharing the many voiced concerns about the environmental impacts of the expansion, I am directly impacted by the expansion by way of Bit by Bit Stables, which is located adjacent to the proposed growth boundaries.

Bit by Bit is a stable that offers Adaptive Riding Instruction and Equine Therapy. They work with many clients who have sensory and nervous system sensitivities. The noise, smell, and discharged debris (which has fallen on the barn), creates an undue stress to the riders and interferes with the benefits gained from their therapeutic ride, and in some cases they are unable to ride because of the unpredictability of the impact.

While working with clients who have vulnerable needs, the horses need to be relaxed themselves; and again, the added unpredictability of the noise, smell, and debris, interferes with the horses own predictability, putting the barn in a tough spot. Thus, with both of these in context, the expansion would seriously interfere with the use on an adjacent property [Benton County Code 53.215 (1)].

I have personally witnessed and experienced the tremendous work and result of this barn; my daughter rides with them, and so do dozens of other young people. This expansion has great potential to negatively impact her, and their, experience while riding, as well as the barn's ability to offer a gentle, sensory supportive, therapeutic ride. So at this time, until more proactive clarity and planning is outlined to the community, as a community member, I oppose the expansion of Coffin Butte Landfill.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Commissioners,

Please vote NO and STOP THE EXPANSION of the Coffin Butte landfill.

Republic Services has a history of doing as little as possible to ensure that their operations do not contribute to the degradation of air and water quality in our community. They have shown time and time again that their overriding motivation is profit. They have demonstrated that they will circumvent, rather than comply with, regulatory statutes regarding the environmental impact of their operations at Coffin Butte.

Why should they be rewarded for being a bad neighbor? The answer is that they shouldn't.

Don't trust that the DEQ or EPA will make Republic meet regulations. They haven't in the past and are unlikely to in the future. Don't expand a situation that is bad for our community's basic air and water resources.

Thank you for your consideration.

Sincerely,

Kate McGee

Attachments: Morrell Coffin Butte Expansion Comments 19 April.docx

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Attached you will find my comments regarding the proposed expansion of the Coffin Butte Landfill. We strongly urge the Planning Commission to deny this application.

I am writing this comment in regard to Republic's proposed expansion of the Coffin Butte Landfill.

By way of background, we have owned our house at 38464 Highway 99W for over 40 years. Our property is approximately 1 km south of the landfill and the proposed expansion will be just over the hill from our house. I have also served on the Solid Waste Advisory Committee (SWAC) and the Disposal Site Advisory Committee (DSAC) for over 16 years and am very familiar with the current operation as well as how it has changed. Most recently, I served briefly on the revived DSAC but had to resign as I took a five year position in South Australia; however, our son now lives in our house, and we continue to be registered voters in Benton County.

At the start, I will state that I have no problem with the position of the current landfill site. It was there before we purchased our house and will be there in one form or another long after we pass from the earth. However, for the entire time I served on the SWAC and DSAC, we were continually told that the landfill had decades of capacity and had no intention to cross the road. We were also told that the land to the south was purchased as buffer, not destined to be active landfill.

When the landfill was owned by Valley Landfills, we were impressed with their forward thinking in terms of methane generation through the co-generation facility and, temporarily, through their attempt at reverse osmosis to treat their leachate water. These illustrated a company that while working to be profitable, was embedded in the community. Although many of the people who worked with Valley remain, the approach has changed dramatically since Republic has assumed ownership with markedly increased fill rates and, as we notice it, more odor issues. We have never reported these because we have accepted the reality of our location.

I have read through the documents provided by Republic in their application and have

the following comments

Traffic: This proposal differs from the previous plan in that it no longer proposes immediately closing Coffin Butte Road to markedly increase landfill capacity; however, it would be disingenuous for the Planning Commission and the County Commissioners to consider this proposal in isolation and ignore the previous proposal for a much larger expansion with the associated closure of Coffin Butte Road.

This proposal really sets the stage for the inevitable increasing landfill footprint, leading to the eventual road closure that Republic desires. Closure of Coffin Butte Road will eliminate the one well-constructed access to Highway 99W from the Soap Creek Valley. This is critical in inclement weather because residents will be forced to use either Sulphur Springs Road or Tampico Road, both of which are narrow and difficult to drive under winter conditions. This will slow emergency response time, potentially creating life threatening situations.

Alternatively, drivers could take Tampico Road heading north around Coffin Butte to exit on either Robison or Airlie Roads. All of this is currently on unimproved dirt track. Multiple tests driving from the junction of Tampico and Sulphur Springs Roads showed that this detour resulted in an increased driving time of 15 minutes to reach Highway 99W.

The current proposal only offers to improve Coffin Butte Road in the areas directly impacted by the expansion but makes no provision for further improvements, leaving these costs to the county and local residents.

It is hard to examine this proposal as a single submission without considering how it will support continued expansion to the south of Coffin Butte Road nor is it hard to imagine that County would not want to continue receiving the millions of dollars in unencumbered funds it receives annually from landfill activities.

Odor Issues: Odors are a reality at any landfill, although we do appreciate Republic's attempts to minimise this issue through landfill gas collection, tarping and daily cover. However, moving the landfill further south will inevitably result in increased odor complaints. As noted earlier, we have noted many more days when we can detect the landfill, but normally do not complain as we see little purpose, especially when we learned that most of these complaints go to the State who then talks to the landfill operators and dismisses them. Residents will be forced to deal with increasing odors. The smell alone is an issue, the recent reports from flyovers suggest that methane levels are often far in excess of minimum effects levels. Expansion will further increase local methane exposure regardless of attempts to capture some of the releases. This has the

potential to impact the health of local residents.

Future Capacity: It is a reality that all landfills eventually reach their designed capacity and close. We have already seen this in several other Willamette Valley facilities. Furthermore, most regions are seeking alternative disposal strategies that place landfills as the last option for dealing with municipal solid waste. Alternatively, landfills are being sited in more remote areas with lower rainfall to reduce some of the environmental impacts (e.g Arlington, Oregon).

Many of the emerging technologies are less financially attractive, but they create opportunities for reuse in the circular economy. Corvallis and Benton County have both been leaders in identifying local, environmentally appropriate strategies for dealing with waste. Expanding the landfill to permit continued decades of disposal goes against this overall strategy.

In summary, the proposed expansion of the Coffin Butte facility will result in increased traffic, more odor issues, potential health issues and a general approach that will readily facilitate continued expansion at the expense of the adjoining properties. We respectively ask that the Planning Commission carefully consider and deny this proposal as it does little to benefit the local community and has the potential to do greater harm to the surrounding area.

However, for the entire time I served on the SWAC and DSAC, we were continually told that the landfill had decades of capacity and had no intention to cross the road. We were also told that the land to the south was purchased as buffer, not destined to be active landfill.

When the landfill was owned by Valley Landfills, we were impressed with their forward thinking in terms of methane generation through the co-generation facility and, temporarily, through their attempt at reverse osmosis to treat their leachate water to keep all of the leachate on site. These illustrated a company that while working to be profitable, was embedded in the community. Although many of the people who worked with Valley remain, the approach has changed dramatically since Republic has assumed ownership with markedly increased fill rates and, as we notice it, more odor issues. We have never reported these because we have accepted the reality of our location.

I have read through the documents provided by Republic in their application and have the following comments

Traffic: This proposal differs from the previous plan in that it no longer proposes immediately closing Coffin Butte Road to markedly increase landfill capacity; however, it would be disingenuous for the Planning Commission and the County Commissioners to consider this proposal in isolation and ignore the previous proposal for a much larger expansion with the associated closure of Coffin Butte Road.

The logistics of having a public highway running between landfill cells will be daunting and will ultimately lead to a request to close the road to the public. This proposal really sets the stage for the inevitable increasing landfill footprint, leading to the eventual road closure that Republic desires.

Closure of Coffin Butte Road will eliminate the one well-constructed access to Highway 99W from the Soap Creek Valley. This is critical in inclement weather because residents will be forced to use either Sulphur Springs Road or Tampico Road, both of which are narrow and difficult to drive under winter conditions. This will slow emergency response time, potentially creating life threatening situations.

Alternatively, drivers could take Tampico Road heading north around Coffin Butte to exit on either Robison or Airlie Roads. All of this is currently on unimproved dirt track. Multiple tests driving from the junction of Tampico and Sulphur Springs Roads showed that this detour resulted in an increased driving time of 15 minutes to reach Highway 99W. This delay could be lethal for emergency responses.

The current proposal only offers to improve Coffin Butte Road in the areas directly impacted by the expansion but makes no provision for further improvements, leaving these costs to the county and local residents.

It is hard to examine this proposal as a single submission without considering how it will support continued expansion to the south of Coffin Butte Road nor is it hard to imagine that County would not want to continue receiving the millions of dollars in unencumbered funds it receives annually from dramatically increased landfill activities.

Odor Issues: Odors are a reality at any landfill, although we do appreciate Republic's attempts to minimise this issue through landfill gas collection, tarping and daily cover. However, moving the landfill further south will inevitably result in increased odor complaints. As noted earlier, we have noted many more days when we can detect the landfill, but normally do not complain as we see little purpose, especially when we learned that most of these complaints go to the State who then talks to the landfill operators and dismisses them. Residents will be forced to deal with increasing odors. The smell alone is an issue, but recent reports from flyovers suggest that methane levels are often far in excess of minimum effects levels. Expansion will further increase local methane exposure regardless of attempts to capture some of the releases. This has the potential to impact the health of local residents.

Future Capacity: It is a reality that all landfills eventually reach their designed capacity and close. We have already seen this in several other Willamette Valley facilities. To whom it may concern:
Attached please find my comments on the application by Republic to expand Coffin Butte Landfill,
Thank you,
Patricia Morrell

Patricia D. Morrell
Professor Emeritus, University of Portland, School of Education
Professor Emeritus, The University of Queensland, School of Education

19 April 2025

I am submitting these comments in response to the Republic Services proposed landfill expansion. With my husband, I own a home and property south of the landfill and close to the proposed expansion site: (38464 Highway 99W).

I am hoping that the expansion proposal will be denied for a variety of reasons. Some of the more pressing concerns are bulleted below:

- Current methane emission levels are unsafe. Methane levels have been linked to health concerns as well as adding to exacerbating conditions for climate change, increased concern with landfill fires, among others. While Republic is "working on" the issue, they have not yet remedied the current methane emissions and Increasing the size of the landfill will only add to the problems. Additionally, emission of other landfill gases, along with dirt and particulate matter (e.g., fiberglass dust) raises other health concerns.
- Odors from the landfill have obviously increased as the amount of waste they receive has increased. Unfortunately, since reporting the odors doesn't result in any real action by the State and certainly not the landfill. As a result, we don't bother to complain. I can't imagine how many more days I'll need to keep my house windows closed if the size of the landfill increases.
- Reports of unsafe practices (e.g, truck washing, questions of proper ash disposal, proper maintenance of equipment, malfunctioning systems, to name a few) have been witnessed and reported.
- Currently less than 10% (perhaps closer to 6%) of the waste in the landfill originates in Benton County, yet it is Benton County, its population, and its community that are being impacted negatively by the increased waste acceptance.
- Questions about ground water leachate without proper state and federal regulating capabilities make it unwise to risk the problems that would likely arise with an expansion into another groundwater system (i.e. different hill).
- There have been concerns raised with what would happen to the intake cap if the expansion is approved. We have already been told that the current cap has been ignored.
- The "meteorological, geologic, and population density are not conducive to a larger landfill tonnage" as described in a Benton County government issued document dating back two years prior to these latest two requests (see https://cd.bentoncountyor.gov/wp-content/uploads/2023/12/history_doc_-_updated_3-27-23.pdf)

The landfill is a for-profit operation, is not a good neighbor, and has dragged its feet in addressing issues, doing as little as possible to maximise profits. It does, however, provide the County with a financial incentive to keep it growing, but at what cost to our community? Remember, the landfill needs to be managed long after it reaches capacity. And the landfill was originally approved with a set capacity in mind. Given past behavior, it is also of concern that Republic will be emboldened by an approved expansion and continue to ask to expand further.

The current landfill would not have been built where it is given our present-day knowledge of appropriate sites. Coffin Butte landfill should be permitted to reach its current preset life span and then be closed. It is time to move to better ways of managing our waste.

Respectfully submitted,
Patricia D. Morrell

Subject: Opposed Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill.
Date: Saturday, April 19, 2025 2:32:03 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is RichardT. Muller and I live at 821 12th Avenue Albany Oregon 97321.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health
- **Traffic increases** that pose safety risks on nearby roads and pathways
- **Odor and noise issues** that degrade quality of life for residents and visitors
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences** for future generations

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

I believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities!

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,

Richard T. Muller

Corvallis, OR 97333-1139

From: Martha Truninger
1130 NW Overlook Dr
Corvallis, OR 97330

I oppose the expansion of the landfill because of the pollution it is causing and the deleterious health effects it is having on the environment and the people who live in this area. It is the responsibility of our appointed officials to make sure that the decisions they make are in the best interests of our community. Approving the landfill expansion would not be in our best interest. All ready the EPA has found significant methane emissions, which are continuing to pollute our environment. ENRAC (Environment and Natural Resource Advisory Committee has recommended to deny the CUP. I worry about the future of this valley and my and my families exposure to the pollutants emitted by the landfill which will only increase if the CUP is not denied.

Sincerely,
Martha Truninger

Dear Benton County Commissioners,

Attached is my letter opposing Republic Services' Conditional Use Permit application LU-24-027.

Sunia Yang
Corvallis, Oregon

To: publiccomment@bentoncountyor.gov

Subject: Oppose/Deny LU-24-027

Body:

Dear Benton County Planning Commissioners,

My name is Sunia Yang and I live at 3505 NW Marshall Drive, Corvallis OR 97330.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health
- **Traffic increases** that pose safety risks on nearby roads and pathways
- **Odor and noise issues** that degrade quality of life for residents and visitors
- **Negative impacts on wildlife, recreation, and property values**
- **Long-term climate and environmental consequences** for future generations

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

Any consideration of expansion should be postponed until Republic Services resolves the issues with the current landfill which include methane leaks, potential ground water pollution, and emissions both caustic and odorous.

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Sunia Yang

Subject of Testimony: Coffin Butte Landfill Expansion

Full Name: Kathleen Bartee

Email: kmbartee@yahoo.com

Street Address: 5695 NW Fair Oaks Dr, Corvallis, OR, 97330

Written Testimony:

I am writing to strongly oppose the proposed landfill expansion operated by Republic services. I have lived in Corvallis for over 40 years. I have seen the odor and trash scattered along the roadways become continual and offensive. I have seen it blowing off Republic's trucks as I follow them. Republic has not been honest. We were told that methane leaks were few and small – but that's simply not true. Two fires broke out last year. That's a public safety issue and absolutely not acceptable. The cover does not contain airborne toxic particles. There are photos available.
An upsetting thing for me personally is knowing that my granddaughter swam in a river where leachate from a landfill was being disposed. I had no idea until concerned citizens made me aware of this practice. Unacceptable.
We should not allow Republic to make huge profits as it degrades our land and leaves all the long term consequences of toxic waste for our children.
I urge you not to allow this landfill expansion to proceed. Our community deserves your no vote.

Dear Benton County Planning Commissioners,

I am writing to strongly urge the Planning Commission to deny Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. This dump is already polluting air and water, and violating environmental laws. It's not even owned, operated, or controlled by Benton County, and no "Conditions of Approval" attached to previous landfill expansions have ever been enforced (See the Benton County Trash Talks final report).

The proposed expansion would further negatively affect the character of the surrounding area and place an undue burden on public resources, in violation of Benton County Code 53.215(1) and (2). Specifically, I have serious concerns about the following:
— Air, soil, and water pollution, e.g. methane emissions, leachate, etc.
— Increased vehicular traffic, obstructed public rights-of-way
— Offensive, noxious odors and noise
—- Harmful impacts on wildlife, recreation, and property values
— Long-term environmental and climate consequences

I urge you to heed the advice of Benton County's own Environment and Natural Resources Advisory Committee (ENRAC), who voted 5-1 to recommend denial of the proposed landfill expansion. Take seriously the League of Women Voters of Corvallis, strongly urging you to deny the proposed expansion because of grave concerns about the health of Benton County residents. Read carefully the thoughtful, detailed testimony from the Mid-Willamette Bird Alliance, which unequivocally opposes any further expansion of the Coffin Butte Landfill and urges you all to reject this application.

Please, please reject LU-24-027. Thank you for your consideration of these comments, and for protecting the health and future of Benton County residents.

Sincerely,
Mary Elizabeth Braun
Corvallis, Oregon. 97330

April 19, 2025

Nick Fowler
Chair, Benton County Planning Commission

Dear Mr. Fowler & Commissioners:
I strongly urge the Benton County commissioners to reject the expansion of the Coffin Butte Landfill (application file number LU-24-027). Expanding this already toxic site puts an enormous burden and great financial risk on our county for the long-term in so many ways.

If Benton County approves the landfill expansion, the county is liable for what happens to this land far, far into the future. If (when!) Republic Services closes or abandons the site, Benton County faces the cleanup of Coffin Butte and the surrounding land at enormous financial cost and unlimited long-term risk and liability. That greatly constrains the ability of my County to use its monies to instead make future public improvements, upgrades or repairs to facilities and public utilities, and the number of services available to residents like me. As a taxpayer, I don't want to support making this landfill even larger and more noxious than it already is.

I was appalled to learn that Coffin Butte is not just a landfill for Benton and a few surrounding counties – no, Republic's site accepts one-third of all of Oregon's garbage! How unfair that my county uses its land as a dumping ground for the entire state! Let all those far-flung counties and communities deal with reducing their garbage volume and sorting and removing both recyclables and toxics from their own solid waste. Expansion simply supports the status quo way we treat "garbage" and goes against the Sustainable Materials Management criteria that Benton County has endorsed. (Criteria 3)

I was also appalled to learn a whopping 31 million gallons of leachate – a stew of industrial solvents, PFAS chemicals, lead, mercury, etc. – were pumped out of the landfill and sent to Corvallis' (and Salem's) wastewater treatment plants. This isn't "wastewater" in the typical municipal sense and it's disgusting to think that this "treated" leachate is then dumped in the Willamette River, an important source of drinking water for the valley. Maybe Benton County makes a lot of money treating this leachate, but the county is knowingly releasing "forever chemicals" into that beautiful river. More and more municipalities are facing expensive solutions to keep PFAS out of drinking water supplies; it makes no sense that Benton would head in the opposite direction. It's a foolish environmental liability to expand the landfill and thereby expand the amount of deadly chemicals that Corvallis dumps into that river and sends to its residents as drinking water. (Criteria 2)

I enjoying hiking in forests just south of Coffin Butte and also walking and birding in EE Wilson. If the wind is right, the smells drifts right to me, and so do the noxious chemicals. It's disgusting that Coffin Butte emits some of the largest methane plumes in the entire Pacific Northwest. Despite what Republic/Valley Landfills claims, methane levels are high enough to be explosive and contribute powerfully to greenhouse gas emissions and climate change. Coffin Butte profoundly degrades the character of our area and should never be allowed to expand. (Criteria 1)

I am proud that Benton County supports so many positive and healthy endeavors for its citizens. But I absolutely do not support expanding a landfill that has made Benton County a literal dumping ground for the entire state – not just for garbage but for truly dangerous chemicals and gases. Citizens like me are bearing the very real health costs of having this facility in Benton. Approving its expansion makes all those problems worse and exposes the County to significant financial and environmental liability.

Sincerely,
Julia Corbett

Dear Benton County Planning Commissioners,

My name is Joe Crockett and I live at 37609 Soap Creek Road, Corvallis, 97330

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

As written in the Valley Landfill CUP 53.210 (Permit Required). This sections states:
"The decision to issue a conditional use permit is discretionary."

As defined by the Merriam-Webster dictionary:
discretionary: left to individual choice or judgement: exercised at one's own discretion.

Words to consider as discretionary: Area, off-site impacts, significant, extensive, effective, short lived, seriously interfere, comprehensive, occasional, undue burden, character, adjacent

On behalf of the citizens of Benton County, please use your discretion to reject LU-24-027.

Sincerely,

Joe Crockett

Dear Benton County Planning Commissioners,

My name is Joe Crockett and I live at 37609 Soap Creek Road, Corvallis, 97330

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

Please note that in the applicant's response to BCC 77.010:
"The Landfill Site Zone recognizes the existing site in the Coffin Butte area…"

The applicant's response:
"…LS zone was expressly created to accommodate and permit the continued use of the landfill that had existed in this area since the 1940s."

In 1983, when the LS zoning was created, one of the conditions of approval for the zoning included that land south of Coffin Butte Road would not be used as part of the landfill ("No disposal of municipal solid waste on the 59.23 acre parcel south of Coffin Butte Road."*)

This is the main point of this CUP: to get rid of the restrictions that do not allow the area south of Coffin Butte Road to be used as a landfill. The applicant's response is misleading at best and should be called out for misrepresenting the facts.

On behalf of the citizens of Benton County, please reject LU-24-027.

RE: Republic Services Coffin Butte Landfill Expansion Proposal - LU-24-027

RESOLUTION Passed by Linn-Benton Pacific Green Party on 12/10/2024:

WHEREAS, climate change is a pre-eminent issue facing the planet, the United States, and Benton County; and

WHEREAS,there is nothing more important than addressing the climate crisis; and

WHEREAS, we have no time to waste in taking action to protect Americans' lives and futures; and

WHEREAS, methane is the most potent greenhouse gas, trapping 86 times more heat in the atmosphere than carbon dioxide over 20 years; and

WHEREAS, the time to reduce carbon emissions is time-limited to 10-20 years if catastrophic temperature rise is to be prevented; and

WHEREAS, Republic Services' Coffin Butte Landfill in Benton County is a methane superemitter because of numerous irremediable factors, including precipitation, waste intake volume type and quantity, and inadequate regulation, it is in the best interest of Benton County, and the planet, that the landfill reduce methane-producing waste-in-place; and

WHEREAS, by definition expanding the landfill will increase volumes of waste-in-place, not reduce those volumes; and

WHEREAS, Benton County has ceded control over waste intake volumes if the landfill is expanded; and

WHEREAS, any landfill expansion will increase methane output even without a removal of the existing waste intake volume cap; and

WHEREAS, methane-monitoring regulatory agencies such as the EPA are likely to be
constrained in their abilities to effectively regulate emissions for the next near-, medium-, and long-term;

NOW, THEREFORE, BE IT RESOLVED, that in order to protect the earth's climate, the Linn-Benton Pacific Green Party endorses the denial of any expansion request of the existing landfill, and any new landfill in Benton County.

Sincerely,

The Linn-Benton Pacific Green Party

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Susan Deemer and I live at 1638 SW Country Club Pl, Corvallis.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

My husband and I did extensive research before deciding to relocate to Corvallis. We wanted to move somewhere that had cleaner air and water and a better quality of life than where we previously lived. Had we known that the landfill expansion was being planned, we may have crossed Corvallis off our list of acceptable locations.

The EPA has documented many severe methane leaks at Coffin Butte Landfill, and emissions are already 100x higher than the legal limit. I have no confidence in legal limits being enforced any better in the future.

An expansion would mean an increase in traffic, odor and noise which will have negative impacts on community health, wildlife, recreation, and property values. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

I believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities!

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Susan Deemer
Corvallis, OR 97333

To: Benton Public Comment
Subject: Time sensitive testimony for LU – 24–027
Date: Sunday, April 20, 2025 10:35:10 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Commission,

Sorry for the delay but I am submitting testimony regarding LU – 24–027, the application to expand the landfill. I want to be upfront and make it clear that I OPPOSE this application. Understand that I believe that this application should be urgently denied.

I understand that any approval of this land use application has to come from your judgment that the expanded landfill will not seriously interfere with the use on adjacent property, or with the character or the area, or with the purpose of the zone, and that the expanded landfill would not impose on an undue burden on any public improvements, facilities, utilities, or services available to the area.

And that further you must judge that an expanded landfill will not force a significant change in, or increase to the cost of, accepted farm or forest practices on any surrounding lands, devoted to farm or for use; and that further still, you must judge that the expanded landfill will not significantly increase fire hazards or significantly increase fire suppression costs or significantly increase risks to people, engaged in fire suppression. And finally that our testimony may refer to relevant provisions in the Benton County comprehensive plan or development code that the land fill expansion would not comply with any of those plans.

As a concerned citizen, I want to emphasize that this hazardous expansion should NOT be in our backyards. I have children here and I want them to have a safe and healthy future in Corvallis. This landfill expansion is hazardous in many ways, especially increased fire danger with the known methane leaks that already exist coming out of Coffin Butte Landfill. Scientific data shows that the metering leaks can expand way past the landfill and the Lewisburg area during certain wind conditions. We already have issues with air pollution and air issues from agricultural dust, woodburning stoves, and smog from Portland. I have asthma and chronic breathing issues from long-haul Covid and so any issue with air quality greatly negatively affects me to the point where I need my regular inhalers, a rescue inhaler, and often nebulizer treatments.

The goals promoted in the Benton County comprehensive plan include “to maintain and improve the quality of the air, water, and land resources of the state; to protect people and property from natural hazards; to maintain and improve the variety of economic and social activities that are vital to the health, welfare, and prosperity of Oregon citizens.“ Clearly the expansion of this landfill is contradictory to all of these plans. I grew up in the Lewisburg area and my dad still lives there and it’s our family heritage land. I can smell the landfill from there as well as all the way into town on 9th Street near market of choice. Many neighbors have expressed their frustration with the landfill smell, and there’s no place for an expansion let alone a good reason to in that area.

Please do not let this landfill expansion happen. It is absolutely the antithesis of what Corvallis

and the Benton County comprehensive plan is all about. Thank you for your time and consideration on this important topic. I hope that my input has been valuable to your decision-making process.

Sincerely,

Bethany Dengler-Germain

Residence Address: 23541 Greasy Creek Rd, Philomath, OR 97370

This testimony is on my sole behalf and does not represent any organization.
John Deuel, Resident of Benton County

I am a relative newcomer as a resident here. I moved here in 2016 after living in Norfolk and Virginia Beach, Virginia, for over 30 years. I have devoted much of my career to achieving sustainable materials management and continue to do so after my retirement in 2023. I participated in the Benton County Talks Trash (BCCT) project in 2022-2023 and am now a member of the Regional Sustainable Materials Management Plan Task Force.

My intent in developing my own position on the proposed conditional use to expand the Coffin Butte Landfill is to be objective and consider multiple concerns within a very complex problem. I acknowledge my own bias toward preventing waste, recycling, and viewing landfills as the last resort. I believe that even with significant improvements in our recycling systems and the advancement of more sustainable systems for managing our material resources, landfills are still necessary.

The two areas of concern that I have are:

1. How well the application demonstrates that the land use requirements and the operator's plans for compliance will be monitored and shared by the County.

We learned through the BCCT shared understandings consensus process that the record for environmental monitoring of the landfill has been mixed. While serving on the Benton County Solid Waste Advisory Council, I observed consistent annual reporting from the landfill operator. However, gaps in oversight by the County and other state and federal agencies have emerged through the BCCT report.

The application states that the "hauling of leachate will continue to be disposed of per DEQ/EPA regulations." While this appears adequate on the part of the Landfill operator, concerns were raised during the BCCT regarding the capacity of the Corvallis Wastewater Treatment facilities to accommodate the leachate that will continue to be brought to these facilities. I am not aware of any research or further analysis about these concerns.

Last year, the EPA identified 41 locations at Coffin Butte where methane emissions exceeded the legal limit of 500 parts per million, including one area that was releasing over 100,000 parts per million. Methane emissions into the atmosphere have a significantly negative impact on climate change.

I have concerns about how well the County can meet these oversight and monitoring requirements, given the level of staffing and funding historically allocated for this purpose. This challenge is exacerbated by general economic conditions and federal funding and staffing cuts, which have a trickle-down effect on State funding. In response to this current uncertainty, Benton County has frozen all hiring. Given the political confusion at the federal level, this trend could continue for some time and hinder the proper monitoring and transparency needed if this conditional use is approved.

2. My assessment of how the proposed land use is viewed within the lens of the sustainability values of Benton County's 2040 Thriving Communities Initiative.

I support the extensive work done in 2017-18 and the resulting "Core Values" presented as part of Benton County's "2040 Thriving Communities Initiative. " These values include "High Quality Environment & Access" and "Diverse Economy that Fits. "

I applaud the County for initiating the community engagement process to address historic and current concerns about the Coffin Butte Landfill. More importantly, they are proactively shifting the focus of the Sustainable Materials Management Plan toward upstream parts of the materials management chain, such as waste prevention and reuse.

This effort to concentrate its resources and public focus on the shift to a circular economy will be more sustainable and consistent with Oregon's 2050 Vision for Sustainable Materials Management. This shift has the potential to delay the closure of the existing landfill, buying more time for the ongoing transformation to more sustainable materials systems.

Landfilling will continue to be necessary, but it is the least desirable, relatively expensive, and environmentally risky option for managing solid waste. Well-managed and carefully monitored landfills serve a public need; however, in my view, they have become a crutch for maintaining the status quo of an unsustainable linear process: resource extraction, transportation, production, consumption, and finally, the permanent disposal of our limited resources. We have also over-relied on a recycling system that has generally been ineffective. Filling up our recycling cart may give us a sense of satisfaction, but that is not the goal.

We have learned over the past decade that this "make-take-throw away" status quo is not sustainable and needs to change. I question whether expanding landfill space at the proposed location addresses this problem or merely "kicks the can down the road, " thus obscuring or delaying the changes needed to manage our waste sustainably.

Due to the need to urgently change our materials management systems and address monitoring uncertainties, I oppose the approval of the pending Conditional Use Permit to expand Coffin Butte Landfill. I urge the County to continue its leadership in developing the Regional Sustainable Materials Management Plan with the utmost urgency and to implement its recommendations in collaboration with neighboring governments and the State of Oregon.

I am Fay Ellis, 2785 NW Romancier Drive, Corvallis 97330. I'm writing regarding application number LU-24-027 to expand the Coffin Butte landfill which is already an eyesore, and has a detrimental impact on air, land and water quality. To consider expanding it is completely irresponsible. I have 3 generations living here in Corvallis and I am committed to working to assure the future of Corvallis' clean water, clean air and non-toxic land for my children and grandchildren. Mitigation efforts to manage the stench from the landfill and possibly the contamination of the water table are not effective currently, so how can we trust that an expansion will be appropriately managed? Don't let us become one of the terrible stories of towns around the country subjected to contaminated water, soil and air quality. This is preventable now.

Thank you,
Fay Ellis

Hello-

I very much OPPOSE the approval of LU-24-027, expanding the Coffin Butte Landfill. I have lived in Benton County my entire life, and have watched the landfill growing slowly over the years, as our local population increases. It has now grown to mammoth proportions, with the importing of trash from all over the state and some counties in Washington! The wet west side of the Cascades is NOT the place for a huge and expanding landfill.

I believe the proposal to expand the landfill is completely contrary to BCC 53.215(1) and Benton County Comprehensive Plan policies 5.9.4, 5.1.2, 5.2.1, and 5.7.4, especially for its impacts on the EE Wilson Wildlife Management Area. This wildlife management area is a premier spot in Benton county to observe and enjoy birds and other wildlife and attracts visitors from around the region. The sights, sounds and smells of the landfill are impacting the enjoyment of such visits, and also the birds and wildlife. The Great Blue Heron rookery that is near to the landfill is very sensitive to disturbance, and the elk that live in EE Wilson and surrounding areas are facing more and more traffic on the roads, as well as being blocked from their movements for feeding and resting. No one knows the effects of polluted air and water on the wildlife and birds in the wildlife management area, not to mention human visitors and residents.

Please vote NO on the proposed landfill expansion- send that garbage somewhere else!!

Thank you.

Karan Fairchild
31540 Homestead Rd
Philomath, OR 97370

MID-WILLAMETTE BIRD ALLIANCE

Date: April 14, 2025

Reference: LU-24-027, Coffin Butte Landfill Conditional Use Permit Application

To: Benton County Planning Commission
Benton County Community Development
4500 SW Research Way
Corvallis, OR 97333-1139

We appreciate the opportunity to comment on the future of the Coffin Butte Landfill, a county planning decision of great concern to our human community, and to the wildlife communities dependent on habitats that lie within and proximate to the parcels of this Conditional Use Permit (CUP) application. Since our inception in 1972 as Audubon Society of Corvallis, our more than 300 members support conservation of birds, other native wildlife, and natural habitats through science, education, and recreational activities made available freely to all.

We oppose any further expansion of the Coffin Butte Landfill and urge the Planning Commission to reject this application. We believe the Planning Commission will find that the Applicant, Republic Services, does not provide evidence to conclude that conditional use permit issuance would not violate County Development Code criteria and Comprehensive Plan policies. Further, based on its current performance, Republic Services cannot be expected to demonstrate that it can assure the County of its future compliance with any conditions that the county might issue.

We assert that any approval of Application LU-24-027 would directly violate Benton County Code criteria 53.215(1) and 53.215(2). We further assert that such a decision would violate or otherwise evade County Comprehensive Plan policies 5.1.2, 5.1.5, 5.2.1, 5.3.1, 5.4.1, 5.4.2, 5.4.3, 5.6.7, 5.7.4, 5.8.2, 5.9.1, 5.9.4, 5.9.5, 5.9.7, 6.1.2, 6.5.7 and 6.5.8. In addition, as Benton County has committed to a Prairie Species Habitat Conservation Plan (HCP) under Section 10 of the U.S. Endangered Species Act, covered species protections and long-term actions committed to by Benton County under the accompanying Prairie Conservation Strategy must not be further compromised by permitting further expansion of the Coffin Butte Landfill. Such approval would also directly counter state-wide goals for species and county-identified priority habitats under the E.E. Wilson Wildlife Management Plan and the Oregon Conservation Strategy.

Audubon Society of Corvallis, dba Mid-Willamette Bird Alliance
P. O. Box 148, Corvallis, Oregon 97339-0148
https://audubooncorvallis.org • audubon.corvallis@gmail.com

Rationale

We have come to this position through careful study of guiding documents relevant to the decision process before you. Over-arching guidance is supplied through Oregon State Land Use Laws, particularly in the promulgation of State and County Land Use Goals. Tiered to statewide land use planning goals, current Benton County Comprehensive Plan Implementation states: "The policies of the Comprehensive Plan serve as the basis for the implementing regulations of the Development Code." Its purpose from the Introduction Guide #2 is, "To guide public decisions on land use changes as reviewed through implementing regulations such as zoning and land division ordinances, such as the Development Code." (pg. Intro-11)

Benton County Comprehensive Plan Goal 5 Overview: Natural Resources, Scenic & Historic Areas, Open Spaces

"Protection of these diverse natural resources calls for a variety of approaches….
Natural areas, scenic areas and open space are to be managed to preserve their essential character, through Benton County's direct management of its lands and by encouraging private landowners to manage appropriately.
Ecosystem components such as wetlands and riparian areas provide multiple utility functions benefiting humans and the environment, and require cooperation among landowners in order to maintain healthy systems. Inventory, analysis and development of protection plans and landowner education programs guide the management of these important resources….
Protection of groundwater resources and wildlife habitat requires the cooperation and participation of local, state and federal agencies. Benton County's policies support the work of those agencies through collaboration on land use decisions and promotion of conservation efforts."
"The statewide planning program directs counties to inventory natural resources and identify significant sites for which protection plans are to be developed. In some cases, significant sites have been identified by state or federal agencies. Interagency coordination and cooperation with local, state and federal programs is particularly important in the implementation of the Goal 5 policies."[i]

Goal 5.9 Wildlife Habitat*: To conserve and protect wildlife habitats and to promote habitat management that maintains wildlife diversity.*

Policies

5.1.2 *Benton County shall work to maintain and enhance ecological health of valued natural areas throughout the county by preserving and restoring natural habitats and maintaining the integrity and stability of these areas.*

Our Finding:
The continuance and expansion of the Coffin Butte Landfill disrupts Oregon's recovery efforts at the E.E. Wilson Wildlife Area, by directly attracting avian predators (such as common raven) to the area with nests of imperiled species of concern (streaked horned lark, Oregon vesper sparrow, western meadowlark), by

attracting invasive Eurasian starlings that displace cavity nesting species of concern (western bluebird, purple martin), and by further compromising wetland, riparian and open water habitats for multiple fish and wildlife species with air and waterborne contaminants. The great blue heron heronry on landfill property may have been abandoned due to bald eagle nest predation or to human cause, but now appears to be established on E.E. Wilson lands immediately adjacent to Highway 99W, where newly fledged herons will experience a far higher risk to road-killed losses. Counter to 5.1.2, Benton County has not worked to preserve the recognized heronry on the applicant's land, nor if by approving this application will it be able to work to preserve and restore the natural habitat of E.E. Wilson or maintain its integrity and stability.

5.1.5 *Benton County shall work with watershed councils, land managers, property owners, and others to protect, maintain, and/or enhance healthy functioning ecosystems and watersheds through conservation incentive programs including property tax benefits, income tax credits, regulatory streamlining, direct funding, voluntary agreements, and technical assistance.*

5.3.1 *Benton County shall work with public and private organizations, landowners, and the general public to identify, record, and protect valued scenic and open space resources.*

5.4.1 *Benton County shall recognize the need for protection of open spaces, especially along natural drainage courses.*

5.4.2 *Benton County shall promote private land stewardship of farm and forest lands, respect private property rights, and work with non-profit groups and others to maintain a comprehensive system of connected open spaces that will protect the most valued natural, scenic, and recreational areas of the county.*

5.4.3 *Benton County shall work to protect ecological and hydrological functions of open space, promoting best management practices and green infrastructure.*

5.4.4 *To protect valued open spaces, Benton County shall use a variety of methods such as land purchase, conservation easements, riparian protection ordinance, open space tax deferrals, gifts and donations, and density transfers.*

5.6.7 *Benton County's riparian planning process shall place particular emphasis on identifying and protecting headwater areas from adverse impacts of development.*

5.7.4 *Benton County shall work with others to conserve and protect natural functions of the county's most important wetland habitats.*

5.9.1 *Benton County shall actively participate with appropriate local, state, and federal agencies to identify, conserve, and protect fish and wildlife habitat.*

5.9.4 *In making land use decisions, Benton County shall protect identified sensitive wildlife habitat types and wildlife corridors from adverse impacts.*

5.9.5 *Benton County shall notify the Oregon Department of Fish and Wildlife (ODFW) early in the review process and collaborate with that agency regarding zone and plan amendments, conditional use permits, and subdivision and series partition applications in areas that include habitat types identified by ODFW as Habitat*

Conservation Priorities: in-stream habitat, native prairie grasslands, oak woodlands and savannas, riparian floodplains and wetlands.

5.9.7 *Benton County shall coordinate with Oregon Department of Fish and Wildlife to minimize conflicts between transportation infrastructure and wildlife migration routes.*

Our Finding:
Local and seasonal movements of Roosevelt elk between the Soap Creek watershed and E.E. Wilson must cross Hwy 99W, and pose an ongoing serious risk to both vehicle traffic and to elk. We are not aware of any discussions between Benton County, ODFW, and ODOT regarding this conflict, and are concerned that any continued expansion of landfill operations southward, while Adair Village expands northward, will disrupt movement corridors and exacerbate conflict, all without addressing any underlying causal factors.
We would expect that ODFW, which maintains the South Willamette Watershed District office and E.E. Wilson Wildlife Area office near the Coffin Butte Landfill, will have already been "worked with" or "coordinated with" early in the staff review process of this application. However we have no evidence of this during the extended absence of any open public advisory body discussions concerning ongoing county landfill or solid waste disposal practices and issues.

5.8.2 *Benton County shall require developers to provide sufficient information to enable Benton County to evaluate whether a proposed use could adversely affect the sustainability of aquifer production when reviewing land use applications.*

Our Finding:
Despite historical ground and surface water contamination on record, and leading up to and during staff review time of this application, evidence has indicated that the east leachate storage pond south of Coffin Butte Road had possibly developed a liner rupture which may have allowed leachate to pass into surface and ground water. Neither Benton County nor Republic Services have reported this possible discharge at any public forum, in any newsletter, or to any advisory body. Such information must be included in landfill site documentation, and not buried *<u>while potential landfill expansion is under public review</u>*.

6.1.2 *In cooperation with appropriate agencies, Benton County shall manage its air, water and land resources to insure their protection, conservation, restoration, or enhancement.*

6.5.7 *Benton County shall maintain a committee that advises the Board of Commissioners on solid waste and disposal site issues.*

6.5.8 *Benton County shall assure safe, accessible, and environmentally sound disposal of solid waste at the Coffin Butte Regional Sanitary Landfill.*

Our Finding:
By policy, Benton County is required to ("shall") manage its air, water and land resources to insure their protection or conservation. Regulatory efforts to do so at the Coffin Butte Landfill and its surroundings have been insufficient, resulting in interference with restoration and enhancement efforts being attempted by others adjacent to the landfill site.
For a considerable period of time recently, Benton County abolished both its Solid Waste Advisory Council and Disposal Site Advisory Council. Maintaining such committees is the lifeblood of the democratic process, and allows all community members to collectively engage towards a more sustainable future.
County government cannot assure anyone of a safe, accessible and environmentally sound disposal of solid waste in the absence of transparency in its Coffin Butte Landfill policy planning and implementation.

E.E. Wilson Wildlife Area Management Plan[ii]
As a wildlife and habitat conservation organization with deep roots in the community, MWBA is also aware of the establishment, purposes, and management of E.E. Wilson Wildlife Area, immediately adjacent to, east of, and downslope of Coffin Butte Landfill and its proposed expansion. Our members recreate there regularly and assist in its volunteer efforts and citizen science projects. Benton County recognizes all its eastern portion with Open Space zoning, identifies it as key expansion habitat for two HCP covered species, and lists all of the management area habitats as priorities. The full text of the E.E. Wilson Wildlife Area Management Plan may be viewed or downloaded here: https://www.dfw.state.or.us/wildlife/management_plans/wildlife_areas/docs/ee_wilson.pdf

"The Oregon Conservation Strategy is an overarching state strategy for conserving fish and wildlife. It provides a shared set of priorities for addressing Oregon's conservation needs. The Conservation Strategy brings together the best available scientific information, and presents a menu of recommended voluntary actions and tools for all Oregonians to define their own conservation role."[iii]
In Benton County, E.E. Wilson Wildlife Area manages one-half of all Strategy Components, manages four of Oregon's eleven key Strategy Habitats, harbors dozens of Oregon Strategy Species, and falls within an important Conservation Opportunity Area (Corvallis Area Forests and Balds). Meanwhile the adjacent Coffin Butte Landfill and its proposed expansion carry all of statewide landscape threats to conservation that Benton County can by choice work to improve: Barriers to Animal Movement, Invasive Species, Water Quality and Quantity, and Land Use Changes. https://oregonconservationstrategy.org/

The Benton County Prairie Species Habitat Conservation Plan (HCP) and its Appendix E Prairie Conservation Strategy (PCS) provides our concluding reference. [iv] HCPs offer non-federal landowners an incidental take permit over a multi-decade period in exchange for a commitment to ensure HCP-covered species are provided sufficient habitat for their

persistence, even with an expected level of individual losses. Seven imperiled species are covered under this HCP agreement, and three are relevant for consideration in this CUP application: Fender's blue butterfly, Kincaid's lupine, and Nelson's checkermallow. E.E. Wilson management has worked to establish both these plant species with the expectation that Fender's blue butterflies may populate this area.

Covered Species; Fender's Blue butterfly (PCS pg. 22)

> *"USFWS has identified Finley National Wildlife Refuge as a potential Fender's blue butterfly network. Additionally, E.E. Wilson has the potential to support Fender's blue butterfly and could form a network with Kincaid's lupine patches currently existing along the Soap Creek drainage and along the Benton/Polk county border. Creating stepping stone patches less than 1 km apart in north Benton County will require coordination and cooperation between USFWS, ODFW, Oregon National Guard, Oregon State University, Luckiamute Watershed Council, additional NGOs[v], and private landowners."*

Priority Long Term Actions, Connect (PCS pg. 46)

> *"C5: Connect Fender's blue butterfly habitat in the Soap Creek watershed from Oregon State University's property to E.E. Wilson by protecting stepping stone habitat patches less than 1 km apart. Work with interested private landowners who are willing to plant nectar species and provide information on conservation easements and incentive programs*."

Our Finding:
It is self-evident that any butterfly flight corridor between Soap Creek Valley and E.E. Wilson will be further obstructed by any enlargement of the landfill between Tampico Ridge and Coffin Butte, all the more so by the host of avian scavengers and insectivorous passerines that amass at the open face of the Coffin Butte landfill.

Conclusion

Development Code Chapter 53: Conditional Uses; Administrative Procedures, General Review[vi]

> *BCC 53.215 (1): The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone;*
> *BCC 53.215(2): The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area;*

Based on our findings, the proposed use seriously interferes with uses on adjacent public and private property, significantly alters and disrupts the ecological, visual, and rural character of both the zoned area and all other surrounding zoned uses, and thereby greatly exceeds the purpose of the zone.
It has been clearly established that the current landfill use already imposes an undue burden on public rights-of-way, transportation routes, esthetic and scenic values, as well as conservation and restoration efforts and recreational opportunities at state

facilities, along with greatly increased traffic, incidental refuse, incompatible noise, noxious odor, combustible vapor, and contaminated air, soil and water.[vii] Such grievous current offense cannot justify its furtherance or any proposed increase in its size or use.

We again appreciate the opportunity to provide comment to inform your Planning Commission consideration.

MID-WILLAMETTE BIRD ALLIANCE

Date: April 14, 2025

Reference: LU-24-027, Coffin Butte Landfill Conditional Use Permit Application

To: Benton County Planning Commission
Benton County Community Development
4500 SW Research Way
Corvallis, OR 97333-1139

We appreciate the opportunity to comment on the future of the Coffin Butte Landfill, a county planning decision of great concern to our human community, and to the wildlife communities dependent on habitats that lie within and proximate to the parcels of this Conditional Use Permit (CUP) application. Since our inception in 1972 as Audubon Society of Corvallis, our more than 300 members support conservation of birds, other native wildlife, and natural habitats through science, education, and recreational activities made available freely to all.

We oppose any further expansion of the Coffin Butte Landfill and urge the Planning Commission to reject this application. We believe the Planning Commission will find that the Applicant, Republic Services, does not provide evidence to conclude that conditional use permit issuance would not violate County Development Code criteria and Comprehensive Plan policies. Further, based on its current performance, Republic Services cannot be expected to demonstrate that it can assure the County of its future compliance with any conditions that the county might issue.

We assert that any approval of Application LU-24-027 would directly violate Benton County Code criteria 53.215(1) and 53.215(2). We further assert that such a decision would violate or otherwise evade County Comprehensive Plan policies 5.1.2, 5.1.5, 5.2.1, 5.3.1, 5.4.1, 5.4.2, 5.4.3, 5.6.7, 5.7.4, 5.8.2, 5.9.1, 5.9.4, 5.9.5, 5.9.7, 6.1.2, 6.5.7 and 6.5.8. In addition, as Benton County has committed to a Prairie Species Habitat Conservation Plan (HCP) under Section 10 of the U.S. Endangered Species Act, covered species protections and long-term actions committed to by Benton County under the accompanying Prairie Conservation Strategy must not be further compromised by permitting further expansion of the Coffin Butte Landfill. Such approval would also directly counter state-wide goals for species and county-identified priority habitats under the E.E. Wilson Wildlife Management Plan and the Oregon Conservation Strategy.

Rationale

We have come to this position through careful study of guiding documents relevant to the decision process before you. Over-arching guidance is supplied through Oregon State Land Use Laws, particularly in the promulgation of State and County Land Use Goals. Tiered to statewide land use planning goals, current Benton County Comprehensive Plan Implementation states: "The policies of the Comprehensive Plan serve as the basis for the implementing regulations of the Development Code." Its purpose from the Introduction Guide #2 is, "To guide public decisions on land use changes as reviewed through implementing regulations such as zoning and land division ordinances, such as the Development Code." (pg. Intro-11)

Benton County Comprehensive Plan Goal 5 Overview: Natural Resources, Scenic & Historic Areas, Open Spaces

"Protection of these diverse natural resources calls for a variety of approaches....
Natural areas, scenic areas and open space are to be managed to preserve their essential character, through Benton County's direct management of its lands and by encouraging private landowners to manage appropriately.
Ecosystem components such as wetlands and riparian areas provide multiple utility functions benefiting humans and the environment, and require cooperation among landowners in order to maintain healthy systems. Inventory, analysis and development of protection plans and landowner education programs guide the management of these important resources....
Protection of groundwater resources and wildlife habitat requires the cooperation and participation of local, state and federal agencies. Benton County's policies support the work of those agencies through collaboration on land use decisions and promotion of conservation efforts."
"The statewide planning program directs counties to inventory natural resources and identify significant sites for which protection plans are to be developed. In some cases, significant sites have been identified by state or federal agencies. Interagency coordination and cooperation with local, state and federal programs is particularly important in the implementation of the Goal 5 policies."[i]

***Goal 5.9 Wildlife Habitat**: To conserve and protect wildlife habitats and to promote habitat management that maintains wildlife diversity.*

Policies

5.1.2 *Benton County shall work to maintain and enhance ecological health of valued natural areas throughout the county by preserving and restoring natural habitats and maintaining the integrity and stability of these areas.*

Our Finding:
The continuance and expansion of the Coffin Butte Landfill disrupts Oregon's recovery efforts at the E.E. Wilson Wildlife Area, by directly attracting avian predators (such as common raven) to the area with nests of imperiled species of concern (streaked horned lark, Oregon vesper sparrow, western meadowlark), by

attracting invasive Eurasian starlings that displace cavity nesting species of concern (western bluebird, purple martin), and by further compromising wetland, riparian and open water habitats for multiple fish and wildlife species with air and waterborne contaminants. The great blue heron heronry on landfill property may have been abandoned due to bald eagle nest predation or to human cause, but now appears to be established on E.E. Wilson lands immediately adjacent to Highway 99W, where newly fledged herons will experience a far higher risk to road-killed losses. Counter to 5.1.2, Benton County has not worked to preserve the recognized heronry on the applicant's land, nor if by approving this application will it be able to work to preserve and restore the natural habitat of E.E. Wilson or maintain its integrity and stability.

5.1.5 *Benton County shall work with watershed councils, land managers, property owners, and others to protect, maintain, and/or enhance healthy functioning ecosystems and watersheds through conservation incentive programs including property tax benefits, income tax credits, regulatory streamlining, direct funding, voluntary agreements, and technical assistance.*

5.3.1 *Benton County shall work with public and private organizations, landowners, and the general public to identify, record, and protect valued scenic and open space resources.*

5.4.1 *Benton County shall recognize the need for protection of open spaces, especially along natural drainage courses.*

5.4.2 *Benton County shall promote private land stewardship of farm and forest lands, respect private property rights, and work with non-profit groups and others to maintain a comprehensive system of connected open spaces that will protect the most valued natural, scenic, and recreational areas of the county.*

5.4.3 *Benton County shall work to protect ecological and hydrological functions of open space, promoting best management practices and green infrastructure.*

5.4.4 *To protect valued open spaces, Benton County shall use a variety of methods such as land purchase, conservation easements, riparian protection ordinance, open space tax deferrals, gifts and donations, and density transfers.*

5.6.7 *Benton County's riparian planning process shall place particular emphasis on identifying and protecting headwater areas from adverse impacts of development.*

5.7.4 *Benton County shall work with others to conserve and protect natural functions of the county's most important wetland habitats.*

5.9.1 *Benton County shall actively participate with appropriate local, state, and federal agencies to identify, conserve, and protect fish and wildlife habitat.*

5.9.4 *In making land use decisions, Benton County shall protect identified sensitive wildlife habitat types and wildlife corridors from adverse impacts.*

5.9.5 *Benton County shall notify the Oregon Department of Fish and Wildlife (ODFW) early in the review process and collaborate with that agency regarding zone and plan amendments, conditional use permits, and subdivision and series partition applications in areas that include habitat types identified by ODFW as Habitat*

Conservation Priorities: in-stream habitat, native prairie grasslands, oak woodlands and savannas, riparian floodplains and wetlands.

5.9.7 *Benton County shall coordinate with Oregon Department of Fish and Wildlife to minimize conflicts between transportation infrastructure and wildlife migration routes.*

Our Finding:
Local and seasonal movements of Roosevelt elk between the Soap Creek watershed and E.E. Wilson must cross Hwy 99W, and pose an ongoing serious risk to both vehicle traffic and to elk. We are not aware of any discussions between Benton County, ODFW, and ODOT regarding this conflict, and are concerned that any continued expansion of landfill operations southward, while Adair Village expands northward, will disrupt movement corridors and exacerbate conflict, all without addressing any underlying causal factors.
We would expect that ODFW, which maintains the South Willamette Watershed District office and E.E. Wilson Wildlife Area office near the Coffin Butte Landfill, will have already been "worked with" or "coordinated with" early in the staff review process of this application. However we have no evidence of this during the extended absence of any open public advisory body discussions concerning ongoing county landfill or solid waste disposal practices and issues.

5.8.2 *Benton County shall require developers to provide sufficient information to enable Benton County to evaluate whether a proposed use could adversely affect the sustainability of aquifer production when reviewing land use applications.*

Our Finding:
Despite historical ground and surface water contamination on record, and leading up to and during staff review time of this application, evidence has indicated that the east leachate storage pond south of Coffin Butte Road had possibly developed a liner rupture which may have allowed leachate to pass into surface and ground water. Neither Benton County nor Republic Services have reported this possible discharge at any public forum, in any newsletter, or to any advisory body. Such information must be included in landfill site documentation, and not buried *while potential landfill expansion is under public review.*

6.1.2 *In cooperation with appropriate agencies, Benton County shall manage its air, water and land resources to insure their protection, conservation, restoration, or enhancement.*

6.5.7 *Benton County shall maintain a committee that advises the Board of Commissioners on solid waste and disposal site issues.*

6.5.8 *Benton County shall assure safe, accessible, and environmentally sound disposal of solid waste at the Coffin Butte Regional Sanitary Landfill.*

Our Finding:
By policy, Benton County is required to ("shall") manage its air, water and land resources to insure their protection or conservation. Regulatory efforts to do so at the Coffin Butte Landfill and its surroundings have been insufficient, resulting in interference with restoration and enhancement efforts being attempted by others adjacent to the landfill site.
For a considerable period of time recently, Benton County abolished both its Solid Waste Advisory Council and Disposal Site Advisory Council. Maintaining such committees is the lifeblood of the democratic process, and allows all community members to collectively engage towards a more sustainable future.
County government cannot assure anyone of a safe, accessible and environmentally sound disposal of solid waste in the absence of transparency in its Coffin Butte Landfill policy planning and implementation.

E.E. Wilson Wildlife Area Management Plan[ii]
As a wildlife and habitat conservation organization with deep roots in the community, MWBA is also aware of the establishment, purposes, and management of E.E. Wilson Wildlife Area, immediately adjacent to, east of, and downslope of Coffin Butte Landfill and its proposed expansion. Our members recreate there regularly and assist in its volunteer efforts and citizen science projects. Benton County recognizes all its eastern portion with Open Space zoning, identifies it as key expansion habitat for two HCP covered species, and lists all of the management area habitats as priorities. CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

DATE: April 20, 2025

TO: Benton County Planning Commission

FROM: Maia Fischler, 37269 Helm Drive, Corvallis
45-year Benton County resident

RE: Opposition to Application #LU-24-027

Respected members of the Benton County Planning Commission:

What a difficult position you are in! You are being asked to approve a land-use application that will permanently impact our beautiful county – not only in terms of the health and environmental quality of life here, but also the perception of Benton County as a pleasant place to live and do business.

You have to weigh, on the one hand, the implications of degrading air and water quality for not just today's children but generations hundreds of years beyond ours. You must consider the potential lawsuits, and also the moral burden that Benton County and those associated with this decision will face in the decades to come. You have to be willing to defend the economic impact of Corvallis becoming "Trash Town," a place that people drive through as quickly as possible, joke about, and dismiss as a place to settle their families and businesses.

On the other hand, you have … money? Not much money, in reality. A couple million a year? Is that really worth the true cost of approving this application?

To me, it's clear that the proposed dump expansion would significantly interfere with the character of the Highway 99W approach to Corvallis (in violation of BCC 53.215(1).) The existing dump is unsightly and smelly, yes, but if it's allowed to expand across the road and up the other side of the valley, it will look and stink like doomsday. "Conditions of Approval" will not mitigate this nightmare; history shows that Benton County does not have the resources or will to enforce conditions, and Republic Services does not and will not comply.

Before you make your decision, I hope you will have driven around the Soap Creek area, a historic and stunningly beautiful part of our county. Your decision will have long-lasting impacts. Please don't opt for short-term gains and cynical corporate promises. Vote no.

From: Shaen Germain
To: Benton Public Comment
Subject: Important time sensitive testimony for LU – 24–027
Date: Sunday, April 20, 2025 10:39:18 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To the Planning Commission,

Sorry for the delay but I am submitting testimony regarding LU – 24–027, the application to expand the landfill. I want to be upfront and make it clear that I OPPOSE this application. Understand that I believe that this application should be urgently denied.

I understand that any approval of this land use application has to come from your judgment that the expanded landfill will not seriously interfere with the use on adjacent property, or with the character or the area, or with the purpose of the zone, and that the expanded landfill would not impose on an undue burden on any public improvements, facilities, utilities, or services available to the area.

And that further you must judge that an expanded landfill will not force a significant change in, or increase to the cost of, accepted farm or forest practices on any surrounding lands, devoted to farm or for use; and that further still, you must judge that the expanded landfill will not significantly increase fire hazards or significantly increase fire suppression costs or significantly increase risks to people, engaged in fire suppression. And finally that our testimony may refer to relevant provisions in the Benton County comprehensive plan or development code that the land fill expansion would not comply with any of those plans.

As a concerned citizen, I want to emphasize that this hazardous expansion should NOT be in our backyards. I have children here and I want them to have a safe and healthy future in Corvallis. This landfill expansion is hazardous in many ways, especially increased fire danger with the known methane leaks that already exist coming out of Coffin Butte Landfill.

The goals promoted in the Benton County comprehensive plan include “to maintain and improve the quality of the air, water, and land resources of the state; to protect people and property from natural hazards; to maintain and improve the variety of economic and social activities that are vital to the health, welfare, and prosperity of Oregon citizens.“ Clearly the expansion of this landfill is contradictory to all of these plans.

Please do not let this landfill expansion happen. It is extremely the antithesis of what Corvallis and the Benton County comprehensive plan is all about. Thank you for your time and consideration on this important topic. I hope that my input has been helpful and is considered in your decision-making process.

Sincerely,

Shaen Germain

From: Abigail Haberman

Subject: Testimony opposing Coffin Butte landfill expansion
Date: Sunday, April 20, 2025 9:15:15 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Please confirm receipt of the following testimony. Thank you.

Date: 4/13/2025

To: Benton County Commissioners

From: Abigail Haberman, M.D.
690 NW Calloway Drive
Corvallis, OR 97330

I live on one acre that is about 2.75 miles, as the crow flies, from Coffin Butte Landfill. There are days I cannot be outside because the stench from the landfill is too strong. Despite going back inside, I am being exposed inside my home and I can smell and even taste it inside some days. It is impossible to open the windows for "fresh air" at times and I cannot leave the windows open at night in case there is a temperature inversion or fog that creates the worst of "stench days." I mistakenly took the dogs for a walk one "stench day" and my lungs burned afterwards.

I moved my office to my home a number of years ago for several reasons, one of which was to reduce my exposure to toxins in the building I was working in. But the ever-increasing emissions from the landfill have increasingly affected my health.

Republic Services has been dumping the leachate from the landfill into the Corvallis treatment plant, which empties into the Willamette. 7 miles downriver at Hyak Park, the water supply for Adair Village is pulled from the Willamette. I have many fruit trees and a large vegetable garden that I have maintained organic and chemical-free for the almost 20 years I have lived here. The leachate-contaminated water is what I have to use to water my garden. This water is used for drinking, cooking, showering, and watering gardens for the residents of Adair Village, the surrounding area, and everyone else downstream. I go to significant effort to obtain clean water from another source for drinking and cooking.

The Mid-Willamette Bird Alliance testimony, which has already been submitted to you and I will not repeat here, clearly outlines all of the code and legal violations that Benton County and Republic Services are already engaging in. Expansion of the landfill would just increase the already negative impact to human, animal, plant, and environmental health.

Albany, Oregon, was long known as the "armpit of Oregon" because of the stench emitted by the paper mills there. That stench was sulfur-based compounds, hydrogen sulfide in particular. It took community pressure and environmental regulations to get the mills closed. Benton County is already becoming the next "armpit of Oregon," and would be increasingly so if county commissioners approve expansion of the landfill.

Hydrogen sulfide is one of the many gases that the landfill is producing. When hydrogen sulfide is combined with oxygen, it produces sulfur dioxide. When it is combined with water, it produces hydrosulfuric acid.

It has taken agencies, organizations, and news reports (Beyond Toxics, Carbon Mapper, the Statesman Journal, to name a few) outside of Benton County and Republic Services to identify all that the landfill is emitting and leaching and to a much greater extent than Republic Services was reporting. In addition to hydrogen sulfide, methane, carbon dioxide, heavy metals, forever chemicals, vinyl chloride, benzene, dioxins, nitrogen dioxide, fiberglass, and plastic particles are some of the known compounds. We don't want to be drinking or breathing any of this. They are toxic to the health of humans, wildlife, plants, waterways, air quality, and the environment.

A few years ago, there was a thriving heron rookery with many birds and nests on the south side of Coffin Butte Road. According to the Mid-Willamette Bird Alliance, this has been abandoned. I wonder why? Did Benton County leaders ever abide by the code of the county and have this area protected? Did they engage the state and federal fish and wildlife departments to protect this area?

The fire hazard of a methane-producing landfill speaks for itself. And expansion of the landfill would close Coffin Butte Road, one of the evacuation routes for residents in the Soap Creek area in the event of wildfire.

Benton County's motto on the website is, "At your service, *every day*." By approving expansion of the landfill, Benton County would only be serving the pocketbooks of Republic Services and not the residents of the county. If revenue produced from the landfill and paid by Republic Services to Benton County was that significant, why haven't residents of the county seen a decrease in property taxes? I've only seen ongoing and significant increases to my property tax bill. The leaders of Benton County would not be serving the residents of Benton County, particularly in the matters of health, environment, or finances, by approving the expansion of the landfill.

Benton County's website has the following, which appear contrary to the landfill expansion:
1. The Sustainable Material Management Plan was to look at environmental impacts of the landfill, including on climate change, air quality, and water quality. Where is this information? The non-profit organization Beyond Toxics has done air quality studies but nothing has been forthcoming from the county.
2. "Benton County strives to *reduce pollutants* entering our ground and surface waters to ensure our water is drinkable, fishable, and swimmable. The county has established programs, control measures, and permit processes that help protect water quality so everyone can safely enjoy this critical natural resource." Why is this not being applied to the landfill?
3. "By cutting down on food waste, buying and using less, or purchasing second-hand items, we can help keep Benton County cleaner, healthier and more sustainable." County residents can make and many are making all of those efforts and still suffer the health effects of an ever-burgeoning landfill because Republic Services is taking waste from *many* areas *outside* the county.
4. Benton County Trash Talks "spent countless hours" on an over 1,000 page report but, interestingly and despite all the public information collected, "did NOT opine on Republic Services' expected Coffin Butte expansion application." Then what was the point?
5. "Benton County is protecting and enhancing natural habitat for future generations of people

and wildlife." Why is this not being applied to the landfill?
6. "Benton County's goal is to reduce emissions from County operations by 50% of 2010 levels by the year 2030, and to be net-zero by 2050." Again, why is this not being applied to the landfill? The county and its residents can make astounding efforts to be more environmentally friendly, only to have that be a drop in the bucket compared to the extraordinary amounts of greenhouse gases being emitted by the landfill.
7. "Benton County monitors the greenhouse gases (GHGs) emitted by County operations." Why is the county not monitoring the GHGs emitted by the landfill?
8. Under the Climate Action Plan accomplishments, "Benton County has made progress on these Climate Action Plan (CAP) objectives," which includes "reducing landfilled waste." The county is not reducing landfilled waste. The county is enabling the significant increase of landfilled waste by allowing the landfill to take waste from multiple surrounding areas. The county is enabling the irresponsible behavior of others by allowing them to create all the garbage they want and conveniently dump it in our county's "back yard" and allowing Republic Services to profit from it.

Instead, we should be doing the following:
1. Setting healthy boundaries, requiring surrounding areas to become responsible for their own waste. This would incentivize their reduction of waste because they would have no place to dump it.
2. Setting the trend for reducing waste in our own county, creating a "circular economy" like Finland, where no waste is created, rather than supporting a large corporation to profit from garbage created.
3. Holding corporations accountable to make everything recyclable, repairable, or compostable.
4. Leading the younger generation in these efforts rather than the younger generation leading us.
5. Creating a healthy community for the following generations to live in rather than creating a second "armpit of Oregon" in Corvallis instead of Albany.
6. Taking responsibility for the garbage we create rather than creating more superfund sites for the following generations to deal with.

Republic Services needs to be held accountable for the climate, health, and environmental impact and the air, land, and water pollution they are already creating and be prevented from causing further damage by expanding the landfill. Benton County commissioners are the leaders in the position to enforce this accountability.

The questions beg to be asked. Are Benton County leaders going to hold Republic Services accountable? Why would you approve the expansion of Coffin Butte Landfill despite all the opposition occurring, the issues being raised, and county codes being violated? Makes one wonder.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

In Regard to the proposed Coffin Butte expansion:

My name is Stacy Hampton and I am a homeowner in Corvallis. I have never written a public testimony regarding a pending government decision. However, I am highly concerned that Benton County officials would choose to poison their air, water, and soil with increasing amounts of chemicals and microplastics. The impact of toxic chemicals, microplastics, and pollution on health has been established in enough studies. Additional studies in the future will likely further quantify this effect. Unfortunately, the technology to create these chemicals and toxic byproducts far exceeds the ability to fully detect and remediate toxic exposures in the air, water, and soil.

The Coffin Butte landfill is an area of high population density as compared to desolate alternatives such as eastern Oregon. Although Republic Services has a vested interest in disposing of garbage in ways that minimize their transportation costs and this is their main site for disposing of garbage in Oregon, the impact of this extra exposure on the health and welfare of Benton County residents far outweighs their corporate interests.

In case of fire or other natural disasters affecting the Coffin Butte landfill, the ability to inhabit Benton County could be seriously compromised in terms of the chemical compounds released into the air/water/soil. Additionally, the ability to remove and even identify the various chemicals that are released into the water supply is insufficient when considering the number of people affected.

It is one thing for Coffin Butte to serve as a landfill for Benton County residents. It is entirely a different concept when only a small percentage of the garbage is derived from Benton County. The expense in terms of environmental harm, environmental remediation, and possible lawsuits related to the harms caused by the Coffin Butte Landfill cannot be understated. There is enough research to date to quantify and extrapolate the health impacts of Coffin Butte on Benton County residents if the landfill leads to future harm.

I am highly opposed to LU-24-027. Approving any expansion of this toxic and under-regulated site, primarily at the expense of Benton County residents, is highly concerning and not consistent with various statutes and initiatives already passed with Benton County. In addition to the health impacts, it poses significant financial risks for Benton County just to benefit Republic Services.

Sincerely,
Stacy Hampton

To: Benton County Planning Commission

Regarding: Coffin Butte Landfill expansion variance: **Application file number: LU-24-027**

From: Mark Henkels, Ph.D. 7540 NE Pettibone Drive, Corvallis, OR 97330
mphcorvallis@gmail.com

Date: March 25, 2025

Please do not approve the Coffin Butte Landfill expansion waiver. Here I present some evidence that the proposed use will seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone.

I hope that the Planning Commission exerts its proper authority to judge the submitted information and chooses, as the law allows, to not grant the conditional use waiver.

The expansion would seriously interfere with uses on adjacent property and the character of the area in at least two ways. First, no matter how Republic Services says things will be different, the expansion will inevitably operate and have a similar appearance as the existing operation. The operation will be seen for many miles, particularly from anywhere to the east, west or north even if Tampico Ridge blocks the visibility from Soap Creek to some extent. Landfills that accept over one million tons of refuse per year are major industrial facility. The Coffin Butte facility stands out as an ugly imposition on an otherwise bucolic rural setting. The expansion will bring many more acres of plastic, heavy truck traffic, dust, and extensive lighting and noise that do not fit well here and will degrade the views, environmental quality, and transportation in the area.

A second consideration regarding the expansion and its impact on the adjacent area is odor. I have reviewed the section on odor in Republic Services application. Although the applicant's information indicates the current odors fit legal guidelines, my personal direct experience and that of others I know is that smells from the existing operation do impact life in the area. I live seven miles aways to the south and I have smelled odor from the dump so bothersome that I reported it to the state. This has happened increasingly in recent years as the amount of garbage going into the dump has doubled to over 1 million tons per year. It is logical to assume that if the 1.1 million ton limit should be lifted, as the expansion agreement allows, incidences of unacceptable stench will get even more frequent and worse.

Republic Services's application does not capture the real experience people have with dump odors. While the reporting system appears to be open and easy, in practice it is not so effective. When I last reported the odor, and I only have done it when it was particularly rank at my home, the Oregon DEQ's response was that Republic's

monitoring at the landfill indicated that there was not excessive odor that date. My experience with the worsening odors from the dump were confirmed when a random conversation with another person, who has no real interest in this issue, told me that they smelled the dump the same day. Another incidental conversation with an Adair Village resident also independently confirmed the increase in odor in recent years, and around that same date. I no longer bother reporting the smells, which I think is very common. Why report things when nothing will happen? The system of monitoring does not work and grossly underrepresents the impact of the landfill's smells. Even if there are promises and agreements regarding improving the odor reporting system, it is a fantasy to think that these would be implemented and effective over the life of the expanded dump.

Further evidence of how the landfill negatively affects our air quality and how there is little hope for better regulation can be found in recent studies of accidental methane releases from the site. An inspection of only a portion of the landfill by the federal EPA on June 23, 2022 found 61 points where methane exceeded the 500 parts per million (ppm) threshold, with at least 21 spots exceeded 10,000 ppm. The 2022 report noted that Republic Service's own reports found no more than six violations of the 500 ppm threshold of concern, and some found no violations. A follow-up inspection on June 21, 2024 found emissions exceeding 500 parts per million (ppm) at approximately 40 holes in the covering materials, that a flange at the flare station (where they purposely burn methane) had methane emissions over 500 ppm, and that one of the wellheads was open to the atmosphere and had emissions over 500 ppm. This information comes from the Region 10 Office of the Environmental Protection Agency, based in Seattle.

Neither the state or federal regulators have done anything yet about this, and the county denies having responsibility for these issues. Most of these releases will not be corrected by improving the "capture technology" since these come from the cover process itself. Beyond the implications to climate change, methane emissions also pose a fire hazard. Fires any larger than the two reported in the Summer of 2024 would certainly affect the surrounding area and in the worst case alter life in the whole region.

To conclude, the Planning Commission must apply its independent judgement of how a major expansion of Coffin Butte facility would harm the adjacent area, and beyond. Benton County made a strong commitment to environmental quality and public health in its *2040 Thriving Communities Initiative*. The information provided here and in other submissions explaining how the expansion would harm the local environment and citizens justifies a rejection of the waiver request.

Subject: Oppose/Deny LU-24-027
Date: Sunday, April 20, 2025 5:02:19 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

My name is Stewart Holmes. I live at 5888 SW Englewood Ave Corvallis.

My wife and I have lived, worked, hiked and ridden my bike in and around Corvallis since 1985. In the 1980s and early 1990s, many of those rides were out near or past the landfill. Not any more and never again. The noise, smells, and extreme amounts of heavy truck traffic make it physically hazardous to go near the area except in an automobile and never to linger. Even going out to the wildlife preserve has become a hazardous activity.

My wife and I used to ride our bikes on Independence Highway north towards Salem. I think it was back in the early 1990s when that became no longer an option given the truck traffic along the road from the landfill hauling gravel from the landfill to I-5. Trash trucks going the other way to the landfill created another huge safety hazard. We stopped riding that road years ago because of that. Too many close calls with trucks. **That seriously interferes with one of the healthy lifestyle choices hundreds or perhaps thousands of residents partake in daily.**

Now the hazard is located primarily at the landfill. The amount of pollution of the air, soil and eventually groundwater that will impact people all the way to the Willamette River and eventually all the way to the Columbia, has reached untenable proportions.

I just read yet one more article (this one in The Economist) about the manner and location in which humans are dealing with their waste. This article talked about how, decades ago, the US would be able to ship mostly its plastic and electronic and similar waste to China, other countries in SE Asia and the poorest African countries where the inhabitants of those countries would have to live with the pollution of their air, soil and drinking water. Nowadays, however, most of those third-world developing countries have developed enough that they are no longer accepting OUR waste. They are telling us in the US to deal with it ourselves. We are struggling to do that. By not allowing others to foist more of their waste on us by allowing an

expansion of the landfill, we can do the same to others elsewhere who are treating us residents of Benton County like a third-world dumping site. We can start to deal with this issue by not allowing an expansion of the landfill at this time, and perhaps ever.

My understanding is that about 93% of the waste going into the landfill – especially the plastics and electronics and other toxic materials being dumped legally or not in the landfill – is from people who don't live here, the image that comes to my mind is of we tax-paying residents of Benton County being in the same situation as the poorest people in the most underdeveloped countries of the world years ago.

The situation in the landfill is already untenable for these reasons and many more that the members of the Planning Commission are well aware.

IF THE PLANNING COMMISSION ALLOWS AN EXPANSION OF THE LANDFILL, you will be allowing a harm to our community that will never be able to be remedied, EVER!

It seems to me that no amount of money would be worth that especially for those of us (you?) who won't have to live with the consequences of YOUR actions. By allowing any, let alone MORE, trash into the landfill, you will be imposing a HUGE UNDUE BURDEN on the community that will last not just for 7 generations, but forever.

PLEASE DON'T!

Thank you for all us residents and for those who will come after us FOREVER!

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear County Commissioners,

I'm writing to you to let you know that I oppose the conditional use permit LU-24-027 for Republic Services to expand their Coffin Butte landfill. Please do not allow this expansion to be permitted.

My home address is 27477 Writsman Creek Drive which is about 2 1/2 miles south of the landfill. On occasions, I can smell the acrid stuff they emit at my house. This is a lot of gas emitted if I can smell it this far away. If the expansion is allowed, I can only assume the smell will get worse. What is in the gas that I smell? I don't really know, but I'll bet it's not good for me and my neighbors as sometimes I'm forced to stay indoors to tolerate the smell. I'm sure you don't want a wide swath of people in your county to be bathed in toxic gases.

I have read that the landfill runoff can seep into the soil even with the preventive measures Republic has taken. Because of all the rain we get in this area, it is almost impossible to prevent 100% of the toxic runoff. This means that this toxicity gets into our soil and from there it must get into our water. This not only ends up in our wells, but in our bodies. Do the people around the landfill get sick more often than in other parts of the county? Before you allow an expansion you must answer this question.

If the landfill is allowed to expand, it will increase truck traffic, which creates its own pollution in the air around the landfill. This landfill is surrounded by homes and farms. All this pollution from the air, water and traffic will get worse with an expansion. I'm sure the expected growth of Adair Village will be affected. The county will lose tax money if this growth is dampened.

I also worry about the long-term impacts from an expansion. Benton County contributes less than 10% of the waste that goes into the landfill, but we feel the effects more than counties that contribute the other 90%. Our county will degrade while theirs will prosper if Coffin Butte continues to expand. That's not good for Benton County. I love living here -- please don't allow it to degrade. It will lower living quality for the county, the people who live here and the tax base if people are forced to move or the land value decreases.

I urge you to deny CUP LU-24-027, the expansion of Coffin Butte.

Lucille L. Honig

I am resubmitting my email with my testimony on Oppose/Deny LU-24-027 because I checked the prior email and could not open the attachment which said it was corrupted. Sorry for the inconvenience. Thank you.

Dear Benton County Planning Commissioners:

Please accept my testimony regarding Coffin Butte Landfill Expansion. Thank you for this opportunity to submit my testimony.

Roxana Kaferly
8811 NE Cori Court
Adair Village, OR. 97330
roxanakaf@gmail.com
Cell: 847-209-8173

Testimony of Roxana Kaferly
Strongly Opposing Coffin Butte Landfill Expansion
File Number LU-24-027

I strongly oppose any expansion of the Coffin Butte Landfill and urge the Planning Commission to reject this application.

I came to Adair Village/Corvallis area 3 years ago from a Chicago suburb to retire in this beautiful area. I was drawn to the bountiful nature, Willamette River, open green fields, the ridges of conifers, the forward-thinking conservation and recreational areas as well as the unique and trendy downtown shops and restaurants.

Last year I bought a home in Adair Village which is my biggest investment for retirement. I worry about plummeting property values due to the negative effects of the Coffin Butte Landfill and if I will be able to sell my home once I need to cover the cost of my long-term care.

The mountain of trash dominates the view north of me rather than the scenic natural areas of Adair Village, Corvallis and surrounding cities and counties. Instead, there is the sound of earth moving equipment, the big trucks grinding up the hill, and the clouds of dust and ash floating through the air carrying pollutants created by the Coffin Butte Landfill.

Frequently rotten odors from Coffin Butte Landfill permeate both cities and the entire surrounding areas. It hangs over the areas like a deep dense fog. There is no way to avoid it on some days which forces me to stay inside in violation of BCC 53.215(1).

In violation of BCC 53.215(1) and (2), 25-30 million gallons of leachate liquid from Coffin Butte Landfill per year is dumped into the Corvallis wastewater treatment plant. This means every day 15-20 large tanker trucks go to and from the landfill to the water treatment plant. This leachate from the landfill contains heavy metals - arsenic, lead, mercury, cadmium, etc., pesticides, personal care products, pharmaceuticals, and high concentrations of PFAS (forever chemicals). The Corvallis wastewater treatment plant is not designed for, nor do they have the technology to remove this complex suite of chemical pollutants in the leachate. These chemicals are dumped in the Willamette River and are in the water we drink. This is also in violation of Benton County Comprehensive Plan policy 6.5.5 (*Benton County shall strive for the safe storage, collection, reduction, reuse, recover and appropriate disposal of hazardous waste materials.)*.

The proposed expansion of Coffin Butte Landfill will place an undue burden on public facilities violating BCC 53.215(2). There will be more truck traffic on local roads hauling garbage and more trucks hauling leachate away to locations unspecified. Already I have several small round dents on the front of my car that have come from having heavy Republic Services trucks on the roads in front of me traveling at high speeds with debris falling from their trucks and shooting up rocks from the road.

I am greatly concerned about the risk of wildfires from the Coffin Butte Landfill from the methane release levels and frequent landfill fires being in these moderate wildfire risk lands adjacent to residential homes. There is no one monitoring the flames from methane after 5:00pm. To introduce

Roxana Kaferly, 8811 Cori Ct., Adair Village, OR 97330
roxanakaf@gmail.com 847-209-8173

the accelerant of high methane levels, flames can easily ignite wildfires in this area. In 2022, the EPA documented a massive number of methane leak violations with some measured methane levels higher than their equipment would register – explosive levels in some cases. See attached EPA Report signed 9/19/2022 p. 8 Daniel Heins, Environmental Scientist Air Toxics Enforcement Section of the EPA expressed his concerns "with the areas of tarp that were inflated with and leaking out landfill gas, as detected during the SEM, noting that in addition to compliance concerns with the surface methane standard that such an accumulation of flammable gas creates a potential safety concern." See also attached EPA Report Appendix B: Field Measurement Data pp 12-14 yellow highlighted readings. "F/O" refers to instrument flame out which is a safety feature of the methane detector which has a tiny flame in it which gets snuffed out when it senses the methane concentration is getting high enough that the flame might ignite it. This concentration is called the "lower explosive limit," indicating readings above 5% that have exceeded the TVA measurement range.

Expanding the Coffin Butte Landfill could only exacerbate these issues and create further detrimental damage and risks to the area and the health of the residents living in the surrounding cities and counties. Expanding the Coffin Butte landfill will be detrimental to the statewide goals promoted in the Benton County Comprehensive Plan such as "maintaining and improving the quality of the air, water and land resources of the state," "[v]ibrant, livable communities," "health considerations in all actions," Expansion will also be detrimental to the County's Core Values adopted in its 2040 Thriving Communities Initiative. Any attempt to increase a current harm is a significant and dismaying departure from the County's core value of protecting all its residents. The applicant has not proved by their current operation that the expansion will be any different.

This expansion would be creating a *de facto* "sacrifice zone" in Benton County: a piece of land and the areas around it that the County is allowing to be ruined for the gain of other areas. This is directly contrary to my values and the character and values of Benton County.

In January, EPA Enforcement initiated an action against Coffin Butte Landfill. This action has significant implications: it indicates the EPA has cause to believe the applicant is misrepresenting their environmental compliance. Given the serious nature of this action, I feel the Planning Commission must reject the applicant's Burden of Proof, which relies on the same representations of the applicant's environmental record that the EPA is investigating.

I thank you for the opportunity to submit my testimony and greatly appreciate your great care in deciding these issues.

SITE OVERVIEW

The following information was obtained verbally from Republic Services representatives, including their consultants, during the virtual conference, unless otherwise stated.

Operations Overview:
The Coffin Butte Landfill (the "Landfill") is owned and operated by Republic Services ("Republic"). Republic acquired the Landfill in 2008. Republic representatives were uncertain of exactly how old the Landfill is, stating that they believed it began as a military dump site in the 1940s. Daniel Heins confirmed this via information online from DEQ, which stated that landfilling began in the 1940s in association with Camp Adair. The areas that predate the Resource Conservation and Recovery Act of 1976 (RCRA) have a clay foundation. Some historic waste that predates the 1970s has been re-located from these unlined sections to the post-RCRA lined areas to facilitate construction of future lined cells in those areas.

The Landfill is permitted for 178 acres and has a permitted capacity of 35,514,471 according to the Landfill's 2020 Part 98 Greenhouse Gas Report. The Facility receives approximately 3,500 to 4,500 tons per day of waste. Wastes received include MSW, petroleum contaminated soils, construction and demolition (C&D) waste, C&D material recovery facility (MRF) residuals, and other industrial wastes. Based on current waste acceptance rate, the Landfill has approximately 20 years left under its current permit. Republic has room to expand the site on its property beyond the current permitted footprint.

Final cover on the Landfill is compacted soils with a synthetic membrane, with penetrations booted and plastic welded. Interim cover is at least 24 inches of soils. Much of the interim cover area is covered in tarps or, in areas without work planned for a few years, a thicker layer of EPDM. In both cases, this is with the primarily goal of reducing water infiltration into the

Landfill. Daily cover is 6 inches of soil or approved alternative daily cover (ADC). Republic uses C&D MRF shaker fines, MSW incinerator ash, and tarps as ADC at the Landfill.

Leachate flows by gravity to sumps and is pumped to covered storage ponds. Leachate collected varies by year based on the weather but typically is around 25 to 30 million gallons. Condensate is routed to the leachate system. Leachate is trucked to local publicly owned treatment works (POTWs). No leachate is recirculated, and no liquid wastes are added to the Landfill.

The gas collection and control system (GCCS) contains over 300 landfill gas (LFG) collection points, including horizontal wells, vertical wells, and parts of the leachate system with gas collection. Collected landfill gas partially routed to a separately owned/operated gas to energy plant run by PNGC Power. The energy plant has five Caterpillar gas engines – three 3516s and two 3520s. Excess gas not routed to the energy plant is controlled via flares at the Landfill. The landfill has two open flares, with capacities of 1000 standard cubic feet per minute (scfm) and 2000 scfm. Recently the Landfill has been collecting 2600 scfm for the full site, with 1600 scfm going to the energy plant and 1000 scfm to the flares.

SITE TOUR — JUNE 23, 2022

Data Collected and Observations:
Daniel Heins arrived on site and met with the site staff for introductions and a brief site orientation/safety briefing at the Landfill's office. During this meeting, Ian MacNab stated that while there was a Method 21 instrument available and that Phil Caruso is their monitoring technician, that he would not take the opportunity to check EPA readings / provide confirmation readings, as a matter of Republic Services corporate policy. Daniel Heins explained that facilities typically prefer to check and confirm EPA readings and he gave advance notice to provide Republic the opportunity to confirm his TVA readings. Ian MacNab re-iterated that as a corporate policy that they would not provide confirmation readings.

After that brief meeting, Daniel Heins began the SEM. Phil Caruso accompanied EPA for the Surface Emission Monitoring (SEM). EPA showed all readings to Phil Caruso for visual confirmation of the readings and instructed him to state if he had any concerns with EPA's monitoring methods at any point. EPA used a ThermoFisher Toxic Vapor Analyzer 2020 (TVA) to perform EPA Reference Method 21 for the SEM.

In the morning (9:50 - 12:45), Daniel Heins conducted the monitoring with the TVA, covering a loop on the western portion of the Landfill. In the afternoon (13:30 - 17:15), he continued monitoring with the TVA, covering a loop on the eastern portion of the Landfill. Over the course of the day, Daniel Heins identified 61 points in exceedance of 500 parts per million (ppm), exhausting his supply of marking flags. Of these, 21 flagged exceedances were above 10,000

ppm. Many flagged exceedances represented clusters of exceedances at multiple points or broad areas of exceedances. Of the flagged exceedances, 26 were at or partially at gas collection wells (including both active and abandoned or decommissioned). Eight exceedances were at leachate cleanouts. Daniel Heins focused monitoring on areas under intermediate cover, though the first six exceedances were in final cover areas. During the afternoon monitoring, Daniel Heins measured multiple exceedances that continued to be above 500 ppm multiple feet in the air, with multiple feet lateral distance from the emission source, indicating substantial landfill gas plumes (flag #26, 46, and 51).

Flag #51 was by a broad area where the tarp was visibly inflated with gas. The tarp was not moving in the wind, it looked to be being pushed out steadily over a wide area towards the top of the south slope on the central area of the landfill, being held down by straps, cover anchors, and sandbags. Neither Daniel Heins nor Phil Caruso could identify any place where the wind could be lifting under the tarps, as the tarp edges were sandbagged and staked down. Daniel Heins measured a concentration of 2% at flag #51 before pulling away to avoid maxing out his instrument. He measured the methane concentration to be 2000 ppm at 3' in the air at this location, indicating a plume of gas coming out from the inflated tarp area. Along the top of this section of tarp, from flag #52 to #54, every post or tarp hole Daniel Heins monitored exceeded the surface methane standard, with readings of up to 7% shown before the instrument maxed out.

Phil Caruso did not dispute any of the readings, though noted that he would not have checked many of the exceedance locations, that he would have spent less time monitoring, or that he would have considered a higher location to be "the ground" when placing his probe 5 to 10 centimeters (cm) above the ground per the SEM regulations.

At an exceedance (flag #1) with a hole in the ground from an animal burrow, Phil Caruso stated that he would have considered the "ground" to be where the ground would have been if an animal didn't dig a hole into it at that location, rather than the ground at the base of the hole, and thus measured from a significantly higher location than Daniel Heins. At an exceedance (flag #2) between overlapped tarp material, with one piece of tarp raised above the other with a gap of air in between, Phil Caruso stated that he would have monitored with his probe above the upper tarp, rather than measuring the 5 to 10 cm from the tarp against the ground.

When Daniel Heins was monitoring a cluster of decommissioned wells with a patch of distressed soil (flag #3), Phil Caruso stated that he would have moved on after not directly getting above 500 ppm within twice his instrument response time even if there was an increase in reading, rather than moving around the penetration points slowly to find maximum reading point and then waiting twice the response time at this maximum reading location.

When Daniel Heins was monitoring at leachate cleanouts, Phil Caruso stated that he does not monitor at these and that they are not fully penetrating the cover. Daniel Heins responded that it was likely that many of these ultimately did penetrate the cover, especially in areas of thinner intermediate cover, and that regardless he recommended checking these as they were proving to be repeated sources of extremely elevated emissions, many over an order of magnitude above the surface methane standard. Phil Caruso stated that he was not required to monitor these. Daniel Heins and Phil Caruso had a similar discussion at the valve box dug into the cover with a reading

of 4% methane (flag #37), with Phil Caruso stating that this was not a penetration and thus he did not have to monitor this.

When Daniel Heins was monitoring at a horizontal penetration of the cover associated with a well (flag #16), Phil Caruso stated that he would not have monitored this as a penetration.

Phil Caruso stated that he would not have monitored the Cell 5 leachate riser that Daniel Heins measured multiple exceedances at, as it was outside of the waste mass.

Photos and/or Videos: were taken during the inspection. See Appendix A.
Field Measurements: were taken during this inspection. See Appendix B.

INSPECTION CONFERENCE — JULY 11, 2022

☒ Provided U.S. EPA point of contact to the facility
☒ Provided CBI warning to facility

Staff Interview:
The Landfill is subject to the Oregon State Plan implementing the Part 60 Subpart Cf Emission Guidelines, having previously been subject to Part 60 Subpart WWW. The Landfill is also subject to Part 63, Subpart AAAA, and has opted-in to demonstrating compliance with the Oregon State Plan through the Subpart AAAA requirements where allowed.

Republic stated that they were unsure if they were excluding non-degradable waste from their maximum gas generation rate calculations in their Design Plan or any other gas modeling runs they have done to size their GCCS. Republic stated that as the operations personnel were not present, they were unable to speak to what types of industrial wastes are received in any further detail. The Landfill does not accept refrigerants. The Landfill receives asbestos. It packages asbestos waste and deposits it in a dedicated asbestos mono-fill that is the only area excluded from the GCCS.

Leachate system components are connected for LFG collection on a case-by-case basis per recommendations of the engineer(s) involved in designing the GCCS.

Republic is aware of a one-off test of the sulfur content of the LFG requested by DEQ and stated that it read at non-detectable levels.

The Landfill has an alternative monitoring plan (AMP) approved by DEQ dating to when the Landfill operated under Subpart WWW. The AMP has allowances for positive pressure, temperatures above 145 degrees Fahrenheit, and elevated oxygen readings. No wells currently are above 145 degrees Fahrenheit. Republic does make use of the positive pressure allowances for wells with high oxygen levels.

Republic stated that they do not consistently check water levels in wells but has done so in the past. All new (at least since 10 years ago) wells are constructed with dewatering pumps, as a best

practice for a landfill in a wet climate. Republic does not typically add pumps to old wells. As wells are typically constructed with steel casings at the Landfill, redrills are rarely needed.

The Landfill has gas migration probes placed outside the area without synthetic liner but has typically seen readings at gas non-detect levels.

For cover integrity monitoring, Republic stated that they look for holes and cracks in the soils and wind damage on the tarps, but that there was no set answer for what degree of tarp damage would necessitate repair.

For surface emissions monitoring, Republic only excludes active filling areas and other areas with active heavy equipment as "dangerous." When Daniel Heins noted that the drawn paths in the submitted SEM reports went straight through the drawn "dangerous areas," Republic stated that the paths on the maps are general and do not reflect the actual walked paths. Republic monitors penetration points during its serpentine path. Phil Caruso stated that in addition to penetrations, he would go off the serpentine path if he saw distressed vegetation or cracks in the cover, and that those were the only examples of places where visual observations indicate elevated concentrations of landfill gas that he considered. Republic was unable to speak to the what the historic SEM exceedance rate had been in past surveys.

Daniel Heins asked if the GCCS was operational on the day of the SEM inspection or if there was anything different from standard operations that could have impacted the results of the monitoring. Republic stated that nothing was operating differently than normal, with all wells in operation and collection running. Republic did note that construction above exceedance flags #48 through 58 would have impacted the cover in the construction area.

Daniel Heins asked if Republic viewed the inflated tarps as a concern or something to acted on. Republic disputed that the tarps were inflated with landfill gas, claiming that the wind has blown them up. Daniel Heins noted the extremely elevated methane concentrations detected by the inflated tarps and that the tarps appeared to be in a static inflated state without any steady wind or apparent way for the wind to lift the tarps.

Republic noted that construction of additional gas collection on the top of the Landfill is in progress and will be completed this summer.

Requested documents:
The following documents were requested and supplied ahead of the inspection:

- Two most recent semi-annual NSPS reports
- Results of any cover integrity reports and quarterly SEM monitoring events that have been occurred since the most recent semi-annual
- GCCS map
- Map of cover by type in place (final vs intermediate vs daily cover)

The following documents were requested during the conference and confirmed via subsequent email:

- Constructed acres and acreages by cover type
- Past 5 years of flare monitoring data
- Flare/blower design specs and any performance tests on file for it
- Past year of migration probe data and a map of the probe locations
- Current GCCS Design Plan, along with any versions that have been active in the past 5 years and them most recent LandGEM run used for GCCS sizing (if not in the Design Plan)
- A map of the GCCS showing extent of any horizontal collectors if these are utilized to demonstrate a sufficient density of gas collection
- Landfill cell map and year of first waste placement for each cell
- 2021 Part 98 Greenhouse Gas Report
- Annual waste deposited tonnages by type from 2016 to present
    - Include a list of the primary sources of industrial wastes and a description for any special wastes listed
    - Outline of what wastes (if any) are classified as non-degradable for LandGEM maximum expected gas generation (Design Plan) along with the basis for this classification
    - Outline of what wastes are classified as "inert" for Part 98 reporting along with the basis for this classification
- Rest of the past 5 years of Annual/Semi-Annual Reports
    - Include all NSPS/NESHAP/EG reports, SSM reports, and air permit reports as applicable
    - If the full SEM reports are not included in the above, please include those for the past 5 years
    - Include the most recent SEM reports, or at least as much of it as has been completed by the end of July, even if they are not a part of any final semi-annual
- Any versions of the SSM plan that have been in place in the past 5 years
- Past 5 years of wellhead parameter monitoring
- Past 5 years of gas flow to the energy plant
- Any H2S or sulfur gas testing results from the past 5 years, or most recent if not within the past 5 years
- Map of wells being added this summer since the inspection
- The Alternative Monitoring Plan and approval letter
- Identification of which wells have dewatering pumps
- General description of final cover construction

Concerns:

Daniel Heins expressed potential concerns with Republic's SEM/Method 21 procedures. Despite Republic having seen no more than 6 exceedances in the recent SEM reports supplied ahead of the inspection that included penetration monitoring, including reports with 0 exceedances, he identified 61 points in exceedance of 500 ppm, including 21 points above 10,000 ppm, with 26 exceedances at gas collection wells that Republic should have specifically been monitoring on a quarterly basis since the Oregon State Plan became effective in November 2020.

Daniel Heins expressed concerns with the areas of tarp that were inflated with and leaking out landfill gas, as detected during the SEM, noting that in additions to compliance concerns with the surface methane standard that such an accumulation of flammable gas creates a potential safety concern.

Dear Benton County Planning Commission,
My name is Janet Lee and I write in opposition to Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

Although there are so many reasons to oppose this application (health and safety violations; long term liability issues; environmental pollution; impacts on wildlife; loss of recreation opportunities, etc. to name just a few), I would like to comment on the issue of community image and liveability and the ways an expansion would seriously interfere with the character of the area I call home. My understanding is that Republic Services have to prove that their proposed expansion does not (again among many other things) interfere with the character of an area (Benton Co. Code 53.215 (1) and that any proposed mitigation measures are effective. Obviously, this is laughable (if it weren't so serious) given the consequences of a potential expansion, and especially because this company has a very poor track record of effective mitigation measures. This expansion will drastically transform this once beautiful area that is home to a thriving Adair and northwest Corvallis community, farming, forest and wildlife into a gigantic dump that accepts trash and toxic waste from far beyond its borders.

In addition, I have recently read about the core values articulated in BC 2040 Thriving Communities Initiative and, again, it is obvious that this expansion is absolutely contrary to this. Please vote against this proposal and help sustain this community. Thank you for your service

on this commission.

Dear Benton County Planning Commission,

I am writing in opposition to Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I strongly urge the Planning Commission to deny this application.

I live in northwest Corvallis within 3 miles of the landfill. We can smell the facility on a regular basis and have concerns about the high levels of methane emitted. Sometimes we have to stay indoors because the smell is so bad. The health, safety, and environmental consequences of the landfill currently places an undue burden on my community and interferes with uses on adjacent properties (Benton Co. code 53.215 -1). If the facility is expanded I cannot imagine what it will be like living here.

Alongside health and environmental concerns for myself, my family, and my neighbours, we are all tired of dealing with the trash that blows off the trucks that are constantly entering and leaving the facility, which combined with the increased traffic, noise, and dust, is changing the character of this area. I know of several neighbours who have had problems selling their property upon hearing about a potential landfill expansion, and we know it is affecting our property values.

I know that landfills are necessary and that no one wants them in their backyard. However, there are two points I want to make about this. One, Coffin Butte is not a landfill that only serves a local community or county, but it is bringing in waste

from all over the region. In this sense it exists completely for corporate profit and not for the uses of this local community. The latter would be reasonable and acceptable. Second, surely there is an uninhabited site where a landfill would make more sense environmentally, geologically (I can't speak to this but have heard that this area is not geologically sound for landfill leachate), as well as a site where it would not place an undue burden on residents.

Thank you for your consideration of my views on this disastrously proposed expansion!

Subject: LU-24-027 Coffin Butte Proposed Expansion Written Feedback
Date: Sunday, April 20, 2025 6:12:13 PM

Subject of Testimony: Coffin Butte Landfill expansion application, LU-24-027

Full Name: Matt Lee

Email: matt.t.lee@comcast.net

Street Address: 670 NW Mirador Pl, Corvallis, 97330

Written Testimony:

I strongly oppose the expansion of the Coffin Butte Landfill (CBL). Air quality: CBL is currently operating under an expired air quality permit, which has not been updated since 2009, and it failed to meet guidelines for methane emissions when monitored by the EPA in 2022 and 2024. These problems will worsen if the landfill is allowed to expand. Water pollution: Arsenic, PFAS, and other toxins in leachate from CBL make their way into nearby wetlands, groundwater, and the Willamette River. Leachate release will increase if the landfill is allowed to expand. Intake cap: If approved, the permit to expand the landfill would eliminate any cap on waste intake, allowing CBL to accept significantly more waste and further exacerbating the problems related to air quality and water pollution.

April 20, 2025
TO: Nick Fowler, Chair of the Benton County Planning Commission
SUBJECT: **Opposition to Benton County Landfill Expansion, LU-24-027**

Dear Mr. Fowler,

My name is Lynne McAllister, and I live at 2590 SE Ryan Street, Corvallis, OR 97333. **I strongly oppose Republic Services' Conditional Use Permit application LU-24-027** which would expand Coffin Butte Landfill. In addition, because the County does not have staff or resources for monitoring or mitigation of impacts or enforcement of conditions and has not effectively done these things in the past, and because there are reasonable and feasible alternatives to the expansion, **I oppose the landfill expansion, even with conditions**.

I am a longtime resident of Corvallis and have watched Coffin Butte grow to an astonishing size, with serious negative impacts on the character of Corvallis and the surrounding area. The following bullets illustrate how the landfill expansion will personally affect me and how it **violates Benton County Code 53.215 (Criterion #1):**

- If approved, the expansion will allow an unchecked volume of trash to enter the landfill, much of which is already coming from areas far beyond Benton County, increasing the unsightliness of the trash mountain, truck traffic, litter along the highway, and stench, while decreasing the appeal and livability in the community. I frequently travel along Highway 99 to points north, which, with the exception of the landfill, is a lovely alternative to I-5. The mountain of garbage affects my experience of traveling this route, as well as my satisfaction of living in an otherwise beautiful part of Oregon. Encroaching closer to Highway 99, while looming taller every year, it presents a terrible image for our town. It has become an absolute eyesore of an operation, positioned directly on the north entrance to our community. Expanding south to the hillside facing north would compound things by creating a direct visual confrontation of trash for motorists traveling south into town (violates BCC 53.215(1)).

- I live in south Corvallis, and I can frequently smell the landfill from my home and from Willamette Park where I walk. I am 100% positive this is odor wafting down from the landfill because I have been on top of the landfill enough times to know exactly what is smells like. The odor is offensive and negatively affects livability at my property and in nearby places where I recreate outside (violates BCC 53.215(1)). Corvallis residents shouldn't have to live with this level of offensiveness, and the odor will certainly get worse with an expansion.
- Along with the odor, I am concerned about chemicals such as PFAS (forever chemicals, which have been documented emitting from the landfill), methane, and carcinogens that also waft through the air and threaten my health. Beyond its toxicity, the climate effects from methane are undisputed, but Benton County does not have control of methane. Most of the recovered methane is burned, which puts greenhouse gasses into the air and creates a fire danger. Numerous methane leaks have been identified, but methane leakage for the facility as a whole has not been adequately measured or addressed and presents additional fire danger. An increase in trash coming to the landfill will worsen the odor and the prevalence of toxic chemicals, which diminishes quality of life and livability in Corvallis (violates BCC 53.215(1)). Simply the knowledge of inadequate monitoring and compliance at such an enormous operation right in my community and the potential effect on my health and on the planet is very distressing for me.
- Increased truck traffic surrounding the intersection of Coffin Butte Road is a hazard to wildlife and poses a safety risk to other motorists, especially when wildlife crosses the road amongst the trucks. When driving through this area, I frequently must slow down for deer crossing the road and am therefore always on the lookout for them, as this is a major travel route that connects to E.E. Wilson. The safety risk of even more truck traffic on humans and wildlife violates BCC 533.215(1).

In addition to these items, the proposed expansion directly contradicts Benton County's 2040 Thriving Communities Initiative by undermining established goals for environmental stewardship, public health, and sustainable waste management.

Benton County and Republic do not have a good track record of addressing the public's concerns about pollution and impacts on the character of the area; therefore, my conclusion is that these matters will only get worse. Approval of an expansion lifts restrictions on volumes and where the trash is coming from, so additions to the landfill will be massive. The burden of garbage from locations throughout the state (and possibly outside the state) cannot be shouldered by only one community.

This is a decision that will impact our region for many years into the future. Compounding current risks and problems stemming from the landfill could negatively impact our community economically. I urge you to carefully use your discretion when making this very consequential decision by considering alternatives, including alternative sites where water pollution is a lower risk (drier climate of eastern Oregon, for example) and investment in more pro-active, sustainable solutions to waste management. The quarry area on the west side of the butte offers an area to expand in without approval of LU-24-027. The time it would take to fill it, per my understanding, is 14-16 years. This period would allow development of sustainable alternatives. There is no good reason to approve the landfill expansion, and I strongly oppose it.

Thank you.
Sincerely,
Lynne McAllister

Subject: LU-24-027, CUP Application for Expansion of Coffin Butte Landfill
Date: Sunday, April 20, 2025 12:31:24 PM
Attachments: Jovan_et_al_2024_incin.pdf

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commission--

I strongly oppose the conditional use permit (CUP) application for expansion of Coffin Butte Landfill (CBL), and urge the Planning Commission to deny Application LU-24-027.

I have lived five miles from the landfill since 1995. For many years, my neighbors have been concerned about environmental and health hazards brought by CBL. Twenty two years ago, in 2003(!), we submitted a letter in reponse to the proposed DEQ Title V permit. We voiced concerns about air quality and the toxic effects of emissions. I could resubmit the exact same letter today -- the exact same concerns apply, i.e., nothing has changed. Expansion of CBL will just make things worse -- enough is enough!

We have a possible cancer cluster in our neighborhood (described in a separate testimony letter). Yes, landfill odors are an ongoing nuisance, but they also are an indicator of much worse toxins in our air that are not being monitored (such as PFAS, or 'forever chemicals'). Some of us have been so dismayed at the total failure of elected county officials and various state and federal regulatory agencies to enforce environmental and monitoring regulations, that we took matters into our own hands.

In 2022, we undertook a research project to demonstrate potential harms of CBL, by collecting and analyzing field data to reinforce our anecdotal and human experience. In collaboration with researchers at Oregon State University and Pacific Northwest Research Station (USDA Forest Service), and others, we utilized a rigorous sampling design to collect samples of native epiphytic moss (Orthotrichum s.l.) around Coffin Butte Landfill and the Covanta (now rebranded Reworld) solid waste incinerator north of Salem, Oregon. Republic Services uses ash from the incinerator as "daily cover" on CBL instead of soil. The data were collected by trained community volunteers (myself and two other neighbors).

Moss (and lichens) can be used as a biomonitors to document the composition and spatial distribution of trace elements and other pollutants that are otherwise expensive to measure, because they bioaccumulate airborne particles over long time periods. There is a large body of scientific literature illustrating the legitimacy of this approach.

Results from the Covanta incinerator are now published in the peer-reviewed scientific literature (Jovan et al. 2024, copy attached). The chemical signatures in moss pointed to the incincerator as a source of several toxic elements, probably from both stack and fugitive dust emissions. These included mercury, cadmium, arsenic, and chromium. Results for three novel elements—cesium and rare earth elements europium and gadolinium—also showed promise as atmospheric tracers for solid waste incineration. Gadolinium, a contrast reagent for MRIs, could reflect medical waste incineration by the facility.

Unfortunately, moss study results from around CBL are still being analyzed, but results will be submitted as testimony when available.

Please note that the primary cost of conducting this kind of research is for lab analysis, and heavy metals are relatively affordable. We had hoped to assess the data for PFAS (forever chemicals) as well, but lab methods remain prohibitively expensive at this time.

The odors from CBL clearly indicate the presence of associated harmful substances in the air we breathe. These chemicals in our air are seriously and SIGNIFICANTLY interfering with use of our adjacent residential properties. Please use your discretion to interpret these air quality issues for what they are, and DENY this request for expansion.

Abstract Solid waste incineration (SWI) can release numerous air pollutants although the geographic reach of emissions is not routinely monitored. While many studies use moss and lichens for biomonitoring trace elements, including around SWIs, few investigate the complex, multi-element footprint expected from SWI emissions. This study develops using native moss as a screening tool for SWI while also informing community concerns about an aging incinerator in rural Oregon, USA. Trained community volunteers helped collect 36 composite samples of epiphytic moss (*Orthotrichum* s.l.) along a 32-km transect from the SWI. We used ICP-MS to measure 40 elements in moss, including 14 rare earth elements (REEs) previously unexplored for SWI. We compared the elemental signatures of samples with an emissions profile for SWI and modeled relationships between element concentrations and distance from the facility using nonparametric regression. The chemical signatures in moss pointed to SWI as a source, potentially through both stack and fugitive dust emissions. The strongest models described farther-dispersing elements, including mercury and cadmium ($xR^2 = 0.65$ and 0.62, respectively), and suggested most deposition occurs within 5 to 10 km of the facility. Elements often associated with soil and dust, like arsenic and chromium, exhibited localized peaks within 0.2 km of the incinerator ($xR^2 = 0.14$–0.3). Three novel elements—cesium and REEs europium and gadolinium—also showed promise as atmospheric tracers for SWI. Gadolinium, a contrast reagent for MRIs, could reflect medical waste incineration by the facility. We include additional analysis and discussion to help stakeholders use results effectively.

Introduction

Biomonitoring is a powerful scientific tool for investigating air quality. Although reference-grade air monitors provide the most accurate depiction of pollution levels, high costs prevent their widespread deployment, making it challenging to capture the spatial extent of air pollutants (WHO, 2023). To address this gap, hundreds of studies since the 1960s have utilized moss and lichens as biomonitors to investigate the composition and spatial distribution of trace elements (Abas, 2021; Chaudhuri & Roy, 2023). These organisms absorb their water and nutrients predominantly from the atmosphere, leading to the bioaccumulation of many air contaminants that are otherwise expensive to measure.

A key goal of biomonitoring is to inform environmental decision-making, though many studies remain within scientific circles (Boquete et al., 2017; Pirintsos & Loppi, 2008). Lack of communication with potential users seems to be a common problem, including explaining how findings fit within a broader inquiry or investigative process. Effort by the scientist to "operationalize" findings may make the difference because biomonitoring data do not directly translate to air quality measurements or the regulatory and health thresholds decision-makers use (Bargagli, 2016; Varela et al., 2023). When applied explicitly as a screening tool, however, data may indirectly influence air quality policy and behavior by optimizing the use of those critical resources (e.g., air monitors, funding, decision-maker time and attention; Chiapella et al., 2019; Donovan et al., 2016; Gatziolis et al., 2016; Jovan et al., 2022; Vuković et al., 2015).

We would expect that biomonitoring would be an insightful screening tool for solid waste incineration (SWI). While SWIs are globally common as an alternative to landfilling, their potential to emit numerous hazardous air pollutants (HAPs), including trace metals (Giusti, 2009; National Research Council, 2000), is controversial. The scientific community remains divided on the risks of living nearby, which are difficult to assess because each incinerator's emissions are unique (Bolan et al., 2023; de Titto & Savino, 2019; Domingo et al., 2020; Tait et al., 2020) yet their dispersal into the surrounding environment is not routinely monitored (National Research Council, 2000).

Mandates typically require monitoring emissions on-site, which is sometimes used in computational models to predict their off-site dispersal. However, this approach relies on many assumptions, leading to inaccuracies compared to empirical methods (Gronwald & Chang, 2018; Holmes & Morawska, 2006), including biomonitoring screening datasets (Donovan et al., 2016; Gatziolis et al., 2016). For example, it is assumed that on-site measurements represent emissions even though measurements are taken periodically, even annually (National Research Council, 2000). Characterizing SWI emissions is challenging because they vary widely depending on the operating conditions and composition of materials being incinerated at the time of measurement (National Research Council, 2000). Transitioning from periodic to continuous monitoring of trace metals is discussed in the current study, although it is not yet the convention.

Several biomonitoring studies address SWI emissions (e.g., Antisari et al., 2011; Contardo et al., 2018; Protano et al., 2015; Tretiach et al., 2011), although to the best of our knowledge, only one captured a multi-element signature clearly indicating SWI (Loppi et al., 2000). Hypothetically, if emissions exceed background levels, we would expect biomonitors to capture a complex elemental signature reflecting the chemical heterogeneity of incinerated materials as well as the contrasting spatial scales of potential emissions pathways—i.e., via tall stacks meant to dilute and spread pollutants across large areas or else concentrated in the residual ash, which must be properly contained to prevent emissions as fugitive dust until disposal in a landfill (Bolan et al., 2023). The low cost of biomonitors allows for measuring numerous contaminants across many samples, as would be needed to describe a complex footprint. Additionally, native (i.e., in-situ) biomonitors reflect pollutant deposition over extended periods, ranging from months to years (Boquete et al., 2013; Kularatne & de Freitas, 2013; Paoli et al., 2018), and may therefore capture the episodic emissions that traditional air monitoring can miss (e.g., Donovan et al., 2016). While relationships are not 1:1, these data may provide information on the long-term exposure of residents in the vicinity of the incinerator.

The main goals of this study were to investigate native moss as a screening tool for SWI while also informing air quality concerns raised by communities near the facility in rural Oregon, USA. In addition

to its older age, the facility is contentious for burning some medical waste, known to release higher HAPs (Bolan et al., 2023), despite being regulated by the weaker emissions standards set for municipal (vs. medical) waste incinerators. With the help of trained community volunteers, we sampled the tufted, epiphytic moss species abundant in our study region (mainly *Orthotrichum* spp.) along a 32-km transect extending from the incinerator. We measured 40 elements in each sample and compared their elemental signatures against an emissions profile for medical waste incinerators (Bolan et al., 2023). Our study is unique among incinerator studies for assessing numerous rare earth elements (REE) along with traditional trace metals. Despite increasing use in the medical and high-tech industries (Sager & Wiche, 2024; Urošević et al., 2020), REE emissions from SWI are unexplored. We expected results would provide an initial, empirical basis for discussing community concerns, and potentially also inform the implementation of new state-level regulations for SWI emissions. To help facilitate the understanding and use of results, we included targeted discussion for stakeholders alongside scientific reporting.

Materials and methods

The study area spanned parts of Marion and Clackamas Counties within the Willamette Valley of Oregon, USA (Fig. 1). The ecoregion is highly agricultural and rural but also contains most of Oregon's population in scattered cities and townships, becoming densest in the Portland metropolitan area 20 km north of the study area. Major habitat types include wetlands, oak woodlands, and savannas. The temperate climate has cool wet winters and warm dry summers. Mean annual temperatures historically ranges from 10 to 13 °C, with precipitation annual

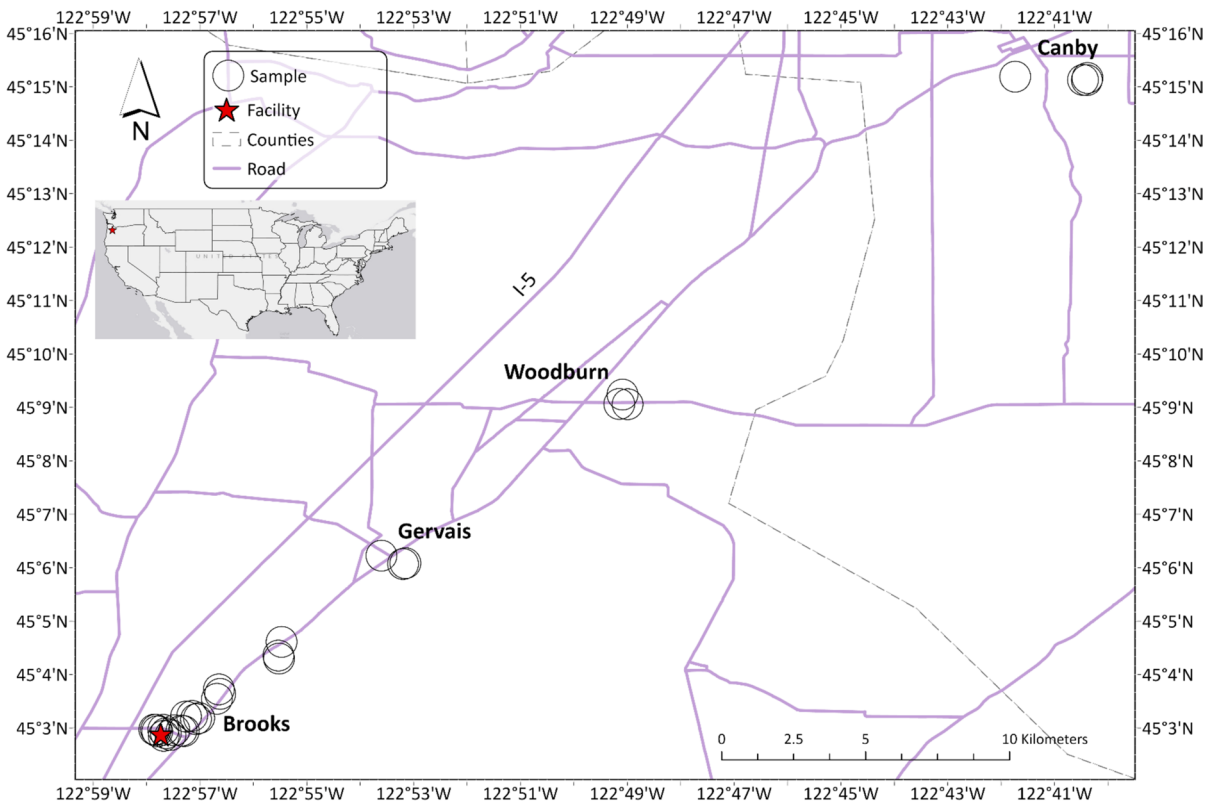

Fig. 1 Map of the study area showing sample sites with major cities and the Interstate (I-5) labeled. Inset map shows location of the study area in the USA

range 89–160 cm, falling mostly in the winter as rain (Wiken et al., 2011).

The facility has been in continuous operation since 1986 in the small unincorporated community of Brooks, Oregon, surrounded mostly by residential and agricultural land as shown in Online Resource 1. The facility is classified as a municipal waste incinerator although some medical waste is incinerated each year. This study may inform three ongoing regulatory matters discussed in stakeholder-focused sections: (1) implementing new requirements for continuous emissions monitoring of certain contaminants under Senate Bill 488 (SB-488; 82nd Oregon Legislative Assembly, 2023), (2) renewal of the facility's Title V permit to emit HAPs, and (3) compilation of an emissions inventory for the facility, a newer requirement under the Cleaner Air Oregon (CAO) Program that was created in response to a prior moss screening study (Chiapella et al., 2019; Donovan et al., 2016).

Moss sampling

In August 2022, we collected moss samples ($n = 36$) along a NE transect at distances of 0.5, 1, 2, 4, 8, 16, and 32 km from the incinerator (Fig. 1). Ten samples were collected within 0.5 km and three per other listed distances at least 50 m apart, with six additional replicates spanning across the transect. The transect was oriented to the NE to align with the dominant W to SW winds (Online Resource 1) and did not intersect any major known sources of metals besides the incinerator.

Four adult community volunteers were trained to assist with moss sampling and processing. We used a protocol similar to a Seattle screening study where trained youth and adult community members led moss sampling and successfully produced a scientifically viable dataset (Derrien et al., 2020; Jovan et al., 2022), although the current study followed more rigorous sample handling and processing guidelines, described in Online Resource 2. Protocols otherwise followed Gatziolis et al. (2016). Briefly, eight or more subsamples of the moss *Orthotrichum* (broad sense, including *Pulvigera pringlei* and *P. papillosa*, formerly considered *O. lyellii,* along with *Lewinskia* spp.) were collected from varied locations on a single tree and analyzed as a composite sample for trace elements. These species have a similar acrocarpous growth form and frequently grow together. We periodically collected replicate samples to evaluate repeat-measurement errors. Samples were transported in a cooler with icepacks and stored at 4 °C until further processing. Moist samples were dried under a HEPA-filtered laminar flow, and any visual debris was removed after discarding the bottom third of the moss tufts.

Trace element analysis

We used a review of medical waste incinerators to define the emissions profile for SWI, noting that municipal waste can release the same metals (Bolan et al., 2023): Silver (Ag), arsenic (As), barium (Ba), cadmium (Cd), cobalt (Co), chromium (Cr), copper (Cu), iron (Fe), mercury (Hg), manganese (Mn), molybdenum (Mo), nickel (Ni), lead (Pb), antimony (Sb), and zinc (Zn). Research suggests mosses are not reliable for biomonitoring Mn (Boquete et al., 2011) and potentially for Ba in *Orthotrichum* spp. (pers. obs) so we retained these as reference elements in the analysis to compare with those exhibiting spatial associations. We also included aluminum (Al), often used as a reference element to differentiate between atmospheric versus edaphic sources (i.e., soil or windblown dust) of trace elements measured in biomonitors (Giráldez et al., 2021).

We measured 23 additional elements that are relatively unexplored with respect to SWI. These include selenium (Se), the only element named in SB-488 that was not in the emissions profile (82nd Oregon Legislative Assembly, 2023). We also measured beryllium (Be), gallium (Ga), rubidium (Rb), strontium (Sr), thallium (Tl), uranium (U), vanadium (V), and 14 REEs: cerium (Ce), dysprosium (Dy), erbium (Er), europium (Eu), gadolinium (Gd), holmium (Ho), lanthanum (La), lutetium (Lu), neodymium (Nd), praseodymium (Pr), samarium (Sm), thallium (Tl), thulium (Tm), and ytterbium (Yb).

Lab analysis and QA/QC

Moss samples were digested according to U.S. Environmental Protection Agency (EPA) method 3052 (EPA, 1996). Briefly, samples were first dried to a constant weight at 60 °C. Samples were then accurately weighed (0.250 g) and digested in 10 mL of trace-metal grade HNO_3 (Aristar Plus, VWR, Radnor, PA, USA) in acid-cleaned, sealed polytetrafluoroethylene (PTFE)

digestion vessels using a MARS 6 microwave digestion system (CEM, Matthews, NC, USA). The temperature was ramped from room temperature to 180 °C over 30 min and held at 180 °C for 15 min. Each set of up to 40 samples included digestion blanks and standard reference materials (SRM 1515- apple Leaves and SRM 1573a—tomato leaves, National Institute of Standards and Technology, Gaithersburg, MD, USA). The resulting digestates were clear and brought to 50 mL with 18 MΩ deionized water (DI water). Samples were then diluted 20× with DI water for analysis of Fe, Mn and Al, and 4× with DI water for all other elements. Samples were then analyzed by inductively coupled plasma mass spectrometry (ICP-MS, 7900, Agilent Technologies, Santa Clara, CA, USA) using U.S. EPA method 6020B (EPA, 2014). Matrix-matched external standards were prepared using certified reference materials (Inorganic Ventures, Blacksburg, VA, USA). An internal standard mix (Ge, Y, In, Tb and Bi) was added at 10 µg/L for all samples and standards. Quality control procedures included initial calibration verification (ICV), continuing calibration verification (CCV), initial blank verification (IBV), continuing blank verification (CBV), analysis of digestion replicates, analysis of dilution replicates, determination of spike recovery, analysis of standard reference materials (SRMs), and analysis of digestion blanks with each analytical batch (Online Resource 3). An octopole reaction system was used to suppress polyatomic interferences in H_2 mode for Fe and Se and in He mode for Cr, Co, Ni, Cu and Zn. All other elements were analyzed in no-gas mode. Analyses of alternate isotopes and SRM recoveries were used to evaluate interferences.

Detection limits

When fewer than 20% of the observations per element were below the detection limit, half the method detection limit was substituted for those values (Online Resource 4). Elements were excluded from further analysis if more than 20% of observations fell below the detection limit. Excluded elements were Lu, Ho, Th, B, and Ag.

Statistical analysis

We used nonparametric regression (NPR) to relate elemental content of the moss to position along the transect from the incinerator. This method assumes no functional form and is thus able to capture complex nonlinear response surfaces (Bowman & Azzalini, 1997; McCune, 2006). The method is based on a kernel smoother, is fully nonparametric, and approximates the maximum likelihood solution, subject to penalization by leave-one-out cross validation in the model selection process. Model selection selects smoothing parameters by iterative trial-and-error to maximize $\times R^2$ (equivalent to a traditional R^2 but penalized by cross validation). After transforming the data as log(elemental content) and log(distance from incinerator), we regressed each element against distance. We used a local linear model, Gaussian kernel, and the "medium" setting for overfitting controls in the software HyperNiche v. 2.30 (McCune & Mefford, 2009). Model fit was expressed with $\times R^2$.

Correction for geogenic sources

We also performed similar regressions after adjusting elemental content relative to Al content, because normalization to Al content is commonly used to correct for soil-based particulates (Giráldez et al., 2021). Due to the modest sample size in this study ($n = 36$), we explored this analysis in several test cases but did not apply corrections across the study dataset. Residuals from the simple NPR of log(element Y) against log(Al) were saved as new Al-adjusted variables, then regressed against log(distance), again maximizing $\times R^2$ (penalizing by leave-one-out cross validation). Correction for Al content for elements with very weak relationships to Al would not have changed the results substantially, so we used residuals from regressions on Al for only those elements meeting two criteria: the cross-validated fit with Al was fairly strong ($R^2 > 0.30$) and the element had some apparent declining relationship to distance from the incinerator. This resulted in a selection of eight elements: As, Ce, Co, Cr, Cs, Cu, Ni, and U.

We also tried adjusting REEs relative to Ce content, as the ratio of REEs to Ce in soils is fairly consistent globally (air) (Von der Kammer et al. 2012). If the relative abundance of a REE is much higher than the natural geogenic ratio, then it might suggest an anthropogenic source. In this case, however, we used residuals from linear fits of log(element Y) to log(Ce), because the relationships were so strongly linear.

Additional analysis for stakeholders

We mapped eight "priority" elements based on their toxicity and use in former screening studies (As, Cd, Cr, Co, Hg, Mo, Ni, and Pb). Several of these had NPR models with inflection points around 1 km on the transect, so we grouped samples into nearer (< 1 km) and farther (≥ 1 km) sites in box plots. As reference points, we included the 95th percentiles from a screening study conducted in the nearby Portland metropolitan area (Gatziolis et al., 2016). That study was a systematic city-wide survey, so we use the 95th percentiles as context for discerning extreme values in datasets collected in a more targeted way (e.g., Jovan et al., 2022), as in the current study. We provide our full dataset to support additional analyses in Online Resource 4.

Results

Elemental gradients with distance

Moss concentrations of most elements in the emissions profile correlated with distance from the facility (Table 1). The profile elements most reported for incinerators, Cd, Hg, and Pb, had the strongest NPR models in this study ($\times R^2 = 0.56$–0.65). The next strongest models were for Cr, Cu, Mo, Ni, Sb, and Zn ($\times R^2 = 0.29$–0.53), followed by As and Co ($\times R^2 = 0.15$ for both). Model fits fell along a continuum, and we considered elements with any poorer fits too weak to discuss further. This included Se, an element listed in SB-488 ($\times R^2 = 0.09$), and the two profile elements we included for reference, Mn and Ba ($\times R^2 = -0.11$ and -0.07, respectively; Table 1).

The spatial scale and shape of NPR models varied by element. The response curves of stronger models ($\times R^2 > 0.30$) tended to have an inflection point near 1 km and an asymptote within 5–10 km (Fig. 2). In contrast, profile elements with weaker models, like As, Co, and Cr, tended to be edaphic elements varying at smaller spatial scales along the transect, with localized peaks within 0.2 km (Online Resource 5). Distributions of the major crustal elements Al and Fe also varied at smaller spatial scales (Fig. 2), although Fe, also a profile element, peaked adjacent to the facility like the edaphic elements.

Accordingly, Al had little spatial correlation to the facility ($\times R^2 = 0.07$) while the model for Fe just made our cut-off for further consideration ($\times R^2 = 0.15$; Table 1). Only two REEs, Eu ($\times R^2 = 0.34$) and Gd ($\times R^2 = 0.15$), had models with equal or stronger fits. Elements that were tightly correlated with Al, like most REEs, also had relatively weak relationships with distance from the incinerator (Fig. 3).

Correction for geogenic sources

Correcting elemental content for Al before relating to distance from the incinerator had mixed results. Of the eight tested elements, three showed a substantial increase in fit with distance to the incinerator (Cr, Cs, Ni), four showed a small increase in fit with distance (As, Cu, Ce, U), and one showed a decline in fit (Co). Response curves showed individualistic and enigmatic patterns for some elements (Online Resource 6). Only Cr and Cu showed nearly monotonic declines in concentration with distance, the pattern expected if the incinerator was a major large-scale source of the elements. For the two REEs with the strongest correlations (Eu and Gd), correcting for Ce concentration did not increase the strength of those relationships.

Additional analysis for stakeholders

The boxplots showed that all priority elements tended to be higher at sites within 1 km of the facility (Fig. 4). Accordingly, all exceedances of the Portland 95th percentiles occurred within 1 km, except for Co and As. These two elements exceeded their percentiles at most sample sites.

Discussion

The screening dataset resolved a chemically and spatially complex footprint consistent with expectations for SWI emissions, seeming to confirm the community's inquiry about air quality effects. Results also supported using *Orthotrichum* spp. as a screening tool for SWI with some caveats, discussed further in the "Study limitations" section. The elemental signatures in moss strongly resembled the emissions profile except for the reference elements Mn and Ba as expected. Otherwise, the strengths and spatial scales of associations between profile elements and the

Table 1 Incinerator element-distance models and ranges. Models are nonparametric regression (local linear) of log(element) content of mosses against log(distance) from the incinerator; $\times R^2$ = leave-one-out cross-validated R^2; ave N* = average neighborhood size for estimate; tolerance = smoothing parameter (s.d. of Gaussian weighting function for kernel smoother) in distance units (log(km)). Ranges in ppm (untransformed) are listed separately for samples taken near the incinerator (< 1 km) and those taken farther away. Elements to be considered for continuous emissions monitoring under SB-488 are bolded. Profile elements included for reference purposes are indicated by †

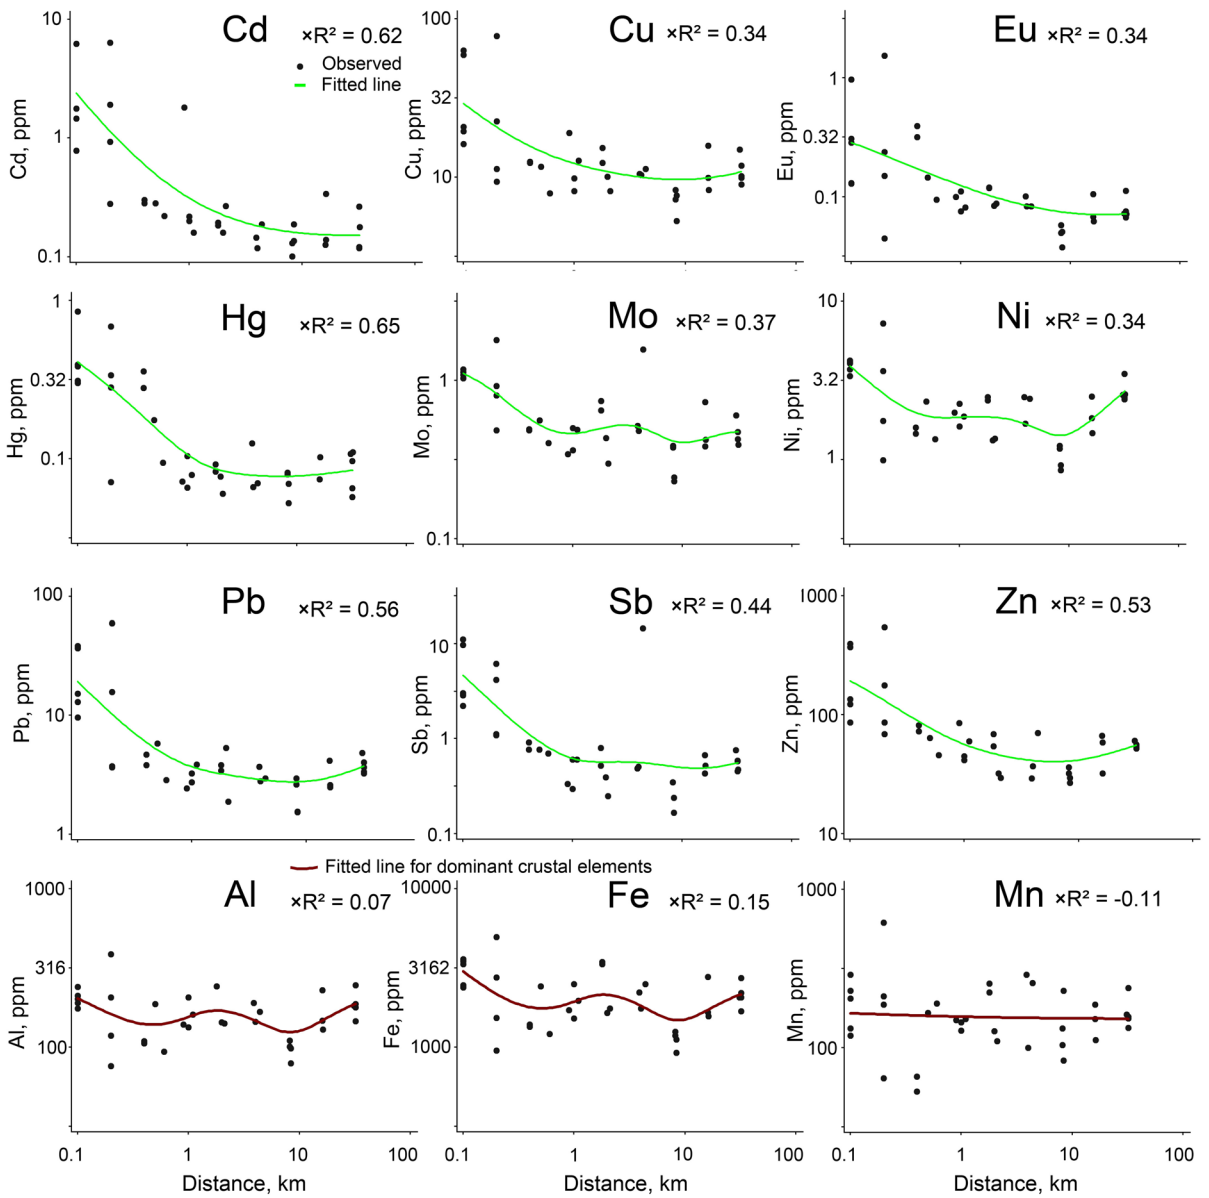

Fig. 2 Elemental content (ppm) of the moss *Orthotrichum* in relation to distance (km) from the incinerator. Both elemental concentrations and distances are on log scales. All elements with cross-validated R^2 ($\times R^2$) > 0.30 are included in the top three rows. The bottom row includes dominant crustal elements (Al, Fe) and Mn for comparison; these were not patterned relative to the incinerator and presumably driven by local patterns of airborne soil or other factors for Mn. The fitted line is based on nonparametric regression with a kernel smoother, the smoothing parameter optimized to maximize $\times R^2$. Further model statistics and data spreads are in Table 1

facility varied, with the highest concentrations consistently measured in moss near the facility. A similar pattern was also seen for Ag (Online Resource 5), the one profile element we excluded from statistical analysis because concentrations were below the detection limit at many sites (Online Resource 4). In addition to extensive use in electronics, silver nanoparticles are used in textiles and some medical devices as an antimicrobial (Padhye et al., 2023). To the best of our knowledge, these results provide the first evidence of

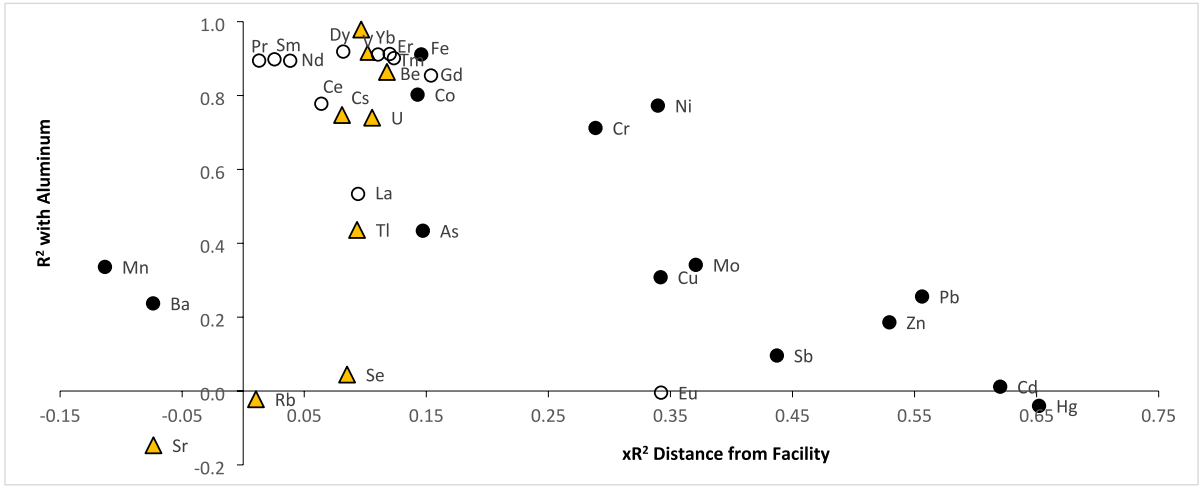

Fig. 3 Scatterplot of the strengths of each element's relationship to aluminum (R^2 from linear regression) versus distance from the incinerator ($\times R^2$ from nonparametric regression). Elements in the emissions profile are indicated by black circles, rare earth elements by open circles, and other trace elements by orange triangles

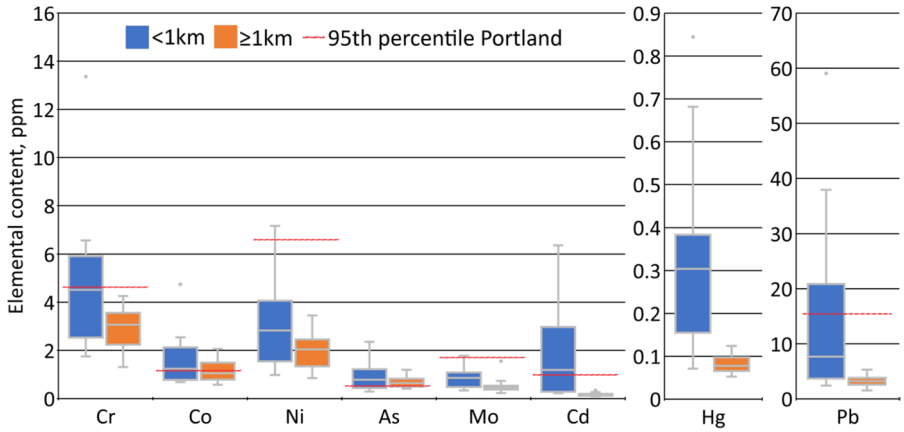

Fig. 4 Boxplots for priority elements in *Orthotrichum* spp. for nearer (< 1 km) and farther (≥ 1 km) sites on the transect. Maps of concentrations are provided in Online Resource 5. 95th percentiles from the city-wide Portland survey are provided as reference points for all elements except Hg, which was first measured in the current study

trace element contamination in the area, serving as an empirical starting point for stakeholders to discuss regulatory and community concerns.

Spatial scales and emissions pathways

The strong spatial relationships for Cd, Hg, and Pb are consistent with their prevalence in SWI emissions (Linak & Wendt, 1993; National Research Council, 2000). Additionally, the most highly correlated element, Hg, is often used in lichen biomonitoring studies as an atmospheric tracer of SWI emissions (e.g., Contardo et al., 2018; Tretiach et al., 2011). Concentrations of all three elements in *Orthotrichum* spp. declined rapidly with distance from the facility (Fig. 2), as commonly seen in biomonitoring studies around point sources (Fernández et al., 2007; Varela et al., 2014). Similar patterns were also observed in incinerator studies using epiphytic lichens for Hg (Fortuna et al., 2019) and for Cd and Pb in the multi-element study by Loppi et al. (2000). While trace metals may be emitted through either or both pathways (stack or fugitive dust from ash), Hg and Cd are primarily stack-emitted while Fe is mainly from ash (Bolan et al., 2023; Chang et al., 2000). Thus, the similar multi-kilometer distributions we observed for several other elements in the emissions profile, such

as Pb, Cu, Sb, and Zn, are suggestive of stack emissions (Fig. 2).

A similar distribution was observed for Eu, an REE widely used for its phosphorescent properties in television and computer screens and low-energy lamps. Europium is also used in plastics as a laser material and in making thin super-conducting alloys (Royal Society of Chemistry, 2024). We found no prior research, biomonitoring or otherwise, associating Eu with incinerator emissions. The closest related studies were prospecting efforts suggesting Eu and other REEs can be economically upcycled from incinerator fly ash (Morf et al., 2013; Wen et al., 2024), although our results indicate that not all REE material ends up trapped in the ash. Potential stack emissions of Eu merit further study and may establish Eu as a useful tracer of SWI emissions. As the economic importance of REEs grows, their prevalence in the waste stream of incinerators will presumably also increase.

Edaphic elements

The reference element Al was largely unrelated to distance from the incinerator, as expected for crustal elements of geogenic origin (e.g., Loppi et al., 2001). Unsurprisingly, edaphic elements closely tracked Al, including most REEs, indicating the incinerator was not a substantial source compared to soil-based sources (Fig. 3; Urošević et al., 2020). It is possible, however, that the localized associations observed for edaphic elements in the emissions profile (i.e., As, Co, Fe, and Cr) indicate fugitive dust emissions. Those elements are highly abundant in the ash (Bolan et al., 2023) and comparable results were found for Fe and Cr in the similar study by Loppi et al. (2000).

Interestingly, the REE Gd had a similar localized association with the facility. This element is used as a contrast reagent for magnetic resonance imaging (MRI) and thus may reflect medical waste incineration by the facility more specifically than the other elements we tested. Information about Gd as an environmental pollutant focuses on the contamination of aquatic systems by hospital effluents (Ognard et al., 2021), so its potential as an atmospheric tracer has not been explored.

Correction for geogenic sources

There are several methods for correcting element concentrations for geogenic inputs although none are widely accepted as best (Giráldez et al., 2021). If anything, our exploratory analysis using Al mostly strengthened spatial associations consistent with the incinerator as a source. This included three of the four edaphic elements we tested from the emissions profile (As, Cr, Ni). The exception was Co, where correcting halved the spatial association, suggesting inputs were mainly from natural, soil-based sources. This outcome was not surprising given the strong relationship to Al (Fig. 3). The most striking change was for Cr, where model strength doubled ($xR^2 = 0.29$ to 0.59) and described a larger-scale association with the facility than the localized peak observed using raw data (Online Resource 6).

Correcting also improved spatial associations for Cs and marginally for U, the latter model remaining weak ($xR^2 = 0.13$). Previous studies have used these elements for biomonitoring nuclear fallout (Anderson et al., 2022; Vosel et al., 2021), although it should be noted that we did not differentiate between the isotopes of Cs, one of which is not radioactive. While these results were not statistically strong, they recommend further study of U and especially Cs as SWI tracers.

Tool utility and generalizability

The screening dataset collected with the help of community volunteers provided complex, spatially detailed information with clear relevance to community concerns and regulatory matters discussed further in "Stakeholder implications" section. The generic emissions profile we used was sufficient to connect element signatures in moss to SWI, although in more routine applications, any on-site emissions monitoring data, as well as emissions inventories (now required by CAO) would ideally inform the selection of elements to measure. Regardless, measuring a wide array of elements is beneficial for cross-referencing emissions datasets since the exact chemical composition of all materials in an incinerator's waste stream is difficult to know. Likewise, chemically diverse datasets may help identify novel elements to consider in future biomonitoring studies of SWI, like Eu, Gd, and Cs in this study. Screening

data can also cross-check pollution prediction maps produced by computational modeling of on-site emissions data (e.g., Donovan et al., 2016; Gatziolis et al., 2016), although we were unaware of any such maps relevant to the current study.

Given our success with *Orthotrichum* spp., it seems surprising that only one other biomonitoring study captured a multi-element signature clearly associated with an SWI. The varied methods and environmental circumstances of previous work make direct comparisons difficult, and relatively few examined signatures rather than single element tracers, like Hg. Regardless, one notable similarity with Loppi et al. (2000) is that both studies took place in rural settings with apparently few other point sources around to confound results. A challenge in urban and industrial studies is clearly differentiating an SWI-specific signature among a variety of possible trace element sources (e.g., Antisari et al., 2011; Paoli et al., 2015). Continued work with tracer elements and developing source apportionment methods could help in these complicated scenarios. Otherwise, failure to resolve an SWI signature could simply mean emissions were not elevated above ambient conditions, as is the goal (e.g., Protano et al., 2015; Wilcke et al., 1997). According to experts, technological advances made over the last decade have greatly reduced SWI emissions (de Titto & Savino, 2019). As the current study demonstrates, biomonitoring can be a valuable cross-check of these assumptions.

Stakeholder implications

This section is a starting point for communicating how results may inform policy and community concerns around the SWI in this study. In summary, elemental signatures and spatial associations determined using moss indicated SWI as a contributing source of several trace metals at multiple spatial scales. Highly localized associations could be due to fugitive dust while farther dispersing elements would more likely signify stack emission. However, we cannot rule out contributions from other sources in this observational study. That said, we are not aware of other major point sources for trace elements near the incinerator, including any additional facilities holding Title V permits. The surrounding area is mainly comprised of agricultural and residential land (Online Resource 1).

Determining the origin of trace elements farther away on the transect (> 1 km) is more uncertain but less consequential since moss concentrations were lower for most elements (Fig. 4). Many elements gradually increase at the farthest sites, possibly from closer proximity to the Portland metropolitan area or other source(s) not considered in this study. It is important to note that the axes of all graphs in Fig. 2 were log-transformed, which visually emphasizes nearer sites on the transect. Curves for many of the farther dispersing elements suggested most deposition occurs within 5 to 10 km of the incinerator. In several cases, the steepest part of the curves, and thus the most acute deposition levels, occurred within 1 km of the facility.

As a screening tool, we interpret the elemental content of moss mainly in relative, spatial terms (i.e., comparing where concentrations are relatively high vs. low) to help guide the need for further investigation. As initial context, however, we included the 95th percentiles from the Portland moss study for comparison (Fig. 4; Gatziolis et al., 2016). In some cases, hotspots with element concentrations in moss at or above these percentiles were found to have air concentrations exceeding state health benchmarks when air monitors were moved to those locations (Donovan et al., 2016; Jovan et al., 2022). Among the elements with values exceeding these thresholds in the current study, Cd, Pb, and Cr exceedances were limited to a subset of the nearer sites. Results for the strongly edaphic (i.e., soil-influenced) elements As and Co appear more severe but should be interpreted conservatively because soil and wind-blown particles naturally accumulate more during hot and dry conditions. Moss sampling for the current study occurred during a major summer heat wave whereas the Portland dataset was collected during the extended wet winter season. Additionally, geogenic As is naturally high in the study region due to volcanic soils (Hinkle & Polette, 1999) and while less is known about Co in soils, its close relationship to Al in this study suggests much of it is geogenic, at least in the dry season (Fig. 3). In contrast, these seasonal differences are relatively unimportant for non-edaphic elements that mosses retain over long time periods, like Cd and Pb (Boquete et al., 2015; Jovan et al., unpublished data for *Orthotrichum* spp.).

Results may inform three regulatory matters, including how the new continuous emissions

monitoring requirements set by SB-488 are implemented. All metals listed in SB-488 were moderately to strongly spatially correlated with the facility (As, Cd, Cr, Hg, Ni, Pb, Zn) besides Mn (not reliable in moss) and Se, which was low compared to previous moss screening studies. Several metals not listed in SB-488 were also spatially correlated, including potential stack emissions of the REE Eu and localized fugitive dust emissions of Gd, the latter possibly specific to medical waste incineration by the facility. We also had weak results suggesting the incinerator as a possible source of U and Cs. Additional uses for these results include helping cross-reference the facility's emissions inventory required by CAO program and informing the facility's Title V permit for emitting HAPs, which is up for renewal.

Study limitations

This study has several limitations. As mentioned previously, concentrations of air contaminants in moss or lichens do not reliably predict measurements of air quality, and therefore do not track the human health and regulatory thresholds decision-makers use to evaluate whether pollution levels are problematic. Screening results are intended to guide the next phase of investigation. However, potential stress from seeing contaminant levels in biomonitors without immediately understanding their personal or regulatory importance, if any, is a major disadvantage for applying this tool in "real world" situations. To help moderate concerns in the current study, we included a provisional analysis for stakeholders showing that only a minority of moss samples had relatively high contaminant levels compared with prior screening data, and these mainly came from sites close to the incinerator.

A second limitation concerns the long, uncertain retention times of contaminants in native biomonitors. Long retention times can be beneficial, as in the current study, since SWI emissions vary widely over time (National Research Council, 2000). On the other hand, the utility of native material for monitoring temporal changes in contaminant levels is limited unless broadly defined, long-term differences are of interest or potentially in special cases where it is possible to identify and harvest only newer growth on the biomonitors (e.g., Loppi et al., 2000 or studies using *Hylocomium splendens*). Studies evaluating temporal change often use transplanted material instead because the timeframe represented can be precisely controlled. One option for transplants is using the European cloned *Sphagnum* "Mosspheres," which standardize some of the physical characteristics known to affect trace metal bioaccumulation (Vázquez-Arias et al., 2024).

Finally, our target species group, *Orthotrichum* s.l., does not grow everywhere, although it is broadly distributed in the Northern Hemisphere in temperate climates. If *Orthotrichum* is not an abundant epiphytic moss available for a screening study, substitution of another species that is well distributed and regionally abundant would be required. A variety of lichen and moss species perform well for trace metals biomonitoring (Abas 2021; Chaudhuri & Roy, 2023), and depending on study goals, transplants are always an option.

Conclusions

This study provides new evidence supporting the use of native epiphytic moss, specifically *Orthotrichum* spp., as a biomonitoring tool for assessing trace elements around SWIs. By analyzing a comprehensive suite of elements, including REEs, we demonstrated that moss can capture the complex, spatially resolved pollution footprint expected from incinerator emissions. Common stack-associated elements, like Cd, Hg, and Pb, had the strongest geographic associations in this study while localized peaks of edaphic elements, like As and Cr, emphasizes the need for further research into biomonitoring fugitive dust emissions from SWI. The study also highlights novel atmospheric tracers for SWI, including Cs, Eu, and Gd, with the latter potentially specific to the facility's incineration of some medical waste. Additional investigation of SWI emissions of these elements, and REEs more generally, is recommended.

Overall, results underscore the utility of native moss as a cost-effective screening tool, capable of identifying spatial pollution patterns that can guide regulatory and community actions. Arguably, lack of communication with potential users is a critical roadblock to applying results to real world issues, and including such guidance in journal publications is one strategy to help overcome this. In this case, we linked

findings to specific issues concerning the studied facility in subsections aimed at stakeholders.

Acknowledgements We would like to thank Janet Ohman, Zane Walker, and Faye Yoshihara for their invaluable assistance in sample collection. We would also like to thank Zane Walker, Claire Whittaker, and Faye Yoshihara for their help processing moss samples, and Lisa Arkin and Carrol Johnston for discussion relevant to the study. We also appreciate comments from 2 anonymous reviewers that improved the clarity of the manuscript.

Author contributions The study idea was conceived by S.J., B.M., and J.U. Study design was led by B.M. and E.J. Fieldwork was led by E.J. Statistical analysis was led by B.M. Elemental analysis of moss samples was led by J. U. with N. J. The manuscript was written by S.J. with substantive contributions from E.J. and B.M. All authors reviewed the manuscript.

Funding Funding was provided by the U.S. Department of Agriculture (USDA) Forest Service through 22-JV-11261979–053 and 23-JV-11261978–035. This project was partly supported by the USDA National Institute of Food and Agriculture through Hatch Project KY006133 and by the National Institute of Environmental Health Sciences (NIEHS) grant P30ES026529. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of the NIEHS.

Data availability Study data are provided in the supplementary information file Supplementary file 1.

Testimony in Opposition to LU-24-027

Matthew S. Philpott, Ph.D.
1110 SW West Hills Pl
Corvallis, OR 97333

I am strongly opposed to LU-24-027 proposing the expansion of the Coffin Butte Landfill for the following reasons:

<!--[if !supportLists]-->1. <!--[endif]-->The character of the area. The Coffin Butte Landfill is surrounded by farms and a wildlife area. Farms in the area raise beef cattle, blueberries and many other agricultural products. The landfill is completely out of character with the surrounding area.

<!--[if !supportLists]-->2. <!--[endif]-->The landfill is an outsize contributor to greenhouse gas. Coffin Butte Landfill leaks massive amounts of methane gas from multiple areas of the landfill. Methane is a very potent greenhouse gas, about 80 times more potent than carbon dioxide over the first 20 years after its release. Records from Republic Services measurements of methane release are at odds with independent measurements, and would suggest little to no leakage, while independent measurements indicate very high levels of methane leakage.

<!--[if !supportLists]-->3. <!--[endif]-->The Coffin Butte Landfill is leaking toxin-laden water containing heavy metals and other toxins into the local water table. The aquifer is critical for homes and farms in the surrounding area, which rely on clean water for drinking and agricultural activities. The landfill lining is leaking in multiple locations in the landfill, and the oldest part of the landfill has no lining at all.

<!--[if !supportLists]-->4. <!--[endif]-->In spite of the leaks, more than 30-35 million gallons of toxic leachate is collected each year and transported to the Corvallis and Salem water treatment plants. These plants were never designed to treat heavy metal wastewater, but rather sewage; therefore, effluent water is likely contaminated with toxins and is being discharged into the Willamette River. This leachate should be detoxified on site by Republic Services in a process specifically designed to detoxify the known heavy metals and other toxins in this liquid material.

<!--[if !supportLists]-->5. <!--[endif]-->Republic Services transports waste from many surrounding counties and municipalities to the Coffin Butte Landfill. Therefore, Benton County is paying a steep environmental price and will ultimately have to clean up the damage at some future time when the landfill is abandoned by Republic Services (a violation of BCC 215(2)). It is estimated that Coffin Butte Landfill is taking in around 40% of the trash from the entire State of Oregon, as well as trash from parts of southern Washington state. Currently Republic Services is limited to 1.1 million tons of waste per year, but if LU-24-027 is approved, Republic Services plans to exploit a loophole in the 2020 Franchise Agreement to lift this cap, which would

allow for importing unlimited amounts of trash. If allowed to happen, this would increase profits for Republic Services at the expense of our community and environment, and ultimately the taxpayers of Benton County will have to pay a lot of money to clean up the mess after Republic Services abandons the landfill.

<!--[if !supportLists]-->6. <!--[endif]-->I often drive near the landfill and have recreated on the public lands in the near vicinity. On several occasions when I have been on the E.E. Wilson game management area, the stench from the landfill was so bad that it caused me to curtail my recreation activities. The amount of escaped trash along Highway 99W near the landfill entrance is appalling, and the smell coming from the landfill is nauseating. I can only imagine how unpleasant the smell and escaped trash must be for the people who live nearby in and around the Soap Creek area, and anywhere downwind of the landfill. Clearly the current mitigation measures being undertaken by Republic Services and the absence of meaningful oversight of the landfill operations by officials of Benton County are woefully inadequate. This, like the ongoing environmental damage, will become much worse if LU-24-027 is approved.

<!--[if !supportLists]-->7. <!--[endif]-->The proposed expansion of the Coffin Butte Landfill will increase the volume of very heavy truck traffic on the public roads, greatly accelerating the damage to the roads and necessitating untimely road repairs, a clear violation of BCC 53.215(2).

Subject: Please Oppose/Deny LU-24-027 - Coffin Butte Landfill Expansion
Date: Sunday, April 20, 2025 11:13:45 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Helen Redfield and I live at 2038 NW Lance Way in Corvallis, OR.

I am writing because I vigorously OPPOSE the approval of LU-24-027 that would expand the Coffin Butte Landfill for a number of reasons. I've lived in Benton county for the past 27 years and like you, I am strongly aligned with the county's "Thriving Communities" values which include responsible environmental stewardship, prioritizing public health, and sustainable waste management. Expanding the dump would be contrary to these values. In addition I feel that approving the conditional use permit for the landfill expansion would violate BCC criteria 53.215(1) and 53.215(2).

Specifically, BCC 53.215(1) requires that the proposed use does not seriously interfere with uses on adjacent property or with the character of the area. Already the increase in odors and trash over the years has negatively impacted my use and enjoyment of the EE Wilson game management area for hiking, biking and bird-watching. The expansion will only exacerbate these problems.

I also frequently swim in and canoe on the Willamette River. The expansion of the landfill will increase the amount of leachate that will be dumped into the river which will impact not just me, but everyone who uses the river. I'll be hesitant to spend time on the river due to the increased exposure to toxins in the leachate, e.g. PFAS and heavy metals.

Furthermore, BCC 53.215(2) requires that the proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area. The expansion of the landfill will certainly increase the amount of truck traffic accessing the dump, which will require increased road maintenance as well as

pose safety risks. There will undoubtedly be much more trash strewn along the roads which will need to be collected and will itself be a safety risk.

Finally, I want to address the fact that Republic has not met their burden of proof that there will be no actual impacts on the issues I have raised in this testimony. Republic's assertion that they are currently or will be complying with environmental law is not sufficient. The BCC land use criteria are concerned with actual impacts rather than compliance with environmental law.

I believe Benton County should invest in waste reduction and recycling, as well as circular economy solutions, rather than expanding landfills that perpetuate pollution and place a long-term burden on our local community.

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Helen Redfield

Greetings!

My name is Mark Taratoot, and I live in a house I own in Benton County at 570 SE Chester Avenue. I urge you to deny the request for expansion of the Coffin Butte Landfill. Again!

The owners of this landfill are not concerned about the welfare of the people who live in Benton County or any of the flora and fauna we share existence with. Their goal is to maximize their own wealth at our expense.

This landfill would not need an expansion if it were used only for the local region. Many people in Benton County work hard to minimize the waste we send to the landfill because there is no "away." We recognize we each have responsibility to provide a healthy environment for our neighbors. The landfill accepts waste from far away - even from other states. We have no way to know if other communities care about waste reduction or merely paying less to dispose of their cast-offs. When a truck dumps at the landfill, the owners of the landfill are enriched. When a truck dumps at the landfill, the residents of Benton County are impoverished. When a truck from hundreds of miles away dumps at the landfill, the residents of Benton County are impoverished even more.

Please deny this application. Again. If this application comes back yet another time, deny it over and over and over.

Dear Benton County Planning Commissioners,

My name is Priya Thakkar and I live at 38987 Arena Rd.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would **seriously interfere with the character of the surrounding area** and impose **an undue burden on public resources**, in violation of Benton County Code 53.215 (1) and (2). Specifically, this expansion raises major concerns about:

- **Air and water pollution** threaten our local ecosystems and community health. My family has a well that can be disrupted by the proposed expansion that would disrupt the function of the area's water. Mining a huge hole around the new proposed site can affect water levels in the area, potentially reducing the water levels and causing our well to run dry, or causing our well water to be contaminated, affecting our ability to provide water for our garden, water for our animals, and water for our family. We rely on water for just about every facet of our life in this area, so this would seriously interfere with the character of the area and cause an undue burden on the local residents. **This clearly interferes with uses of nearby property and character of the area BCC 53.215 (1)**
- **Traffic increases** that pose safety risks on nearby roads and pathways. I regularly drive on Coffin Butte Road for my morning and evening commute and in the short time that I am on the road, there is an immense amount of traffic, making it unsafe for passenger vehicles. Garbage trucks frequently pull out in front of my vehicle, without regard for the public driving on the road. In addition, the amount of garbage being hauled up and down 99W has created a massive amount of trash and garbage along the highway that flies out of the garbage trucks, often all the way to Monmouth. Not only is it pollution and an eyesore, but Republic does not appear to ever clean up the road garbage. **The proposed expansion of Coffin Butte Landfill will place an undue burden on public facilities violating BCC 53.215 (2).**
- **Odor and noise issues** that degrade quality of life for residents and visitors. I live approximately 2 miles from the landfill and there are days when I am unable to spend time outside because the stench of the dump is so severe that it makes me nauseous. I have filed DEQ complaints and the response has been a message relayed from Republic to DEQ saying that there were no odors and their systems are working as they should. If I can smell it at my home, things are not working as they should. We know through past DEQ investigations that their methane emissions have been observed to be massively above the allowable amount, leaving me with little faith that they are monitoring emissions or controlling odors as they should. In addition, I am able to hear trucks and their accompanying beeping (brakes) at all times of day from my backyard (again, 2

miles away!), as well as see the light from the landfill. **This clearly interferes with uses of nearby property and character of the area BCC 53.215 (1)**

- **Negative impacts on wildlife, recreation, and property values**. There is a herd of elk and a large population of Great Blue Herons in the area. The Great Blue Herons used to nest in the stand of trees next to the proposed new dump site ("expansion" according to Republic, but it is actually an entirely new site, separated by a road). Due to the work that Republic has put into their new dump site, and the noise, traffic, and increased pollution, the Great Blue Herons have abandoned their rookeries in that stand of trees and have moved across 99W. I fear that the expansion will further drive out the Great Blue Herons, who are beloved in this area. **BCC 53.215 (1): The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the FC zone, as well as the Benton County Comprehensive Plan policy 5.9.4: In making land use decisions, Benton County shall protect identified sensitive wildlife habitat types and wildlife corridors from adverse impacts.**
- **Long-term climate and environmental consequences** for future generations. Benton County has said numerous times since the landfill's creation that a landfill in the Willamette Valley is not environmentally sound and that it should be phased out and shut down. Rather than expanding the dump and allowing Republic's tonnage cap to be lifted, increasing the amount of garbage (and pollution and smell and noise and traffic) into our beautiful community, we should be looking for alternatives to this landfill and reducing our reliance on Republic. **Deny the expansion application using BCC 55.215 (1) or BCC 60.220 (1).**

The proposed expansion does nothing to align with *Benton County's 2040 Thriving Communities Initiative*. This expansion undermines our shared goals for responsible environmental stewardship, prioritizing public health, and sustainable waste management.

I believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities! Please prioritize the well-being of our community and not Republic's profits.

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,
Priya Thakkar

Attention Benton County Planning Commission:

ATTACHED please find a word document with my public comments regarding Republic Services' Expansion request (LU-24-027).

I urge the Benton County Planning Commission (BCPC) to take a courageous and unanimous stand by promptly denying, on June 17,2025, Republic Services' repeated request to expand the Coffin Butte Landfill (CBL).

I do appreciate this opportunity to state my serious concerns and my position as a 40-year resident of Corvallis and Benton County.

Feel free to contact me:

ATTN: Benton County Planning Commission

RE: Proposal to Expand the Coffin Butte Landfill (LU-24-027)

Dear Planning Commissioners:

I urge the Benton County Planning Commission (BCPC) to take a courageous and unanimous stand by promptly denying, on June 17,2025, Republic Services' repeated request to expand the Coffin Butte Landfill (CBL).

I am outraged and extremely concerned that Republic Services is again endeavoring to expand the CBL. **Let's remember** this December, 2021 headline: Benton County Planning Commission unanimously denied LU-21-047, the application by Republic Services to expand Coffin Butte Landfill, **finding that it would cause significant harm to Benton County.**

Three-plus years later, the CBL continues to be a toxic cauldron. And yet here we go again in 2025, Republic Services is seeking permission to expand and spill this toxic cauldron onto more neighboring lands. Dr. Shelley Su, retired OSU Public Health Department Professor and Toxicologist, recently stated: *I was greatly alarmed to learn of the unprecedented exceedance of methane concentrations from the CBL; plus, there are significant concerns about the handling of leachate generated at the landfill; leachate that contains many chemicals that are extremely toxic to the environment, including polyfluoroalkyl substances (PFAS) and other heavy metals.* Further, I have been informed that the landfill site and its methane releasing funnels also represent a continuous and significant fire hazard.

The frightening result of this continuously operating toxic cauldron is that the CBL has not only significantly diminished the quality of life for those living in the area; it has also become literally life-threatening to plants, animals and us humans. And the area of impact continues to alarmingly expand as well.

I have lived in Corvallis since 1982 and love the Willamette Valley's cooler climes, as well as, the mountains and rivers and ocean in our geographic region. I am challenging the commissioners to **take a long-term look at what will lead to an official end to the current CBL** and preserve Corvallis and neighboring communities as a safe and

appealing place to live. I want to highlight **this suggested long-term look does NOT include any expansions.**

And about revenue generated for the county from this landfill operation, **let us remember,** Mark Yeager, civil and environmental engineer, highlighted in his "As I See It" article in the Gazette-Times newspaper on 09/05/24,

In the recently published "Solid Waste in Benton County FAQ" document, the county stated on Page 2, "Decisions to approve or deny land use permits at the landfill are not revenue-based decisions."

For a time, as I began learning about the issues, I wondered why Benton County Commissioners agreed to again review another expansion request. Now I am terrified as I become clear that even long-standing, life-threatening business operations are allowed to continue because the status quo is comfortable, recent history is hard to look at forthrightly and shuffling downhill to ecological and moral decline is easier than facing the upward climb of, ultimately, ending this landfill operation and building our own solutions. These reasons are precisely why I suggest, in my opening, the Commissioners will be required to take a courageous stand denying the expansion request and, thus, lead us to the start of different waste-management planning.

Ken Eklund, in his *As I See It* news piece on April 17, 2025 highlights Republic Services' evasion of the EPA's *active legal action… should be GAME OVER* (I add here, for the expansion)---*but never underestimate Republic's commitment to this expansion, or its ability to steamroll reality.*

In summary, I am dumbfounded that there is any consideration of expanding a business that has already proven to be dangerous and unsafe, in its practices at the landfill, to all in our geographic area.

Respectfully submitted,

Greg Warburton MS, LPC

Friends of Polk County

TO: Benton County Planning Commission April 20, 2025

RE: Application for Coffin Butte expansion (LU-24-027)

Friends of Polk County is a local citizen group that seeks to promote wise management of farm and forest land, a high level of livability in our urban and rural communities and a strong resource-based economy. Polk County lies adjacent to Benton County and we have growing concerns about the negative impacts of the Coffin Butte Landfill on Willamette Valley. As Coffin Butte has been accepting dramatically more waste since 2017, the trash along Highway 99W, the methane emissions and the pervasive odor particularly have all reached unacceptable levels. Republic Services has not effectively dealt with these problems.

We urge you to vote against expansion of the Coffin Butte landfill for the following reasons:

(1) The landfill is not suitable for the "character" of the region. Benton County prides itself as providing an inviting and environmentally conscious environment. The Coffin Butte trash and odor detract significantly from this image. Benton County purports to provide a healthy environment for its citizens. The methane emissions found by EPA and Carbon Mapper indicate violations of the maximum levels allowed.

(2) Approval of an expansion would remove the current cap on tonnage of solid waste allowed per year. The landfill is currently causing problems. An expansion and removal of a cap on allowed tonnage per year would further increase the current problems.

(3) On January 16 the EPA's enforcement division served an Information Request on Coffin Butte Landfill. The registered agent for Republic Services forwarded this request to the legal department at Republic Services in Phoenix on January 21. The cover letter describes that this is a subpoena for business records for the legal process "United States Environmental Protection Agency vs. Republic Services". It would be prudent to delay any expansion of the landfill until this potential lawsuit is resolved.

We urge the Planning Commission to deny this application for expansion until the current issues are resolved.

Patricia A. Wheeler, Board Member

Subject of Testimony: Opposition to Expansion of Coffin Butte Landfill

Full Name: Robert L White

Email: rlwii47@gmail.com

Street Address: 4050 NE Fair Acres Dr, Corvallis, OR 97330

Written Testimony:

There are numerous reasons to oppose the expansion of the Coffin Butte Landfill. I will discuss only a few points.

The "local" landfill is not local in the area it services. The majority of trash is not from Linn and Benton Counties. Consequently the surrounding counties are not concerned with our landfill problems because their trash is no longer in their "backyard." Long after Coffin Butte is decommissioned we will be stuck with everyone else's debris.

The monitoring of methane and other pollutants by the County, EPA, and Republic Services has been inadequate if not negligent. To assume that conditions will improve with an expansion is ludicrous. The County has failed to provide adequate oversight.

We have a real concern with the continued disposal of leachate into the Willamette River. The water treatment plants are not equipped to remove the hazardous particulate matter. One cannot assume the situation would improve with an expansion of the landfill. Should we continue to condone polluting our downstream neighbors?

Various Benton County and City of Corvallis officials have commented that the revenues received from Republic Services are beneficial for the general funds. However any amounts currently received will be inadequate to cover future costs after Republic Services has gone. The County should expect cleanup expenses and lawsuits associated with the eminent health risks.

Date: Sunday, April 20, 2025 10:45:49 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Benton County should be focused on improving the current operation of the Coffin Butte Landfill instead of allowing the expansion of its dangerous practices. Expansion of this landfill will only add to the current and future environmental liability that impacts our water, air and lands.
Millions of gallons of toxic leachate, including carcinogens and “forever chemicals”, are trucked to treatment plants in Corvallis and Salem where they are treated by simple dilution before being dumped into the Willamette River. It is only a matter of time, if it is not happening already, before this toxic brew is percolating into the underlying soil and groundwater, spreading and polluting the surrounding lands. In addition, regular methane leaks, polluting our air and contributing to climate warming, have been documented as violations for years.
State and federal regulators are providing virtually no regulatory enforcement. Corvallis and Benton County are not allowed oversight or enforcement. Republic Services can and does ignore regulations with little consequence.
Why would we allow this kind of mis-management of our environment and related health consequences to continue, much less dramatically increase?!
The yearly amount of waste dumped at Coffin Butte has doubled in the last 8 years, and it is my understanding that the annual cap on waste dumped at the landfill will go away with any expansion. Currently, more than 90% of the waste dumped at Coffin Butte originates outside of Benton County. And once we go down this road of increased waste it is not likely to stop with just one expansion. There are other landfill sites in Oregon situated in better environments for wasted disposal. Those are the places that should be looked to for expansion.
There are many reasons why my wife and I moved to Corvallis over 30 years ago, raised our daughters here and continue to live here. The continued emphasis on a healthy, natural environment is at the top of the list. Please do not allow this expansion to go forward.

Sincerely, John Wilson
Retired Ecologist

TESTIMONY AGAINST THE PROPOSED COFFIN BUTTE EXPANSION LU-24-027

DEBORAH WOLF

Thank you, Commissioners, for your service and for allowing this testimony.

I am joining my fellow citizens of Corvallis in saying no to the proposed expansion of the Coffin Butte garbage site. Republic has demonstrated a callous lack of reasonable monitoring of the leachate and methane emissions already. There are large tears in the covering daily which allow these substances to escape. Republic's practice of dumping leachate into the river puts us all at risk of higher rates of cancer, liver damage and developmental problems with children. Not only does Republic have no accountability with our waste, it brings in garbage from nine other major sites as far away as Washington State—only 10% of this mess is local.

According to the 2020 Franchise Agreement between Republic Services and Benton Country stipulated that is this expansion is approved, there will be NO LIMIT to the amount of garbage they can dump there. I'm afraid that our children and grandchildren will bear the brunt of us not stopping the expansion of this huge toxic stew, which unchecked could fill an entire valley. (6.1.2.In cooperation with appropriate agencies, Benton County shall manage its air, water and land resources to insure their protection, conservation, restoration or enhancement.) Now is our chance I urge a vote for no expansion.

Dear Chair Fowler and members of the Planning Commission -

I am submitting the following testimony in opposition to the conditional use permit application for construction and operation of a new landfill south of Coffin Butte Road.

I am attaching two EPA air quality inspection reports and one summary document for your review and consideration.

Sincerely,

Mark Yeager

April 20, 2025

Dear Chair Nicholas Fowler, and

Members of Benton County Oregon Planning Commission

Subject: LU-24-027, New Landfill Proposal, EPA Inspection Reports

I am writing in opposition to the conditional use permit for a new landfill proposed for 59 acres south of Coffin Butte Road. One aspect of my opposition is that the proposed use will seriously interfere with uses on adjacent and nearby properties due to landfill gas emissions. The landfill gas emissions also seriously interfere with the character of the area that is otherwise a fresh air environment with farm, forest and wildlife areas. These impacts violate the review criteria listed in Benton County Code at 3.215(1).

For the record, I am attaching a copy of the 2022 EPA Coffin Butte Inspection report along with the 2024 EPA Coffin Butte Inspection report. I am also submitting a document prepared by Beyond Toxics that summarizes the June 21, 2024, EPA Clean Air Act Inspection of Coffin Butte.

On June 23, 2022, EPA conducted an announced landfill gas emissions inspection at Coffin Butte Landfill, owned and operated by Valley Landfills, Inc., a wholly owned subsidiary of Republic Services. Following completion of the inspection, Daniel Hines, the EPA inspector, summarized his concerns in the report:

"Daniel Heins expressed potential concerns with Republic's SEM/Method 21 procedures. Despite Republic having seen no more than 6 exceedances in the recent SEM reports supplied ahead of the inspection that included penetration monitoring, including reports with 0 exceedances, he identified 61 points in exceedance of 500 ppm, including 21 points above 10,000 ppm, with 26 exceedances at gas collection wells that Republic should have specifically been monitoring on a quarterly basis since the Oregon State Plan became effective in November 2020.

Daniel Heins expressed concerns with the areas of tarp that were inflated with and leaking out landfill gas, as detected during the SEM, noting that in additions to compliance concerns with the surface methane standard that such an accumulation of flammable gas creates a potential safety concern." Page 8 of the report.

Following the public disclosure of this inspection and report, Valley Landfills misrepresented the operating condition of the landfill gas system at the time of the inspection, and they continued with that narrative in their January 15, 2025, letter (Methane Memo Addendum) from Ginger Richardson to Petra Schuetz. The landfill operator's statements in their 2022 Annual Report and the January 15, 2025, letter led the reader to believe that the exceedances were caused by construction interference with the landfill gas system. However, at the time of the EPA inspection, the landfill operators were asked specifically about the condition of the landfill gas system, and this is what they said:

"Daniel Heins asked if the GCCS was operational on the day of the SEM inspection or if there was anything different from standard operations that could have impacted the results of the monitoring. Republic stated that nothing was operating differently than normal, with all wells in operation and collection running. Republic did note that construction above exceedance flags#48 through 58 would have impacted the cover in the construction area." Page 6 of the report.

In the January 15, 2025, letter to the County, the applicant represented to the County and to the public that they had taken corrective action to deal with the methane exceedances identified in 2022. Whatever steps they took to deal with the methane leaks obviously did not resolve the continuous methane emissions exceedances.

When EPA re-inspected the landfill on June 21, 2024, Sara Conley, EPA's Clean Air Act Inspector, wrote this:

"At 16:00, our group returned to the facility conference room to discuss the inspection and conduct the closing conference. I led the closing conference and summarized the parts of the facility we had visited during the inspection and our observations related to CAA. I went through my inspection notes and described potential compliance concerns from the inspection. The following were identified as potential compliance concerns during the closing conference:

1. *EPA monitored only a portion of the landfill surface and found numerous methane emissions at 500 ppm and higher, including at holes in the cover material. We identified many of the approximately 40 exceedances at locations where the cover material was damaged. Inspectors had noticed some plants growing out of the cover material near the areas where we monitored for emissions.*

2. *EPA monitored a flange at the flare station had methane emissions over 500ppm. The facility indicated that they were repairing this flange while we were in the opening conference.*

3. *One of the wellheads EPA monitored to was open to the atmosphere and the IRwin measured emissions over 500ppm.*" Page 10 of the report.

While these documented massive methane leaks are problematic for many reasons, it is important to note that, along with the methane, many other air pollutants are being released in the landfill gas. Those include Hazardous Air Pollutants (HAPs) such as benzene, toluene, and ethyl benzene, other non-methane organic compounds (NMOCs), and inorganic compounds such as ammonia and sulfides (such as hydrogen sulfide). Landfill gas can pose health risks, particularly to individuals living or working near landfills. These gases can cause respiratory irritation, headaches, nausea, and potentially more severe effects.

Recent studies have shown that landfill gas also contains PFAS (per- and polyfluoroalkyl substances), which can be released into the air from landfills as a gas, according to a recent study published in ACS Publications. These chemicals, which are known as "forever chemicals" due to their persistence in the environment, can be converted into a gas form as waste decomposes in

landfills. The study reported in Science News found that landfill gas contained 13 types of PFAS, with some concentrations reaching up to 210 to 940 parts per trillion.

Operation of the existing landfill with the gases and odors released daily seriously interferes with the use of my property and the character of areas where I recreate, such as McDonald Forest and E.E Wilson wildlife area, because of dozens of days per year when outdoor activities are intolerable due to landfill gas emissions.

Benton County officials have repeatedly told residents, including the Planning Commission, the Disposal Site Advisory Committee, and the Environment and Natural Resources Advisory Committee, that the impacts of the existing landfill operation are irrelevant in this conditional use proceeding and will not be considered.

Actually, they are highly relevant and must be considered. The fact of the matter is that most conditional use applications are for new uses, so determining the future impacts of a proposed use will be somewhat of a guessing game. However, when the use already exists and will be moved a bit, expanded, or both, the fact that it already exists provides clear evidence in determining the impacts of the proposed use.

The applicant has repeatedly demonstrated their inability to comply with air quality regulations, according to the EPA inspection reports. Given the applicant's track record for mismanagement of landfill gases, there are no mitigation measures or land use conditions of approval that could be reliably implemented and enforced to resolve the impacts of the proposed conditional use.

I urge the Planning Commission to deny this application outright.

Thank you for your time.

Date of Inspection:	June 21, 2024
Inspection Start/End Times:	9:45 – 16:30
Inspection Notice:	This was an unannounced inspection. At approximately 9:00am on June 21, 2024 I called Ian Macnab to let him know that we would be arriving at the facility in about 45 minutes.

II. Purpose of Inspection

This was a multi-media Clean Air Act (CAA) compliance inspection by the Environmental Protection Agency (EPA). Inspector Conley, EPA Region 10, led the inspection and was assisted by EPA inspectors Alyson Skeens, EPA Region 10, and Steve Rapp, EPA AED/OECA, (collectively, "the inspectors"). The regulatory state air agency, the Oregon Department of Environmental Quality, was made aware of the inspection beforehand and participated in the inspection.

This was a partial compliance evaluation by the U.S. Environmental Protection Agency Region 10. The purpose was to identify potential compliance concerns with CAA regulations, specifically the National Emission Standards for Hazardous Air Pollutants: Municipal Solid Waste Landfills, 40 CFR Part 63 Subpart AAAA and 40 CFR Part 61 Subpart M—National Emission Standard for Asbestos. The facility operates under a Title V Air Operating Permit (302-9502-TV-01. The facility is also subject to the federally enforceable Oregon State Plan for existing municipal solid waste landfills. The facility is regulated under the Oregon Administrative Rules at Chapter 340, Division 236 (OAR 340-236-0500) entitled "Solid Waste Landfills: Emission Standards for Municipal Solid Waste Landfills."

Disclaimer

This report is a summary of observations and information gathered from the facility at the time of the inspection and from a subsequent records review. The information provided does not constitute a final decision on compliance with CAA regulations or applicable permits, nor is it meant to be a comprehensive summary of all activities and processes conducted at the facility.

III. Compliance History

EPA's Enforcement and Compliance History Online, ECHO[1], lists four on-site CAA inspections since 2022.

CAA	*PCE On-Site*	*EPA*	*06/21/2024*
CAA	FCE On-Site	State	07/11/2022
CAA	*PCE On-Site*	*State*	*07/07/2022*
CAA	*PCE On-Site Monitoring/Sampling*	*EPA*	*06/23/2022*

[1] See https://echo.epa.gov/

The ECHO database does not list formal or informal enforcement actions in the last three years for the CAA or other statutes.

IV. Pre-Inspection Observations

We went directly to the facility. No observations were made prior to the scheduled inspection.

V. Facility and Process Description

The following facility description is based on information provided by a facility representative in the opening conference as well as documents submitted by the facility to ODEQ.

The Valley Landfills Inc. facility ("the landfill," "the facility," or "Coffin Butte") is located in Benton County Oregon. The landfill began accepting waste in 1978 and has a design capacity of approximately 39.7 tons. In 2021 there were 312 active vertical wells and a landfill gas control capacity equal to 5000 standard cubic feet per minute (scfm). Approximately 110 acres of the landfill have been constructed. The landfill directs landfill gas to an electrical generation plan owned and operated by the Pacific Northwest Generating Cooperative (PNGC). PNGC has a total of five engines capable of combusting 1915 standard cubic feet per minute (scfm). The PNGC facility has two backup flares with a combined capacity of 3,000 scfm.

The landfill uses interim cover consisting of temporary plastic covers. Temporary plastic cover is 12-mil lightweight plastic or 45-mil ethylene propylene diene monomer (EPDM) rubber. The cover material is anchored to the surface of the landfill. Sheet seams are sewn together, taped, or made to overlap with sandbags. Interim soil cover is typically 12 inches thick. Interim soil and plastic cover are placed to control landfill gas prior to final cover placement.

According to the facility, final cover will be installed once areas have settled. The final cover will consist of an under-drainage layer, 24" of soil, geomembrane and a drainage layer.

VI. Entry and Opening Conference

Inspectors Rapp, Skeens and I arrived at 9:40am along with representatives from ODEQ. The opening conference began at 9:45am.

Opening conference attendees included:

ODEQ:

- Becka Puscas
- Katie Eagelston
- Heather Kuoppamaki
- Alex Haulman
- Laura McWhorter

Valley Landfills Inc.

- Ian Macnab
- Broc Kienholz
- Phil Caruso

Inspectors Rapp, Skeens and I presented our credentials to Mr. Macnab. I explained the purpose of the inspection was to evaluate compliance with the Clean Air Act and that we would be primarily focused on conducting surface emission monitoring (SEM). I explained that we had three instruments with us, the two TVA 2020s[2] and an Inficon IRwin SX[3], which can be used to measure surface concentrations of methane. I explained that we would calibrate each instrument following the opening conference. We also notified the facility that we planned to take photos with a digital camera[4] and that we brought a Forward Looking Infrared (FLIR) Camera[5] capable of visually monitoring methane. I explained that all measurements, photos, video, and other information collected during the inspection would be included in the inspection report. I also described the timeline of the inspection and set expectations that we would be asking questions of the facility staff as we conducted the inspection.

I asked about the age of the landfill and about the cells in the landfill that are subject to the gas collection and control and surface emission monitoring (SEM) requirements under the federal CAA regulations for Municipal Solid Waste (MSW) Landfills. The facility representatives explained that the landfill first accepted waste in the 1970s. There is waste older than 5 years in every cell of the landfill. Inspector Rapp asked if there are any areas of the landfill that are currently excluded from gas collection and control. The facility representatives said that long ago there were areas but not now. At this landfill there is a cell of asbestos monofil as well as a small area that has asbestos buried in-place. Most asbestos is in the designated asbestos cell.

Mr. Kienholz explained how waste shipments are accepted at the facility. Trucks with municipal solid waste are weighed at the scale house. Mr. Kienholz stated that the commercial trucks have an account with Republic Services and if they bring in special wastes that information is recorded at the scale house. New waste is placed in active fill areas onsite. There is a new cell under construction at the landfill which will be located near the asbestos cell.

Inspector Skeens asked what the approximate volume of asbestos containing waste (ACW) Coffin Butte received and the customer breakdown between public and commercial. Mr. Macnab stated that Coffin Butte receives approximately 5,000 to 10,000 tons of ACW per year.

[4] Olympus Tough TG-6, Serial Number BJ5B27623

[5] FLIR Gx620 1060080

Macnab stated that Coffin Butte does not typically receive ACW from the public and most shipments are from commercial contractors. Mr. Macnab stated that Coffin Butte will see loads coming from Coast from Portland to Eugne up to Willamette. Coffin Butte rarely receives waste from out of state but if they do it would most likely be from Washington.

Inspector Skeens asked if Coffin Butte has turned ACW loads away for discrepancies. Mr. Macnab stated that they have turned loads away before. The load is inspected when dropped off and workers will require bags to be taped if there are rips or tears. Inspector Skeens ask if they could see the asbestos cell during the inspection. Mr. Macnab states that the asbestos cell was downhill from the construction site and advised against going there for safety concerns. Inspector Skeens asked if Coffin Butte had plans to layer over the asbestos cell with MSW. Mr. Macnab stated that there are plans but he was not sure when that would take place.

Inspectors Rapp and I asked about how the facility monitors surface emissions and the landfill gas collection system. The facility representatives explained that their consultant, SCS, provides a SEM route map and performs the SEM monitoring on foot. The facility representatives stated that the most recent surface emissions monitoring was performed a few months ago. The facility representatives do not observe the surface emission monitoring conducted by SCS. According to the facility representatives, if SCS identifies surface emission exceedances, SCS reports the exceedances to Republic Services and Republic Services will make the repairs. Inspector Rapp asked if there are any areas of the landfill that are not monitored for surface emissions. The facility representatives said that they do not monitor dangerous areas such as where there active filling is occurring.

I asked who conducts the well parameter monitoring and the facility told me that PNGC Power monitors the wells. PNGC Power operates the landfill gas to energy facility. I asked about interior well installations and the facility representatives told me that wells will be installed beginning in July. The facility has a combination of vertical and horizontal interior wells installed and the facility representatives explained that the active fill area is managed with horizontal wells. The facility reported that cover integrity monitoring is conducted by in-house staff.

Inspector Rapp asked if the flares were operating that day. The facility representatives indicated that the landfill was producing approximately 1800 scfm of which approximately 1000 scfm was being routed to the engines and the remainder to flares. The inspectors indicated that they would like to visit the flare station later during the facility walkthrough.

I asked the facility for a printed map of the landfill and we discussed where we planned to conduct the monitoring with Mr. Macnab. I explained that we would not be conducting a full surface emission monitoring survey over the entire landfill and that our inspection would be limited to an area before lunch and one after lunch. I decided to start with the area closest to the facility's office for the morning and then to visit the flare station and northeastern area in the afternoon. The opening conference concluded at approximately 10:50. Immediately following the opening conference we calibrated the two TVA 2020s and the Irwin.

VII. Facility Walk-Through

The table of surface emissions exceedances and digital image log is included as Attachment 1 to this report. A map of the Surface Emissions Monitoring (SEM) path walked by Inspector Rapp with the EPA IRwin is included in Attachment 2.

A. Morning SEM on Southwest Face of The Landfill

The walkthrough began at about 11:00. The inspection team was escorted by Mr. Macnab and Mr. Caruso. We began the monitoring with one TVA 2020 operated by inspector Skeens, another TVA 2020 operated by Mr. Haulman of ODEQ, and the EPA IRwin operated by Inspector Rapp.

Mr. Macnab estimated that we were over Cell 3 of the landfill. The lower side of the slope was vegetated, and Mr. Macnab stated that they were in the process of getting the vegetated surface of the landfill mowed. We did not measure any exceedances on the lower-vegetated section of the landfill slope. As we moved up the slope of the landfill we began to walk on the 45-mil ethylene propylene diene monomer (EPDM) rubber covered area. The 45-mil EPDM cover is considered interim cover. Mr. Macnab explained that this area would remain covered with 45-mil EPDM until there was either more waste placed in this cell or the area is placed under final cover. The EPDM material is weighed down with sandbags and straps it is also bolted to the surface in places.

We traversed a section of the southwest side of the landfill moving from one penetration to another and monitoring surface emissions along the way. I noticed that when the wind was blowing from the west there was an odor that smelled like landfill gas. There were a number of exceedances, readings of 500 ppm methane or larger, coming from holes or tears in the cover material. I noted that there were a number of plants growing out of the cover material at the top of the western side of the landfill in the area along the edge of Cell 3 and Cell 5. Some of the plants were between 1.5 to 3 feet tall. We did not monitor at the plant locations because of filling activity immediately uphill from that location. We made our way down the landfill slope and continued to take surface emission measurements with the TVAs and the Irwin. We took a break for lunch at approximately 13:00. The Irwin, operated by Inspector Rapp, detected 31 locations where methane emissions were 500 ppm or greater in this section of the landfill. See Attachment 1.

B. Afternoon SEM at Flare Station

We returned to the facility at 14:30 and performed a calibration bump check on the TVAs and the Irwin which both units passed. See Attachment 3. Mr. Macnab informed us that SCS would be coming the week of June 24th to conduct penetration monitoring. We followed Mr. Macnab in our vehicle to the flare station, the ODEQ representatives joined us for this portion of the afternoon. At the time of our visit, a new enclosed flare was onsite but construction of the flare was not complete and the flare was not operational. I operated the FLIR camera and recorded a

video, FLIR0093, of a leaking flange/blank plate at the flare station. The Irwin measured emissions above 500 ppm at the flange (photo 1734). See Attachment 1. The ODEQ team departed the flare station at approximately 15:00.

C. Afternoon SEM at Eastern Face of The Landfill

We followed Mr. Macnab in our vehicle to a pull-off at the northeastern face of the landfill. There was a noticeable landfill gas odor at the base of the slope. The Irwin measured methane greater than 500ppm at a liquid separation pipe for a horizontal collector. Inspectors Rapp and Skeens monitored surface emissions while we walked up the eastern slope of the landfill. We made our way up the slope walking from one wells or other penetrations to another and monitored surface emissions along the way. We also stopped at areas where visual inspection indicated possible surface emissions such as holes in the cover material. We identified 9 locations with emissions over 500ppm methane along our path. See Attachment 1. The walkthrough ended at approximately 16:00.

D. Asbestos

The inspectors did not observe the asbestos cell due to safety concerns Mr. Macnab expressed during the opening conference.

VIII. Closing Conference

At 16:00, our group returned to the facility conference room to discuss the inspection and conduct the closing conference. I led the closing conference and summarized the parts of the facility we had visited during the inspection and our observations related to CAA. I went through my inspection notes and described potential compliance concerns from the inspection. The following were identified as potential compliance concerns during the closing conference:

1. EPA monitored only a portion of the landfill surface and found numerous methane emissions at 500 ppm and higher, including at holes in the cover material. We identified many of the approximately 40 exceedances at locations where the cover material was damaged. Inspectors had noticed some plants growing out of the cover material near the areas where we monitored for emissions.
2. EPA monitored a flange at the flare station had methane emissions over 500ppm. The facility indicated that they were repairing this flange while we were in the opening conference.
3. One of the wellheads EPA monitored to was open to the atmosphere and the IRwin measured emissions over 500ppm.

Inspector Rapp and I discussed EPA's follow-up from the surface emission monitoring EPA conducted during the inspection. We explained that we would send the locations of the

exceedances and the readings within a week. We explained the 10-day re-monitoring would be due within 10 days following the facility's receipt of the list of exceedances.

I listed the records I needed to further evaluate the facility to Mr. Macnab. I explained that the inspection would not be complete until I have reviewed all the records that the facility submitted, reviewed my notes, and written an inspection report. Inspector Rapp, Skeens, and I thanked the facility representatives for their time and assistance and departed the facility at 16:30.

IX. Post Inspection Activities

A. Records Review

The facility provided a response to our information request on August 16, 2023.

Table 1: Records Review

Records Requested

Electronic copy of a map or maps: • **Including the locations of all wells and an indication of the well type.** • **Indicating the cell outlines on the landfill.** • **Indicating the boundaries of each phase of the landfill.** • **Indicating the most recent planned path for surface emission monitoring, including areas excluded from monitoring.**
Response: The facility provided all of the requested maps in an electronic format.
The most recent two quarters of gas migration/perimeter probe readings.
Response: The facility provided monthly readings from January 2024 through July 2024. The permitter probe readings recorded for the last two quarters were all 0.0% methane.
Electronic copy of the most recent design plan.
Response: The facility provided the requested record.

10 most recent ASM-4 for commercial loads.
Response: The facility provided 10 ASN-4 forms.
Last 6 months of landfill cover monitoring records.
Response: The facility provided records for each month from January 2024 through June 2024.
Last three months of all well readings, including all parameters measured. Please provide in an excel readable file type.
Response: The facility provided the requested data.
Odor complaints received in the last 6 months.
Response: The facility provided records covering December 2023 through June 2024, all months had a complaint about odor.
Electronic copy of the two most recent semi-annual (or annual) reports.
Response: The facility provided the two most recent semi-annual reports. One dated February 13, 2024 covering the reporting period of July 1, 2023 through December 31, 2023 and one dated July 16, 2024 covering the reporting period of January 1, 2024 through June 30, 2024.
2 most recent quarterly surface emission monitoring surveys
Response: Facility provided both of the reports we requested.

B. <u>Surface Emission Monitoring Follow-up</u>

The facility submitted the following documents on August 23, 2024

SEM Repair tracking – listed repairs but not the date of the repair, see Attachment 5.

Second Quarter Emission Monitoring - June 11, 16, 18, 24, 26, and July 6, 16, and 26, 2024, OAR landfill surface emissions monitoring (SEM) performed by SCS Field Services (SCS) at the Coffin Butte Landfill.

EPA's surface emissions results, received by the facility on June 26, 2024, indicated that forty-one (41) locations exceeded the 500 ppmv maximum concentration. The required first and second 10-day (Oregon Administrative Rule) follow-up monitoring performed by SCS on July 6, and 16, 2024, indicated that not all locations returned below compliance limits as required, following system adjustments and remediation by site personnel. Based on these monitoring results, and in accordance with the Oregon State Regulations, the site is required to perform a system expansion within 120 days of the third detected exceedance or November 13, 2024.

Calibration/Concentration Check				
Expected Reading (ppmv CH4)	**Zero**	**500**		
Instrument Reading	0	500	Accepted/pass	
Bump Check Date: 6/21/2024 Time: 14:28				
Expected Reading (ppmv CH4)		**500**		
Instrument Reading		470	Accepted/pass	
Bump Check Date: 6/21/2024 Time: 16:10				
Expected Reading (ppmv CH4)		**500**		
Instrument Reading		460	Accepted/pass	

Background concentrations (ppmv CH4):			**Location:**	**Time:**
Upwind:	0		Measured on road by portable toilets in northeast corner of LF	16:00
Downwind:	0		Measured in parking lot of office building	11:00

Comments/Notes:

The instrument was calibrated and checked for response time and precision on 6/20/24 at approx. 7:30 am using the 0 air and 500 ppm CH4 from the same cylinders identified above.
All readings are within 10% of the known calibration value. Response times are approximately 7.1 seconds, under the maximum of 30 seconds.
The gas cylinders identified above were used for the daily calibration and bump checks.

EPA Coffin Butte Inspection Report 6/2024_Summary
Prepared by Beyond Toxics 1/17/2025

EPA conducted a follow up inspection of Coffin Butte Landfill on June 21, 2024, almost exactly two years after their inspection in 2022. EPA explicitly framed this as a "Clean Air Act Compliance" inspection. The EPA inspected a small portion of the landfill's surface area, which focused on similar locations to their original inspection in 2022. They also examined the landfill gas flare to the south across Coffin Butte Road.

Oregon and Federal rules stipulate that **any detection of methane over 500 ppm is a violation of the Clean Air Act and Oregon State Rules**. Landfill operators are required to take remediative action and bring emissions below 500 ppm within 10 days.

During the 2024 inspection, EPA found a total of **41 exceedances of 500 ppm. The vast majority of the exceedances were magnitudes over the legal maximum of 500 ppm, ranging from 1000 to 118,000 ppm.**

- Many of those exceedances occurred at locations with openings in the tarp cover caused by fabric separation, failed patch repairs, rocks and vegetation puncturing the tarp.
- Other exceedances occurred where gas extraction wells were installed and the surrounding landfill tarp cover had not been adequately sealed around those wells.
- EPA found a gas extraction well without a lid, where methane was belching out resulting in a reading of 118,000ppm (10% of air content), which is an explosive concentration of methane and 200 times over the regulatory limit.
- Some exceedances were so high that the monitoring equipment "flamed out", meaning that the inspectors had to turn off the equipment before it was damaged.
- EPA received records of odor complaints filed by community members from landfill gas for 6 months leading up to the inspection. There were complaints about landfill gas in each of those months (Dec 2023-June 2024).
- EPA inspectors reported smelling landfill gas while onsite conducting SEM measurements.
- EPA found that one of the landfill flares had a leak at a juncture in the pipe, which also resulted in exceedances above 500 ppm.

After two follow-up inspections, re-monitored areas showed that not all methane leaks returned to below 500 ppm. It is important to note that the 2024 EPA inspection monitored the same areas as the 2022 inspection and found these areas continued to leak and emit methane above 500 ppm. In two years time, Republic Services had not repaired the gas system correctly. The landfill operator appears to be managing methane reactively after inspections by regulatory agencies. This demonstrates a need for legislative intervention to improve monitoring technology, reporting and operator accountability.

==========

EPA inspectors photographed examples of where methane emissions exceeded state and federal law at Coffin Butte landfill.

Example 1 - ***4,000 ppm Methane Exceedance at gas collection piping/equipment***

Example 2 - ***20,000 ppm Methane Exceedance from small tear in the tarp***

Example 3 - ***800 ppm Methane Exceedance measured where a weed punctured the tarp***

Additional Note:
DEQ has paused their Title V Air Permit process for Coffin Butte, citing a need for additional information from Republic Services. The permit hearing originally scheduled for January 14th was cancelled indefinitely.

Other Landfill Inspections:
The EPA also inspected the Wasco Landfill and found problems with methane exceedances. Beyond Toxics has not yet written up a summary of the EPA's findings.

BASIC INFORMATION

Facility Name: Republic Services Coffin Butte Landfill

Facility Location: 28972 Coffin Butte Road, Corvallis, OR 97330

Date of Inspection: On Site Inspection: June 23, 2022
Virtual Conference: July 11, 2022

EPA Inspector(s):

1. Daniel Heins, Environmental Scientist [a,b]

Other Attendees:

1. Ian MacNab, Environmental Manager – Republic Services [a,c]
2. Phil Caruso, Environmental Specialist – Republic Services [a,b]
3. Brock Kienholz, Operations Manager – Republic Services [c]
4. Nikki Wuestenberg, Operations Support (Nationwide) – Republic Services [a]
5. Melissa Green, Environmental Consultant – Weaver Consultants [a]
6. Yuki Puram, Air Inspector & Permit Engineer – Oregon Department of Environmental Quality [a,b]

[a] Attended virtual conference
[b] Present for all of on-site, including SEM
[c] Present during on site conferences but not during SEM

Contact Email Address: imacnab@republicservices.com

Facility Type: Muncipal solid waste (MSW) landfill

Purpose of Inspection: Surface emissions monitoring (SEM) and evaluating compliance with landfill air rules.

Regulations Central to Inspection: 40 C.F.R. Part 60, Subpart WWW; Oregon State Plan for 40 C.F.R. Part 60, Subpart Cf; 40 C.F.R. Part 63, Subpart AAAA

On Site (6/23) Arrival Time: 09:00
On Site (6/23) Departure Time: 17:50
Virtual Conference (7/11) Start Time: 13:00
Virtual Conference (7/11) End Time: 15:00

Inspection Type:
☐ Unannounced Inspection
☒ Announced Inspection

SITE OVERVIEW

The following information was obtained verbally from Republic Services representatives, including their consultants, during the virtual conference, unless otherwise stated.

Operations Overview:
The Coffin Butte Landfill (the "Landfill") is owned and operated by Republic Services ("Republic"). Republic acquired the Landfill in 2008. Republic representatives were uncertain of exactly how old the Landfill is, stating that they believed it began as a military dump site in the 1940s. Daniel Heins confirmed this via information online from DEQ, which stated that landfilling began in the 1940s in association with Camp Adair. The areas that predate the Resource Conservation and Recovery Act of 1976 (RCRA) have a clay foundation. Some historic waste that predates the 1970s has been re-located from these unlined sections to the post-RCRA lined areas to facilitate construction of future lined cells in those areas.

The Landfill is permitted for 178 acres and has a permitted capacity of 35,514,471 according to the Landfill's 2020 Part 98 Greenhouse Gas Report. The Facility receives approximately 3,500 to 4,500 tons per day of waste. Wastes received include MSW, petroleum contaminated soils, construction and demolition (C&D) waste, C&D material recovery facility (MRF) residuals, and other industrial wastes. Based on current waste acceptance rate, the Landfill has approximately 20 years left under its current permit. Republic has room to expand the site on its property beyond the current permitted footprint.

Final cover on the Landfill is compacted soils with a synthetic membrane, with penetrations booted and plastic welded. Interim cover is at least 24 inches of soils. Much of the interim cover area is covered in tarps or, in areas without work planned for a few years, a thicker layer of EPDM. In both cases, this is with the primarily goal of reducing water infiltration into the

Landfill. Daily cover is 6 inches of soil or approved alternative daily cover (ADC). Republic uses C&D MRF shaker fines, MSW incinerator ash, and tarps as ADC at the Landfill.

Leachate flows by gravity to sumps and is pumped to covered storage ponds. Leachate collected varies by year based on the weather but typically is around 25 to 30 million gallons. Condensate is routed to the leachate system. Leachate is trucked to local publicly owned treatment works (POTWs). No leachate is recirculated, and no liquid wastes are added to the Landfill.

The gas collection and control system (GCCS) contains over 300 landfill gas (LFG) collection points, including horizontal wells, vertical wells, and parts of the leachate system with gas collection. Collected landfill gas partially routed to a separately owned/operated gas to energy plant run by PNGC Power. The energy plant has five Caterpillar gas engines – three 3516s and two 3520s. Excess gas not routed to the energy plant is controlled via flares at the Landfill. The landfill has two open flares, with capacities of 1000 standard cubic feet per minute (scfm) and 2000 scfm. Recently the Landfill has been collecting 2600 scfm for the full site, with 1600 scfm going to the energy plant and 1000 scfm to the flares.

☒ Provided CBI warning to facility

Data Collected and Observations:
Daniel Heins arrived on site and met with the site staff for introductions and a brief site orientation/safety briefing at the Landfill's office. During this meeting, Ian MacNab stated that while there was a Method 21 instrument available and that Phil Caruso is their monitoring technician, that he would not take the opportunity to check EPA readings / provide confirmation readings, as a matter of Republic Services corporate policy. Daniel Heins explained that facilities typically prefer to check and confirm EPA readings and he gave advance notice to provide Republic the opportunity to confirm his TVA readings. Ian MacNab re-iterated that as a corporate policy that they would not provide confirmation readings.

After that brief meeting, Daniel Heins began the SEM. Phil Caruso accompanied EPA for the Surface Emission Monitoring (SEM). EPA showed all readings to Phil Caruso for visual confirmation of the readings and instructed him to state if he had any concerns with EPA's monitoring methods at any point. EPA used a ThermoFisher Toxic Vapor Analyzer 2020 (TVA) to perform EPA Reference Method 21 for the SEM.

In the morning (9:50 - 12:45), Daniel Heins conducted the monitoring with the TVA, covering a loop on the western portion of the Landfill. In the afternoon (13:30 - 17:15), he continued monitoring with the TVA, covering a loop on the eastern portion of the Landfill. Over the course of the day, Daniel Heins identified 61 points in exceedance of 500 parts per million (ppm), exhausting his supply of marking flags. Of these, 21 flagged exceedances were above 10,000

ppm. Many flagged exceedances represented clusters of exceedances at multiple points or broad areas of exceedances. Of the flagged exceedances, 26 were at or partially at gas collection wells (including both active and abandoned or decommissioned). Eight exceedances were at leachate cleanouts. Daniel Heins focused monitoring on areas under intermediate cover, though the first six exceedances were in final cover areas. During the afternoon monitoring, Daniel Heins measured multiple exceedances that continued to be above 500 ppm multiple feet in the air, with multiple feet lateral distance from the emission source, indicating substantial landfill gas plumes (flag #26, 46, and 51).

Flag #51 was by a broad area where the tarp was visibly inflated with gas. The tarp was not moving in the wind, it looked to be being pushed out steadily over a wide area towards the top of the south slope on the central area of the landfill, being held down by straps, cover anchors, and sandbags. Neither Daniel Heins nor Phil Caruso could identify any place where the wind could be lifting under the tarps, as the tarp edges were sandbagged and staked down. Daniel Heins measured a concentration of 2% at flag #51 before pulling away to avoid maxing out his instrument. He measured the methane concentration to be 2000 ppm at 3' in the air at this location, indicating a plume of gas coming out from the inflated tarp area. Along the top of this section of tarp, from flag #52 to #54, every post or tarp hole Daniel Heins monitored exceeded the surface methane standard, with readings of up to 7% shown before the instrument maxed out.

Phil Caruso did not dispute any of the readings, though noted that he would not have checked many of the exceedance locations, that he would have spent less time monitoring, or that he would have considered a higher location to be "the ground" when placing his probe 5 to 10 centimeters (cm) above the ground per the SEM regulations.

At an exceedance (flag #1) with a hole in the ground from an animal burrow, Phil Caruso stated that he would have considered the "ground" to be where the ground would have been if an animal didn't dig a hole into it at that location, rather than the ground at the base of the hole, and thus measured from a significantly higher location than Daniel Heins. At an exceedance (flag #2) between overlapped tarp material, with one piece of tarp raised above the other with a gap of air in between, Phil Caruso stated that he would have monitored with his probe above the upper tarp, rather than measuring the 5 to 10 cm from the tarp against the ground.

When Daniel Heins was monitoring a cluster of decommissioned wells with a patch of distressed soil (flag #3), Phil Caruso stated that he would have moved on after not directly getting above 500 ppm within twice his instrument response time even if there was an increase in reading, rather than moving around the penetration points slowly to find maximum reading point and then waiting twice the response time at this maximum reading location.

When Daniel Heins was monitoring at leachate cleanouts, Phil Caruso stated that he does not monitor at these and that they are not fully penetrating the cover. Daniel Heins responded that it was likely that many of these ultimately did penetrate the cover, especially in areas of thinner intermediate cover, and that regardless he recommended checking these as they were proving to be repeated sources of extremely elevated emissions, many over an order of magnitude above the surface methane standard. Phil Caruso stated that he was not required to monitor these. Daniel Heins and Phil Caruso had a similar discussion at the valve box dug into the cover with a reading

of 4% methane (flag #37), with Phil Caruso stating that this was not a penetration and thus he did not have to monitor this.

When Daniel Heins was monitoring at a horizontal penetration of the cover associated with a well (flag #16), Phil Caruso stated that he would not have monitored this as a penetration.

Phil Caruso stated that he would not have monitored the Cell 5 leachate riser that Daniel Heins measured multiple exceedances at, as it was outside of the waste mass.

Photos and/or Videos: were taken during the inspection. See Appendix A.
Field Measurements: were taken during this inspection. See Appendix B.

INSPECTION CONFERENCE — JULY 11, 2022

☒ Provided U.S. EPA point of contact to the facility
☒ Provided CBI warning to facility

Staff Interview:
The Landfill is subject to the Oregon State Plan implementing the Part 60 Subpart Cf Emission Guidelines, having previously been subject to Part 60 Subpart WWW. The Landfill is also subject to Part 63, Subpart AAAA, and has opted-in to demonstrating compliance with the Oregon State Plan through the Subpart AAAA requirements where allowed.

Republic stated that they were unsure if they were excluding non-degradable waste from their maximum gas generation rate calculations in their Design Plan or any other gas modeling runs they have done to size their GCCS. Republic stated that as the operations personnel were not present, they were unable to speak to what types of industrial wastes are received in any further detail. The Landfill does not accept refrigerants. The Landfill receives asbestos. It packages asbestos waste and deposits it in a dedicated asbestos mono-fill that is the only area excluded from the GCCS.

Leachate system components are connected for LFG collection on a case-by-case basis per recommendations of the engineer(s) involved in designing the GCCS.

Republic is aware of a one-off test of the sulfur content of the LFG requested by DEQ and stated that it read at non-detectable levels.

The Landfill has an alternative monitoring plan (AMP) approved by DEQ dating to when the Landfill operated under Subpart WWW. The AMP has allowances for positive pressure, temperatures above 145 degrees Fahrenheit, and elevated oxygen readings. No wells currently are above 145 degrees Fahrenheit. Republic does make use of the positive pressure allowances for wells with high oxygen levels.

Republic stated that they do not consistently check water levels in wells but has done so in the past. All new (at least since 10 years ago) wells are constructed with dewatering pumps, as a best

practice for a landfill in a wet climate. Republic does not typically add pumps to old wells. As wells are typically constructed with steel casings at the Landfill, redrills are rarely needed.

The Landfill has gas migration probes placed outside the area without synthetic liner but has typically seen readings at gas non-detect levels.

For cover integrity monitoring, Republic stated that they look for holes and cracks in the soils and wind damage on the tarps, but that there was no set answer for what degree of tarp damage would necessitate repair.

For surface emissions monitoring, Republic only excludes active filling areas and other areas with active heavy equipment as "dangerous." When Daniel Heins noted that the drawn paths in the submitted SEM reports went straight through the drawn "dangerous areas," Republic stated that the paths on the maps are general and do not reflect the actual walked paths. Republic monitors penetration points during its serpentine path. Phil Caruso stated that in addition to penetrations, he would go off the serpentine path if he saw distressed vegetation or cracks in the cover, and that those were the only examples of places where visual observations indicate elevated concentrations of landfill gas that he considered. Republic was unable to speak to the what the historic SEM exceedance rate had been in past surveys.

Daniel Heins asked if the GCCS was operational on the day of the SEM inspection or if there was anything different from standard operations that could have impacted the results of the monitoring. Republic stated that nothing was operating differently than normal, with all wells in operation and collection running. Republic did note that construction above exceedance flags #48 through 58 would have impacted the cover in the construction area.

Daniel Heins asked if Republic viewed the inflated tarps as a concern or something to acted on. Republic disputed that the tarps were inflated with landfill gas, claiming that the wind has blown them up. Daniel Heins noted the extremely elevated methane concentrations detected by the inflated tarps and that the tarps appeared to be in a static inflated state without any steady wind or apparent way for the wind to lift the tarps.

Republic noted that construction of additional gas collection on the top of the Landfill is in progress and will be completed this summer.

Requested documents:
The following documents were requested and supplied ahead of the inspection:

- Two most recent semi-annual NSPS reports
- Results of any cover integrity reports and quarterly SEM monitoring events that have been occurred since the most recent semi-annual
- GCCS map
- Map of cover by type in place (final vs intermediate vs daily cover)

The following documents were requested during the conference and confirmed via subsequent email:

- Constructed acres and acreages by cover type
- Past 5 years of flare monitoring data
- Flare/blower design specs and any performance tests on file for it
- Past year of migration probe data and a map of the probe locations
- Current GCCS Design Plan, along with any versions that have been active in the past 5 years and them most recent LandGEM run used for GCCS sizing (if not in the Design Plan)
- A map of the GCCS showing extent of any horizontal collectors if these are utilized to demonstrate a sufficient density of gas collection
- Landfill cell map and year of first waste placement for each cell
- 2021 Part 98 Greenhouse Gas Report
- Annual waste deposited tonnages by type from 2016 to present
    - Include a list of the primary sources of industrial wastes and a description for any special wastes listed
    - Outline of what wastes (if any) are classified as non-degradable for LandGEM maximum expected gas generation (Design Plan) along with the basis for this classification
    - Outline of what wastes are classified as "inert" for Part 98 reporting along with the basis for this classification
- Rest of the past 5 years of Annual/Semi-Annual Reports
    - Include all NSPS/NESHAP/EG reports, SSM reports, and air permit reports as applicable
    - If the full SEM reports are not included in the above, please include those for the past 5 years
    - Include the most recent SEM reports, or at least as much of it as has been completed by the end of July, even if they are not a part of any final semi-annual
- Any versions of the SSM plan that have been in place in the past 5 years
- Past 5 years of wellhead parameter monitoring
- Past 5 years of gas flow to the energy plant
- Any H2S or sulfur gas testing results from the past 5 years, or most recent if not within the past 5 years
- Map of wells being added this summer since the inspection
- The Alternative Monitoring Plan and approval letter
- Identification of which wells have dewatering pumps
- General description of final cover construction

Concerns:
Daniel Heins expressed potential concerns with Republic's SEM/Method 21 procedures. Despite Republic having seen no more than 6 exceedances in the recent SEM reports supplied ahead of the inspection that included penetration monitoring, including reports with 0 exceedances, he identified 61 points in exceedance of 500 ppm, including 21 points above 10,000 ppm, with 26 exceedances at gas collection wells that Republic should have specifically been monitoring on a quarterly basis since the Oregon State Plan became effective in November 2020.

Daniel Heins expressed concerns with the areas of tarp that were inflated with and leaking out landfill gas, as detected during the SEM, noting that in additions to compliance concerns with the surface methane standard that such an accumulation of flammable gas creates a potential safety concern.

Subject of Testimony: Coffin Butte Landfill CUP planning and application

Full Name: Jim

Email: jim@alderspring.net

Street Address: 31540 Homestead Road, Philomath, Oregon, 97370

Written Testimony:

I strenuously urge the Planning Commission to reject this CUP application completely, without condition. Besides the overwhelmingly negative impacts noted by many, I note that Benton County and its staff, led by county counsel Vance Croney (and possibly the County Administrator) have circumvented Oregon Public Meeting Laws to hamstring and otherwise limit public engagement. The convening the BCTT to talk about everything BUT the real potential of this CUP re-application by Republic Services, to dismissing active BCTT members who leadership no longer wanted to hear from, while cancelling two advisory bodies to which the public could bring concerns over, to the at late notice assigning public evaluation of landfill expansion issue to the ENRAC body which had no familiarity with the issue, and which held some relevant meetings not publicly notified or recorded, and never allowed public comment, a public advisory body pressed by staff to act with little time to supply a simple response with encouragement not to review the entire document. After the BCTT supplied its report, the county then convened a SMMP work group, choosing a new county resident who had success in moving a California landfill forward, and who was ASSIGNED, not elected, as Chair, again supplanting the urgent need for county public engagement with a regionally focused work group that was entirely outside county control, which could not address the expected next CUP application. Thank you for your work.

TO: Benton County Planning Commission, Nick Fowler Chair
RE: LU-24-027

First, I want to thank each Planning Commissioner for all the work you do and for your attention to this issue.
The key consideration I want to address in the Benton County Code is **BCC 53.215(1)** which states: "The proposed use does not **seriously interfere** with uses on adjacent property, with the **character** of the **area...**".
On the contrary, I think the new land use: the Coffin Butte expansion, patently defies and is antithetical to this criteria.
As a resident of Benton County, I strongly oppose the application to expand the landfill.
Specifically, I want to address the terms: 'seriously interfere', 'character' and 'area'.

I come at this from a recreationist point of view: as an avid: hiker, biker and kayaker.
I'm a fairly new resident of Corvallis. I grew up in Pennsylvania, across the river from Three Mile Island, lived near the radioactive canyons of Los Alamos for decades, now it's a 'supersize me' landfill called Coffin Butte.
I used to love biking in the Coffin Butte area for its rural character and variety of terrain: forest, farmland, vineyards and parks like Sarah Helmick. Truly, riding out of town, up and over the saddle and out Soap Creek Road in early April, is magical, a kind of Currier and Ives pastoral scene. Maybe when you hit Tampico, you get lucky and see a herd of elk... but ride a little further ... and you've entered a Cormac McCarthy novel -an industrial zone with a hulking black mountain of trash, carved out of the butte.
These days, I have to think twice about riding out there. Some routes like Independence Highway, I no longer do: trash litters the roadside and the heavy and often aggressive truck traffic is prohibitive. I'm not alone in this thinking, I know many bikers who feel the same way. Too many stories of close calls and near misses; sooner or later there will be an accident or worse; it really isn't a question of **if**, but **when**. It's just **not safe**.
Safety concerns interfere with enjoying the area, but so do health risks.
Landfills are notorious methane polluters and the third largest source of methane in the country. EPA found explosive levels of methane leaking from Coffin Butte in 2022. In July 2023, Carbon Mapper showed methane at super-emissions levels and a methane plume extending over a mile. In addition to methane thirty different hazardous pollutants are emitted at Coffin Butte, including: particulates, heavy metals, VOC's and sulfides totaling 14,500 pounds in 2021. Other expert testimony speaks in depth to these health risks, but from a personal view once you know this information, you can't unknow it. When I'm hiking or biking, I'm exerting myself, breathing harder, inhaling deeper, longer, noticing, paying attention. If there's wind, a headwind everything gets ramped up. And what is that wind doing with all the toxic incinerator ash capping the landfill...? Now that I've seen that plume on a map, I know where it is and how far it extends; I'm thinking about that. The 'pastoralness' of my ride is gone.
Beyond serious health and safety concerns, Coffin Butte is a brutal assault to the senses:
the noxious smell, the visual degradation to the land and the noise of heavy machinery and trucks.
I've described the current situation, the landfill expansion is simply a multiplier.
For me these factors seriously interfere with this valued recreation area.
The current area of the landfill is178 acres (trash collection), the expansion adds 30% of that for a total of 232 acres; a football field is roughly an acre, so think 232 football fields. But that's not really the 'area' of the landfill.
A landfill -by its very nature- affects the land (forests and farms), water (groundwater, run-off, local watershed) and air that surround it. It helps me to think of 'area' as three dimensional.
Leachate -the percolated liquid moving through the garbage- from Coffin Butte contains dissolved heavy metals, carcinogenic industrial solvents and PFAS, forever chemicals. In 2021, 31 million gallons of leachate was pumped out of the landfill and trucked to wastewater treatment plants in Salem and Corvallis. Municipal water treatment plants are unequipped to process the leachate, so many toxics pass through the plant and are discharged into the Willamette.
But leachate contaminates the area in two distinct ways. It also percolates into the groundwater —from

unlined cells (the old Coffin Butte was a military dump for Camp Adair and didn't require liners) and from leaks in current liners— enters the water table and eventually makes its way to the river about ten miles away. Experts say 'all liners eventually leak' and at least one drinking water well in the area has been contaminated.
Kayaking?? .... on the Willamette....

In short the health and safety risks, the interrupted integrity of this rural area **seriously interfere** with the **character** of this **area**.

Just recently, ENRAC -the Environment and Natural Resources Advisory Committee for the county, after lengthy and extensive research compiled a substantive report on the Coffin Butte Expansion and voted 5-1 to recommend <u>denial</u> of Republic's application to expand the landfill.

Respectfully,
El-Edith G. Conover

As a resident of Benton County, I strongly oppose the application to expand the landfill.

Welcome to Corvallis: We have a superfund site.

It's called United Chromium Products.
Because superfund sites include so many forever chemicals, they are our forever friends.
But, we might actually have another Superfund site; that will be for you to decide.

In the late 1970s, toxic waste dumps such as Love Canal received national attention when the public learned about the risks to human health and the environment posed by contaminated sites. In response, Congress in 1980 established the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) CERCLA is informally called Superfund. Superfund was created to address health and environmental risks posed by contaminated toxic waste sites. Through a federal process sites like Love Canal-1984, Rocky Flats-1989 and Hanford-1988 ended up on the NPL (the National Priorities List) and became designated Superfund sites.
Oddly, the Hanford site is also in Benton Co, Benton County Washington on the Columbia River.

United Chrome Products is a superfund site just south of Corvallis and owned by the city. Past activities contaminated the soil and groundwater with chromium and other hazardous wastes. EPA added the site to the Superfund list in **1984**. **Chromium contaminated soils were taken off site for disposa**l. Today 40+ years later, the city pumps and treats groundwater to remove contamination and continues to perform long term groundwater monitoring. Forever chemicals, forever friends.
Where were the chromium contaminated soils taken?
I don't know the answer to that question, but I do know that at the Superfund site next door in Linn County waste went to Coffin Butte.

That site, **Teledyne (now Wah Chang)** was added to the Superfund list in **1983.** It is one of the country's largest producers of rare earth metals and alloys. Waste from Teledyne/Wah Chang went to Coffin Butte moreover, it apparently went into an unlined cell. After it began leaking and contaminating groundwater, DEQ required it to be moved to a lined cell in 1992.

So if Teledyne/Wah Chang is a Superfund site, and its waste went to Coffin Butte, maybe Coffin Butte too is a Superfund site.

Consumers Power Inc (CPI) formerly located in Corvallis near Ninth and Circle (now Buffalo Wild Wings, Jimmy Johns and Walmart) produced soil contaminated waste containing wood preservatives (used to treat power poles) and PCB's from leaking transformers. It went to Coffin Butte.

Following the Santiam wildfires in 2020, the EPA identified and removed about 300,000 pounds of hazardous waste from affected properties. It's a long list but included: fuel, petroleum, car batteries, solvents, pesticides, propane tanks, ammunition and asbestos. It went to Coffin Butte.

Toxic fly ash from Covanta's Marion Waste Incinerator containing dioxin and heavy metals is used as a daily cover at the landfill.

The following are headlines from the Gazette-Times:
1976 "Wah Chang waste ignites, landfill operator cannot use water for fear of explosion"
1977 "Radioactive material found at Coffin Butte, Radium 222, as deadly as plutonium, concerns about groundwater contamination"
1979 "Commissioners require home developer to notify buyers of proximity of home to dump"
1979 "Diesel soaked pot plants to be taken to landfill"

1996 "Local Landfill got OK to pump polluted water into Willamette"

All this toxic waste **deposited** over decades at Coffin Butte produces leachate -in 2021, 31 million gallons- which is pumped and trucked to local municipal wastewater treatment facilities unequipped to deal with it, so many toxics including PFAS -forever chemicals- pass through the plant and are discharged into the Willamette River. The subsurface geology at CB is poorly understood, so the extent of groundwater contamination is unclear, but groundwater connects to surface water and the landfill is only about ten miles from the Willamette River.

Finally ENRAC -the Environment and Natural Resources Advisory Committee for the county, after lengthy and extensive research published a substantive report on the Coffin Butte Expansion and voted 5-1 to recommend denial of Republic's application to expand the landfill.

Welcome to our town.
I understand the local theater company is contemplating a production of An Enemy of the People.
We have a superfund site, we may soon have another.

Respectfully,
Elizabeth G. Conner

Street Address: 5888 SW Englewood AV Corvalis OR 97333

Written Testimony:

April 19,2025

To: Benton County Planning Commission
Nick Fowler, Chair

This is to express my strong opposition to the expansion of the Coffin Butte Landfill. As a long time resident of Benton County, I have grave concerns about the effect of our air, water and land with this expansion. Please do what is in the best interest of the residents of Benton County and say NO.

As I read through the Benton County Comprehensive plans for our future, I don't see any correlation with the stated objectives and this plan. Specifically I am greatly concerned about the amount of garbage that this landfill already takes in; only seven percent of the total is from Benton County. If the garbage isn't taken here, where will it go? Republic Services owns another land fill across the Columbia River. What makes this land fill a superior choice for more garbage is that it is about 250 feet above the water table and the that 250 feet is mostly clay soil. By the time the toxins and leachates reach the water, they will have been filtered out through the clay and greatly reduced. Unfortunately for our residents, the water table is only slightly above this land fill.

Additionally, by taking in so much other garbage from surrounding areas, the truck traffic on Highway 99 has greatly increased. There are over 265,000 trucks dumping garbage every year; that is a huge number. With that many trucks dumping garbage, there is one truck every minute and a half or 90 seconds! I can't fathom to think about more truck traffic coming to this site.

By the way, I voted for all the County Commissioners when they were on the ballot. I sincerely hope as a constituent, my voice will matter.

Again, I urge you to OPPOSE this expansion.

Sincerely,

Maya Abels

As a long time resident of Benton County, I have grave concerns about the effect of our air, water and land with this expansion. Please do what is in the best interest of the residents of Benton County and say NO.

I am seriously concerned about methane gas that is not contained. I applaud Republic Services for capturing some of these gases but it is not sufficient to address a serious problem. The landfill has a history of grossly under-reporting the methane pollution. In both 2022 and 2024, the EPA found explosive levels of methane leaking from Coffin Butte. By expanding the landfill, this will increase the problem that already exists. Methane is well known to interfere with the health and well-being of the people in the vicinity. Additionally, there are very special places nearby like MacDonald and Dunn Forests that have high volume use by hikers and bikers. The methane gas leakages has the to greatly interfere with the health and well-being of these people and the neighbors.

For this and many other reasons, I strongly urge you to deny this request.

As a long time resident of Benton County, I have grave concerns about the effect of our air, water and land with this expansion. Please do what is in the best interest of the residents of Benton County and say NO.

Among the many reasons that I oppose this expansion is that the Benton County Commissioners have an abysmal record of following through with asking Republic Services (or their predecessors) to address CONDITIONS. There is absolutely no historical record to show that any conditions previously noted on other expansion efforts were ever addressed. Perhaps it is an issue about time but whatever the reason, if the County were to accept this proposal with conditions, it is very unlikely that the Commissioners would follow through to enforce the conditions.

For this and many other reasons, I strongly urge you to deny this request.

This is to express my strong opposition to the expansion of the Coffin Butte Landfill. As a long time resident of Benton County, I have grave concerns about the effect of our air, water and land with this expansion. Please do what is in the best interest of the residents of Benton County and say NO.

Toxic chemicals are routinely leached out off the landfill and wind up in the Willamette River. These hazardous pollutants that include mercury, lead, industrial solvents, and “forever chemicals” (PFAs) leach out of the landfill and end up in the Willamette River. In 2021, 31million gallons of leachate were pumped out of Coffin Butte and sent to wastewater treatment plants in Corvallis and Salem, where the leachate passed through treatment plants not equipped to capture PFAs, and then dumped into the Willamette River. Without a credible plan for significantly reducing leachates, a landfill expansion would increase toxic pollution into the Willamette River, putting increased burden on public utilities by further fouling municipal sources of drinking water.

I drink Corvallis water and I recreate on the Willamette River. I can install a better filter in my home to try to capture some of the toxins in the water, but I want to recreate on the River with my dog. I want to kayak and swim and let my dog enjoy the river. Knowing the amount of toxic pollution is frightening and it will be significantly increased if this expansion were to happen. For this and many other reasons, I strongly urge you to deny this request.

Sincerely,

Maya Abels

March 24, 2025
To: Benton County Planning Commission, Nick Fowler, Chair
The Willamette Valley chapter of the Great Old Broads for Wilderness strongly opposes the expansion of the Coffin Butte Landfill. For the health of our air, water, land, and communities, now and into the future, we insist that the Benton County commissioners reject this noxious expansion.
The Great Old Broads are a national grassroots organization and most of our chapter's more than
100 dues-paying members are Benton County residents who care deeply about the people and nature of the Willamette Valley.
Rather than considering any expansion of this faulty landfill, we believe Benton County should
be realistically planning the inevitable closure of the landfill. That means developing a serious plan that details a modern waste-recovery facility, an effective waste-reduction system, and a realistic accounting of the cost of clean-up, a cost that Benton County residents will have to pay.
Such a plan should be developed in a public process, and be responsible to public review and comment.
As for the proposed expansion of the landfill, we see many troubling problems, including:
• Gross under-reporting of methane pollution by Valley Landfills, Inc., despite 2023 satellite images that show some of the largest methane plumes in the Pacific Northwest emanating from
Coffin Butte. In 2022 and again in 2024, the EPA found explosive levels of methane leaking from Coffin Butte, after Valley Landfill had reported only negligible leakage. Landfills are a major source of methane, a climate-damaging gas 28 times more powerful than CO2.
A landfill expansion will only exacerbate this problem at Coffin Butte. This would seriously interfere with the health and well-being of adjacent residents and public lands within a four-mile
radius, where widespread drift of noxious chemicals is regularly detected by residents and recreationists. (Criteria 1)
• Other hazardous pollutants, including mercury, lead, industrial solvents, and "forever chemicals" (PFAs) leach out of the landfill and end up in the Willamette River. In 2021, 31 million gallons of leachate were pumped out of Coffin Butte and sent to wastewater treatment plants in Corvallis and Salem, where the leachate passed through treatment plants not equipped
to capture PFAs, and then dumped into the Willamette River.
Without a credible plan for significantly reducing leachates, a landfill expansion would increase
toxic pollution into the Willamette River, putting increased burden on public utilities by further
fouling municipal sources of drinking water. (Criteria 2)
• Coffin Butte already receives one-third of all of Oregon's garbage, much of it in large loads

of unsorted solid waste. Valley Landfill and Republic Services make little effort to encourage (much less enforce) recycling and waste reduction, despite DEQ's mandate to shift from Solid Waste Management to Materials Management. An ever-larger landfill serves far-flung communities that choose to ignore the importance of Materials Management and leaves an increasing burden of liability on Benton County.

Benton County needs a far more serious Sustainable Materials Management Plan that provides a roadmap toward eventually closing, not expanding, Coffin Butte. The current status-quo approach to waste management violates the shift toward Sustainable Materials Management criteria endorsed by Benton County and the state of Oregon. (Criteria 3)

• The environmental impact of Coffin Butte extends well beyond the landfill itself. Besides releases of climate-damaging methane into the air and toxic leachate into the river, the smell of rotting garbage percolates across the northern part of Benton County. Wafting along with rank odors is a cocktail of toxic chemicals—vinyl chloride, ethyl benzene, toluene, benzene—that can endanger public health and welfare. Expanding the Coffin Butte landfill will certainly expand the release of these toxins.

Coffin Butte started as a military dump for Camp Adair during World War Two. The expanding sight, smell, and health threats of this landfill has made it a filthy "Welcome to Benton County" landmark that seriously damages the character of the area. (Criteria 1)

• Benton County is burdened by the unlimited long-term risk and environmental liability for the landfill, even though Benton County does not own the landfill. Republic Services, and its subsidiary, Valley Landfills, own and operate the landfill, but it is likely that Benton County will face substantial financial expense of cleanup, which could be far greater than the funds currently being saved for this purpose.

An expansion of the landfill imposes the burden of increased risk and liability on Benton County, compromising the county's capacity for future public improvements, facilities, utilities, or services available to the area and to the residents of Benton County. (Criteria 2)

• Expanding the landfill removes any volume restriction imposed by Benton County, freeing Republic Services to immediately increase intake of waste from the region. This Coffin Butte expansion will have long-lasting negative impacts to water quality, air quality, and the climate, rippling far beyond the local area and lasting far longer than the short lifespan of the landfill.

In summary, expansion of the Coffin Butte landfill:

• Will seriously interfere with current and future uses on adjacent property within the watershed, air-shed, and view-shed. (Criteria 1)

• Will seriously interfere with the character and identity of the area, making Benton County a dump site rather than a destination. (Criteria 1)

• Will impose an undue environmental and financial burden on future public improvements, facilities, utilities, and services that might otherwise be made available to the surrounding area. (Criteria 2)

• Will violate the spirit and the mandate to shift from Solid Waste Management to Materials Management, a stated goal of Benton County and the State of Oregon. (Criteria

3)

Subject: Opposition to Landfill Expansion
Date: Monday, April 21, 2025 10:53:02 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I am writing to express my concerns regarding the proposed landfill expansion and to urge the planning commission not to approve the proposal.

Firstly, the landfill already places an undue burden on the county's environment and quality of life, especially when considering that Benton County accounts for less than 10% of the trash brought to the landfill. Toxic leachate is contaminating the Willamette River and local groundwater. Methane is polluting the air, along with other airborne particles and noxious (and potentially harmful) volatile gases. Further expansion of the landfill will lead to an even higher rate of methane generation which, especially in such a wet climate, will adversely impact our shared global environment. Furthermore, I am also concerned about rising levels of arsenic, which is showing up in monitoring wells at the edge of the landfill site, and may be spreading to rural household wells and irrigation wells which have not yet been tested.

The proposed expansion of landfill operations will also hurt the rural character of the area, particularly along Hwy 99W as far north as Rickreall or McMinnville. Many of us who enjoy the natural and rural beauty of the region are disturbed by the plastic trash seen out in farm fields. Our rural Oregon character must be preserved and not polluted by windblown trash.

For these reasons, the proposed landfill expansion can not be approved. Rather, the county should be improving waste reduction strategies, including incentives, improved services and public education. Ultimately, the landfill should be modeled after Lane County and converted to a municipal site that does not prioritize profits over the well-being of county residents.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello,

I am opposed to the proposed expansion of Coffin Butte Landfill. I believe the expansion will have detrimental impacts in many areas including the following:

Pollution – air (methane, dust, incinerator ash), water (leachate), noise.

Environmental - climate impacts due to methane emissions, local environment issues due to pollutants.

Safety violations - worker safety may be compromised.

Negative impacts to Wildlife habitat and individuals.

Recreation impacts – loss of areas for hiking, birdwatching, and biking

Impacts on character of the area – odor, litter, traffic, community image, housing and property values.

Long-term financial and environmental liabilities.

Sincerely, Nancy Allen

To whom it may concern:

I live in NE Corvallis, and very occasionally, under certain atmospheric conditions, I wake up to the smell of the landfill. I have informed myself about the issues with the high volumes of methane produced by the landfill and the leachate that eventually ends up in the river, and I respectfully request that those entrusted with making the decision about whether to allow RS to expand the landfill VOTE NO on the expansion.

Sincerely,
Lorraine Anderson

I strongly oppose this expansion.
E.E. Wilson Wildlife Area has been a delightful and productive birding site for myself and many others for decades. However, the increased traffic, noise, odors, overpopulation of scavenger birds resulting from the Coffin Butte Landfill have resulted in degradation of the habitat and made it much less pleasant over the last several years. Expansion of the landfill would only exacerbate those issues. Ravens, starlings and eagles not only scavenge at the dump, they also predate on many of the other birds nesting and raising their young at E.E. Wilson and surrounding areas. An expansion of the landfill would only increase pressures on those species that have increasingly become prey species.
This clearly interferes with uses of nearby property and character of the area BCC 53.215 (1) and Benton County Comprehensive Plan policies 5.1.2, 5.2.1, and 5.7.4.
Respectfully,
Mark Baldwin

I strongly oppose this expansion.
Expanding the Coffin Butte Landfill is a violation of BCC 53.215(2). This proposed expansion will impose an undue burden on public improvements, facilities, utilities, and services available to our Corvallis area. Services such as road maintenance, which is unduly impacted by large, heavy trucks, and is unfairly borne by Benton County residents, as the Republic Services landfill property yields less tax revenue than would be collected were those acres to be devoted to housing- a scenario made far more unlikely by the proposed expansion.
Respectfully,
Mark Baldwin

I strongly oppose this expansion.
This proposed Coffin Butte landfill expansion clearly violates BCC 53.215 (1) and BCC 53.215(2).
Effective monitoring of methane emissions from the current landfill has been woefully inadequate in recent years. There is no reason to believe that this situation will improve if the CUP is approved. Without third party testing and meaningful enforcement, methane emissions will only increase. This runs contrary to my values of protecting our environment from further degradation and damage.
Respectfully,
Mark Baldwin

Dear Benton County Planning Commission,

I am writing in opposition to Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I strongly urge the Planning Commission to deny this application.

I live on South Boundary Road, off of Soap Creek Road, about 3 miles from the landfill. We have lived here for 22 years. My impression when we first moved here was that the landfill, locally owned at the time, was well-managed and responsive to the community. The landfill was busiest on weekends, when locals were bringing their garbage to the landfill.

Now it is completely different. It is owned by a large publicly traded corporation that appears interested in profit and shareholder returns and not about the community. **I was shocked to learn that only 6.7% of waste is coming from Benton County.** That supports my observations. Every day large semi trucks filled with waste are parading in from the North, in part because other landfills have been similarly challenged and either closed or restricted. The size of the mountain of garbage grows right before your eyes. Do we trust Republic Services to responsibly control what comes into the landfill? Who knows what toxins and forever chemicals are coming into our neighborhood. Republic has a reputation for

The smells from the landfill have become much worse. I can only read about the potential effects on our groundwater, air, and wildlife, because those are not my areas of expertise. However, those concerns make logical sense: rapidly expanding the amount of waste in such a short amount of time does not suggest that Republic is monitoring the volume or the contents of what comes in. The company is gaining a reputation for violating environmental regulations and then covering those up. I understand they are currently under investigation from the EPA for this.

And building a landfill in such a wet climate, on a steep hillside, with fractured basalt rock will increase concerns about leachate, methane, groundwater contamination, and the negative effects on wildlife. ***A properly situated landfill would be in a dry climate, on clay soils, and away from human habitation. Coffin Butte Landfill is none of these.***

We have such amazing, diverse wildlife out here in the Soap Creek valley, including a large herd of elk, bald eagles, herons, and of course our beloved turkeys. OSU raises beef cattle here. These are assets to Benton County that can never be replaced. All are threatened by a landfill expansion. I hope you will read the extensive and detailed report about this from the Mid-Willamette Bird Alliance.

I am also concerned about our property values. We live in a beautiful area, our properties often have some acreage, and we have invested a lot of time and money. We have also paid a lot of property taxes to our county. If Soap Creek has a reputation for being the garbage dump for the State, and if groundwater contamination is found, who would want to live here? I get that we all have to take responsibility for disposal of our own garbage, but why should we have responsibility for everyone else's garbage, at our expense and peril? Is that good for Benton County?

I echo the concerns of the Benton County Environment and Natural Resources Advisory Committee (ENRAC) who voted on April 9, 2025, to recommend to the Benton County Planning Commission to deny the Conditional Use Permit requested by Republic Services to expand Coffin Butte Landfill (CBL). They cited the following negative impacts of the landfill expansion as reasons:

- Air pollution
- Methane emissions
- Water pollution
- Leachate
- Impact to local residents and the community
- Economics
- Regional impacts and coordination

Please vote against this proposal -- and thank you for your service on the commission.

Republic Services – Coffin Butte Landfill
Corvallis, OR

Re: LU-24-027 Opposition to Coffin Butte Landfill Expansion

To Whom It May Concern,

My name is Jaclyn and I am writing this testimony about LU-24-027 (the application to expand the landfill) to express my strong opposition to the proposed application expansion of the Coffin Butte Landfill and to urge denial of this application. My husband and I recently moved onto our dream parcel of land, adjacent to Oregon State University's property, with hopes of building our future here. We have invested nearly everything we had —myself working long hours and enduring brutal shifts as a nurse—to be able to afford land in this peaceful and beautiful part of Oregon.

We were drawn to this area by its natural charm, the warmth of the community, and the promise of a quiet place to call home. Since moving in, however, we've found ourselves battling something we never expected: the *weekly* stench of the landfill as well as fire, environmental, and safety concerns. On a weekly basis now, the smell of garbage sweeps through our property, disrupting our quality of life and making us question the very future we were so excited to build here. We've started with a tiny house and have long-term plans to build a larger home. But with the landfill expansion looming, those plans are now on hold. We are *genuinely* reconsidering whether this is a place where we can live long-term, raise a family, and thrive.

Our greatest dream is to start a small family farm—one that welcomes visitors from all over who are seeking a chance to reconnect with nature. We envision people walking through gardens of wildflowers, de-stressing as they take in the crisp, clean fresh air, and experiencing the simple beauty of this area that first drew us in. Now this may be a broken promise to guests if they happen to be here on a day where we get a *wicked whiff* of the landfill down the road and I have an incredible number of concerns regarding safety and increased costs incurred from a business standpoint.

Without doubt, the landfill expansion *directly* imposes an undue burden on our ability to farm, live sustainably, and share this land with others and would not only seriously interfere with how we would want to use it, but would destroy the character of the area and significantly increase the cost of farming and forest practices for us with our intent to farm and promote a flourishing forest on our now bare land. Furthermore, it would significantly increase our fire hazard risk as well as fire suppression costs; costs we cannot afford. Being far from town in this quaint,

isolated valley with it's long, bumpy, pot-holed country roads and no street lights poses an undue burden and significant increased risk to people engaged in fire suppression; these are protectors, saviors and servants to our community and we have a *duty* to protect them and this land and uphold morals congruent with using our community resources wisely. Protecting the people who would be battling fires, potential hazards and environmental emergencies should be considered of utmost importance and I have many memories of my father, who is a firefighter, coming home from fires reeking head to toe of smoke. I pray the exposures these public servants face don't impact their health in the future but it's a risk they have to take.

Again, I am deeply concerned about the safety & environmental effects of this proposed expansion as well as the undue change in cost this would incur on residents, the majority of whom are older and on a fixed income. Coffin Butte sits in a sensitive area, surrounded by rich ecosystems, charming farmland, and home to majestic wildlife. Not only does expanding the landfill bring up significant safety concerns around fire hazards, increased air and water pollution, and further degradation of this environment we all cherish, it would also burden public improvements, facilities, utilities and services in the area.

In accordance with Benton County's land use regulations, the proposed landfill expansion should not force a significant change in, or significantly increase the cost of, accepted farm or forest practices on surrounding lands devoted to those uses. It should **not** significantly increase fire hazard or the risks faced by those engaged in fire suppression activities. Yet, this expansion would do exactly that—placing added pressure on our environment, our safety, and our ability to steward the land. Furthermore, my testimony directly references provisions within the Benton County Comprehensive Plan and Development Code, with which the landfill expansion proposal *fails* to comply. An expanded landfill inherently runs counter to these values, criteria, and regulations—values put in place to protect exactly the kind of life we are trying to build here.

I've spoken with several neighbors who have lived in this area for years, and many have shared that previous promises made by Republic Services were not upheld—whether about odor control, visual barriers, or limits to expansion. This erodes public trust and makes it difficult to believe that any new assurances will be honored.

I ask that you please **reconsider and deny the application for expansion**, not only for my family but for all the residents who live near Coffin Butte as I feel this would impose an undue burden on public improvements, facilities, utilities and services available to the area.

We are grateful and proud to be part of this community, and we pray we can stay here, but we need to know that our voices—and our safety, health, homes, and hopes—matter more than corporate interests. We beg you to deny the application for the Coffin Butte landfill expansion.

Thank you for taking the time to hear my concerns.

Sincerely,
Jaclyn Batchelor
RN & Proud Soap Creek Resident

Dear Planning Commissioners,

I am writing to you today to express my opposition of LU-24-027, the application to expand the landfill.

My name is Sean Batchelor and I live at 37630 Soap Creek Road. My wife and I have recently moved to the area from out of state, drawn here by the natural beauty of this valley and the strong sense of community. We are aspiring homesteaders and care deeply for the environment and our local resources.

After learning about the proposed landfill expansion, we have become quite worried about the future of this valley where we have decided to plant roots and call our new home. This expansion would severely interfere with the character of the valley. We have already suffered days dealing with the lingering stench of waste. How much worse will it get? What about the possible impact to the water table? To the local wildlife?

In fact, this expansion seems in direct contrast to the statewide goals promoted in the Benton County Comprehensive Plan: “to maintain and improve the quality of the air, water and land resources of the state.”

We thought we were moving to a part of the country that values investment in environmental preservation over corporate greed. I hope we were not mistaken.

Please join me in opposing this landfill expansion, with the goal of keeping this valley beautiful for years to come.

Regards,

Sean Batchelor

Dear Benton County Planning Commissioners,

My name is George Beekman and I live at 3825 NW Hayes Ave. in Corvallis.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill.

I'm know you've received many objections to the expansion; virtually everybody I know is opposed to it. I agree with those people who say it will have a strong negative impact on Corvallis and the surrounding area. The impact could last for generations.

But I'm especially concerned about the larger environmental impact. There's no possible justification for having trucks drive garbage from all over Oregon to create one giant mountain of waste that pollutes a small western community. If we're going to continue to create waste mounds, they should be local waste mounds.

George Beekman

Erin and Lowell Bradley
38578 Hwy 99W
Oppose Lu-24-027

Benton County Planning Commissioners,

I respectfully request the Benton County Planning Commissioners to deny LU-24-027. This proposed expansion would move the landfill even closer to our property line. We are one of the closest southern neighbors. The buffer land is no longer sufficient due to the growing pile of debris. This proposal seriously interferes with the use of our property. Republic Services is currently in violation of County code 53.12. The last few years we have suffered through noise outside business hours, plastic bags blowing from the landfill, over the trees, onto our property, along with strange plumes of dust like material. Some days the odor is unbearable. The proposed expansion does nothing to align with Benton County's 2040 Thriving Communities Act.

Sincerely,
Erin and Lowell Bradley

To the Benton County Planning Commissioners,

Hello, and thank you for your service to our county. I live in Corvallis at 7315 NW Acorn Ridge Drive. I'm writing to you this evening because I'd like to express my opposition to the conditional use permit application of Republic Services (LU-24-027.

I've heard neighbors speaking about this issue for years, but just recently I did my own research into what it all means. I object on several levels:

1) I don't believe that we should be expanding our waste disposal footprint, even if what would come to Coffin Butte wouldn't necessarily be from our area. I believe ALL Oregonians should be reducing landfill bound waste. Expanding landfills does not incentivize this.

2) I'm very concerned about ground water pollution from the landfill. I'm equally concerned about air pollution. This is partly an issue of the stench that the landfill emits, but mostly an issue of the unsafe emissions from a public health perspective. Producing less land-fill bound waste is the answer; not expansion of the landfill.

I also believe that this permit for expansion does not comport with Benton County Code 53.215 (1) and (2). I urge you to deny this request and protect Benton County and Oregon from the harms of an expanded landfill.

Thank you for soliciting public comment. Collectively, we make up a thriving, environmentally sustainable community. Let's keep it that way and protect our collective future!

Sincerely,
Susie Brubaker-Cole -- 7315 NW Acorn Ridge Drive, Corvallis, OR 97330

To: Benton County Planning Commission
Benton County Community Development
4500 SW Research Way
Corvallis, OR 97333-1139

Members of the Benton County Planning Commission:

Thank you for the opportunity to submit comments on the proposed Coffin Butte Landfill Conditional Use Permit Application. I have lived in Corvallis for 45 years and worked in environmental research and monitoring during that time. Though there are many serious issues related to the expansion of the landfill, such as wildlife habitat connectivity, surface and groundwater contamination, I would like to comment on the production of methane and other noxious gases.

The proposed landfill expansion will adversely affect the character of the region, reducing air quality, producing noxious (unhealthy) odors, and releasing increasing quantities of greenhouse gases. We will simply see more of what we see now, incremental degradations with no stated limits to the amounts of outside trash, the expected number of methane flares, or the expected lifespan of the landfill. These ongoing and future degradations in the quality of life in the area are in violation of BCC 53.215 (1).

The decision on landfill expansion has serious implications for Benton County residents' quality of life for decades to come. Management of methane and air quality at the landfill in the recent past (meager, low-tech monitoring, dozens of methane leaks (EPA inspection, and lack of a current air quality permit) does not give one confidence about the future management of an even larger facility. Yet, it appears that the Benton County Planning Commission may be rushing into this decision without the advice of the Solid Waste and Disposal Site advisory councils that have been disbanded. This situation appears to be in violation of Benton County Comprehensive Plan
policy 6.5.5 ("Benton County shall strive for the safe storage, collection, reduction, reuse,
recovery, and appropriate disposal of hazardous waste materials."),

Logic tells us that Republic Services needs to demonstrate that they can manage the existing

landfill well and incompliance before any discussions of expansion can occur. In the meantime, we can debate the appropriate size and life span of this landfill rather than treating it like a growth industry that accepts trash from far and wide indefinitely.

Thank you,
Sandra Bryce

To: publiccomment@bentoncountyor.gov

Subject: Oppose/Deny LU-24—027

Dear Benton County Planning Commissioners,

My name is Sarah Chaney and I live at 3120 NW Manzanita Pl, Corvallis, 97330

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

I began my career out of college managing grants for rural water and wastewater projects in Western states. 39 years ago we knew any landfill or waste storage area needed to be located in a stable area -- not on top of fractured basalt – and constructed properly with an excellent, state of the art liner. I've learned that parts of the Coffin Butte dump are unlined, and it may be leaking already. The county should not permit the entity managing the dump to continue to expand in an area that is not geologically appropriate. In addition, Republic Services has not been managing the existing area in a responsible manner.

I'm sure by now you are well-versed in the myriad negative impacts of the Coffin Butte landfill on residents in Adair Village, surrounding neighbors, the surrounding environment, the huge amounts of leachate that are trucked to the Willamette River, and all the violations of our county planning code. There is also the very real, deadly concern of the methane plumes that affect people as they breathe the air, along with the massive contribution to global warming.

What also struck me is the information that the stench is so strong that it interferes with residents in North Albany from being able to have their windows open in the summer and interferes with the use of nearby property and character of the area BCC 53.215 (1). I live in NW Corvallis and occasionally I will walk outside and the air smells like it used to when we would drive past Albany when there was a pulp mill there. I've wondered about this because I know the mill is long gone. I can't imagine having to live nearby the landfill with the smell. I empathize with parents who are worried about what their children are breathing in.

It's time to turn the page and leave the old ways of dealing with solid waste behind. It's also time to abandon accepting business as usual and not hold companies accountable for the mess they create as they put profits over peoples' and community's health and wellbeing.

Please deny Republic Services' Conditional Use Permit application LU-24-027.

Thank you for the opportunity to submit this letter.

Sarah Chaney

Dear Benton County Planning Commissioners,

I am writing to express my concerns with Republic Services and state my opposition to Conditional Use Permit application LU-24-027. My name is Andrew Child and I live with my partner and her mom at 38483 Plowshares Road. We share a property line with Republic Services.

I am concerned that, being a national for-profit company, Republic Services is motivated by the financial boons of expanding its business at coffin butte without regard for the consequences that it will have for the local community. It is clear that Republic Services' business model is to take as much trash from as many customers as possible in order to maximise profits. I believe that if LU-24-027 is approved they will continue to expand their landfill at a growing rate with no regard for the local environment and watersheds.

My partner's family has lived on this land for over 35 years. The recently accelerating business of the landfill has us deeply concerned about the air and water quality at our home. Frequently we can smell the dump in the air, expansion of the landfill means that we will be subject to more stink and more harmful particulates in our lungs. We also drink from a well, although Republic Services pays lip service to EPA regulations they have been caught with tears in their leachate barriers on multiple occasions. I worry that these leaks will make their way into our watershed and pollute our well.

The financially motivated expansion of this landfill has the potential to make my home unlivable and poison my body with harmful chemicals. This does not serve the needs of the community or further our environmental goals. Please reject LU-24-027 and thank you for your consideration.

Sincerely,
Andrew Child

I've lived in Corvallis since 1989, and moved to northeast Corvallis 18 years ago.
When I moved into town, the dump smell was rare, once or twice a year.
Since I moved to the north part of town the nasty smell of the dump has increased drastically to several times a month.
In the past few years, it has tremendously increased, as I have smelled it from Philomath to Albany and beyond.
I'm really concerned about the amount of pollution spewed out into the air, water, and soil.
I'm concerned about the multiple EPA violations, such as the massive amount of methane leaking from all over the site that is NOT getting addressed, the dumping of (leachate) into the Willamette River, since the water treatment facilities are NOT equipped to clean it up. And so on.
I am extremely concerned with the amount of people in charge of our community who are in favor of an expansion of the landfill, or in denial, or uninformed, that would want to see the expansion go through.
I beg you to take all of these factors in consideration, and deny the expansion of this for profit dump at the expense of the community's safety and well-being.
Sincerely,
François Colomb

April 20, 2025
TO: Benton County Planning Commission, Nick Fowler Chair
RE: LU-24-027

First, I want to thank each Planning Commissioner for all the work you do and for your attention to this issue.
The key consideration I want to address in the Benton County Code is **BCC 53.215(1)** which states:
"The proposed use does not **seriously interfere** with uses on adjacent property, with the **character** of the **area…"**.
On the contrary, I think the new land use: the Coffin Butte expansion, patently defies and is antithetical to this criteria.
As a resident of Benton County, I strongly oppose the application to expand the landfill.
Specifically, I want to address the terms: 'seriously interfere', 'character' and 'area'.

I come at this from a recreationist point of view: as an avid: hiker, biker and kayaker.
I'm a fairly new resident of Corvallis. I grew up in Pennsylvania, across the river from Three Mile Island, lived near the radioactive canyons of Los Alamos for decades, now it's a 'supersize me' landfill called Coffin Butte.
I used to love biking in the Coffin Butte area for its rural character and variety of terrain: forest, farmland, vineyards and parks like Sarah Helmick. Truly, riding out of town, up and over the saddle and out Soap Creek Road in early April, is magical, a kind of Currier and Ives pastoral scene. Maybe when you hit Tampico, you get lucky and see a herd of elk… but ride a little further … and you've entered a Cormac McCarthy novel -an industrial zone with a hulking black mountain of trash, carved out of the butte.
These days, I have to think twice about riding out there. Some routes like Independence Highway, I no longer do: trash litters the roadside and the heavy and often aggressive truck traffic is prohibitive. I'm not alone in this thinking, I know many bikers who feel the same way. Too many stories of close calls and near misses; sooner or later there will be an accident or worse; it really isn't a question of **if**, but **when**. It's just **not safe**.
Safety concerns interfere with enjoying the area, but so do health risks.
Landfills are notorious methane polluters and the third largest source of methane in the country. EPA found explosive levels of methane leaking from Coffin Butte in 2022. In July 2023, Carbon Mapper showed methane at super-emissions levels and a methane plume extending over a mile. In addition to methane thirty different hazardous pollutants are emitted at Coffin Butte, including: particulates, heavy metals, VOC's and sulfides totaling 14,500 pounds in 2021. Other expert testimony speaks in depth to these health risks, but from a personal view once you know this information, you can't unknow it. When I'm hiking or biking, I'm exerting myself, breathing harder, inhaling deeper, longer, noticing, paying attention. If there's wind, a headwind everything gets ramped up. And what is that wind doing with all the toxic incinerator ash capping the landfill…? Now that I've seen that plume on a map, I know where it is and how far it extends; I'm thinking about that. The 'pastoralness' of my ride is gone.
Beyond serious health and safety concerns, Coffin Butte is a brutal assault to the senses:
the noxious smell, the visual degradation to the land and the noise of heavy machinery and trucks.
I've described the current situation, the landfill expansion is simply a multiplier.
For me these factors seriously interfere with this valued recreation area.
The current area of the landfill is178 acres (trash collection), the expansion adds 30% of that for a total of 232 acres; a football field is roughly an acre, so think 232 football fields. But that's not really the 'area' of the landfill.
A landfill -by its very nature- affects the land (forests and farms), water (groundwater, run-off, local watershed) and air that surround it. It helps me to think of 'area' as three dimensional.
Leachate -the percolated liquid moving through the garbage- from Coffin Butte contains dissolved heavy metals, carcinogenic industrial solvents and PFAS, forever chemicals. In 2021, 31 million gallons of leachate was pumped out of the landfill and trucked to wastewater treatment plants in Salem and Corvallis. Municipal water treatment plants are unequipped to process the leachate, so many toxics pass through the plant and are discharged into the Willamette.
But leachate contaminates the area in two distinct ways. It also percolates into the groundwater —from

unlined cells (the old Coffin Butte was a military dump for Camp Adair and didn't require liners) and from leaks in current liners— enters the water table and eventually makes its way to the river about ten miles away. Experts say 'all liners eventually leak' and at least one drinking water well in the area has been contaminated.
Kayaking?? …. on the Willamette….

In short the health and safety risks, the interrupted integrity of this rural area **seriously interfere** with the **character** of this **area**.

Just recently, ENRAC -the Environment and Natural Resources Advisory Committee for the county, after lengthy and extensive research compiled a substantive report on the Coffin Butte Expansion and voted 5-1 to recommend **denial** of Republic's application to expand the landfill.

April 20, 2025
TO: Benton County Planning Commission, Nick Fowler, Chair
RE: LU-24-027

As a resident of Benton County, I strongly oppose the application to expand the landfill.

Welcome to Corvallis: We have a superfund site.

It's called United Chromium Products.
Because superfund sites include so many forever chemicals, they are our forever friends.
But, we might actually have another Superfund site; that will be for you to decide.

In the late 1970s, toxic waste dumps such as Love Canal received national attention when the public learned about the risks to human health and the environment posed by contaminated sites. In response, Congress in 1980 established the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) CERCLA is informally called Superfund. Superfund was created to address health and environmental risks posed by contaminated toxic waste sites. Through a federal process sites like Love Canal-1984, Rocky Flats-1989 and Hanford-1988 ended up on the NPL (the National Priorities List) and became designated Superfund sites.
Oddly, the Hanford site is also in Benton Co, Benton County Washington on the Columbia River.

United Chrome Products is a superfund site just south of Corvallis and owned by the city. Past activities contaminated the soil and groundwater with chromium and other hazardous wastes. EPA added the site to the Superfund list in **1984**. **Chromium contaminated soils were taken off site for disposa**l. Today 40+ years later, the city pumps and treats groundwater to remove contamination and continues to perform long term groundwater monitoring. Forever chemicals, forever friends.
Where were the chromium contaminated soils taken?
I don't know the answer to that question, but I do know that at the Superfund site next door in Linn County waste went to Coffin Butte.

That site, **Teledyne (now Wah Chang)** was added to the Superfund list in **1983.** It is one of the country's largest producers of rare earth metals and alloys. Waste from Teledyne/Wah Chang went to Coffin Butte moreover, it apparently went into an unlined cell. After it began leaking and contaminating groundwater, DEQ required it to be moved to a lined cell in 1992.

So if Teledyne/Wah Chang is a Superfund site, and its waste went to Coffin Butte, maybe Coffin Butte too is a Superfund site.

Consumers Power Inc (CPI) formerly located in Corvallis near Ninth and Circle (now Buffalo Wild Wings, Jimmy Johns and Walmart) produced soil contaminated waste containing wood preservatives (used to treat power poles) and PCB's from leaking transformers. It went to Coffin Butte.

Following the Santiam wildfires in 2020, the EPA identified and removed about 300,000 pounds of hazardous waste from affected properties. It's a long list but included: fuel, petroleum, car batteries, solvents, pesticides, propane tanks, ammunition and asbestos. It went to Coffin Butte.

Toxic fly ash from Covanta's Marion Waste Incinerator containing dioxin and heavy metals is used as a daily cover at the landfill.

The following are headlines from the Gazette-Times:
1976 "Wah Chang waste ignites, landfill operator cannot use water for fear of explosion"
1977 "Radioactive material found at Coffin Butte, Radium 222, as deadly as plutonium, concerns about groundwater contamination"
1979 "Commissioners require home developer to notify buyers of proximity of home to dump"
1979 "Diesel soaked pot plants to be taken to landfill"
1996 "Local Landfill got OK to pump polluted water into Willamette"

All this toxic waste **deposited** over decades at Coffin Butte produces leachate -in 2021, 31 million gallons- which is pumped and trucked to local municipal wastewater treatment facilities unequipped to deal with it, so many toxics including PFAS -forever chemicals- pass through the plant and are discharged into the Willamette River. The subsurface geology at CB is poorly understood, so the extent of groundwater contamination is unclear, but groundwater connects to surface water and the landfill is only about ten miles from the Willamette River.

Finally ENRAC -the Environment and Natural Resources Advisory Committee for the county, after lengthy and extensive research published a substantive report on the Coffin Butte Expansion and voted 5-1 to recommend denial of Republic's application to expand the landfill.

Welcome to our town.
I understand the local theater company is contemplating a production of An Enemy of the People.
We have a superfund site, we may soon have another.

Dear Benton County Planning Commissioners,

We are writing because we stongly oppose Republic Services Conditional Use Permit application LU-24-027 and urge the Planning Commission to deny this application, as it is in direct violation of Benton County Code 53.215 (1) and (2).

We live at 28925 Blaze Drive, which is located on the backside of the proposed expansion. We get our water from the well that is located on the north end of our property. We not only use the water for daily household use but we also have a small hazelnut orchard and garden that relies on regular irrigation throughout the summer months.

We are worried about the sustainability of the well and the serious impact the expansion could have. There is a very real possibility of groundwater contamination that could do irreparable damage to our home and our financial well being. I also don't have a lot of faith about the landfill's site preparation phase that might affect groundwater levels and cause our well to go dry during the summer months. That would severely interfere with our orchard and plants and cost a lot of money.

The smell is so bad at times I have to stay inside, which interferes with the numerous chores that have to be done. It not only affects my property, but I was at Adair Park with my dog the other day and had to immediately return home due to the horrendous methane stench. It's a lovely park that should be shared by all, but it's not possible if you can't breathe and your eyes start watering.

The operational noise is already so loud and obnoxious, with the rattling of windows as the sounds of the semi tractor trailers downshift and grind along, it would only increase with the expansion. Since there would be no cap on how much garbage could be brought in, the traffic and noise would only increase, disturbing the rural community atmosphere and turning it into a heavily industrialized area.

We understand Republic Services' main goal is to make as much money as possible, regardless of the harmful consequences that may occur. You need only to look at the numerous unanswered code violations for this site and their other operations to know they are not acting in good faith.

The consequences of your decision will have long term ramifications for the surrounding community for generations to come.

Please follow the recommendations of the Environmental and Natural Resources Advisory Committee (ENRAC) and deny/oppose LU-24-027.

Sincerely,

Steve Frazier and Lue Ann Davis

Hello County Commissioners

I'm writing because I'm VERY CONCERNED about expanding the dump to accommodate garbage from all around Oregon. The current dump is already an eyesore and often smells.

I'm a mountain bike rider and occasionally ride in the area of Poison Oak hill and do not want to have our outdoor playground further degraded.

My wife and I came to live in the Corvallis area because we wanted to get back to nature. We, and our regional neighbors, paid dearly for this privilege (high cost of living). The dump diminishes the appeal of this region and is already impacting valuations. From my understanding the dump does contribute to the public coffers but:

1. The amount of money is small especially when compared to the tangible and intangible costs.
    a. Costs to argue about expansion
    b. Costs to attempt to police the dump's compliance failures
    c. Costs to our infrastructure
    d. Costs to our health
    e. Reduction of our enjoyment of your own "backyard"
2. I'm willing to pay more taxes to not lose the valuable nature that we so enjoy.

Joe Dody

Subject: LU-24-027, EPA Enforcement in process, Applicant's Burden of Proof fails to assure air quality

Dear Chair Nicholas Fowler, and Members of the Benton County Oregon Planning Commission,

In mid-2022 the EPA performed an announced inspection of Coffin Butte Landfill, and found many environmental infractions, which led them to open a case file on the operations there. In mid-2024 they returned to Coffin Butte Landfill unannounced with an inspection team and again found numerous infractions, including an uncapped well venting landfill gas straight into the atmosphere. Imagine, if you will, being an inspector who wanders out onto 110 acres of landfill and discovers something as serious as that after walking only about 250 yards.

On January 15, 2025, the EPA's years-long investigation of Coffin Butte Landfill moved into a new phase: active enforcement proceedings. The Enforcement Manager for EPA Region 10 served a process on Republic Services, in the form of a Section 114 Information Request (attached). I have researched this Section 114 Information Request and written an Explainer to detail what this enforcement action is, how it came about, and how it relates to the applicant's Burden of Proof (attached), which I urge you to read.

Republic Services did not disclose this EPA action and have no narrative about it in their application now before you; it was uncovered by the Benton County Disposal Site Advisory Committee through a Freedom Of Information Act request.

Perhaps needless to say, the EPA Enforcement process would seem to render the applicant's Burden of Proof insufficient, because that Burden of Proof had cited lack of enforcement action by regulators as credentials for the applicant going forward. I recommend that the Planning Commissioners deny LU-24-027, the application to expand Coffin Butte Landfill, due to the gravity of many questions raised about the accuracy and completeness of the application and the environmental ethic of the applicant, and how those questions threaten the character of the area, the uses of nearby lands, the quality of Oregon's air and climate, and the health and peace of mind of the landfill's neighbors. "Burden of proof" means the applicant must make a convincing case for their environmental stewardship, and to me the EPA Enforcement action has put the final nail into the coffin of that idea.

Sincerely,

Ken Eklund
Past Chair, Disposal Site Advisory Committee of Benton County

writerguy-cube2.png

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Subject: LU-24-027, accurate portrayal of community concerns about the landfill

Dear Chair Nicholas Fowler, and Members of the Benton County Oregon Planning Commission,

In the Burden of Proof in the application to expand the landfill, the applicant focuses on concerns raised by stakeholders during their failed 2021 expansion attempt or brought up during the Benton County Talks Trash (BCTT) process. They do not address the concerns of the actual community in the landfill's area, especially as those concerns have escalated in number and impact since 2021 and BCTT.

The volunteers on Benton County's Disposal Site Advisory Committee (DSAC) are charged by the state to listen to community concerns about the landfill and to compile them into a Community Concerns Annual Report (CCAR) each year, which is sent to Oregon DEQ. The applicant is familiar with DSAC and its mission, as one of DSAC's members is the landfill's Designated Representative and their votes on the CCAR are a matter of record.

These CCARs thus provide valuable insight into how the landfill is impacting the community from the point of view of "boots on the ground," and I consider their elision from the Application to seriously undermine the Application's credibility. You on the Planning Commission are to judge whether or not the applicant has met the burden of proof that exists in the real world, not in some cherry-picked effigy of it.

What I've seen in DSAC meetings over the years is that Republic has no answer for the hundreds of concerns that the people of the community bring forward. As in the application, there's a shrug and a reference to regulatory enforcement, as if it's up to regulatory enforcement to solve the problem, not Republic.

If you look through the hundreds of concerns captured in these CCARs, and look at the last columns of each, which are about "action taken to address" the concerns, you'll only find one act that actually solved anything: in the 2021 CCAR, when the Planning Commission unanimously denied the landfill's application to expand.

I urge you Planning Commissioners to take action likewise, and in your discretion to deny LU-24-027, the application to expand the landfill. Because, among many reasons, the Applicant's disregard for the community runs counter to the directive in the Benton County Comprehensive Plan that bids you "to maintain and improve the quality of the air, water and land resources of the state; to protect people and property from natural hazards; to maintain

and improve the variety of economic and social activities that are vital to the health, welfare, and prosperity of Oregon's citizens" – which is an aspiration that will take more than a shrug and helpless gesture toward the letter of the law to accomplish.

Sincerely,

Ken Eklund

Subject: LU-24-027, compared to LU-21-047: little has changed, nothing has gotten better

Dear Chair Nicholas Fowler, and Members of the Benton County Oregon Planning Commission,

I'm attaching the Decision and Findings from the last application to expand the landfill, in 2021. More analysis to come later, but the main point is, very little has changed since then, and nothing has gotten better, regarding the application's merits. I urge you to deny the application, for all the reasons put forward by the Planning Commission back then, to derive their unanimous decision.

Sincerely,

Ken Eklund

The EPA investigation of Coffin Butte Landfill has moved into its next phase

EPA Enforcement: a timeline and explainer

Ken Eklund
April 15, 2025

What's happening?

The public has known for a while that the EPA was investigating Coffin Butte Landfill: neighborhood groups brought up concerns about the landfill to Senators Merkley and Wyden in the years 2021 – 2023, and their staffs took the matter to the EPA. In May 2024 Senator Merkley asked Michael Regan, then Head of the EPA, about Coffin Butte Landfill in hearings. Regan confirmed that the EPA had opened a case and was actively pursuing it against the landfill.[1]

That investigation has now progressed to EPA enforcement action against the landfill. On January 16, 2025, the Enforcement Manager for EPA Region 10 served a process on Republic Services, in the form of a Section 114 Information Request.[2] [3]

This process document came to light when Bailey Payne, the Solid Waste Coordinator for Benton County, filed a Freedom Of Information Act request on behalf of the county's Disposal Site Advisory Committee, which was seeking more information about the EPA investigation. Republic Services did not disclose to you, the Planning Commissioners, that the landfill had been served a Section 114 Information Request in their final update to their Application to expand the landfill, which they filed with the County on March 14, almost two months after the EPA served the Request on them.

What does it mean to be served a Section 114 Information Request by EPA Enforcement?

- Technically, it's a "Clean Air Act (CAA) Section 114 Information Request," which is functionally a government subpoena.

- This Section 114 Information Request requires the landfill's Environmental Manager to turn over a comprehensive list of environmental records to the EPA. Air quality regulations require the landfill keep these records of their self-testing and monitoring.

- There are two kinds of Section 114 Information Requests: "rulemaking" ones and "enforcement" ones. This is an enforcement IR: it was filed by by the Manager of the Air and Land Enforcement Branch of Region 10 of the EPA, and the document states it is requiring records so that it can determine "whether any violations of the Clean Air Act have occurred."

- The document requires someone at Republic to certify that the information provided is "true, accurate and complete" under threat of fines or prison.

- The EPA investigation has moved into its next phase: assessing compliance.

What is the implication of the Section 114 Information Request by EPA Enforcement?

It implies that the EPA intends to initiate enforcement action as warranted. The Section 114 Information Request is a crucial tool in the EPA's arsenal for gathering data and ensuring accountability in matters related to air pollution. It's often the first step in enforcing compliance.

It may be useful to think of the Section 114 Information Request as the environmental equivalent of an audit by the Internal Revenue Service. In both cases it's an effective litigation tactic to query the underlying data in a defendant's possession, because that can naturally lead to findings that the defendant (1) is not maintaining data properly, or (2) has altered or destroyed data, or (3) has not been complying with regulations, all of which are offenses. With both the IRS audit and the Section 114 Information Request, the action often represents the initial stage of a process that can end up assessing civil penalties, issuing compliance orders, or initiating legal proceedings.

What are possible reasons EPA Enforcement has taken this step?

The implication is that the EPA has grounds to believe that Republic has committed some infractions and that Coffin Butte Landfill is out of compliance. What's not known at this time is how serious the believed infractions are. Throughout this process the EPA has declined to discuss their investigation, as it is an active legal proceeding.

Here's what we know the EPA knows about the landfill, that may be grounds for or contributing to its Section 114 Information Request:

- The EPA inspected the landfill twice, once in 2022 and again in 2024, and both times found larger numbers of breaches, and breaches much more serious in scale, than what Republic's self-monitoring had reported. The 2024 inspection, for example, found an uncapped landfill gas well leaking at 230 times the actionable amount.[4]
- The EPA required Republic to remediate the 61 breaches identified by the EPA's 2022 inspection, but there seems to be no corresponding remediation log for these breaches in Republic's subsequent reporting to Oregon DEQ. It's possible those leaks were never remediated.
- In September 2024, the EPA widely issued two Enforcement Alerts to municipal landfills such as Coffin Butte. These Enforcement Alerts warned of a series of regulatory infractions that the EPA had noted during recent inspections. This Section 114 Information Request may be a follow-up to these Enforcement Alerts, again because of infractions observed during the EPA's 2022 and 2024 inspections of the landfill.[5]

- Carbon Mapper, a climate science nonprofit, partnered with the EPA to survey hundreds of landfills in 2023, detecting and quantifying their methane leaks from the air. Their survey of Coffin Butte Landfill revealed four super-emitting leaks, all active in different locations on the landfill at the same time, throughout the 10-day survey period.[6]
- Carbon Mapper estimated that during that survey period, Coffin Butte Landfill was leaking methane at a rate of 1.7 metric tons per hour, which is almost twice the average rate for super-emitting landfills as a class. So Coffin Butte Landfill may have been prioritized for enforcement action.[7]
- Oregon DEQ collaborated with the EPA on the 2024 inspection, and may have shared information about its own enforcement action against the landfill happening at that time, regarding Republic's non-compliance with requirements to update its landfill gas collection and control system.
- The EPA has the Community Concerns Annual Reports compiled by Benton County's Disposal Site Advisory Committee for the years 2021-24. These Annual Reports summarize concerns and complaints by members of the public. Each report has hundreds of community concerns, with "odor" and "methane" being the most prevalent issue. The 2024 CCAR summarizes 233 community reports, for example, with odor comprising 59% of total issues raised and methane being an additional 7%.[8]

What effect does the EPA Enforcement action have on Republic's application to expand the landfill?

In my view, EPA Enforcement's action defeats Republic's expansion application, because it causes the application's Burden of Proof to fail. This outcome is apparent when you view this legal landscape from a Planning Commissioner's point of view – your point of view. To approve the expansion application, a Planning Commissioner would have to affirm Republic's proofs as sufficient; they'd have to publicly certify that an expanded dump couldn't pose significant problems – and do so while the EPA is actively investigating the current dump for significant problems. This seems like an impossible position for you as a Planning Commissioner to take.

EPA Enforcement's action can unravel the expansion application so thoroughly because the application's Burden of Proof has been built around a core misdirection all along: it focuses on regulations and regulatory power. The Planning Commission's criteria, however, do not say anything about regulations: they focus on actual harms.

In the world of the applicant's Burden of Proof, it's impossible for these two statements to both be true: (a) "the applicant is complying with environmental regulations" and (b) "the landfill is causing environmental harms." The Burden of Proof attempts to construct a binary world.

In the world of the Planning Commission's criteria, however, it's quite possible for both statements to be true. You regularly make judgments on how land uses will work (or not) in the real world.

Put another way, Republic's Burden of Proof means that their application must show that the landfill expansion won't cause significant harm to nearby properties, character of the area, etc., or it fails. Their proof for this has been "we comply with environmental regulations" – this is said throughout their Burden of Proof. But now that the EPA has said "let's see all your compliance records" explicitly to see if Republic really is complying, the EPA has slapped big red question marks all over Republic's proof. And a proof with big red question marks on it is no proof at all.

What has been Republic's response to the EPA Enforcement action?

- **No disclosure.** Republic did not disclose in their final Burden of Proof that Coffin Butte Landfill had been served by the EPA, nor offer the Planning Commissioners any narrative about it.

- **Misleading statement maintained.** Republic's Burden of Proof includes a letter that states "we have not received notification from the EPA that… Coffin Butte is the subject of any pending enforcement action" dated the day the EPA Enforcement initiated its action.[9]

- **Delay.** You as a Planning Commissioner might reasonably expect Republic to deal with this EPA Enforcement action forthrightly and expeditiously, to "clear the air" for their expansion application. Instead, Republic Services has acted instead to delay the EPA's examination of landfill records by filing two extension requests to date. With these extensions, they have made it impossible for the EPA to take further action until after the public comment period for the application is closed.[10]

Summary.

On January 15 the EPA's investigation of Coffin Butte Landfill moved into a new phase: active enforcement proceedings. The Enforcement Manager for EPA Region 10 served a process on Republic Services, in the form of a Section 114 Information Request. Republic Services did not disclose this development and have no narrative about it for the Planning Commissioners. The EPA Enforcement process would seem to render the applicant's Burden of Proof insufficient, because that Burden of Proof focuses on the lack of enforcement action by regulators as credentials of the applicant. I recommend that the Planning Commissioners deny LU-24-027, the application to expand Coffin Butte Landfill, due to the applicant's failure to make a convincing case for their environmental compliance, and due to the gravity of many questions raised about the accuracy and completeness of its application.

1:52:32
Senator Merkley: [In my] home state: Coffin Butte Landfill. In June of 2022 the EPA sent out a team to measure the methane coming out of it, because of local concerns. The inspection resulted in recording 61 leaks, including three measurements that maxed out the instrumentation that was being used, at 70,000 parts per million. So: can you give me a short version of what action the EPA is taking? This is now 23 months ago that the field inspection occurred. If we need a longer discussion, I'd like to follow up with you to make sure that there is going to be action regarding landfills like this that are out of compliance.

1:53:10
Mr. Regan: Well, I will say that our enforcement arm has been very aggressive at looking at these methane leaks and opportunities here. This is one that as you said was discovered in 2022. Unfortunately it is an active enforcement situation, so I can't speak to that without betraying the confidence or the legal obligations that I have. But I can tell you that we are coordinating with the State of Oregon – it's an active case, and we are laser-focused on this case.

1:53:43
Senator Merkley: Great, because if you have a landfill which maxes out the instrumentation – which is I think quite rare? – it should probably rise to the top of the list of places to act on. I'll convey to the folks in Corvallis and nearby that you are on the case.

2021 Community Concerns Annual Report
Coffin Butte Landfill, Benton County, Oregon

Prepared By: The Disposal Site Advisory Committee of Benton County

Preparation Period: September 2023 to January, 2024

Version: September 15, 2024 – *Approved September 19, 2024*

The duties of Benton County's Disposal Site Advisory Committee (DSAC) are outlined in Oregon state law—specifically in ORS 459.325, which includes the requirement that "the committee shall prepare an annual written report summarizing the local citizens' concerns and the manner in which the owner or operator is addressing those concerns." The Oregon Department of Environmental Quality will consider this report as part of reviewing a solid waste permit for Coffin Butte Landfill.

As requested by Benton County staff, DSAC has prepared the following staff report summarizing community member concerns regarding Coffin Butte Landfill in 2021. Concerns listed in this report have been compiled using information from the Coffin Butte Landfill and Pacific Region Compost Annual Reports for 2021, concerns sent to Benton County government, concerns presented during Benton County Disposal Site Advisory Committee or Solid Waste Advisory Council meetings, and concerns presented during a Planning Commission public hearing about an application by the owner to expand Coffin Butte Landfill. This Report includes community complaints received by the County government either in written form or as live testimony in public meetings, as well as various notices reported directly to the landfill, including three odor complaints, and sixteen complaints sent directly to Oregon DEQ, whose reasons for complaint were not documented to us by DEQ.

In mid-2021, the landfill owner, Republic Services, filed a Conditional Use Permit (CUP) application to expand the landfill site; this application was denied by the Benton County Planning Commission in early December. This application process generated many expressions of concern from community members, about the landfill, its operations, and its potential to expand. This annual report intends to encapsulate the hundreds of community member concerns received throughout that public hearing process.

The public's many topics of concern include: acceptance of out-of-county waste, hazards to groundwater quality and air quality, odor, greenhouse gas emissions, roadside litter and debris, impacts to wildlife, impacts to vehicle traffic, and impacts to the viability of local business operations and value and livability of area properties and character of the area. A focus of concern were the impacts the landfill may have on a county arterial road, Coffin Butte Road, and its intersection with Highway 99W. Almost every testimony relating to the CUP expressed concern that the landfill may expand beyond its currently permitted area; many also were concerned that the landfill owner would continue to expand the landfill's intake/wasteshed.

Please note that the response column does not reflect a full resolution of each community member complaint. In some cases, for example, individual comments include concerns that were both related and not related to the proposed expansion, with only a subset resolved by the denial of the expansion application.

2021 Community Concerns Annual Report for Coffin Butte Landfill, Benton County, Oregon

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response

1a-1	4/15/21	not recorded	Coffin Butte Landfill	not recorded	Landfill Annual Report	price	exact day not recorded	none
1a-2	4/15/21	not recorded	Benton County	not recorded	Coffin Butte Landfill Concern Log 2021 (Benton County)	roadside litter and debris along Highway 99W	exact day not recorded	Notified Republic Services, requested further investigation
1a-3	7/15/21	not recorded	Benton County	not recorded	Coffin Butte Landfill Concern Log 2021 (Benton County)	"other"	exact day not recorded	none
1a-4	7/27/21	Bruce Bartlett	Inga Williams	email	1_NoAddress_Bartlett-.pdf	traffic, safety, access/ egress, undue corporate influence	"…Coffin Butte Road would have to be closed. That means the only reliable access-eggress of heavy equipment would be Tampico Road or Soap Creek to the Lewisburg Saddle. That is absolutely unacceptable to the families that live in Soap Creek and Tampico"	Benton County denied application to expand landfill
1a-5	7/27/21	Debbie & Norm Johnson 28831 Tampico Rd	General Benton County	Letter/PDF	38_Johnson-.pdf	Impacts to blue Heron Rookery/Bald Eagles, Closure of Coffin Butte Rd, impact to Tampico cultural and natural features, concerns about diminishing landfill capacity/life, operating noise, lack of public engagement	Note: date of this complaint/concern is approximate	Benton County denied application to expand landfill
1a-6	7/28/21	Joel Geier	Inga Williams; County Commissioners	email	2a_Geier-.pdf	groundwater contamination, impact on property values	"As an internationally recognized professional groundwater analyst, I'm very concerned about the potential impacts of this proposed landfill expansion on the wells that we and our neighbors depend on for our households, and the impact on our property values if those wells are contaminated by leachate from the expanded landfill."	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-7	7/31/21	Willow Holdorf	Inga Williams	email	3a_NoAddress_WHoldorf-.pdf	impacts on property values, worsening odor, impacts of noise, traffic and safety, access/ egress	“The property value will plummet and we’ve spent 32 years working on and improving this property, including the house with all of my late father's handiwork. My father, John Holdorf, worked the land and built our home. Our property is his legacy as he lost his battle to cancer in 2013 and what he built was his life's dream.”	Benton County denied application to expand landfill
1a-8	8/6/21	Cynthia R Clapp	Inga Williams	letter + pdf	14_CynthiaClapp-.pdf	concerns about landfill’s effect on water quality of both spring and groundwater systems, safety hazard of increased traffic on Tampico Road (especially to children / school bus stops), negative changes to character of the neighborhood, loss of storm and evacuation access, inadequate buffers, noise, traffic	Live on Poison Oak hill, property borders the proposed expansion area. Very troubled with the lack of time available to provide a response. Water comes from well and spring-fed system, concern for area water quality	Benton County denied application to expand landfill
1a-9	8/7/21	Ada Hyla E. Holdorf	Inga Williams	email	4_Aholdorf-.pdf	loss of important through-route and scenic route (Coffin Butte Road), increased vehicle noise, truck pollution, loss of forest conservation, historical and rural character. Landfill expanding beyond local demand, increased size and intake	Currently lives on property close to landfill, dramtic expansion of landfill. A new private road would dramatically increase vehicle noise through Tampico and Soap creek valley due to the rise 130 and drop 100 that the heavy trucks would need to navigate. Expansion clearly contravenes the interests of forest conservation and rural use for which adjacent lots are zoned.	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-10	8/8/21	Kyle and Jessica Ulassin	General Benton County	letter + pdf	7_Ulassin-.pdf	traffic study of Tampico flawed, road would be more dangerous, would change it from a rural forested road to a commercial district, evac routes	traffic study of Tampico was flawed as it was taken during COVID when traffic was way down, better understanding of actual flows and impacts is needed. Use of larger trucks will change the character of the area from a rural forested road to a commericial district. Tampico will get more dangerous with the increased traffic. Would not be comfortable letting kids cross the road to visit neighbors. Would not be the environment that they moved to to raise their kids 5 years ago. Improvements needed for Tampico are not clearly defined. Loss of access to Coffin Butte Road in the event of an unanticipated emergency.	Benton County denied application to expand landfill
1a-11	8/9/21	Lyla Houglum	Inga Williams	email	5_Houglum-.pdf	inclement and emergency egress via Coffin Butte Road; huge increase in truck traffic along Tampico Road; safety issues for bikers and pedestrians; landfill would be abrogating a long standing commitment to use the quarry rather than expanding	Both Sulphur Springs and Tampico Road where they intersect with Soap Creek Road can be impossible to negotiate when ice-covered, due to freezing rain or heavy wet snow. We need to have Coffin Butte Road remain open as a way out in winter and emergency situations. Tampico Road is not equipped to handle heavy truck traffic as it is an artery of a rural neighborhood. In addition, the increased truck traffic on Tampico Road will be dangerous for families with children who live on that road, bikers, walkers, and runners using the road, and for the residents who cross the road to retrieve their mail. Various assurances made previously by the landfill operators: Since the mid 1990s and again in the early 2000s, the changes granted at those times were based on the use of the rock quarry for the next set of garbage cells and that those cells would allow continued landfill operations until '2035 but until 2030 at the very least.'	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-12	8/9/21	Catherine Holdorf	Inga Williams	email	6_CHoldorf-.pdf	impact to water supply, land improvements, increased odors, traffic, evac routes, dangerous new entry/exit for trucks	property is on the south side of that ridge at 38483 Plowshares Rd, 60 acres purchased 32-33 years ago, worked hard to manage the land putting thousands of hours into wildlife management plantings, Allowing the Landfill to dump so close to property would negate the added value of years of labor. Landfill on the same ridge would jeopardize the potability of our aquifer and ability to even get water. Odors would likely be worse with the landfill that much closer. Closing Coffin Butte Rd to through traffic, thereby re-routing onto Tampico Rd, is a dangerous idea. Locals have had to use Coffin Butte Rd as an alternative exit nearly every year. This year, Tampico had downed trees and power lines after the ice storm, but we were able to get out via Coffin Butte Rd. Other years, there has been impassable snow or ice or downed trees, etc. Imagine if a fire swept through Soap Creek or down Tampico. How would people get out? Tampico is a popular road for walking and bikes, putting trucks on the road would be asking for accidents. Coffin Butte Road has good visibility both ways. The Tampico entrance is in a low spot and does not.	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-13	8/9/21	Lue Ann Davis and Steve Frazier	Inga Williams	letter + pdf	9_Davis-Frazier-.pdf	groundwater contamination, impact on property values, loss of evacuation route, road more dangerous	Potential contamination of groundwater, increase in the noise, losing fire evacuation route and alternative route during weather impacts, increase in traffic impacts on Tampico Road. Tampico is already a narrow winding road, how would it handle the additional traffic and large trucks, property values would plummet based on the expansion. Was not given direct notice about the proposed changes. Feels like there is an effort to rush through this decision quickly to help a large corporation pursuit profits by avoiding the need to shut down the quarry.	Benton County denied application to expand landfill
1a-14	8/9/21	Nancy Whitcombe	Ken Kenaston	letter + pdf	10b_Whitcombe-.pdf	loss of evacuation route	Coffin Butte Road is by far the best route out of the valley in the case of an emergency. Does not meet the criteria outlined in Section 53.215 'The Proposed use 'does not seriously interfere with uses on adjacent property, with the character of the area' 'does not impose an undue burden'. It is irresponsible and dangerous to approve an application which taking away a neighborhood's most vital, safest egress and replacing it with...nothing. In the event of an earthquake, ice storm, wildfire, or an everyday medical emergency, seconds can make the difference between life and death.	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-15	8/10/21	Ryan and Lisa McAlister	Inga Williams	letter + pdf	8_McAlister-.pdf	increased traffic, unknown improvement needs, road degrading, road more dangerous	concerned about the increased vehicle traffic, road noise, property value erosion. Currently quiet rural neighborhood. Higher vehicle count would make road degrade faster, conditions would be unsafe for pedestrians, extent of improvements needed on Tampico are not currently known, improvements may be very expensive based on line of sight challanges. realignment may have a signficnt impact on residents. Section 53.215 (2) of the code has not be adequatly addressed regarding the impact on public improvements needed	Benton County denied application to expand landfill
1a-16	8/10/21	Nancy Whitcombe	Inga Williams	email	10a_Whitcombe-.pdf	loss of evacuation route	During ice storm, coffin butte road was the only exit. Getting rid of the straightest, flatest, driest, least treed, most direct road out of our valley and replacing it with a 510' tall pile of other counties' garbage There will absolutely be a time in the coming years that Coffin Butte will be needed as access for fire fighting.	Benton County denied application to expand landfill
1a-17	8/10/21	Nancy Whitcombe	Inga Williams	email	10c_Whitcombe-.pdf	loss of evacuation route	Applicants page four, at the grading of reconfigured Coffin Butte. There is a 50% slope to the south of the reconfigured Coffin Butte, and what looks like a 30% slope (of garbage) to the North at the saddle. Is that a tenable exit road in an earthquake? Is a road with a 10% grade a tenable exit road in the next ice storm? Is a road that heads *up* into the treeline a tenable exit road in a fire? Taking away a *public* road that is well served for egress/ingess in any emergency and replacing it with a road which is vulnerable in *all* emergencies is madness	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-18	8/10/21	Rose Holdorf	Inga Williams	email	11a_RHoldorf-.pdf	groundwater contamination, impact on property values, loss of evacuation route, road more dangerous	Expansion would cause the landfill to expand very close to home and family's land. added noise, distasteful smell, or added truck traffic on Tampico Road .worried about the safety and stability of my family and neighbors. our water table will likely be severely affected by the landfill expansion, and the aquifer from which we drink may well become toxic. With the added risk of wildfires, I am scared that our fastest evacuation route to Highway 99, Coffin Butte Road, will disappear. the land and the house make up the majority of my family's financial legacy. What will happen to the value of our property if the landfill extends to our doorstep? proposed landfill expansion threatens my life and livelihood, as well as that of my friends and family. the proposed expansion is against Benton County codes (listed above). Coffin Butte Road must remain an evacuation route for me and my Soap Creek and Tampico neighbors. Republic Services are already permitted to collect waste from up to five counties at our Benton County landfill at its current size. Why should Benton County residents be at risk of a Coffin Butte expansion that absorbs the waste from people and industry outside Benton County?	Benton County denied application to expand landfill
1a-19	8/10/21	H. Christine Smith	Inga Williams	letter + pdf	12_Smith-.pdf	traffic, evac routes, potential costs to support expansion	Concerned as a benton county resident about additional traffic, evacuation routes, potential costs to support increased use and the short time given to comment.	Benton County denied application to expand landfill
1a-20	8/10/21	Lewis L. Nunnelley	Inga Williams	letter + pdf	13_Nunnelley-.pdf	traffic, evac routes, potential costs to support expansion	Concerned as a benton county resident about additional traffic, evacuation routes, potential costs to support increased use and the short time given to comment.	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-29	8/12/21	Willow Holdorf	Inga Williams	email	3b_NoAddress_W Holdorf-.pdf	impacts on property values, well water impacts, worsening odor, impacts of noise, traffic and safety, access/egress	Property value will plummet, spent 32 years working on improving the land. Water table that they draw their well water from is next to expansion area which could easily be contaminated, odor is already noticable many times throughout the year and the expansion will likely make it worse, noise will likely increase since the expansion will bring the landfill closer to property. Tampico doesnt have shoulders and the larger trucks would have to use this road, impacting the many cyclists, including her, that use it. Road closure will take away disaster relief outlet for Soap Creek Valley. Tree lined Tampico and Saddle exits are lined with trees, in the event of a fire, Coffin butte road may be the only viable exit.	Benton County denied application to expand landfill
1a-30	8/12/21	Ken Funk	Inga Williams	letter + pdf	15b_Funk-.pdf	ground water, traffic, loss of old growth	lived on Tampico for 20 years, leachate could contaminate well, diverted trucks would increase noise/traffic endangering pedistrians, widening road would remove many old growth trees altering the character of the cooridor, traffic reports are incomplete, proposal is very vageu about impacts to groundwater	Benton County denied application to expand landfill
1a-31	8/12/21	Chrystal Young	Inga Williams	letter + pdf	16_Young-.pdf	purchased land with promise not to expand south, well impacts, wildlife impacts, evac route, climate concerns long truck routes	at time of purchase, parents were told landfill would not cross coffin butte road, land to the south of coffin butte road is one of the few remaining natural oak savannahs. Stream running through is salmon spawning habitat. Landfill crossing road will severely impact this habitat. Landfill expansion could impact well. Concerned about closing coffin butte as an evac route. Tampico is frequently impassible when it snows. Republic trucks coming in from 5 counties has environmental impacts	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
1a-32	8/12/21	Faye Yoshihara & Kevin Kenaga	Inga Williams	letter + pdf	17_Yoshihara-Kenaga-.pdf	evac routes, expansion into conservation zone, groundwater contamination, increase traffic, noise, smells	don't understand why landfill would be allowed to expand into forest conservation zone, loss of primary evacualtion route, groundwater contamination,. Increse in the noise, foul smells and air pollution. County revenues should not come at the expense of county residents	Benton County denied application to expand landfill
1a-33	8/12/21	Janet L. Ohmann	Inga Williams	letter + pdf	18_Ohmann-.pdf	insufficent time to respond, evac route, safety, pollution, access to EE Wilson, land values	insufficient amount of time to respond, serious threats to health and safety posed by changes to the road system, Coffin Butte safest, more reliable evac route, leaving two poor choices (sulfer spirngs, tampico) both winding and heavily wooded, frequently impassible in winter. Routing traffic from coffin butte to these other roads is courting disaster. Latest ice storm in 2021 shut down these roads for several days. Six months later county has yet to remove all downed vegetation. Coffin Butte road provides access to EE Wilson. New proposed cell would bring landfill closer to residents increasing levels of noise, odors and nighttime light pollution, all of which are already noticable. Expanding to save quarry access not in the publics best interest	Benton County denied application to expand landfill

1a-35	8/12/21	Joseph Crockett	Inga Williams	letter + pdf	21_Crockett-.pdf	Loss of evac route, traffic study flawed	Coffin Butte is needed access for 99W emergencies, Coffin Butte is an important link for bicycles, farm vehicles and slow moving vehicles. Applicant fails to address the improvements that would need to be made to Tampico road, without improvements, traffic incendents are likely to increase, costs of improvements are likely to be born by the taxpayer, traffic count is flawed as the numbers were taken during the height of the pandemic, application states there will be no traffic impacts, but clearly there would be if you packed all traffic onto Tampico, which will seriously interfere with local transportation systems. "permanently vacating a valued public road that has served the community since the early 1900s, for the short term benefit of a private enterprise so they can have a few more years to sell gravel, is not going to be looked upon in the future as a wise planning decision"	Benton County denied application to expand landfill

1a-36	8/12/21	Bryan Cornell	Inga Williams	letter + pdf	22_Cornell-.pdf	safety issue, suggested alternative route, applicant damaged road county paid to fix	the section of tampico considered for expansion is narrow and winding, with blind spots due to curves and humps re-open the vacated section of Coffin Butte Road from Soap Creek Road West to Wiles Road then North on Wiles Road to Robison Road and East out to Hwy 99W. This would require replacement of two bridges over Soap Creek, significant improvements to the intersection of Robison Road and Hwy 99W and paving. Wiles Road can also serve as the route for East bound truck traffic off of Tampico Road as well as North bound traffic off of Soap Creek Road. This route is flat, straight and wide making it a much better truck route than Tampico Road from Soap Creek Road to Hwy 99W. In 2017 republic Services completely destroyed the paved surface of Coffin Butte Road during operations to move overburden dirt from the North side of the road to a stockpile on the South side. Republic reimburse the county for damages when Coffin butte Road had to be resurfaced, pushing the cost of their operations off on the taxpayer	Benton County denied application to expand landfill
1a-37	8/12/21	Doug Bisland	Inga Williams	email+pdf	23_Bilsland-.pdf	impact to groundwater and well water supply, evac route, increased traffic	all surrounding residents have wells that could be contaminated in an expansion, water escaping from new leachate ponds a serious concern, closure of Coffin Butte Road would limit egress for local residents and close a vital evac route, Tampico would see much heavy traffic including logging trucks, increased noise, traffic and pollution for local residents	Benton County denied application to expand landfill
1a-38	8/12/21	Lauri Richer	Inga Williams	email+pdf	24_NoAddress_Richer-.pdf	Concerns about the landfill expanding beyond its permitted area, increasing rate of garbage intake	Do not want to become a dumping ground for other counties	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? 1a-39	8/12/21	Michael Larkin	Inga Williams	letter + pdf	25_NoAddress_MLarkin-.pdf	insufficent time to respond, evac route removal impacts to emergency response	two weeks is not even 10% of the time needed to understand the proposal, study the data, detirmine what data is missing and analyze results against the code. As a member of the fire dept, concerned with emergency access if Coffin Butte Road is closed. Coffin Butte was last to close during the ice storm and easist to open. By far the saftest egress in case of a fire or earthquake. Closing Coffin Butte Road will add four additional minutes for mutual aid fire response to an emergency including the fire chief and captian to respond to emergencies, a difference between life and death. Closing Coffin Butte is not a public improvement, this access road has served the public well for 75 years	Benton County denied application to expand landfill
1a-40	8/12/21	Patti Haggerty	Inga Williams + Commission	email+pdf	26_Haggerty-.pdf	evac route, safety, lack of details around improvement cost, odors, safety, trash on the roadways	Coffin Butte was designed to carry heavy vehicles, Tampico is not suitable for heavy traffic. The intersection of Tampico and 99 is not suitable for a truck exchange. This intersection has poor line of site and it would take a huge investment ot modify it for this type of use. Closing Coffin Butte because Republic doesn't want to use other existing cells is not reasonable. Why should Benton County be the dumping ground for all of Oregon? Noxious oders, trash on the sides of road, potential groundwater contamination. This is a buisness opportunity for the landfill operator with all the costs being born by county residents. Why don't any of the documents provided explain how a private entity can demand the closure of a public road? These documents also only state the new route 'may' be improved without providing any details on the cost or timeline for doing so.	Benton County denied application to expand landfill

1a-41	8/12/21	David Vesely	Inga Williams	letter + pdf	27_Vesely-.pdf	impact to the heron rookery	Been a wildlife biologist for 25 years, most of which has been focused on conservation and research. Herons nest in the poplar trees since those trees became fully mature. Observations led me to believe there are between 15-25 active Heron nests in these trees. Code states that this is a sensative wildlife area. BCC 87.220 specifies the need to reivew any development activity to guage impact of development work. Expansion of the landfill poses serious threat to the rookery due to tree loss and additional traffic/noise. Request confirmation that ODFW/ODF have been notified of this development plan.	Benton County denied application to expand landfill
1a-42	8/12/21	Millie Burton-Funk	Inga Williams	letter + pdf	28_Burton-Funk-.pdf	stop accepting out of county trash, potential cost of expansion, the landfill will expand beyond its currently permitted area	Communities should be in charge of their own local trash. Costs of expansion are too high, widening extraneous roads is expensive and unnecessary when there is an existing road that already serves this purpose. Coffin Butte should stop accepting trash from other counties with the exception of Polk since the landfill is on the border of that county. This will help to encourage other county's to come up with local solutions.	Benton County denied application to expand landfill

1a-43	8/12/21	Judith Kerr, Robert Brunck	Inga Williams	letter + pdf	29_Kerr-Brunck-.pdf	evac route, safety, quality of life for residents on Tampico, ground water concerns	Surrounding community was not given adequate notice for a response. Coffin Butte is a critical road. Closing this road would be dangerous to public health and safety. During the 2021 ice storm, Coffin Butte was the only egress route for many residents while Tampico was shut down. Coffin Butte is the safest road due the limited number of trees. Soap Creek runs directly into Coffin Butte and provides safe acccess to Hwy 99. If Tampico is expanded, what happens to hikers and bikers that use the road? Having Tampico as the main road for access to the landfill destroys the quality of life for residents living on Tampico. Large expansion of the landfill can have pontential impacts on the ground and well water that is used by local residents	Benton County denied application to expand landfill
1a-44	8/12/21	Rebecca Merja	Inga Williams	letter + pdf	30_Merja-.pdf	evacuation route, noise and odor pollution, safety issues driveway line of sight/Tampico intersection	Process seems to fall short for public notification considering the potential impact of the permit to expand. Concerns about losing the best evacuation route with the close of Coffin Butte Road. Rerouting through Tampico, through a neighborhood, is likely to cause additoinal time, conjestion and risk. There is a safety issue with making Tampico alternative route, many driveways have limited sight distance due to hilly terrian. Same is true with the intersection of Tampico and Hwy 99. Negative Quality of life impacts for the residents, heavier traffic, increase in noise, dust and exhaust creating negative impacts to the character of the neighboorhood.	Benton County denied application to expand landfill

1a-49	8/17/21	Nancy Whitcombe	Xan Augerot	email	10d_Whitcombe-.pdf	loss of evacuation route, no notice to EMS personnel	"Soap Creek Valley is very vulnerable to natural disasters – earthquake, ice storm, wildfire -- one of which we have experienced this very year. There aren't many ways out, and most of the ways out are steep, narrow, curved, tree-lined roads that are easily blocked. Coffin Butte is the one exception to this rule. It is flat, wide, straight, and not heavily forested. I estimate that hundreds of households – probably thousands of people – depend on Coffin Butte as a lifeline. the Fire District had not been notified of, nor consulted about, the proposal by either the developer nor County planning staff. I suggest that, in addition to incorporating Adair's comments into Staff's recommendations, the Benton County Sheriff's Office department of Emergency Planning be consulted to determine what effect this closure might have on Law Enforcement and EMS response times in the event of a medical emergency." 2a-1	9/7/2021	Nancy Whitcombe	Daniel Redick	email	10d_Whitcombe-.pdf	impact to emergency access/egress; concerns that emergency agencies not consulted/notified about changes to landfill scope and operations	The issue of the future of the landfill be addressed in detail via a comprehensive plan amendment or as a first step in the next comprehensive plan, invite the participation of stakeholders and provide that the future direction of the landfill be studied in the detail it warrants. The 2007 Comprehensive Plan, the landfill was projected to have a useful life of 43 years. Landfill & quarry usage at that time was very different from 2005, disposal volumes per year were 580,000 tons. By 2020, disposal volumes per year were 860,000 tons.The number of vehicles at the landfill has increased enormously, 127% in 2020 Stakeholders -- neighbors, EMS personnel, the fire district, Emergency Preparedness, law enforcement officials -- would all like a say in the future of the landfill. A Comprehensive Plan amendment or a section dedicated to issues of the future of the landfill in the upcoming Comp Plan is the right way to thoughtfully address consideration of numerous issues and help guide Advisory Committees. Issues: 1) Clear mission creep since 1974 when the original permit was provided 2) What impact has the landfill had on property values 3) Do forest zones around the landfill provide a buffer, or will the landfill expand into these zones eventually 4) Should there be more stringent requirements for conditional use permits 5) should there be a rock quarry and landfill in the same location? 6) to what extent does Benton county want to be the recipient of the states garbage?	Benton County denied application to expand landfill

2b-16	10/13/21	Kate Harris	Solid Waste Advisory Council	live testimony, chat testimony	SWAC Oct 13 2021 70104458751177 41060.mp4, minutes, 10.13.21 SWAC meeting - chat.pdf	concerns that the landfill will expand beyond its currently permitted limits; concerns that the County be good stewards of the land for all residents; concerns about landfill hazards to new area residents		Benton County denied application to expand landfill
2b-17	10/13/21	Tom Hewes	Solid Waste Advisory Council	chat testimony	10.13.21 SWAC meeting - chat.pdf	concern about water quality in groundwater and in Soap Creek downstream from the landfill; concern that landfill expansion will have negative impacts on nearby property owners and wildlife		Benton County denied application to expand landfill

Community Concerns Annual Report 2021: Set 3a, Written Testimonies from Oct 14 through Oct 20

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
3a-1	10/14/21	George Dragich	Ned Harris, Benton County	phone call	10_Dragich-.pdf	noise from equipment, noise from trucks; stray debris on hwy99 and independence; traffic danger; property values;	“Tampico where I raised my children is dangerous as it is. Speeding cars very close to our mail boxes. Now Trucks? There goes all our life long investments. This is rural residential property, not the entrance to a land fill. “	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
3a-2	10/14/21	Joseph Crockett	Inga Williams	letter	3_Crockett-.pdf	closing of Coffin Butte Road, danger and discomfort of alternate routes	Closing Coffin Butte Road presents an undue burden for those seeking to stay on rural roads for safety as well as a quieter experience. Not only are the alternatives routes longer, they are more dangerous due to having to use 99W which has higher traffic volumes, higher speeds, and higher noise than our rural Roads.	Benton County denied application to expand landfill
3a-3	10/14/21	Janet L Ohmann	Inga Williams	letter	4_Ohmann-.pdf	closure of road, lack of compensation for land transfer; violation of 53.215 criteria, traffic danger and inconvenience of alternate route, loss of emergency route, loss of recreational use, impact to environment, impact to livability, impacts to hydrology, noise, odors, light polution, stray garbage, increased traffic, impacts to wildlife; capacity for county residents' waste	The lifespan of our Landfill is finite, and the faster we fill it up with garbage from outside our area, the sooner Benton County will have to seek more expensive options for our waste disposal I'm also concerned about impacts to wildlife habitat and other ecosystem services provided by the forest, woodland, and savannah in the expanded dump. the Tampico Rd./Hwy. 99W intersection has poor visibility, limited turning lanes, and requires rapic acceleration into traffic. The alternate route proposed is longer, inconvenient, and a poor replacement for Coffin Butte Rd.	Benton County denied application to expand landfill
3a-4	10/14/21	William J Briskey	Benton County	letter	5_Briskey-.pdf	increased traffic loads on poor road conditions, wind carried debris, odors		Benton County denied application to expand landfill
3a-5	10/15/21	Nancy Whitcombe	Inga Williams	email	9_NoAddress_ Whitcombe-.pdf	flaws and inaccuracies in application materials; lack of citizen involvement	" There are so many flaws & inaccuracies in the material presented by the applicant that it is basically impossible to note them out in the short time citizens have been given to respond to this mammoth proposal, and the hundreds of pages of material the applicant has dropped at (after) the last minute."	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
3a-6	10/15/21	Mona Goetzinger	Inga Williams	email	11_Goetzinger-.pdf	increased traffic; closure of road; traffic on Whiles; Whiles bridge condition		Benton County denied application to expand landfill
3a-7	10/15/21	Joel Geier	Benton County Planning Commission, Ken Kenaston	letter	7_Geier-.pdf	short notice for comment; failure of supplemental materials to address issues in original proposal; lack of public access to planning department staff report; egress; lack of report from ORDEQ; impact to adjacent land; increased dust, noise, odors; decreased buffer zone; lack of reclamation plan; cultural and archaeological impact; great blue heron rookeries; misleading statement of public benefit to county residents	" Back in May, the Applicant gave you a flimsy, incomplete, and often misleading application. Their recent supplementary information filed in haste by their consultant on October 5th attempts to paper over the gaps and errors with arguments, opinions, and promises from their consultants."	Benton County denied application to expand landfill
3a-8	10/15/21	Becky Merja	Linda Ray	email	8_Merja-.pdf	loss of public road; traffic impact on Tampic Rd residents; truck traffic impact; lack of benefit to local waste management; concern that the landfill will expand beyond its currently permitted area	" I also take issue with the need to expand the landfill because Republic Services accepts garbage from 22 Oregon counties and a couple from Washington State. .. Benton County only contributes about 12% of the total annual tonnage. How long would the current cell last if some of those loads were redirected to fill sites closer to where the trash originated?" " Coffin Butte Road is the entrance to Soap Creek Valley filling this area with trash and permanently cutting off access is irresponsible."	Benton County denied application to expand landfill
3a-9	10/18/21	Dr. Eric Rehm	Inga Williams	email	5 -EricRehm-.pdf	concerned that existing waste reduction tools are not being employed		Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
3a-10	10/18/21	Jim Martinez	Inga Williams	email	7 - NoAddress_JimMartinez-.pdf	concerns about general decline in property values and livability/ desirability of the County; concerns about roadside trash; concern that the landfill will continue to expand	"With the proposed expansion, bucolic Corvallis that is considered to be one of the nation's most "Desirable Cities" will be viewed "Dump City." Why not? That will become our most prominent feature."	Benton County denied application to expand landfill
3a-11	10/19/21	Cheryl Martinez	Inga Williams	email	2 - NoAddress_CherylMartinez-.pdf	concern that the landfill owner's current path will lead to landfill closure and greater public costs, and saddle the County with future problems; complaints about excessive roadside litter; concern about the unslghtly visual appearance of the dump and its becoming a negative landmark for the area; concerns about methane emissions and groundwater contamination; concerns about high carcinogen levels in trash coming into the landfill; concern that the negative effects on water quality will be of vital importance in a climate-changed future; concern that the landfill will expand beyond its currently permitted area	"As it is, when visitors come in, they comment on "The Dump" alongside the road. Corvallis is quickly becoming known as "The Place With The Landfill", not for the benefits of OSU, the Willamette River or its tributaries, clear skies and beautiful forests/fields and a welcoming community."	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
3a-12	10/20/21	Stratos Flanders	Benton County Planning Commission	letter	12 - KnifeRiver.pdf	concern that landfilling will cut off access to rock resources in the Coffin Butte quarry	"We currently are mining rock at a slower pace than Republic is bringing in materials. If Republic is unable to expand its operations at the landfill, Knife River would have to leave the property with millions of tons of rock left unmined. We believe the current arrangement – we are able to mine the rock and create a lower-cost option for customers, and Republic fills the land back in with their materials – has been beneficial for all, including Benton County residents."	Benton County denied application to expand landfill
	Community Concerns Annual Report 2021: Set 3b, Live Testimonies to Republic Services, October 20							

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
4a-1	10/21/21	Mark and Marcella Henkels	Benton County Planning Commission	email	14 - Mark-Marcella-Henkels-	Increased amount of fallen trash littering surrounding roadways; windblown trash disrupting work on farms; trucks causing runoff water pollution; Benton County absorbing trash from many other counties; disruption from heavy truck traffic; impact on traffic from closing Coffin Butte Road	"A simple review of the proposal shows how this is not in the long-term interest of the county and that it would have an immediate negative impact on the lives of county residents."	Benton County denied application to expand landfill
4a-2	10/21/21	Patti Haggerty	Inga Williams	email	15 - PatriciaHaggerty -	Closing Coffin Butte Road: impact on traffic on Tampico road, no sufficient plan to improve Wiles and Robinson Roads (the proposed new truck routes), Republic having access to expansion further north but choosing to close Coffin Butte Road instead	"I reviewed the Development Code and have found no section that says that if you own property on both sides of a road, you may take it away from the public. Is this to be the new norm, that private entities can abscond with public rights of way at will?"	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? (Benton County group, Republic Services, etc.)	How was the Complaint / Concern expressed? (call, email, testimony, etc.)	Source/Record of Complaint / Concern	Character of Complaint / Concern	Notes	Response
4a-3	10/21/21	Kendra Callahan	Benton County Planning Commission	Letter	9 - KendraCallahan-.pdf	concerns about noise, smell, garbage blowing from the site, dust, vibrations from trucks, air pollution; concerns about impacts to the character of the area; impacts to forestland and wildlife, including loss of a wildlife corridor; concerns about loss of a public improvement (Coffin Butte Road); concerns about road safety; concerns about loss of an emergency evacuation route; concerns about cyclist safety; concerns about security of power and telephone services; concern that the landfill will expand beyond its currently permitted area	"In closing, I would like to state again that I object strongly to the Conditional Use Permit set forth by Republic Services to expand their landfill onto a different part of their property and to their request that the county closes Coffin Butte Road and gives it to Valley Landfill. Coffin Butte Road DOES NOT have to be closed for Republic Landfill to continue their operations. They can continue disposing of trash into the quarry area as was previously planned. They can extend the life of the landfill by taking less garbage from counties outside of Benton County. They can extend the life of the landfill by separating out more recyclables or separating construction waste from other waste. It is short sighted to think that expanding the landfill and closing a public road is the only way forward. But most importantly, this application clearly does not meet the conditions of approval stated in Benton County Code."	Benton County denied application to expand landfill
4a-4	10/22/21	Doug Pollock	Benton County Planning Commission	email	3 - DougPollock-.pdf	Concerns about emergency access/ egress, increased vehicle miles and other effects of closing Coffin Butte Road	"I would strongly encourage Planning Commission members to visit the area and drive the various routes. If you do, think about what would happen if Tampico Road were closed for several days (as it was during last winter's ice storm). Coffin Butte Road was our only safe route out of the Soap Creek Valley. Or consider what might happen in the event of a catastrophic wildfire. Both Tampico Rd. and the proposed re-routing via Wiles/Robison Rd. are much less direct. In an emergency, egress/ access is everything. Coffin Butte Road provides the best egress/access by far."	Benton County denied application to expand landfill

Index Number	Date of Complaint /Concern	Community Member Name(s)	Who was the Complaint / Concern expressed to? 4a-7	10/22/21	Robert Larkin	Inga Williams	email	17 - RobertLarkin-	Closing Coffin Butte Road, closing off routes for emergency services/ evacuation.	“Coffin Butte Road exists today as a Benton County Minor Arterial. That road belongs to Benton County. It is used by residents and commerce. It provides access and travel savings. Most importantly, it provides a route for emergency services as well an evacuation route... If Coffin Butte Road must be moved, so be it, but DO NOT close it!”	Benton County denied application to expand landfill
4a-8	10/22/21	Robert Morris & Jackie Calvert	Inga Williams	email	18 - RobertMorris-JackieCalvert-	environmental impact, impact on wildlife, impact on native plants, public not given enough time to respond	“Our home is located on 8 acres, a portion is native, untilled prairie. We are deeply concerned to learn that the Planning Commission may allow a disposal site expansion in Benton County. We are working very hard to preserve and protect our prairie by planting native grasses, trees and flora. Allowing the enlargement of the Coffin Butte landfill goes against one of the main reasons we located here. Especially since there is no advantage to our local environment, that we can imagine. We foresee only detrimental effects.”	Benton County denied application to expand landfill
4a-9	10/22/21	Faye Yoshihara & Kevin Kenaga	Inga Williams	Letter	19 - Yoshihara-Kenaga-	closing Coffin Butte Road, access/egress, impact on traffic, impact on wildlife, advisory council not given enough time to properly research/ evaluateimpacts		Benton County denied application to expand landfill
4a-10	10/22/21	Jeff Morrell 38464 Hwy 99W Corvallis 97330	Inga Willams Benton County Planning Commission	email/PDF	JefferyMorrell-.pdf	No buffer from odor,noise, roadside litter, reduced property values,Safety concerns re: closure of Coffin Butte Rd., increased road maintenance, Annual reports that misrepresent landfill lifespan	Jeff Morrell was a SWAC/DSAC member for 2 decades	Benton County denied application to expand landfill

4a-13	10/22/21	Ken Eklund	Inga Williams	email/PDF	10-KenEklund-.pdf	concern about landfill operator locking in high impacts to community; concern that landfill operator is not planning for future improvements to landfilling methods and technologies; concern that the landfill will expand beyond its currently permitted area	“Republic is advancing their request for a Conditional Use Permit now, many years before it’s actually needed, because they would like to develop the garbage mountain alongside Highway 99 first and fill in the quarry last. This is because the quarry produces profit for them, and because they are not impacted by the many costs for the garbage mountain over the road and alongside Highway 99. Approving the Conditional Use Permit now would lock in a future where Benton County residents do suffer these impacts and pay these costs, and they pay them in full and soon. Rejecting the CUP application now defers all these many costs for decades and may obviate some of them entirely, depending on what happens in the region and in Oregon to manage wastestreams and encourage reuse and recycling.”	Benton County denied application to expand landfill
4a-14	10/22/21	Ken Funk	Inga Williams, BC Planning Commission	email	11 - KenFunk-.pdf	concerns about traffic flows and safety, and the character of the Tampico Road corridor, due to the landfill closing Coffin Butte Road; concerns about leachate leakage and spills contaminating groundwater; concerns about consequent loss of property value and livability; concerns about inadequate and incomplete studies and testing; concern the landfill is rapidly growing; concern the landfill will expand beyond its currently permitted area	“It seems a great injustice for my Benton County neighbors and me to bear the risks associated with the rapidly growing pile of waste from people in Salem, Portland, and as far away as Washington state who wish to simply discard their trash and forget about it.”	Benton County denied application to expand landfill

4a-28	10/28/21	Suzanne Ortiz Corvallis	Inga Williams BC Planning Commission	Email/PDF	SuzanneOrtiz-.pdf	Closure of Coffin Butte Rd, safety/EMS access, volume of out of area trash. Environment safety, future (of BC residents)		Benton County denied application to expand landfill
4a-29	10/29/21	Heidi Igarashi	Inga Williams, for Planning Commission	email	HeidiIgarashi-.pdf	Landfill is transforming the character of the area as it grows. Concerns about the landfill increasing its footprint and impacts. Heavy truck traffic, trash escaping from vehicles heading to the dump, odors. Concerned about hazardous consequences for air and water quality including PFAS; concerned about contamination risk to the physical/natural environment including streams, well water and wildlife; concerned about impact on livelihood of local farmers; concerned about increased concentrations of invasive grass species and invasive bird species (attracted to trash) competing with native birds for feeding and nesting. Concerned about Coffin Butte Road closure threat and commensurate severe impact to community and emergency vehicle ingress/egress	"I want to emphasize that all over the Willamette Valley landfills are closing because the lands here are very fertile, and because there are relatively high levels of precipitation that prevent efficient landfill functioning. Although I recognize the problems associated with the "not my backyard" response, objections to this notion assume equivalent backyards. There are other areas in Oregon where land is cheaper, population density is minimal, and there is less precipitation. The Coffin Butte area is enjoyed by hikers, bicyclists, and equestrians, as well as by hunters and others outdoors people. It seems ludicrous and short-sighted to allow this expansion given these factors."	Benton County denied application to expand landfill

4a-68	11/1/21	Brandon Trelstad	Inga Williams, Greg Verret Benton County Planning Commission	Email/PDF	BrandonTrelstad-.pdf	Wildlife impacts, water contamination, landslide risk, lack of any community outreach by the landfill owner; lack of community support; scar on our natural systems; public impacts to enhance private profitability; violating core community values (2040 Thriving Communities Initiative); impacts to health and vulnerable populations	"It's hard to believe in 2021 with our knowledge of human-caused global environmental devastation that we would not collectively try to find a solution to the antiquated practice of landfilling. As holders of the public trust, and protectors of the future, governments are the only entities with a continued, large-scale responsibility to protect the livability of our communities. The County is our social memory and must protect the vulnerable, not the profitability of private entities. "It's strange to talk about expanding a trash landfill in the year 2021. After so much great work the County did during the 2040 Thriving Communities Initiative, it would be a shame to not actualize the Core Values the County took such care to create."	Benton County denied application to expand landfill

Cc: Jones-Cobb, Brandon
Subject: INFORMATION REQUEST Regarding Coffin Butte Landfill, Corvallis, Oregon

Dear Mr. Macnab,

The U.S. Environmental Protection Agency (EPA), Region 10 seeks information concerning the Coffin Butte Landfill owned or operated by Valley Landfills Inc., a wholly-owned subsidiary of Republic Services, at 2917 Coffin Butte Road in Corvallis, Oregon. The enclosed Information Request is issued to Valley Landfills Inc. pursuant to Section 114 of the Clean Air Act (CAA), 42 U.S.C. § 7414.

Please confirm receipt of this email. Thank you for your cooperation. If you have any questions regarding this Information Request or wish to request an extension, please contact me, Sara Conley, at (206) 553-6914 or conley.sara@epa.gov. For legal matters or questions from legal counsel, please contact Brandon Jones-Cobb, in the Office of Regional Counsel, at (206) 553-6917 or jonescobb.brandon@epa.gov.

Thank you,

Sara Conley

Re: **INFORMATION REQUEST** Regarding Coffin Butte Landfill, Corvallis, Oregon

Dear Ian Macnab:

The U.S. Environmental Protection Agency (EPA), Region 10 seeks information concerning the Coffin Butte Landfill owned or operated by Valley Landfills Inc., a wholly-owned subsidiary of Republic Services, at 2917 Coffin Butte Road in Corvallis, Oregon. The enclosed Information Request is issued to Valley Landfills Inc. pursuant to Section 114 of the Clean Air Act (CAA), 42 U.S.C. § 7414.

Under CAA Section 114, 42 U.S.C. § 7414, EPA is authorized to require the submission of records, reports and other information for the purpose of determining whether any violations of the CAA have occurred and for other purposes of the CAA. Valley Landfills Inc. is required to provide information and documents in accordance with the enclosed Information Request within **60 days** of your receipt of the request. If you anticipate being unable to fully respond to this Information Request by the specified date, you may request an extension within **10 days** of receipt of this request. Include a justification for your extension request. If timely submitted, EPA will consider your request and may extend the deadline.

Submit your response to this Information Request or request for extension to:

Sara Conley
Conley.sara@epa.gov
Air Enforcement Officer
Air Enforcement Section, Enforcement and Compliance Division, EPA Region 10

Please ensure the enclosed Statement of Certification is signed by a duly-authorized officer or agent of Valley Landfills Inc. and returned with the response to this Information Request.

Failure to timely respond fully and truthfully to this Information Request may subject you to civil penalties pursuant to Section 113 of the CAA, 42 U.S.C. § 7413. In addition, providing false, fictitious or fraudulent statements or representations may subject you to criminal penalties under 18 U.S.C. § 1001. Your response to this Information Request may be used by EPA in administrative, civil or criminal proceedings.

Thank you for your cooperation. If you have any questions regarding this Information Request or wish to request an extension, please contact Sara Conley, at (206) 553-6914 or conley.sara@epa.gov. For legal matters or questions from legal counsel, please contact Brandon Jones-Cobb, in the Office of Regional Counsel, at (206) 553-6917 or jonescobb.brandon@epa.gov.

Sincerely,

MORGAN JENCIUS Digitally signed by MORGAN JENCIUS

ENCLOSURE 1
CAA INFORMATION REQUEST

Republic Services, Valley Landfills Inc.

A. INSTRUCTIONS

1. Provide a separate narrative response to each question and subpart of a question in this Information Request. Mark each answer with the number of the question (and subpart, if applicable) to which it corresponds.

2. For each question, provide a copy of each document relied on or referred to in the preparation of the response or that contains information responsive to the question.

3. Indicate on each document produced in response to this Information Request, or in another reasonable manner, the number of the question to which it corresponds.

4. Provide the name, title, and business contact information for each person who prepared or was consulted in the preparation of your response. If you have reason to believe that there may be persons able to provide a more detailed or complete response to any question contained in this Information Request, or who may be able to provide additional responsive documents, provide the name, title, and business contact information for each such person and the additional information or documents that they may have.

5. If you believe a question is not applicable to the Facility, explain the reason for that belief.

6. The information requested must be provided whether or not you regard part or all of it as a trade secret or confidential business information. You may assert a confidentiality claim covering part or all of the information submitted, pursuant to Section 114 of the Clean Air Act (CAA), 42 U.S.C. § 7414 and 40 C.F.R. Part 2, by placing on (or attaching to) the information, at the time it is submitted to EPA, a cover sheet, stamped or typed legend, or other suitable form of notice employing language such as "trade secret," "proprietary," "company confidential." Allegedly confidential portions of otherwise non-confidential documents should be clearly identified, and may be submitted separately to facilitate identification and handling by EPA.

   Information covered by such a claim will be disclosed by EPA only to the extent and by the procedures set forth in statutes and 40 C.F.R. Part 2, Subpart B. See 40 C.F.R. § 2.301 for additional rules governing certain information obtained under the CAA. Note that certain categories of information, including "emission data," are not entitled to confidential treatment. Unless you make a claim at the time you submit the information in the manner described in 40 C.F.R. § 2.203(b), it may be made available to the public by EPA without further notice to you. See also 41 Fed. Reg. 36902 (Sept. 1, 1976).

   If you claim all or part of your response as a trade secret, proprietary, or company confidential, please also return with your response a complete substantiation of your claim. Enclosure 3 contains the information you must provide in order to substantiate your claim. If you require additional time to substantiate your confidentiality claim, contact the individuals listed in the cover letter.

B. DEFINITIONS

All terms used in this Information Request have their ordinary meaning unless such terms are defined in this Information Request; or 302 of the CAA , 42 U.S.C. §§ 7401 or 7602; or 40 C.F.R. Part 63, Subpart AAAA National Emission Standards for Hazardous Air Pollutants: Municipal Solid Waste Landfills. For purposes of this Information Request:

1. The terms "you" or "Respondent" mean Republic Services, Coffin Butte Landfill, Valley landfills Inc., and its subsidiaries, officers, directors, managers, partners, employees, contractors, and agents, as applicable.
2. "Abandoned" means, when used in reference to a component of the gas collection system, a component that is no longer operating.
3. "Document" means any object that records, stores, or presents information, and includes, without limitation, email, writings, memoranda, contracts, agreements, records, or information of any kind, formal or informal, whether wholly or partially handwritten or typed, whether in computer format, memory, or storage device, or in hardcopy, including any form or format of these. If in computer format or memory, each such document shall be provided in translation to a form useable and readable by EPA, with all necessary documentation and support. Include all attachments to or enclosures with any responsive document.
4. "Facility" means the municipal solid waste landfill owned or operated by Respondent located at Highway 99 & Coffin Butte Road Corvallis, OR 97330.
5. "Gas Collectors" means vertical wells, horizontal collectors, or other collection devices capable of collecting and extracting gas at the landfill and meets the requirements of 40 C.F.R § 63.1962 and parallel provisions under the other EPA Landfill Air Regulations.
6. "Gas collection system" means the active or passive system of wells or similar collection components used to collect and move gas at the landfill.
7. "Gas Collection and Control System" or "GCCS" means an active or passive system of wells or similar collection components to move gas at the landfills to associated control devices per the requirements at 40 C.F.R. § 63.1959(b)(ii) and parallel provisions under the other EPA Landfill Air Regulations.
8. "Gas Collection and Control System Design Plan" or "Design Plan," means a plan that is developed by the landfill and meets the requirements of 40 C.F.R. § 63.1981(d) and parallel provisions under the other EPA Landfill Air Regulations.
9. "Gas Control System" means the systems that treat and/or destroy landfill gases collected by the gas collection system, including but not limited to flares, gas to energy projects, and renewable natural gas plants, as well as any other control devices and treatment systems used to fulfill the control requirements of 40 C.F.R. § 63.1959(b)(2)(iii) and parallel provisions under the other EPA Landfill Air Regulations.
10. "Landfill" means the municipal solid waste (MSW) landfill operated by Republic Services, Coffin Butte Landfill, or Valley Landfills Inc..
11. "Landfill Air Regulations" refers to 40 C.F.R. Part 60, Subpart WWW; 40 C.F.R. Part 60, Subpart XXX; 40 C.F.R. Part 62, Subpart OOO; 40 C.F.R. Part 62, Subpart GGG; 40 C.F.R. Part 63, Subpart AAAA; and State Plans for the Control of Emissions from Existing Municipal Solid Waste Landfills incorporated under 40 C.F.R. Part 62 pursuant to 40 C.F.R. Part 60, Subpart Cf or Cc, as applicable.

12. "LandGEM" means EPA's Landfill Gas Emissions Model, which is an automated estimation tool with a Microsoft Excel interface that can be used to estimate emissions for total landfill gas, methane, carbon dioxide, nonmethane organic compounds, and individual air pollutants from municipal solid waste landfills.
13. "Leachate" means liquids, including landfill gas condensate inside the landfill.
14. "Owner or Operator" means any Person who owns, leases, operates, controls, or supervises the Facility.
15. "Person" or its plural or any synonym thereof, is intended to and shall embrace and include any individual, partnership, corporation, company, association, government agency (whether federal, state, local or any agency of the government of a foreign country), or any other entity, and includes Republic Services, Coffin Butte Landfill, and Valley Landfills Inc.
16. "Surface Emission Monitoring or SEM" means monitoring surface concentrations of methane at collection areas of a landfill, as required by 40 C.F.R. §§ 63.1960(c)&(d) and parallel provisions under the other EPA Landfill Air Regulations.
17. "You and/or Your" means Republic Services, Coffin Butte Landfill, Valley Landfills Inc. and all its agents, servants, employees, representatives, investigators, accountants, auditors, attorneys, experts, consultants, contractors, and others who are in possession, custody, or control (actual or constructive) of relevant information that is otherwise available to You or may have obtained information for or on Your behalf.

C. INFORMATION REQUEST

Provide the following information for the Facility. Unless otherwise specified, provide all responsive information for the time period between January 1, 2022 and the date of this Request.

General Applicability:

1. Provide the name and address of the legal owner of the Facility. If the owner and operator of the Facility are not the same entity, provide the name and address of the operator of the Facility and provide contracts/legal documents between entities as they relate to ownership, purchase or buy-back agreements and contract operation.

2. Provide copies of any submitted initial or amended design capacity reports.

(*As referenced in* 40 C.F.R. §§ 63.1981, 63.1983(a) and parallel provisions under EPA's Landfill Air Regulations).

Permits and Applications/Alternatives/Variances/Previous Enforcement:

3. Provide copies of the following documents for the Facility:
    a. All permit(s) in effect as of the date of this Request and the permit application(s) You submitted to obtain each such permit;
    b. Permit application(s) pending as of the date you received this Request; and

c. The original construction permit(s) and permit application(s). If an original construction permit has been modified, provide the current version of the construction permit.

4. Provide a copy of the following:
    a. All applicability determination or regulatory interpretation requests to and responses from the Oregon Department of Environmental Quality or EPA;
    b. All approvals of alternatives to Landfill Air Regulation requirements issued by Oregon Department of Environmental Quality or EPA; and
    c. Alternative compliance timeline requests to and responses from the Oregon Department of Environmental Quality or EPA.

5. Provide information regarding citizen complaints that the Landfill has knowledge of between January 1, 2022, and the date of this request. The information should include:
    a. Date and time;
    b. Location at or near the Landfill which is the subject of the complaint;
    c. Copy or description of complaint;
    d. Corrective action or monitoring done as a result; and
    e. Name and contact information for the person who submitted the complaint.

Semi-annual/Annual Reports:

6. Provide the semi-annual and annual reports between January 1, 2022 and the date of this request in an electronic format such as a searchable PDF.

(*As referenced in* 40 C.F.R. §§ 63.1959(a)-(b), 63.1981(h) and parallel provisions under EPA's Landfill Air Regulations).

Waste Type and Quantity Data:

7. Provide the monthly quantity (short tons or megagrams, labeled) of waste accepted at the Landfill between January 1, 2022 and the date of this request, including:
    a. A breakdown by type of waste (e.g., municipal solid waste, construction and demolition, asbestos, sludge, etc.);
    b. List the types and quantities of waste that were excluded from the maximum expected gas generation calculation and the rationale for excluding those types of waste; and
    c. List the types and quantities of waste that are classified as "inert" in facility reports for the Greenhouse Gas Reporting Program pursuant to 40 C.F.R. § 98.346(c).

Please provide underlying documentation or statements from which you compiled the information in the spreadsheet.

(*As referenced in* 40 C.F.R. §§ 63.1983(a), (d) and parallel provisions under EPA's Landfill Air Regulations).

Gas Collection and Control System (GCCS) Design:

8. Provide a copy of the following documents related to the Design Plan:
    a. Design Plans in effect at the Landfill since January 1, 2022.
    b. Copies of EPA or Oregon Department of Environmental Quality approval, disapproval, or other response to the two most recent Design Plans. If EPA or Oregon Department of Environmental Quality did not provide an approval, disapproval, or other response, provide a statement that EPA or Oregon Department of Environmental Quality approval did not approve, disapprove, or otherwise respond to Valley Landfill Inc's submission of the Design Plan(s).
    c. Identification of, and an explanation for, areas excluded from gas collection;
    d. A description of the design of the main gas header, including:
        i. Maximum rated flow rate capacity;
        ii. Maximum operating flow rate; and
        iii. Maximum allowable pressure drop.
    e. As-built, final design documents for each flare/blower system. The design documents shall include but not be limited to the following (for each piece of equipment):
        i. The manufacturers' expected/design life (years);
        ii. Minimum and maximum design flare temperatures (^{o}F);
        iii. The rated maximum flow rate capacity of the flare (standard cubic feet per minute, scfm); and
        iv. The blower(s) and backup blower(s) rated maximum flow rate at inlet vacuum.
    f. Most recent maximum expected gas flow rate calculations, if different from the Design Plan.
        i. Include the annual or monthly waste breakdown for every year used in the maximum expected gas flow rate calculations.
        ii. If LandGEM is used, provide a spreadsheet containing the most recent LandGEM calculation.
        iii. If LandGEM is not used, provide documentation of the method used to calculate the maximum expected gas flow rate.
        iv. Include scale house data of waste excluded from LandGEM calculations.

(*As referenced in* 40 C.F.R. § 63.1981 and parallel provisions under EPA's Landfill Air Regulations).

9. Provide report(s) for gas collection and control system stack test(s) and performance test(s), including initial tests , as well as other compliance testing, engineering testing, and testing for general information.

(*As referenced in* 40 C.F.R. § 63.1983(b) and parallel provisions under EPA's Landfill Air Regulations).

<u>Gas Collection System:</u>

10. Provide the following information for the gas collection system:
    a. List of existing and historical Gas Collectors/wellheads and leachate collectors, which are or were connected to the gas collection and control system;
    b. For each existing or historical Gas Collector/wellhead or leachate collector that is not in active service collecting landfill gas as of the date of this Request, provide the date on which the Gas Collector/wellhead r was taken out of active service and describe the status of the Gas Collector/wellhead, including whether the valve is open or closed, whether the Gas

Collector/wellhead is connected to the GCCS, whether the header lateral has been capped, and whether the Gas Collector/wellhead has been abandoned. Provide documents explaining the basis for each Gas Collector/wellhead abandonment, as well as any approvals issued by EPA or the Oregon Department of Environmental Quality for abandoning the Gas Collector/wellhead;

c. Indicate whether a Gas Collector is a vertical or horizontal Gas Collector;
d. Indicate the location of each Gas Collector, both by cell and by GPS coordinates;
e. Indicate whether each existing Gas Collector has a pump for leachate/water removal;
f. Indicate higher operating value or alternative operating procedure for Gas Collector;
g. Installation dates for Gas Collector/wellhead installed between January 1, 2022 and the date of this request; and
h. From January 1, 2022 to the date of this request, evaluations or analyses, conducted either by you or an external consultant/company, of the gas collection system, including any evaluation or analysis related to:
    i. Gas Collector placement;
    ii. Gas Collector depth;
    iii. Gas Collector density; and
    iv. Amount of vacuum applied to the Gas Collector/wellhead.

(*As referenced in* 40 C.F.R. §§ 63.1957-62, 63.1981(d)-(e) and parallel provisions under EPA's Landfill Air Regulations).

11. Provide the current topographic site map(s) displaying the following information:
    a. Gas Collector/wellhead locations and identifiers, including gas laterals and gas headers; and
    b. Areas in which gas collection is not occurring.

(*As referenced in* 40 C.F.R. § 63.1958(d) and parallel provisions under EPA's Landfill Air Regulations)

Wellhead Monitoring Data:

12. In an unlocked, Excel-compatible electronic spreadsheet format, provide GCCS monitoring records, including dates, times between January 1, 2022 and the date of this request, including the following:
    a. Monthly GCCS Gas Collector/wellhead measurements, including:
        i. Methane;
        ii. Carbon dioxide (CO_2);
        iii. Carbon monoxide (CO);
        iv. Flow rate;
        v. Oxygen;
        vi. Nitrogen;
        vii. Pressure;
        viii. Temperature; and
        ix. Notes taken by the technician during monitoring, corrective actions, and re-monitoring measurements.
    b. Monitoring data for each blower, including vacuum;

c. Gas Collector/wellhead parameter exceedances and corrective actions, including enhanced monitoring due to elevated temperatures, and corrective actions;
d. Gas Collector/wellhead higher operating values approvals relevant from January 1, 2022 and the date of this request, along with approvals of alternative timelines or corrections in that time; and
e. A list of Gas Collectors/wellheads not monitored during monthly monitoring and the explanation for exclusion.

Please provide underlying documentation or statements from which you compiled the information in the spreadsheet.

(*As referenced in* 40 C.F.R. §§ 63.1958(b)-(c), 63.1961, 63.1962, 63.1981, 63.1983, and parallel provisions under EPA's Landfill Air Regulations)

Depth-to-Water and Depth of Perforation Data:

13. In an unlocked, Excel-compatible spreadsheet(s), provide the following information related to each vertical Gas Collector available between January 1, 2022 and the date of this request:
    a. Records of measurements of depth to water and/or height of water taken between January 1, 2022 and the date of this Request;
    b. Documentation of pinches and other obstructions;
    c. Depth to bottom of the vertical Gas Collector;
    d. Length of perforated pipe;
    e. Percentage of perforation; and
    f. A description of corrective actions taken by the facility as a result of the water level measurements or observation of obstructions, as applicable.

Please provide underlying documentation or statements from which you compiled the information in the spreadsheet.

(*As referenced in* 40 C.F.R. § 63.1962(b)(2), and parallel provisions under EPA's Landfill Air Regulations)

14. Provide a description of standard operating procedures or internal guidelines relating to Gas Collector obstruction and/or dewatering at the Facility.

GCCS Main Header Data:

15. In an unlocked, Excel-compatible spreadsheet, provide the following landfill gas collection system main header data on an hourly basis from January 1, 2022 and the date of this request:
    a. Date and hour;
    b. Average system pressure (inches of water column, in. w.c.);
    c. Average gas flow rate collected (standard cubic feet per minute, scfm);
    d. Average landfill gas temperature (degree Fahrenheit, ^{o}F); and
    e. Average methane concentration.

Please provide underlying documentation or statements from which you compiled the information in the spreadsheet.

(*As referenced in* 40 C.F.R. § 63.1961(a), and parallel provisions under EPA's Landfill Air Regulations)

16. Provide gas sampling reports between January 1, 2022 and the date of this request. Your response should include, but not be limited to, sampling done for:
    a. Methane concentration;
    b. Sulfur compounds; and
    c. Hazardous air pollutant (HAP) content.

<u>Gas Control System:</u>

General:

17. Provide monthly inspection, maintenance, and repair logs and records for each piece of control equipment (e.g., blower/flare system) between January 1, 2022 and the date of this request.

(*As referenced in* 40 C.F.R. § 63.1983(c)(7), and parallel provisions under EPA's Landfill Air Regulations)

18. In an unlocked, Excel-compatible spreadsheet, provide the following monitoring data for each flare between January 1, 2022 and the date of this request:
    a. Temperature readings;
    b. Gas flow readings;
    c. Methane percentages at each flare;
    d. Operating hours on a monthly basis for each flare;
    e. Records of bypass incidents at each flare; and
    f. Monthly SO_2 emissions calculations (tons/month, tons/year) for each flare system with supporting calculations.

Please provide underlying documentation or statements from which you compiled the information in the spreadsheet.

(*As referenced in* 40 C.F.R. § 63.1961(b)-(c), and parallel provisions under EPA's Landfill Air Regulations)

Surface Emissions Monitoring (SEM):

19. Provide SEM records since January 1, 2022. Please make sure units of measurement are clearly indicated. For each monitoring event, include:
    a. Date(s) and description(s) of the monitoring activity, including identification of the device used;
    b. SEM data, including but not limited to instrument calibration data, methane concentration at the location of each monitored exceedance marked according to 40 C.F.R. § 63.1960(c)(4)(i), any other recorded methane concentrations, raw instrument data outputs, methane concentration upon re-monitoring at the location of each monitored exceedance; and

c. Records or descriptions (if the facility does not maintain records) of corrective actions performed in response to each monitored exceedance;

20. GPS coordinates, notes, drawings, maps or other records of the actual path traversed by the SEM technician for each quarterly SEM event since January 1, 2022, depicting:
    a. The monitoring route traveled and any deviations from the 30-meter intervals; and
    b. Areas excluded from surface emission monitoring (SEM) or exempt from quarterly SEM, including explanation(s) for each area excluded or exempted.

Please provide underlying documentation or statements from which you compiled the information in the spreadsheet.

(*As referenced in* 40 C.F.R. § 63.1961(f), and parallel provisions under EPA's Landfill Air Regulations)

21. Records or reports of additional emissions monitoring activities conducted at the direction of the Facility, including but not limited to drone, satellite, and tower-based monitoring, between January 1, 2022 and the date of this request.

Gas Migration:

22. Provide gas measurements at the gas monitoring probes between January 1, 2022 and the date of this request.
23. Provide records of corrective actions taken and remediation plans made in response to methane measurements taken at the gas monitoring probes.
24. Provide a map of the gas monitoring probe locations.

(*As referenced in* 40 C.F.R. §§ 63.1960(c), 63.1961(f), and parallel provisions under EPA's Landfill Air Regulations)

Corvallis, Oregon 97330

INFORMATION REQUEST
STATEMENT OF CERTIFICATION

I certify that the enclosed responses to EPA's Information Request issued to Republic Services, Inc. are true, accurate, and complete. I certify that the portions of these responses which I did not personally prepare were prepared by persons acting on behalf of Republic Services, Inc. under my supervision and at my instruction, and that the information provided is true, accurate, and complete. I am aware that there are significant penalties for submitting false information in response to this Information Request, including the possibility of fine and imprisonment.

ENCLOSURE 3
SUBSTANTIATION OF
CONFIDENTIAL BUSINESS INFORMATION CLAIM

Republic Services, Valley Landfills Inc.

EPA is providing you notice that if you assert a claim of business confidentiality for information you provide in response to this Information Request, EPA will determine whether such information is entitled to confidential treatment, pursuant to 40 C.F.R. Part 2, subpart B, including 40 C.F.R. §§ 2.208 and 2.301. If you feel that some or all of the information is entitled to confidential treatment, you must make the showings below with specific reference to those portions of the information you consider confidential.

Please be specific by page (including Bates Stamp, if applicable), paragraph, and sentence when identifying and substantiating the information subject to your claim. Where your claim, as originally made or as modified by your response to this letter, does not include all information on a page, please attach a copy of each such page with brackets around the text that you claim to be CBI. Please note that if a page, document, group, or class of documents claimed by you to be CBI contains a significant amount of information which the EPA Region 10, Office of Regional Counsel determines is not CBI, your CBI claim regarding that page, document, group, or class of documents may be denied. Any information not specifically identified as subject to a confidentiality claim and substantiated as such in your response to this letter may be disclosed to the requester without further notice to you.

In making its final confidentiality determination, the EPA will consider the relevant substantive criteria in its CBI regulations, under 40 C.F.R. § 2.208(a)-(d), as well as the U.S. Supreme Court's decision in Food Marketing Institute v. Argus Leader Media (Argus), 139 S. Ct. 2356 (2019), which evaluated the definition of "confidential" as used in Exemption 4. In the Argus decision, the Court held that at least where "[1] commercial or financial information is both customarily and actually treated as private by its owner and [2] provided to the government under an assurance of privacy, the information is 'confidential' within the meaning of Exemption 4." Argus, 139 S. Ct. at 2366.

For each item or class of information that you continue to claim as CBI, please answer the following questions, giving as much detail as possible. Your comments in response to these questions will be used by the EPA to determine whether the information has been shown to be entitled to confidential treatment:

1. For what period of time do you request that the information be maintained as confidential, e.g., until a certain date, until the occurrence of a specified event, or permanently? If the occurrence of a specific event will eliminate the need for confidentiality, please specify that event.

2. Information submitted to the EPA becomes stale over time. Why should the information you claim as confidential be protected for the time period specified in your answer to question #1?

3. Has EPA, another federal agency, or court made any determination as to the confidentiality of the information? If so, please attach a copy of the determination.

4. What measures have you taken to protect the information claimed as confidential? Have you disclosed the information to anyone other than a governmental body or someone who is bound by an agreement not to disclose the information further? If so, why should the information be considered confidential?

4. Is the information contained in any publicly available material such as patents or patent applications, publicly available databases (including state databases), promotional publications, annual reports, or articles?

   If you answered "yes," please identify the publicly available information and its location (e.g., patent number or website address).

5. Has your company taken reasonable measures to protect the information claimed as CBI? If so, please identify the measure or internal controls your business has taken to protect the information claimed as confidential:

   a. Non-disclosure agreement required prior to access. Yes/No
   b. Access is limited to individuals with a need-to-know. Yes/No
   c. Information is physically secured (e.g. locked in a room or cabinet) or electronically secured (encrypted, password protected, etc.). Yes/No
   d. Other internal control measures(s). Yes/No. (*If yes, please explain*.)

6. Does your company customarily keep the information private or closely-held? If so, please explain the basis for your response.

7. At the time you submitted the information you claimed as CBI, did EPA provide any express or implied assurance of confidentiality? If so, please explain the specific assurance(s) you received. For example, expressed assurances indicating that information will not be publicly disclosed could include legal authorities (regulation or statute), direct communications, class determinations, etc. Examples of implicit assurances could include a description of the specific context in which the information was received.

8. Did the Agency provide any expressed or implied indications at the time the information was submitted that EPA would publicly disclose the information?

9. If you believe any submitted information to be a trade secret, please state and explain the reason for your belief. Please attach copies of those pages containing such information with brackets around the text that you claim to be a trade secret.

10. Are there any means by which a member of the public could obtain access to the information or readily discover the information claimed as confidential through reverse engineering?

11. Please explain why the information claimed as confidential is not emissions data under the Clean Air Act.

12. Explain any other issue or additional information you deem relevant to EPA's determination.

Please note that *you bear the burden of substantiating your confidentiality and trade secret claim(s).* Generalized or conclusory statements will be given little or no weight in EPA's determination on the confidentiality of the information you claim to be CBI.

Your comments must be postmarked or hand delivered to this office, or emailed to Sara Conley conley.sara@epa.gov, by the 30th day after receipt of this letter. You may seek an extension of time to submit your comments to this office, but the request must be made before the 30th day after receipt of this letter. Except in extraordinary circumstances, no extension will be approved. Failure to submit your comments within that time will be regarded as a waiver of your confidentiality claim or claims, and the EPA may release the information.

If you wish to claim any information that you provide in your response to this letter to itself be confidential, you must mark the response "**CONFIDENTIAL**" or with a similar designation, and must bracket all text in the response that you so claim. Information so designated will be disclosed by the EPA only to the extent allowed by, and by means of the procedures set forth in, 40 C.F.R. Part 2, Subpart B. If you fail to claim the information provided in your response as confidential, it may be made available to the public.

2022 Coffin Butte Landfill Community Member Concerns Annual Report

Prepared By: Bailey Payne

Preparation Date: November 26, 2024

The duties of Benton County's Disposal Site Advisory Committee (DSAC) are outlined in Oregon state law—specifically in ORS 459.325, which includes the requirement that "the committee shall prepare an annual written report summarizing the local citizens' concerns and the manner in which the owner or operator is addressing those concerns" which will be considered by the Department of Environmental Quality as part of issuing and renewing a solid waste permit.

Benton County staff and the DSAC have prepared this staff report summarizing community member concerns regarding Coffin Butte Landfill in 2022, which may be used by DSAC to meet the requirements of ORS 459.325. Concerns listed in this report have been compiled using information from the 2022 Coffin Butte Landfill & Pacific Region Compost Annual Report, complaints received by Benton County staff, complaints received by the Oregon Department of Environmental Quality and concerns presented during Benton County Disposal Site Advisory Committee and Solid Waste Advisory Council meetings.

One hundred ninety-one complaints about the Coffin Butte Landfill were reported in 2022 as detailed in Table 1. Some complaints included numerous topics while others focused on a single concern. The complaints were organized into themes as illustrated in the following chart. The Oregon DEQ notified Republic Services of 20 complaints which have been integrated into Table 1 below.

Chart 1: 2022 Community Feedback Topics

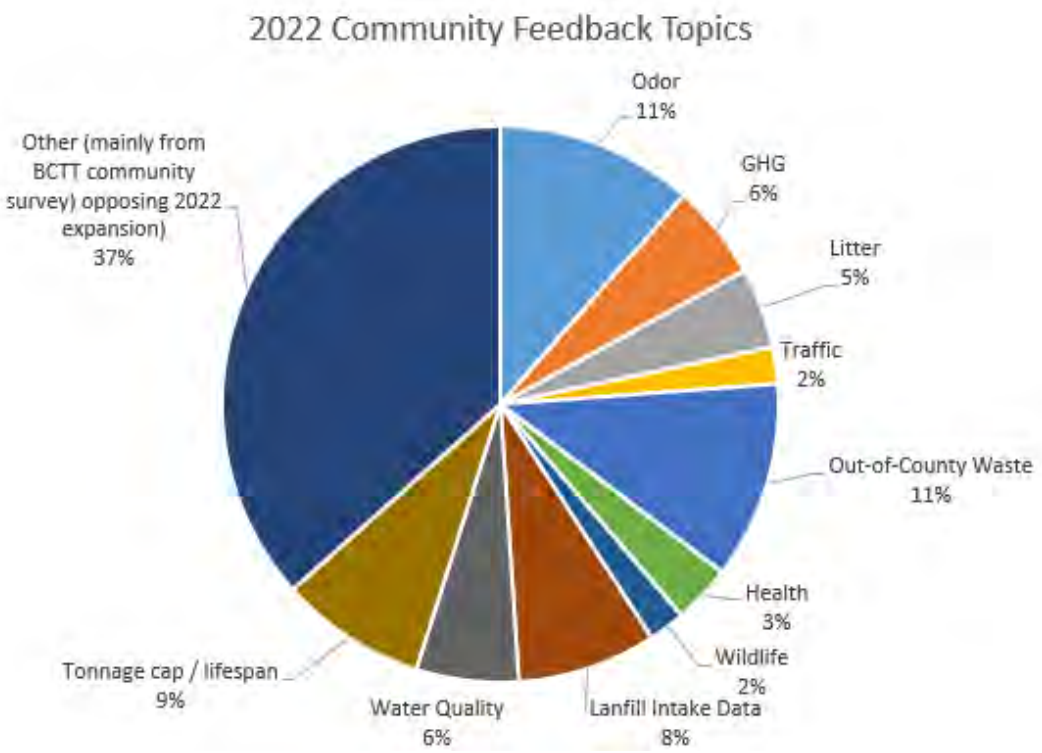

Table 1: Coffin Butte Landfill Community Concern Log 2022					
#	*Date*	*Concern Summary*	*Received By*	*Compliant / Concern Communication Method*	*Manner in which the landfill is addressing those concerns*
1	*1/24/2022*	*The toxic odor coming from the Coffin Butte Landfill managed by Republic Services is overwhelming on my property today. It causes stomach upset and lightheadedness if outside for more than a few minutes.*	*DEQ*	*Reported on DEQ's online complaint form*	*enhanced inspection planned*
2	*1/24/2022*	*Odors and gasses move into our region regularly..*	*DEQ*	*Reported on DEQ's online complaint form*	*1/25 (SG) - this is a permitted facility rerouting complaint.enhanced inspection planned*
3	*1/25/2022*	*Went outside to work in the garden around noon - odor was so disgusting that I came inside as soon as my work was done. This was especially annoying as I had much to do outside and it was a beautiful day.*	*DEQ*	*Reported on DEQ's online complaint form*	*1/27 (SGallino) - received this complaint from Wilson Wade. Reassigned to Karen White-Fallon.enhanced inspection planned*
4	*1/25/2022*	*Late morning worked outside under terrible odors and air quality that seemed unhealthy. After lunch could no longer put off walking the dogs and walked in the awful stench. I ran into a neighbor also out walking who wondered if we were doing more harm than good to our health breathing what seems like toxic air.*	*DEQ*	*Reported on DEQ's online complaint form*	*1/27 (SGallino) - received this complaint from Wilson Wade. Reassigned to Karen White-Fallon.enhanced inspection planned*
5	*1/25/2022*	*Several times each week our family drives hwy 99 Independence Hwy and hwy 20 from our Soap Creek Valley home in Benton Co. These roadways' ditches are filled with trash and fields along these routes have plastic and other garbage that has blown into them. These are routes to the Coffin Butte Landfill. The trash is never-ending and is an environmental hazard to wildlife and waterways. It is embarrassing that this continues to happen here; who is responsible for dealing with this?*	*DEQ*	*Reported on DEQ's online complaint form*	*enhanced inspection planned.*
6	*1/26/2022*	*Concerns about landfill tonnage cap, lifespan, and revenue*	*DSAC Meeting*	*Meeting, and written comment*	*Unknown*

7	*1/26/2022*	*Greenhouse gasses* *Debris escaping trucks and littering the roadway*	*DSAC Meeting*	*Meeting*	*Unknown*
8	*1/26/2022*	*Landfill accepting out-of-county waste*	*SWAC Meeting*	*Meeting*	*Benton County has no authority to limit out-of-county waste per a Supreme Court decision.*
9	*1/26/2022*	*Air quality impacts from landfill cover*	*SWAC Meeting*	*Meeting*	*Unknown*
10	*1/26/2022*	*Unknown volume/types of hazardous materials accepted at the landfill;*	*SWAC Meeting*	*Meeting*	*Unknown*
11	*1/28/2022*	*Landfill fumes once again effecting air quality. It is happening way more frequently to 2-3 a week. It's disgusting and impacts daily quality of life at home and inside the home*	*DEQ*	*Reported on DEQ's online complaint form*	*enhanced inspection planned*
12	*1/31/2022*	*Garbage trucks releasing roadside Litter and debris - Hwy 99;* *Acceptance of out-of-county waste;* *Traffic near landfill;* *Odors from landfill and PRC;*	*Benton County*	*Phone*	*Benton County provided odor complaint resources*
13	*1/31/2022*	*Commerial trucks losing material on the way to the landfill creating truck traffic* *Odors from landfill and PRC*	*North Albany*	*Email*	*Benton County provided odor complaint resources. Resident was encouraged to provide public testimony.*
14	*2/8/2022*	*It appears that some vehicle approaching or departing the Coffin Butte landfill spilled a portion of an unsecured load leaving me to dodge broken chunks of plastic and a coil of metal scrap*	*DEQ*	*Reported on DEQ's online complaint form*	*This was a drive by complaint from someone who does not live near the landfill. Additionally based upon the information provided it would not be possible to determine if the trash observed was from a private vehicle or from the landfill trucks.*
15	*2/8/2022*	*Same old problem as fog or low clouds lift in mid-day it draws a hideous cloud of noxious odor to our house*	*DEQ*	*Reported on DEQ's online complaint form*	*enhanced inspection planned*

16	*2/15/2022*	*Drove into Corvallis today and looked at trash along the roadside of Hwy99 from the landfill at Coffin Butte Road all the way to (Hospital) Elks Drive. Looked at more trash on the way home. Appears to be more trash on the East side of Hwy99. Probably due to number of vehicles heading to the landfill. Welcome to Benton County!*	*DEQ*	*Reported on DEQ's online complaint form*	*Not reported*
17	*2/23/2022*	*Request for third-party audit of materials accepted at the landfill*	*SWAC Meeting*	*Meeting*	*Unknown*
18	*2/23/2022*	*Covanta plant ash used as ADC, health/safety, landfill gas monitoring*	*SWAC Meeting*	*Written comment*	*Republic Services provided a presentation about Covanta Ash at the 4/27/22 DSAC meeting.*
19	*3/23/2022*	*Concerns the landfill causes nearby residents cancer. (Written comment)*	*SWAC Meeting*	*Written comment*	*Unknown*
20	*4/27/2022*	*Concern about landfill methane emissions*	*DSAC Meeting*	*Written comment*	*Unknown*
21	*4/27/2022*	*Concern about landfill-related traffic*	*DSAC Meeting*	*Written comment*	*Unknown*
22	*5/25/2022*	*Concern landfill is approaching maximum annual tonnage allowed*	*SWAC Meeting*	*Written comment*	*Unknown*
23	*6/1/2022*	*Odor shows up typically on beautiful fair weather days like today. Often it starts in mid-morning when any light clouds or other moisture in the air begins to lift as the day warms. Then sticks around most of the day until nightfall.*	*DEQ*	*Reported on DEQ's online complaint form*	*Not reported*

24	*6/16/2022*	*on 6/14/2022 the property owner Zachary Zeek for 775 Gerth Ave NW was notified the results of a re-inspection of a recent cleanup by Bill Goff Construction. In May of 2022 The site had a preexisting LUST number 27-04-2434. Bill Goff Construction removed a previous decommissioned 240-gallon underground heating oil tank. Goff Construction then collected worst case assessment soil samples from beneath the tank measurements indicated 3450 ppm diesel was present. Goff Construction removed 4.63 tons of impacted soil which was transported to Coffin Butte Landfill for disposal.Goff Construction subsequently collected cleanup confirmation soil samples from the tank cleanup excavation. Four soil samples were collected at a depth of 90 to 92 inches on each of the sides of the excavation. The reported results of Bill Goff Construction soil samples were three not detected for diesel and one soil sample had 231 ppm diesel. The tank which was located on the south side of the house lay in a flowerbed between the concrete walkway and the house. The excavation surface exposure was only three feet wide between the sidewalk and the house. They reportedly dug out the tank and the contaminted soil with five gallon buckets by hand without shoring. The tank was approximately 3 ft in diameter and 4 feet long.Bill Goff Construction sent the owner a certification letter for the property transaction stating the property meet DEQ Soil Matrix Standards. And a bill for $8790 saying the project is complete. My InspectionThe subsurface soil boring was completed with AMS Power Probe and GeoProbe Dual tube 2.5 inch sampler. Soil core samples were collected in 5 feet increments. The total depth of the boring was 25 feet. Groundwater bearing zone at the property was at 23 feet.After a subsurface inspection on 6/14/22 soil samples revealed that the tank had leaked and contamination remained in the excavation on the south side after reported to all removed by Bill Goff Construction. Heavy contamination was visible at 5 feet and 7.5 ft (91 inches). Soil contamination appeared to have cleaned up 14 feet depth on the south side of the excavation. The groundwater sample appeared to be clean. This site appears to have larger footprint of heating oil contamination than reported by Bill Goff Construction. The question of this complaint comes my suspicions of Bill Goff's work it appears that every heating oil cleanup he submits in the last 6 years is a Soil Matrix Cleanup every one! In 2020 i re investigated a heating oil tank cleanup at 950 SW Levens in Dallas Oregon DEQ file 27-17-0915 which Erik Anderson of Anderson Geological. Our conclusion was that Bill Goff's Soil Matrix cleanup closure certification was grossly mistaken and inaccurate.Soil samples I obtained will be going to the laboratory today*	*DEQ*	*Reported on DEQ's online complaint form*	*Had multiple conversations with Bill Goff and Karl Van Zandt. Completing extra review of a number of projects. Bill Goff came back to site and corrected errors at this site.*

25	*7/1/2022*	*The usual stench from the landfill. Once again occurring at my location as the marine clouds lift and the day warms.*	*DEQ*	*Reported on DEQ's online complaint form*	*I contacted the facility and told them to add the complaint to their complaint log and to perform an odor investigation.*
26	*7/11/2022*	*Coffin Butte Landfill not accepting cash*	*Benton County*	*Phone*	*Benton County notified Republic Services, requested further investigation*
27	*7/11/2022*	*Coffin Butte Landfill not accepting cash, after passing of SB 1565*	*Benton County*	*Phone*	*Referred to Republic Services*
28	*7/26/2022*	*Odors from Coffin Butte Landfill. Quite noticeable in the morning while we had a high pressure system and no wind.*	*DEQ*	*Reported on DEQ's online complaint form*	*I contacted the facility and told them to add the complaint to their complaint log and to perform an odor investigation.*
29	*7/27/2022*	*Concern about details of collected and shared data associated with the landfill and PRC in annual reports: Accuracy of waste county-of-origin data, C&D data is not separately reported/recorded for all vehicle types at the landfill, too little detail for vehicle data, leachate hauling data, and gravel truck hauling data (written comment, also presented at 8/24/23 DSAC meeting).*	*DSAC Meeting*	*Meeting, and written comment*	*Unknown*
30	*7/27/2022*	*Concern about landfill impacts on nearby heron rookery.*	*DSAC Meeting*	*Meeting*	*Unknown*
31	*7/27/2022*	*Concern about landfill annual report data - tonnage accuracy.*	*DSAC Meeting*	*Meeting*	*Unknown*
32	*7/27/2022*	*Concern about high arsenic levels reported in monitoring wells in the landfill annual report.*	*DSAC Meeting*	*Meeting*	*Unknown*
33	*7/27/2022*	*Concern about landfill annual report data - PRC runoff not included.*	*DSAC Meeting*	*Meeting*	*Unknown*
34	*7/30/2022*	*Coffin Butte Landfill by Republic*	*DEQ*	*Reported on DEQ's online complaint form*	*I contacted the facility and told them to add the complaint to their complaint log and to do an odor investigation.I emailed the complainant and let*

					them know that I had contacted the facility regarding the complaint.
35	*8/15/2022*	*The Coffin Butte dump smell is noticeable on occasion. Today it is really bad. To the point of making me sick to my stomach when I walk around outside.*	*DEQ*	*Reported on DEQ's online complaint form*	*I sent a message to the landfill and told them to add the complaint to the complaint log and asked them to do an investigation and to report back their findings.I also called and talked to the complainant on 8/17/2022 and said I had contacted the landfill. I asked if it could be the composting facility and was told no it smelled like the landfill not compost. The complainant will let us know if it is an issue again.*
36	*8/24/2022*	*Concern landfill is approaching maximum annual tonnage allowed, concern DEQ solid waste disposal reports filed by Coffin Butte Landfill are shorter than previous years (written comment).*	*DSAC Meeting*	*Written comment*	*Unknown*
37	*8/24/2022*	*Concern landfill impacts on nearby heron rookery.*	*DSAC Meeting*	*Meeting*	*Unknown*
38	*8/24/2022*	*Concern about landfill methane emissions.*	*DSAC Meeting*	*Meeting*	*Unknown*
39	*8/24/2022*	*Concern that reported landfill capacity is not accurate.*	*DSAC Meeting*	*Meeting*	*Unknown*
41	*8/24/2022*	*Concern about materials accepted at the landfill, recommending a characterization of accepted materials.*	*DSAC Meeting*	*Meeting*	*Unknown*
42	*10/6/2022*	*Concern about hazardous materials accepted at landfill via commercial waste collection, concern about hurdles and inaction in complaint process (written comment, duplicate of email complaint received by Benton County)*	*Benton County*	*Email*	*Complainant filed complaints with DEQ, DEQ responded during BCTT process*

43	*10/6/2022*	*Hazardous materials accepted in garbage collection from commercial facilities*	*Benton County*	*Phone*	*Unknown*
44	*10/7/2022*	*We typically smell the odor from the landfill on days when there is no wind and it is very still*	*DEQ*	*Reported on DEQ's online complaint form*	*Not reported*
45	*10/26/2022*	*Concerns about landfill closure date, fill rate, capacity, environmental cost of the landfill (including methane, PFAS, leachate, landfill gas emissions, air quality, wildlife impacts, traffic impacts, visual impacts, dust and litter, land use impacts, liner/cover maintenance, public security), regulatory and general compliance (federal, state, and local), material acceptance monitoring, material sources, accepted tonnage/intake rate, liability for remediation, quarry excavation, closure and reclamation plans, risks (fire, earthquakes, hazardous materials, PFAS, flood, power outages, multiple disasters, groundwater contamination, economic impacts*	*SWAC & DSAC Joint Work Session*	*Written comment*	*Unknown*
46	*10/26/2022*	*Concern landfill impacts on nearby heron rookery (written comment)*	*SWAC & DSAC Joint Work Session*	*Written comment*	*Unknown*
47	*10/26/2022*	*Concern about amount of recyclable materials in the landfill (written comment)*	*SWAC & DSAC Joint Work Session*	*Written comment*	*Unknown*
48	*10/26/2022*	*Concern about landfill material characterization, and methane containment*	*SWAC & DSAC Joint Work Session*	*Written comment*	*Unknown*
49	*10/26/2022*	*Concern about level of detail in landfill traffic reporting*	*SWAC & DSAC Joint Work Session*	*Written comment*	*Unknown*
50	*11/16/2022*	*This was a typical Coffin Butte landfill odor event at my home: a beautiful sunny cool morning which starts with a low-hanging fog sucking landfill odors south through the Soap Creek Valley. By midday the odors dissipate.*	*DEQ*	*Reported on DEQ's online complaint form*	*Not reported*
51	*12/7/2022*	*Concerns about rate of quarry excavation and impacts to available landfill airspace*	*SWAC & DSAC Joint Work Session*	*Meeting*	*Unknown*
52	*12/7/2022*	*Concern about various landfill business contracts/agreements increasing accepted tonnage and impacting landfill lifespan (in meeting and via written comment)*	*SWAC & DSAC Joint Work Session*	*Meeting, and written comment*	*Unknown*
53	*12/7/2022*	*Concern about landfill compliance with land use conditions of approval*	*SWAC & DSAC Joint Work Session*	*Meeting*	*Unknown*

54	*12/9/2022*	*Republic Services truck releasing roadside Litter and debris - Camp Adair Road*	*Benton County*	*Email*	*Benton County notified Republic Services, requested further investigation*
55	*12/9/2022*	*Republic truck releasing trash along Camp Adair Road*	*Benton County*	*Email*	*Sent the complaint details to Republic Services, asking for investigation and follow up for resolution, in order to prevent this from reoccurring.*
56	*12/12/2022*	*Frequent odors surrounding neighborhood and beyond from Coffin Butte landfill- emissions gas unsafe air quality and it is happening more and more frequent- weekly if not daily at times . Absolutely unacceptable. We are becoming the new armpit of Oregon. So sad.*	*DEQ*	*Reported on DEQ's online complaint form*	*Since the complaint report doses not provide additional information regarding the date time or location that is difficult to track detail for the incident. According to representative of the landfill the landfill conducts regular drives through the areas surrounding Coffin Butte and haven't detected offsite odors. Their LFG collection system have been running as designed as well. The landfill hasn't started taking any new waste streams recently that would cause odors.*
57	*12/17/2022*	*driving home experience very strong smell upon entering the Soap Creek Valley.Odor too offensive for outdoor activities*	*DEQ*	*Reported on DEQ's online complaint form*	*Not reported*

58	*12/18/2022*	*The (sadly) typical disgusting odor of Coffin Butte Landfill. See comments above about atmospheric conditions. The smelly air tends to concentrate in different strata of the atmosphere depending on the weather. Yesterday was a strong inversion and the odor was most concentrated at around 500-900 ft elevation.*	*DEQ*	*Reported on DEQ's online complaint form*	*Not reported*
59	*9/15/2022*	*Paul Nietfeld (engineer and resident living between Corvallis city limits and the landfill): Issues: Historic intake for coffin butte. Shows a graph with landfill input and a table with projections for landfill life, including Cell 6. Quarry challenge. Shared a desire to document intake, life, and quarry in a final report.*	*Benton County Talks Trash - Community Survey*	*BCTT meeting public comments*	*Logged comments*
60	*10/6/2022*	*Audrey Sterling (Community Member): Reflects that the talk in the community focuses on the idea that the landfill is full and what to do with the trash. They need to find a place for it, so the landfill does not overflow.*	*Benton County Talks Trash - Community Survey*	*BCTT meeting public comments*	*Logged comments*
61	*11/17/2022*	*Schmidt Pathman: His company promotes research on Solid Waste Management and partners with universities, national, and international organizations. Some of their concerns about landfills are: 1) the underestimation of methane produced by landfills and lessoning organic materials thrown away, and 2) lessening cross contamination of recyclable materials, which can be better achieved with the sorting system they have designed. (Pending receipt (full statement) by speaker to be placed in Appendix A of Meeting Minutes.)*	*Benton County Talks Trash - Community Survey*	*BCTT meeting public comments*	*Logged comments*
62	*12/15/2022*	*Kate Harris: (Lives in Soap Creek and kids go to school in Adair Village) Thanks the group for being here. Explains that the Adair Village water source is in an area that gets contaminated by the landfill. The contaminants go to the Corvallis treatment plant, but how do we know the water from the park is getting cleaned for all the things? What is the filtration process? We know fires at the landfill, earthquakes, even air quality is starting to be tracked, but water is a big issue too. She hopes the3focus can be on minimizing the landfill need. How can we move*	*Benton County Talks Trash - Community Survey*	*BCTT meeting public comments*	*Logged comments*

		landfill storage to drier climates, so they are not so hazardous?			
63	*12/15/2022*	*The County sells its residents short with this plan. If the Company backs out altogether, would the County run the landfill? Is BC hostage to a waste monopoly? Who is paying County staff time and effort for this greedy expansion request? The Company I hope, not our county taxpayers. The waste of community volunteer time also should be assessed to the Company. A few million a year is simply not worth it to the County -- the Company needs to offer much much much more to have taxpayers even think this is a good idea. If the Company tries to hold BC residents hostage to higher rates, let's call their bluff, let's sue them for the 1999 fire costs and everything else. BC has leverage and needs to use it. Finally, how to insure against the expected many externalities that our county residents will pay in the future. Instead of a sleepy beautiful county and small town (Corvallis), we will be known as the garbage dump of the Willamette Valley. How much is that worth?*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
64	*12/15/2022*	*Opening our dump to materials from other counties, while expedient and profitable for the operators, is a mistake. Benton County is rapidly running out of room and public use if "our" dump is becoming prohibitively expensive. In addition, the effects on neighboring properties is causing justifiable resentment.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
65	*12/15/2022*	*The County staff and commissioners have systematically failed the residents of Benton community by allowing Republic Services to profit at the expense of the health and well being of Benton County Residents. The county has decided to allow Republic Services to dramatically increase the amount of material is accepts in Coffin Butte, thereby leading to a unnecessary "need" for expansion. To right these wrongs the County and Republic Services has committed, the County must reject any large-scale increase in the footprint of Coffin Butte outside the plan to move into the Kniferiver Area north of the current landfill. The County must also stop Republic Services from spreading medical waste ashes as a "cover" on top of of trash. The County must also halt Republic Services from accepting trash from other portions of the state in the volumes that it currently is accepting.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

66	*12/15/2022*	*My main concerns are that we stop expanding Coffin Butte to accommodate other peoples' trash and that we do all that is possible to reduce our waste, including requiring waste reduction processes of all communities that contribute to Coffin Butte.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
67	*12/15/2022*	*Who is opening each trash bag and tallying the banana peels? This sounds like a waste of the millions it will cost to conduct what is simply put as a "waste audit."*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
68	*12/15/2022*	*I think the most important thing is that the SMMP be completed before any further decisions are made about expansion or changes to the county's solid waste contracts. That way decisions are made with a long term comprehensive view of the true costs and benefits of choices and their alternatives.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
69	*12/15/2022*	*Benton county can't support the amount of trash coming in. Someone should have said "no" long ago. Protect the environment, protect the quality of life of those living in Benton County (many of whom are here for the outdoor opportunities), and protect the home values of those living in proximity to coffin butte. The complexity of this topic is unnecessary. Let community members vote on how to proceed. Do we want to expand the size of coffin butte? Do we want to continue to allow other counties to dump their waste? How do we increase sustainability is something this committee can provide. Offer resources and ideas, complete community trials, then again, we can vote. Creating committee after committee and collaborating with county after county will slow down the process and prevent meaningful change.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
70	*12/15/2022*	*I am opposed to increasing the size of the current landfill. It will further impact residential homes near the landfill, and I believe that health concerns of residents who live near the landfill should be prioritized and addressed.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
71	*12/15/2022*	*Consider not expanding the landfill and phasing to other Republic sites . And absolutely NOT raising tonnage cap. Local agencies will not get increased revenue when the landfill moves but it is inevitable. Current staff should make the sustainable materials management plan and not keep draining taxpayer funds for constant consultants*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
72	*12/15/2022*	*1. Do not raise the annual cap on waste coming to the landfill. 2. Do not expand the landfill. 3. Stop wasting taxpayer dollars on outside consultants. Use county staff. Our county commissioners are highly paid. They should have been able to reach a decision by now that will benefit county residents.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

73	*12/15/2022*	*What about mining the landfill? It must have tons of usable materials. I think in the future landfills are going to be desirable assets for recovering otherwise depleted materials.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
74	*12/15/2022*	*There should be no implication that SMMP in Benton County or anywhere that sends waste here will have any impact at Coffin Butte, per se, because Republic Services and not Benton County has power over how they fill their tonnage cap prior to expansion, or lack of tonnage cap if expansion is approved. Any reduction in the contribution to that tonnage by Benton County or any other entity will have no impact on the life span of Coffin Butte or any other impacts of Coffin Butte landfill to the neighboring community because Republic Services choose to sell its services to other entities to replace tonnage reduction that may result from SMMP.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
75	*12/15/2022*	*On the topic of waste disposal in Corvallis: Why can't the city REALLY encourage everyone to put their garbage cans OUT OF PUBLIC VIEW? Get the GT involved with photos, etc. Even million dollar houses often just leave all their cans sit by the garage!!! Our city is supposed to be #! in many areas but it sure fails in this area of general beauty; The garbage company has never done much to help. I know as I have asked them to do so through the years more than once without much effect!! Please consider my plea Thanks*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
76	*12/15/2022*	*I would much prefer that a group of experts and professionals develop and work towards achievable goals vs NIMBY neighbors that want to drag out the process and add layers of bureaucracy under the guise of stakeholder equity as a delaying tactic. Not everyone has an equally valid or meaningful opinion on the intricacies of waste management.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
77	*12/15/2022*	*It seems foolish that the cost to dump sustainable materials (compost, building waste, etc.) for the average homeowners is nearly the price (sometime exceeds!) the price to dump garbage. Yard waste used to be affordable to dump and was measured by the yard - now it is weighed, and now I burn instead! Also, there are now no viable options for those that generate little trash (such as economical on-call pickup, 1x per month, etc), which actually incentivizes loading up the bin! Please don't cow-tow to Republic's gloom and doom scenarios. Benton and surrounding counties are the market - drive a deal that benefits the residents, not Republic execs. If they wish to pull out - let them! I can take my own trash and yard debris to the locations while another entity moves in to take advantage of the opportunity. And PLEASE, stop the influx of refused from out of the area and out of state - if it needs to come to Benton County, maybe have it piled in Reset Stadium.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

78	*12/15/2022*	*THE COFFIN BUTTE LANDFILL SHOULD "ONLY" TAKE REFUSE FROM BENTON COUNTY !!!!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
79	*12/15/2022*	*The workgroup should work to ensure the following: 1. That Corvallis, Albany, Salem, and other communities continue to have access to a landfill within 60 miles of where they live. 2. Minimize impacts to neighbors and environment while also recognizing there is no perfect solution. We should address and mitigate problems, not kick the can to another community. 3. Engage with community members and reach out. Understand there are hundreds of thousands of people served well by the current waste management arrangement who may not be the most vocal in their opinions and objections.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
80	*12/15/2022*	*"should the County do a better job of managing waste in the County and waste delivered to Coffin Butte?" ..the clear answer is a very loud "YES". But if the dump were not in Benton County, there likely wouldn't be the urgency or interest. The point is this is a state or regional issue. I would suggest that funding for the SMMP be from a surcharge on all waste dumped at the landfill. That way, the users of the dump are funding the study. Benton County rate payers would only be on the hook for a small percentage of the cost since Benton County residents only contribute a small percent of the volume to the dump. The money from the surcharge should be in a separate fund, not in the General Fund. This is particularly important since the Commissioners have been using solid waste fees for general fund purposes while ignoring their obligations to fund a competent waste management program. I would also suggest that the County hire outside legal council to assist in this endeavor.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
81	*12/15/2022*	*It's disheartening to see all the waste litter on the side of road shoulders on both sides of the road and thins like metal or two by four with nails he ving me a flat tire And living in Adair we get the methan smell at times , not a fan .*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
82	*12/15/2022*	*An audit could provide good information but likely no surprises. DEQ does waste composition studies and is in the process of doing that currently. It will be interesting to see if these yield similar results.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
83	*12/15/2022*	*Stop accepting all trash coming from north of Salem. This would extend the lifetime of the current footprint. Charge the landfill a hefty fee for each load of toxic leachate leaving the facility and needing treatment.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

84	*12/15/2022*	*Cap the tonnage allowed at Coffin Butte*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
85	*12/15/2022*	*I drive by coffin butte frequently and activity along Hwy 99 is often unsettling and raises questions on how well waste is handled locally. A detailed report measurements from both ORDEQ and third party confirmations (from companies with not even vague financial ties to waste management) would go a long way in easing those concerns.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
86	*12/15/2022*	*The execution of the 2020 Landfill Franchise Agreement in private, without the knowledge of affected residents of Benton County, was an egregious breach of trust of the population, and strongly influences and taints all other steps that Benton County takes regarding solid waste and related topics. It's clear that short-term monetary considerations outweighed other factors in the signing of this agreement. Residents most directly affected by negative impacts of the Landfill are effectively being thrown under the bus to support a stream of discretionary income for the County. This lack of trust and credibility will spill over to other County efforts, most notably the proposed justice center.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
87	*12/15/2022*	*Please factor in the greenhouse gas emissions from the tailpipes of trucks, especially those coming from and going to afar.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
88	*12/15/2022*	*Compost and recycling are two things I think this community value and support. There are systems available to mitigate these natural processes that ultimately can enhance the livability of the community. Having a junkyard of non biodegradable items on the edge of town is very different from composting, which ultimately creates fertile soil to help replace that lost from commercial farming, pesticides, and climate change.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
89	*12/15/2022*	*No tonnage increase allowed in any future CUP*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
90	*12/15/2022*	*The LSCL committee should clearly recommend that the annual tonnage capacity should not be raised. Frankly if the cap isn't increased then I doubt that Republic will push to expand the landfill because of the increased costs they will incur without the increased revenue from the cap increase.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

91	*12/15/2022*	*1. the landfill because of the increased costs they will incur without the increased revenue from the cap increase. It is important that we understand why the 1983 and later prohibitions against expanding south of Coffin Butte Road were not completely accepted by the county and have formed the basis for the continuing creep of expansion efforts across the road. This aspect of the history is murky and reeks of insider collusion between the county staff and corporate owners of the landfill. We have been sold down the river over and over again by the county staff and legal advisories who do not have the best interests of Benton County residents in mind.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
92	*12/15/2022*	*Just drive around new and older subdivisions in this area. The newest one in Ponderosa Ridge already has some who never put their cans out of public view!! Then drive into Oak Knoll off Western to see or NOT SEE ANY Garbage CANS ever in PUBLIC VIEW! Past Pick up time days. QUITE a DIFFERENCE!! The city/county has got to have some impact on this problem!! Create codes for all new residential areas, etc. Provide rebates for putting up a 6 foot fence panel to hide cans for existing homes, etc.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
93	*12/15/2022*	*It still doesn't seem right that Benton County should be the waste repository for all of Western Oregon without some compensation, unless other counties are willing to assume that role in the future.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
94	*12/15/2022*	*STOP ALLOWING OTHERS COUNTIES TO DUMP THEIR TRASH IN BENTON COUNTY !!!!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
95	*12/15/2022*	*The methane emissions definitely need to be studied before the landfill can be expanded.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

96	*12/15/2022*	*This regional landfill is key to a very large area surround it that the landfill services. It is key in terms of the feasibility of solid waste disposal. If this landfill is inactive or the regulations and requirements to dispose of solid waste become too expensive, the cost of solid waste disposal will and could go up a significant amount, making it difficult for citizens in its service area to dispose of their solid waste. This has a trickle-down effect from businesses whose disposal costs go up that then pass that increase on to their customer who is also getting charged an increase in their cost to dispose to the landfill as well.* *Unfortunately, illegal dumping becomes appealing. If the landfill is no longer operating or if the cost of doing business for the landfill gets too high, the next likely closest landfill is in Arlington, which is much farther away for the current customers, which will require more resources to haul solid waste from mid-western Oregon. I implore those making the decisions to be mindful of repercussions of passing regulations that increase expenses making it more difficult to dispose of solid waste. I realize the importance of long term planning, but increases to landfill costs don't happen in a vacuum.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
97	*12/15/2022*	*"Has the County been lax in monitoring and regulating the landfill and is the County poorly equipped to regulate a major, statewide landfill and to manage the adverse impacts" the very loud answer is "YES, the county is poorly equipped and quite incompetent when it comes to regulating all waste matters and has done an exceedingly poor job". If the question is "Should the County get its act together and do a professional job" the answer is YES. The County has taken in money from the landfill but has not funded adequate* *supervision, review, investigation, or implications of a growing environmental problem on the horizon. The County has not retained professional or legal assistance competent and informed on landfills but has used a generalists with no knowledge or experience with landfills. The County has ignored all warnings from their own advisory committees and knowledgeable citizens in the community. The County for years has bumbled along. The title of this section is LANDFILL SIZE/CAPACITY/LONGEVITY (LSCL). The County really has no clue and the numbers keep changing for reasons (manipulations) the County doesn't even understand. As a result, citizens have no trust at all in the County's ability to monitor or regulate the landfill or to insure it does not become an environmental liability for county residents. Obviously the landfill will be closed in the not too distant future.* *The County has no idea when or how to close the landfill and the implications of the closure other than the chicken little8strategy…the sky is*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

		falling. The County needs better leadership and management. Time for change.			
98	*12/15/2022*	*Many of these questions demonstrate a lack of understanding of how landfills operate and changes in recycling, composting and food waste initiatives in Oregon. This group has been focused on taking the lead not understanding that much of this work is in process on a statewide level. The process seems determined to be directed by landfill neighbors with a lack of knowledge or input from experts.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
99	*12/15/2022*	*The landfill should finance the ability to move into the rock quarry as soon as possible*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
100	*12/15/2022*	*I did not see an explicit statement about sharing the responsibility with community to run the landfill however, in a perfect world I would like to think that Coffin Butte could be run as though it was a public entity and not a profit center. In other words, I'm all for capitalism but the air shed, watershed, view shed, and protecting our sense of place and livability belong to the public and must be defended.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
101	*12/15/2022*	*The County should take steps to acquire better information about the methane emissions of Coffin Butte Landfill < I agree with this > because the landfill's emissions are currently not well-characterized and use this information to guide diversion programs that could limit the amount of organic waste going to the Landfill.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
102	*12/15/2022*	*Why does LLU Recommendation 1 refer to Republic Services as the manager of the landfill and associated services? Why can't Benton County put out an RFP for new landfill service providers? Do we have to continue to let Republic Services run a monopoly based on profit rather than community well-being? I oppose it. LLU 4 Recommendation appears to hide important public comment from the county board. I oppose it.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
103	*12/15/2022*	*Let's not have the fox guard the hen house, please. Subject matter experts need to be involved as third party evaluators of compiance.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
104	*12/15/2022*	*County needs the legal right to terminate the CUP if the holder of the permit fails to stay within the CUP stated limitations.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

105	*12/15/2022*	*1) These items assume that Republic Services will negotiate an acceptable contract with Benton County, which may not be the case. Other waste management corporations exist. 2) Code amendments are badly needed prior to any further CUP reviews for Coffin Butte Landfill. Both chapters 53 and 77 require reality-based updating. They are based on another era of regulation, technology, public concern, and an era of trust-based negotiating, which appears to no longer be the case. These regs were based on a much smaller corporation, not one like Republic with annual revenues exceeding $10B. 3) Any CUP conditions of approval must have clear, measurable standards, including metrics and a timetable noting monitoring periods. Failure to meet conditions would result in suspension of operations, which should be included in any contract approved.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
106	*12/15/2022*	*I also believe SWAC is not necessarily a group of people who are experts in this field, and just go with what Republic presents to them. There is no unbiased watchdog on the landfill and what is going on. I feel these question lead us to believe only republic can run the landfill, I do not believe this is true.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
107	*12/15/2022*	*I don't think Benton County should allow Republic Garbage Services to market our garbage site to Portland and SW Washington especially dead bodies!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
108	*12/15/2022*	*The legal processes ensuring compliance as listed in #57 should be rated as highly important. It seems BC has never held any of the owners of Coffin Butte to account and it appears easy for the process to point to 'some other agency… DEQ, EPA etc etc… as the ones who are responsible. Also, efforts to block public knowledge and input to the process because of 'attorney-client privilege' or other corporate privilege.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
109	*12/15/2022*	*LLU Recommendation 7 etc. Planning Officials and the Planning Commission need some latitude to use judgement. Circumstances cannot always be foreseen that impact the land use decision. Decision makers should be trusted to exercise judgement when "additional criteria" or unforeseen issues arise.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
110	*12/15/2022*	*As someone who has been involved in issues relating to the landfill for 30 years, I'm exceedingly disappointed that the commissioners have given this forum to what appear to be individuals who live near the landfill and are involved only to advance what they see as their own best interests and don't consider the general welfare of the community in their proposals.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

111	*12/15/2022*	*The following sentiment captures the majority of the BCTT public input survey responses. There were a lot like this:* *I care deeply about this process and thinks that engaging with the public around the community's waste stream is important and I cannot understand what most of these questions are asking. This is maybe the most confusing community survey I have taken in 16 years of living in Corvallis and I hope that the Benton County Talks Trash workgroup takes whatever information they receive from this survey with a huge asterisk. I would recommend scrapping any information that you glean from this survey and starting again from scratch.* *----------* *Seems like far too many recommendations for a team to effectively track. How can a team focus on this volume of verbiage? No wonder it takes so much time and effort to agree on a direction for Benton Co. The public can't be expected to read and understand the ramifications of the volume of recommendations in his survey.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
112	*12/15/2022*	*Let the public vote on all of the above - that would result in much more thought put into the recommendations!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
113	*12/15/2022*	*Too much government in an area where qualified professionals already oversee related activities.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
114	*12/15/2022*	*DEQ has experts in this area that the Benton County Planning Department does not. DEQ's evaluations and permitting process should be approved.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
115	*12/15/2022*	*I am not sure of the overarching theme here. I checked "generally agree" because I think the work group is trying to find a fix for the County's lack of transparency and openness. However, it is clear that when it has come to land use or permitting issues related to the landfill, the process has been controversial and unclear. There has also been a feeling that the voice of the public was intentionally muted, discouraged, ignored or rejected. At times, the County has proceeded without public notice and without public input. The County has devoted too few resources to waste management which in turn has led to confusion and distrust. It has not helped that the County has relied on County Council that, in instances, seems to have provided more of an advocacy role than legal consultation role.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

116	*12/15/2022*	*Landfills are among the most regulated industries in the nation. Benton County should rely on regulatory agencies rather than adding more regulations.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
117	*12/15/2022*	*This section is quite revealing on how much ambiguity is actually in the current code. Although ambiguity can be a very good thing it still needs bounds...still, moving goal posts during the game is not at all fair. It was not that long ago that we didn't worry much about the landfill or the debris on the side of the road from uncovered loads or even what materials were dumped. But things seem to be changing far more rapidly now. I believe we need to amend the code, and I believe we need to shorten the franchise agreement term to allow the community and vendors to be more responsive to needed change. I don't think "business as usual" should apply to our current situation. It comes down to a trade...what would we do if Coffin Butte became too expensive? We can't have our cake and eat it too.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
118	*12/15/2022*	*CUP recommendation 8. Why does it refer specifically to Republic Services rather than the Landfill operator? Hopefully sometime in the future Republic Services will no longer be the service provider. I oppose it. The landfill buffer for groundwater contamination seems to be an insufficient solution to such a catastrophic problem. I oppose it. The CUP subcommittee has done a good job of identifying many of necessary components of a completely broken system. Well done!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
119	*12/15/2022*	*"Actively monitor and enforce prior land-use decision Conditions of Approval for the landfill or any other land use decision." Would like more detail on this question, is it referencing only prior to 2020 decisions? How to insure against the expected many and serious externalities (costs, envir degradation, etc) that our county residents will pay in the future? Who pays for the costs of fire, disaster, groundwater contamination, lack of road access, or even noxious smells on a wedding day ruined in your backyard? Certainly the couple million a year from the Company won't cover this. It is the Benton county taxpayers and residents who pay. Thus, a fire plan, a GW contamination pan, an anything plan must include a way to assess Republic now.* *When these disasters happen, companies have a way of going bankrupt and avoiding costs. Certainly avoiding paying them in real time when the funds are needed.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
120	*12/15/2022*	*Make it easier for the public to file complaints of noise, odor, etc. by providing a user friendly link that includes a copy sent to DEQ.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

121	*12/15/2022*	*Regarding question # 75, it is not only odor. It should also concern the health effects of vaporous gasses on the of residents of Benton, Linn and Polk Counties.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
122	*12/15/2022*	*It's shocking and unacceptable that conditions for approval of a CUP are not monitored nor enforced. Also, odor is one of the biggest quality of life issue for the landfill and needs to be better addressed.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
123	*12/15/2022*	*The most surprising thing I've learned through this process was the number of important things that the county didn't monitor and enforce from their agreements with the landfill operators. Steps like the ones listed here would help ensure this doesn't happen any longer.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
124	*12/15/2022*	*#62, is particularly important - a system for tracking complaints. I know for a fact that this has never been done in an organized, transparent, and well advertised manner. #72, "purchase buffers" should be closely analyzed and scrutinized to be sure they are not de facto expansions. Purchase of land does not override land use regulations and contamination, as of groundwater, should not be allowed. Groundwater and air quality are "the commons" and do not belong to an individual or corporation. Generally, this entire survey assumes Republic Services as the slam dunk operator of the landfill, which may not be the case going forward. When coordinating with DEQ, it's good to keep in mind that large agencies (state and federal) are subject to the whims of politics, and as our political environment becomes more extreme we may want to keep that in mind. Recall the reversal of decades of environmental regulation under the last president.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
125	*12/15/2022*	*Avoid costly redundancies. Provide a way for concerns and complaints to be easily recorded and saved but no need to actively seek out.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
126	*12/15/2022*	*I want clear and transparent process! It seem to me that Republic Garbage Services has had an inside track with the county and the board of commissioners. I don't want any 1group of people make such a big decision like the expansion that Republic wants to get away with.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
127	*12/15/2022*	*Most of the recommendations seem very appropriate. I am concerned that so many of the previous accounts of interactions point only to 'Soap Creek Valley' residents. I live in the Lewisburg/Crescent Valley area and also frequently am affected by odors, am offended by the trash and traffic, and remain concerned about the region wide effects of groundwater contamination in the north county area. Also, I am very concerned about the ash deposits from the Covanta furnace and dispersal of the ash within all of our region by winds.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

128	*12/15/2022*	*Who will be paid to do all of this? Will I pay a lot more in Taxes? Will garbage rates rise out of sight? The solution is to find somewhere else to start a new mountain of waste. Our pile is way beyond too high now.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
129	*12/15/2022*	*(61) states what has long been a nagging concern of mine--at least. CUP non-compliance reported by others has long been ignored, and worst in cases where county code enforcement officials make retributory threats against the reporter. Being "nice" in Benton County seems to be all the more important than being fair, and the whole county suffers for it. (72) serves only as a cover-up of unacceptable conditions and is blatantly unfair to the county. (65,67) Recommendations should be to "determine that..." and not "determine if..." THis is all too much for an individual to carefully advise!!!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
130	*12/15/2022*	*Limit infill from outlying counties*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
131	*12/15/2022*	*CEO Recommendations 3 , 4, 5, 7 &13. Why is the notification radius 10 miles? Why not the entire county? CEO Recommendation 6. Why does it refer specifically to Republic Services rather than the Landfill operator? Hopefully sometime in the future Republic Services will no longer be the service provider.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
132	*12/15/2022*	*"Notifications for the Benton County Talks Trash (BCTT) Survey for public input on the Workgroup Report should include an email blast..." PLEASE ADD mailers to each address as many residents are older and the GT has priced itself out of circulation. Also, assess the cost of the mailers and outreach (effort and S/H) to the Company, not to the County taxpayers. This way all will start getting a realistic picture of how much the Company is costing our County over their greedy requests.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
133	*12/15/2022*	*Is there a way to modify the county's emergency alert system to include info on up-coming meetings.* *Regarding question #80. Should include all residents of the affected counties. Benton County residents will be financially responsible for the landfill's lasting effect for an extremely long period, perhaps hundreds of years.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
134	*12/15/2022*	*There was a huge deficit of communication during the last CUP process, the steps here seem like a good start to improving that communication for any future CUP.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

135	*12/15/2022*	*Why is there so much talk about a 10 or 15 mile radius of Coffin Butte? This is supposed to represent the public of Benton County, not those in Salem who have no ties to this action, other than their own political agenda.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
136	*12/15/2022*	*Please consider postcards to notify the public of surveys, public meetings, and major decision making events are open to the public as not everyone is on the email blast list. Public buildings like the library are not frequented by everyone, nor is the city webpage.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
137	*12/15/2022*	*Suggestion - First, find out how people regularly get their news about county government processes. Don't waste time on the modes nobody uses. Consider email, mail, newspaper, social media, texts, radio, local television, etc. Most importantly - Revive the Citizen Advisory Committees! (BCC 51.305) The absence of these committees is a missed opportunity to meet, educate, and engage with citizens. I believe Community Development should revitalize the CACs, staff them, and engage over important issues. In a large and contentious land use like the landfill, pre-application community meetings with the applicant should be required, listening to the citizens' concerns BEFORE an application is submitted and deemed complete. Planning in a vacuum, as we've seen, doesn't work. Planning on the ground, IN the affected community, is messy at times, but it's far better than being slammed in a Planning Commission hearing by people who resent the fact that they don't feel heard, and the planners have never even been where they live. This is how trust is built.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
138	*12/15/2022*	*Too many postcards. 2 weeks ahead seems like too long and 24 hours post meetings/decisions seems too tight, maybe not for emails or social media*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
139	*12/15/2022*	*24- 72 hours is not enough time for notifications. All of Benton County should be notified not just not up to 10 miles of the landfill. All of Benton county will deal with theses decisions to expand the landfill for future generations. The landfill is visible past 10 miles now, you can smell it past 10 miles, this was not suppose to occur. Semi- trucks bringing out of county trash move all over Benton county. I oppose many of these questions more notice should be given. People have jobs, travel, events, childcare to be dealing with and many of these notices are on too short time frame. I also oppose many of above questions, the questions should include all of Benton county to be notified by at least notice in the paper and website.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

140	*12/15/2022*	*More notifications would be good however we also need to have well written narratives available to the public in outlets such as the local newspapers such as the Gazette Times and the Corvallis Advocate, also perhaps the Eugene Register Guard. I have been dismayed at the Iowa based corporately owned Gazette Times (really the Albany Democrat Herald in disguise) promoting the viewpoints of Republic Services and name calling Benton County residents as NIMBYs. Hard to be a NIMBY when this dump has been in our backyard since World War 2. I am waiting for other counties to step up to the plate! There are lots of other buttes in western Oregon that are likely more suitable for landfill development than Coffin Butte, right on the edge of major streams draining into the Willamette River.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
141	*12/15/2022*	*I am not sure of the purpose of these survey questions. If the question is "Has the County been lax in monitoring and regulating the landfill and is the County poorly equipped to regulate a major, statewide landfill and to manage the adverse impacts" the very loud answer is "YES, the county is poorly equipped and quite incompetent when it comes to regulating all waste matters and has done an exceedingly poor job". If the question is "Should the County get its act together and do a professional job" the answer is YES. The County has taken in money from the landfill but has not funded adequate supervision, review, investigation, or implications of a growing environmental problem on the horizon. The County has not retained professional or legal assistance competent and informed on landfills but has used a generalists with no knowledge or experience with landfills. The County has ignored all warnings from their own advisory committees and knowledgeable citizens in the community. The County for years has bumbled along. The title of this section is LANDFILL SIZE/CAPACITY/LONGEVITY (LSCL). The County really has no clue and the numbers keep changing for reasons (manipulations) the County doesn't even understand. As a result, citizens have no trust at all in the County's ability to monitor or regulate the landfill or to insure it does not become an environmental liability for county residents. Obviously the landfill will be closed in the not too distant future. The County has no idea when or how to close the landfill and the implications of the closure other than the chicken little strategy...the sky is falling. The County needs better leadership and management. Time for change.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
142	*12/15/2022*	*More education about composting that keeps organic material out of the landfills is a positive step that I support. We need more organic material to maintain healthy soils and concentrating it in a landfill is bad for all around.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

143	*12/15/2022*	*LSCL #3, #7, #9 are vital actions needed to understand present and projected future states. It's very difficult to plan without metrics! Indeed, these three items, especially #9, will allow better understanding of the entire carbon footprint from start to finish. I doubt we even have a starting point for calculating that. LSCL #8 This seems to reflect upon Republic's desire to play their cards close to their chest. More power to them but I think their agendas are purposely vague, minimalistic, and secretive. Unfortunately, this builds mistrust and I wonder if that mindset played into why LSCL #4 is now necessary. LSCL #10 Absolutely. (Metrics!) LSCL #12 should be broadly coordinated it may take other jurisdictions or private entities to actually make this concept work. I did not see an explicit statement about sharing the responsibility with community to run the landfill however, in a perfect world I would like to think that Coffin Butte could be run as though it was a public entity and not a profit center. In other words, I'm all for capitalism but the air shed, watershed, view shed, and protecting our sense of place and livability belong to the public and must be defended*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
144	*12/15/2022*	*Work to reduce garbage immediately.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
145	*12/15/2022*	*Items continue to propose that the county contract with someone. I generally oppose those. When I consider the quality of outputs of the individual who has conducted the meetings and devised the process, I'd say the county doesn't have a good method for evaluating the quality and competence of contractors. Again, items address more than one issue - these are poorly written survey items. Example: The County should take steps to acquire better information about the methane emissions of Coffin Butte Landfill < I agree with this > because the landfill's emissions are currently not well-characterized and use this information to guide diversion programs that could limit the amount of organic waste going to the Landfill.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
146	*12/15/2022*	*Why can't Benton County put out an RFP for new landfill service providers? Do we have to continue to let Republic Services run a monopoly based on profit rather than community well-being? I oppose it. LLU 4 Recommendation appears to hide important public comment from the county board. I oppose it.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
147	*12/15/2022*	*How about nationalizing Coffin Butte Landfill and kicking Republic Services back to Arizona?*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

148	*12/15/2022*	*Only two choices of approval and oppose did not feel right. There is a lot of grey areas between. I also believe SWAC is not necessarily a group of people who are experts in this field, and just go with what Republic presents to them. There is no unbiased watchdog on the landfill and what is going on. I feel these question lead us to believe only republic can run the landfill, I do not believe this is true.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
149	*12/15/2022*	*It seems BC has never held any of the owners of Coffin Butte to account and it appears easy for the process to point to 'some other agency… DEQ, EPA etc etc… as the ones who are responsible. Also, efforts to block public knowledge and input to the process because of 'attorney-client privilege' or other corporate privilege.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
150	*12/15/2022*	*These recommendations are even more ridiculous that the first two sets. As someone who has been involved in issues relating to the landfill for 30 years, I'm exceedingly disappointed that the commissioners have given this forum to what appear to be individuals who live near the landfill and are involved only to advance what they see as their own best interests and don't consider the general welfare of the community in their proposals.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
151	*12/15/2022*	*COFFIN BUTTE SHOULD BE USED "ONLY" FOR BENTON COUNTY REFUSE !!!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
152	*12/15/2022*	*"Actively monitor and enforce prior land-use decision Conditions of Approval for the landfill or any other land use decision." Would like more detail on this question, is it referencing only prior to 2020 decisions? How to insure against the expected many and serious externalities (costs, envir degradation, etc) that our county residents will pay in the future? Who pays for the costs of fire, disaster, groundwater contamination, lack of road access, or even noxious smells on a wedding day ruined in your backyard? Certainly the couple million a year from the Company won't cover this. It is the Benton county taxpayers and residents who pay. Thus, a fire plan, a GW contamination pan, an anything plan must include a way to assess Republic now. When these disasters happen, companies have a way of going bankrupt and avoiding costs. Certainly avoiding paying them in real time when the funds are needed.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
153	*12/15/2022*	*It's shocking and unacceptable that conditions for approval of a CUP are not monitored nor enforced. Also, odor is one of the biggest quality of life issue for the landfill and needs to be better addressed*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

154	*12/15/2022*	*All good but not sure if postcards are really needed. Do we know how effective they actually are? Also, how was the 15 mile radius selected? Perhaps it should be greater...*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
155	*12/15/2022*	*The decisions being made affect the entire region, you should be gathering information outside of Benton County*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
156	*12/15/2022*	*Revive the Citizen Advisory Committees! (BCC 51.305) The absence of these committees is a missed opportunity to meet, educate, and engage with citizens. I believe Community Development should revitalize the CACs, staff them, and engage over important issues. In a large and contentious land use like the landfill, pre-application community meetings with the applicant should be required, listening to the citizens' concerns BEFORE an application is submitted and deemed complete. Planning in a vacuum, as we've seen, doesn't work. Planning on the ground, IN the affected community, is messy at times, but it's far better than being slammed in a Planning Commission hearing by people who resent the fact that they don't feel heard, and the planners have never even been where they live. This is how trust is built.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
157	*12/15/2022*	*Re-examine outflow of leachate and hold the landfill liable for toxic waste ending up in the Willamette River. Test for these toxins prior to treatment at the Corvallis facility and fine the responsible parties.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
158	*12/15/2022*	*I would like to know when you are going to get to the real issues like the fact that a landfill for northwest Oregon really doesn't belong in our wet environment. Or that Republic Services requires all rural customers to have weekly trash, yard waste and partial recycling pickup. We compost and have very little trash, but we do have some. Bi-weekly or monthly pickup would much better match our needs.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

159	*12/15/2022*	*Thank you for involving Benton County residents. In sum, I support the County's involvement in most items and committees. I support a bigger collaboration across many subcommittees (the turnover of the SWAC shows why, plus holding so few accountable for so much doesn't work). I support Stakeholders who have permanent residences in Benton County also being involved. I support true Benton County community participation (not outside hired guns). I do NOT support Stakeholders from outside Benton County. The only other party at the table should be the Company. I worry about costs to Benton County now, and the unequal and unfair costs county residents will pay in the future. I have no reason to trust that Republic will behave differently than any other company when it is held to account. There will be lawsuits, much time and effort expended by BC taxpayers and residents, and in the end the damages from the Landfill will still be done; in the time frame residents need to be made whole, instead they will suffer.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
160	*12/15/2022*	*Contamination of the Willamette River by leachate from the landfill needs to be studied. Risks due to taking ash from the Covanta incinerator needs to be study. Possibility of leakage into groundwater around the landfill needs to be more actively monitored, not just on Republic/VLI property but on neighboring state and private properties.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
161	*12/15/2022*	*Coffin Butte landfill will be a liability to all Oregon residents for many, many years. Short term financial gains for Benton County will never be sufficiently cover this liability. Republic Services will not be responsible for cleanup when it ultimately dissolves or declares bankruptcy, essentially taking the money and running. Republic Services, with all of its financial assets, should now be required to invest, explore and develop alternatives to accepting potentially recyclable materials especially plastics. I implore Benton County to refuse the CUP and any expansion of Coffin Butte Landfill and close it when it's currently stated capacity has been reached.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
162	*12/15/2022*	*Benton County has lost its credibility and the trust of residents through it's secretive backroom process for negotiating the 2020 landfill franchise agreement. This smacks of a simple "follow the money" scenario, with local residents being thrown under the bus and their lives being negatively compromised in the interest of short-term economic gain for both the County and Republic. The last nail in the coffin of public trust was the removal of the two neighborhood representatives from the Trash Talk working groups, both exceedingly knowledgeable and professional individuals whose contributions will be sorely missed. The lack of processes for monitoring and addressing compliance with conditions of approval for CUPs is shocking and needs to be addressed. Landfill odors are a huge problem and need to be grappled with somehow.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

163	*12/15/2022*	*You clearly needed to hire a communications firm (or someone with some common sense) to assist you, if you really intended to make a survey. I find this so symbolic of your entire Trash Talks process - which is completely out of touch with the average citizen. the process has clearly had a strong agenda right from the start. I find this whole thing APPALLING! Shame on the commissioners for supporting this (or rather using as an excuse to get them off the hook and further their agenda)! Shame on the Darren Nichols for proposing this process and pushing it! Shame on Oregon Consensus for supporting this biased and ineffective consultant (who is making loads of money off this process)! This is ALL COMPLETE RUBBISH!!!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
164	*12/15/2022*	*I do not support the expansion of the Coffin Butte Landfill. This survey is a waste of time to the public that does not support this action.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
165	*12/15/2022*	*Waste from only Benton and Polk counties should be going into our landfill. Linn and the other counties should take care of their own problems. Leachates need to be rendered harmless/non-toxic before going into streams and rivers. Medical waste incineration-produced ash needs to be rendered harmless as well. If the ash and leachates are not so treated, then Benton County Commissioners and Corvallis officials should be required to sign their names on letters to all residents downstream who draw water for drinking from the Willamette River stating the number of gallons carrying those toxins being discharged into the river every day.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
166	*12/15/2022*	*Please do not expand the landfill. Please do not allow other counties far and wide to dump their trash here. It is too easy to "pass the buck" in these situations. If each small community is responsible for their waste, they have ownership in keeping their community clean, safe, healthy, and environmentally friendly. It also reduces the environmental impact of driving garbage from county to county. The larger this landfill gets in size and in area it serves (number of cities/counties), the harder it gets to regulate and the harder it is to make sure all parties are being responsible. We do not want Corvallis known for our landfill; we want it known for our university, our community, our beautiful green space, our clean air, and our property value that holds up through thick and thin. Please make transparency and simplicity a focus of the landfill discussion.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
167	*12/15/2022*	*Past decisions with previous landfill owners or operators seem irrelevant. County Commissioners, please don't approve a CUP that raises the tonnage cap. Note that no matter how much factual information is provided, folks often already have made up their minds. If the city is considering not accepting leachate at the local water treatment plant, perhaps the phaseout of our local landfill needs to begin.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

168	*12/15/2022*	*Unfortunately most of our neighbors don't recycle properly. I think a stiffer penalty for contamination of mixed recycling is appropriate!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
169	*12/15/2022*	*I fail to understand why this is all about procedural recommendations, ignoring the issues. The issues are that Coffin Butte is possibly already damaging the water, ground and error and further expansion only makes this worse. I do not see recommendations that will lead to an honest assessment of the damage being created.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
170	*12/15/2022*	*We have followed this process closely from our earliest awareness of the renewal of the permit. This Workgroup, the process and the recommendations are a great contribution to this Permit process and future similar process for county and regional government agencies. Thank you.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
171	*12/15/2022*	*Benton County is one of the smallest counties in the state but we are taking the majority of the trash from other counties in the state and sometimes outside the state. It is time for this to stop. I do not believe Republic has been upfront from the start for their vision of our local landfill. They have purchased property which was to be used for a cell, now they do not want to use it, it's a money maker. Let's close a road instead and fill a space to be viewed for miles. Due diligence was not done on the last proposal. So many questions, and so little time to understand the larger implications to our county's citizens welfare. Air, water, evacuation routes, fire, noise pollution to just name a few. Also historical archeological significance along the ridge where they propose fill with garbage and build a road. This ridge was once used by indigenous peoples to travel to Kings valley and on to the coast. Our County needs to take a step back and realize we should be the ones to decided what our future landscape will look like not out of state multi billion dollar company who will disappear once the resource is used up. If we can now see this mountain of trash, well beyond its intended size. What will it look like if the CUP is expanded and coffin butte road is closed, they did not supply accurate pictures I wonder why? The smell now makes it to north Corvallis. Once expanded how much further, maybe to your house? I then imagine residents who are out enjoying beautiful Corvallis will have some choice words as the smell moves them inside their houses. The landfill has been on fire in last years. If Coffin Butte road was not there, this fire could have jumped through the dry grass and moved along the ridge towards residential areas.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

172	*12/15/2022*	*Republic has their agenda, make money for their stock holders and CEO. I am sure they will not be interested to help pay for the clean up of ground water including local wells for contaminated chemicals. Look at past and present contamination sites through this country. The owners all vanish once it's time to fix a problem they helped create. This could create more money out than what we take in for filling a once large hole in north Corvallis currently.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
173	*12/15/2022*	*I live less than 1/2 mile from Coffin Butte and strongly oppose the expansion south of the road due to potential ground water contamination, smell, and visual site, reduced property values, just to name a few issues. I am also opposed to Republic Services recruiting other landfills to use Benton Co. as the state landfill. There was a time when more things were recycled but now they keep reducing what they will take. Obviously it is cheaper to throw it in the landfill.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
174	*12/15/2022*	*A plan for going forward to manage and decrease overall solid waste in our county and ALL the contributing counties would be a great contribution to the current situation and that of our offspring. However the current situation needs to be dealt with and the first step is to allow only the currently approved landfill cells to be used, then to plan for an orderly shutdown of Coffin Butte. The amount of leachate being dumped into the Willamette River is astounding. Of course, in past declaration, the landfill owners said no fluids would be dumped in the waterways, but clearly that is not the case. Importantly, even if the corporate owners fulfill their obligations and tend to a closed landfill for 30 years, it is a certainty that western Oregon will still be a rainy place and WE the residents of Benton County will be dealing with massive amounts of poisonous effluents from the landfill for perhaps centuries. The time to stop digging ourselves into a worse hole of trouble is now. Use the existing landfill cells conservatively and wisely, then close down CB in a safe and sane manner. Also, Republic Services 'contractual obligations' are not Benton County residents' concern. Let RSI deal with their unwise decisions which seem to be based on steam rolling over Benton County residents through quiet (possible illegal) deals with the current Board of Supervisors. I think the removal of the garbage limits as aligned with a CUP expansion, in light of Zero public comments sought by the Board, is a serious issue that needs to be further explained and if necessary remanded to the appropriate court or state board governing violations of open meetings and public notification laws.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

175	*12/15/2022*	*Republic Services is not transparent (they pretend to not have a business plan nor to have developed options for their future business at Coffin Butte), and apparently the Benton County Board of Commissioners franchise agreement with them was developed without transparency. This action ties the hands of other county actions and the public's right to impact future decisions. The BOC agreement (in the franchise agreement) to lift the tonnage cap based on approval of the expansion raises serious concerns and limit options. The SWAC apparently fell asleep somewhere along the way. If this happens again, their involvement in decisions cannot be taken for granted.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
176	*12/15/2022*	*This entire process/controversy hinges on the question: "Do all of the residents Benton County generate waste and where do they want it to go?" Coffin Butte or Central Oregon? Dreams of zero waste are just that...dreams. of the loudly under-informed are mostly self-serving and do not recognize/accept the needs of greater Benton County. I live within the 10 mile radius of Coffin Butte and accept that the necessity of the landfill far outweighs the inconveniences resulting from its operation. Stop screwing around and accept that human nature (ie: personal benefit) will always triumph over altruism.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
177	*12/15/2022*	*And here to once again confuse things "solid waste management" and "sustainable materials management" planning are used interchangeably. No one knows what you all are really talking about, and county leadership claims no stake in the matter. I never expected to have such pathetic leadership in Benton County, nor witness such contrived legal counsel given here, or on a number of matters beside the landfill issue. Don't pretend to be developing sustainable materials management planning, it is the solid waste disposal delivered into our county, without suitable environmental controls or limitations that is polluting our water, our air, threatening our wildlife, our soils, and the habitability of an increasingly large portion of our county--all allowed because we have yet to hammer out a solid waste management plan leadership has not stressed. Pushing nearly a million dollars, and BCTT doesn't know even now what to do or clearly say about it. Maybe that is partly due to BCTT members, so- called stakeholders, who aren't representing Benton County citizens, but rather their corporate interests. No solid waste management plan after all this. Meantime legally sanctioned advisory bodies don't meet regularly, and members of one of those and the Planning Commission are removed because divergent voices are not to be heard. I hope to be proved wrong, but this BCTT process has provided the most grease I've ever seen laid down on very carefully laid skids. The end result will be county commissioners saying once again "our*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

		hands are tied and we can't act in the interests of our citizens and residents."			
178	*12/15/2022*	*Seems to me that there has been little discussion of the local and global impacts of maximizing the use of Coffin Butte as a landfill as compared to the alternatives which I assume are taking it somewhere far away and dumping it. This seems like the real issue and it's barely noted. These recommendations read like the cathartic rants of a few individuals who have an axe to grind because they feel they've been ignored for years. I hope the commissioners remember that those of us who live in other parts of the county and greater landfill "waste shed" have an interest in how the coffin butte resource is used that goes beyond being told a day in advance that it's going to smell bad tomorrow.* *It still doesn't seem right that Benton County should be the waste repository for all of Western Oregon without some compensation, unless other counties are willing to assume that role in the future.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
179	*12/15/2022*	*I know not everyone likes the landfill but unless we stop creating trash, and everyone else in the country does too, wwe need landfills. They are better than burning the trash and an existing landfill here is better than a new landfill being opened somewhere else.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
180	*12/15/2022*	*Coffine Butte Landfill is a good community partner. Not everybody lives in Corvalis and not everybody think that there is a problem. They are not the bad guy.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
181	*12/15/2022*	*Again, please give us clear and transparent answers about where our recycled waste is going and how that can be improved. The County itself needs to step up on its own carbon emission goals before shifting the focus to things like Coffin Butte, etc. Where is Benton County at in meeting its own upcoming deadline for carbon emission reductions?*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
182	*12/15/2022*	*Stop the influx of trash from ousted Benton and immediate adjacent counties. Tell Republic NO on the expansion. Drive a better deal with more economical options for residential trash/recycling/yard debris. If Republic won't pay, recruit a provider that wants the job.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
183	*12/15/2022*	*Please consider stopping trash from counties other than Benton to be dumped at Coffin Butte*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

184	*12/15/2022*	*Use the 15 years remaining of landfill life to transition to modern post-landfill waste management. Benton County should stop being the 'sin eater' for the region, taking all the region's garbage and its associated long-term problems in exchange for inadequate short-term cash. Benton County should collaborate with other waste generators in the region to devise a strategy for sustainable waste management. It's apparent that Benton County has not been dealing with the issues being engendered by the landfill, and has instead devoted its energy to denying those issues exist and suppressing evidence to the contrary. Benton County needs to begin facing the ramifications of hosting a regional landfill, which first of all means to begin collecting data not spoon-fed to them from Republic Services. Benton County has values to operate from, such as those enshrined in its 2040 Thriving Communities Initiative, but those values seem to vanish whenever solid waste management issues come up. It's counter to those values, for example, to uplift some residents at the expense of others. Benton County needs to realize that Republic Services will never work with them to create significant reductions in waste generation, especially as part of a regional initiative. Benton County needs to begin its own program to do that regionally, and to invest a share of the money it's currently making from the landfill to liberate itself from dependence on the landfill.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
185	*12/15/2022*	*If the County wants to "host" a landfill, then they need to do their job. That likely includes establishing a fully funded work unit to do the tasks necessary and as outlined above. Since the waste comes from all over the state, the cost of the work unit could be born by a surcharge on waste dumped or diversion of the host fee to a separate fund established for supervising, reporting , advising and other tasks. If an City or County wanted to "host" a major industrial site known to cause or result in environmental and land use issues, they would establish means of monitoring, regulating and enforcing standards. The County needs to do so. I would like to see an annual "landfill status report" each year similar to the annual water quality report. It would be detailed and thorough and mailed or emailed to all county addresses. The annual report could also include progress made on the SMMP.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
186	*12/15/2022*	*This open table process was overthrown by a small number of community members that do not represent the broader opinions of the county. Decisions at this scale, like the ones suggested in the recommendations, are left to qualified professionals for a reason.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
187	*12/15/2022*	*It is pretty clear that "Solid Waste Management in Benton County" is broken and needs to be fixed. The BCTT was / is a hopeful first step in getting on track. However, it is only a first step and much more needs to be done. The*	*Benton County Talks Trash -*	*BCTT community survey*	*Logged comments*

		recommendations provide some "next steps" and I am hopeful that the County will follow through.	*Community Survey*		
188	*12/15/2022*	*The development of a responsible SMMP will be a difficult task. In my opinion, the BCTT process has been weighed down by information that is subjective in many cases. Determining the future of Coffin Butte has impacts outside Benton County which should be considered. The environment does not see the imaginary lines drawn by counties. We should be considering what is really best for our future, not just inside those lines.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
189	*12/15/2022*	*So many things to think about! Benton County seems to be shouldering most?all? of the responsibility for hosting a regional landfill. In that sense is BC justly compensated? How does our landfill compare to other regions, states, vendors, providers? I imagine we are above average in terms of having a viable and responsibly run landfill in the first place but I feel as though there are many intangible and long-term effects that we may eventually come to regret. I apologize for sounding idealistic but the major problem is not due to the operations but is due to the fact that we don't have a circular economy along with a host of other positive recycling processes. We have too much packaging and too many plastic containers. It's just way too easy to toss stuff...how can we change that mindset? Thank you for asking!!*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
190	*12/15/2022*	*If inflow is limited to the abutting counties the current facilities will have a longer useful life, with less toxins present to develop future issues. The facility should not be allowed to transport toxins that are dumped into the Corvallis water treatment facility and then diluted, end up in the river. I am concerned that the city will be held liable at some point for the discharge. At the very least, the landfill needs to fund extensive treatment facilities at the Corvallis waste water plant to deal with their "contributions".*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*
191	*12/15/2022*	*the landfill was no secret when those folks bought their homes. we live in a republic not a democracy - most of these recommendations seem inspired by the latter, which is not our reality.*	*Benton County Talks Trash - Community Survey*	*BCTT community survey*	*Logged comments*

12/11/24	Letter sent (in 2025.01.08 DSAC Meeting Packet). Her concerns related to odors and a need for technological sensors that don't rely on the human nose.	Email	Bailey apologized that the link to the DSAC meeting on 12/11/24 wasn't working and let her know that I'd pass along her concern to the DSAC (in the meeting packet on 1/8/25) and include it in the 2024 CCAR
10/8/24	Hi! I'm not very good at computers, so hope that you get this message. I believe that the Benton County land fill shouldn't be for numerous other counties(other than maybe a few adjoining ones like Linn which maybe should pay something for access to it) who don't want a landfill in their back yard and would rather we shoulder the environmental burden. If Republic wasn't taking all that other outside trash, the land fill would be able to function until the quarry is available for expansion. I have found Republic's service to be great, but they are being greedy for additional business at our expense. The new contract should restrict where the waste comes from.	Email	Bailey emailed her instructions on how to sign up for Coffin Butte permit application updates and how to provide public comment.

Public Comment for DSAC 12/11/24 Meeting – Please Distribute to All DSAC Members.

Republic Services has indicated that it will monitor air quality at the landfill by training two employees in odor detection.

I have the following concerns about this plan.

1) Republic Services has a vested interest in having low incidents of bad air quality, methane leaks, etc.

2) Republic Services does not have a good track record for self-report accountability. Just one example relevant to odor detection.

> Laura McWhorter, PE, Permitting and Compliance Specialist – Air Quality, Oregon Department of Environmental Quality (DEQ) send an email to Ian Macnab, Republic Services Environmental Manager - Oregon to share a description of seven Coffin Butte odor complaints between 11.26.24 - 12.1.24 over the Thanksgiving holiday. <Quotes from that email.>
>
> > **Tuesday 11/26/24: 9:30-11:30 a.m. –** ***"Coffin Butte dump stench."***
> >
> > **Wednesday 11/27/24: 7:15 a.m. –** ***"Went outside with my cup of coffee. Hit with the smell of the landfill."***
>
> Ian Macnab's response: ***"Our odor patrols on the 26th and 27th did not detect anything. I drove through the area on my way to Corvallis on the 29th and also did not smell anything***. All systems were operating as normal last week."

3) Republic Services employees doing odor patrols on Coffin Butte landfill property, are, by definition, not recording air quality for the entire community. The odor complaints appear for Adair Village, Soap Creek Valley, and beyond. Winds, temperature, cloud/fog cover, inversion layers, elevation, location, etc, all impact **where the odor is noticeable**. For example, I live at lower elevations, and I don't always smell what my neighbors who live at higher elevations report.

> Saturday 11/30/24: 10:00 a.m. – 12:00 p.m. – **(7 miles S of landfill)** *"Sitting at my desk, when I started to smell it. It lasted for about 3 hours."*
>
> Saturday 11/30/24: 12:00 p.m. – *"Passing by the Coffin Butte landfill on Saturday afternoon, there was a terrible odor that we could smell from our car for about* ***a mile north and south of the landfill."***
>
> Sunday 12/1/24: 11:52 a.m. – *"Coffin Butte landfill toxic gases are* ***flowing south to many houses in Soap Creek Valley,*** *trapped by fog and stagnant air."*

4) Republic Services' plan to train employes to monitor air quality also has some physiological issues that aren't being taken into account:

> **Olfactory fatigue -** also known as **odor fatigue**, **odor habituation**, **olfactory adaptation**, or **noseblindness -** is the temporary and normal inability to distinguish a particular odor after a **prolonged exposure to that airborne compound**.

This term is commonly used in **wine tasting**, where one loses the ability to smell and distinguish wine bouquet after sniffing at wine(s) continuously for an extended period of time.

The term is also used in the study of **indoor air quality**, for example, in the perception of odors from people, tobacco, and cleaning agents.

Since odor detection may be an indicator that exposure to certain chemicals is occurring, **olfactory fatigue can also reduce one's awareness about chemical hazard exposure.**

Olfactory fatigue is an example of neural adaptation. The **body becomes desensitized to stimuli** to prevent the overloading of the nervous system, thus allowing it to respond to new stimuli that are 'out of the ordinary'.

Individuals experiencing olfactory fatigue may find it challenging to notice a smell they were initially sensitive to, even if the odor concentration remains constant. **This is particularly concerning when the smell is associated with potential dangers of toxic materials or leaks.**

Nose blindness develops faster in response to unpleasant smells.

Based on the way bodies function, there is **no way to prevent nose blindness**.

To reduce olfactory fatigue for Republic Services Employees, the following must occur.

- Remove the source of the odor ***(not possible to remove the source of the landfill odor),***
- Limit the duration of exposure ***(not possible for onsite employees),*** or
- Allow the affected individual to spend time in a different environment to help reset the person's olfactory receptors. Avoiding strong smells can alleviate the symptoms to regain sensitivity to a specific odor ***(not possible for onsite employees)***.

Although not related to Olfactory Fatigue, Anosmia occurs when a person's overall sense of smell is greatly reduced or even lost. This is a long-term condition. There is no way to know if this condition is a factor for landfill employees.

Resources: Healthline, Wikipedia

5) Bottom line:

To measure air quality around Coffin Butte landfill, appropriate equipment sensors, not human noses, must be set up in various locations at Coffin Butte Landfill and surrounding areas of Adair Village, Soap Creek Valley, and Corvallis at different elevations.

Continuous data needs to be reported directly to a trained, neutral party for recording and providing an easy way for the public to see data that has been collected.

STOP THE LANDFILL EXPANSION

I've read up on all the facts and the negative impact on the Coffin Butte expansion. I present to you an alternative direction that could solve this challenging problem. Transporting trash is nothing new. The state of Washington currently has two major contracts to transport nearly all of that state's trash to either Arlington, Oregon or Roosevelt, Washington via the Union Pacific Railroad (UPRR) or Burlington Northern Santa Fe Railway (BNSF) for over 30 years via containers on intermodal rail cars. Trash could still be received at Coffin Butte serving as a receiving station, but then transferred by truck to one of two trans load rail facilities. One facility at Millersburg (see below) would be a 16-mile, 26-minute distance; or to a closer rail head at Wellsdale on the Portland & Western Railroad within Camp Adair, a distance of about 1 mile. (The Camp Adair facility would have to be developed to accept container railcar loading.) Travel time to the latter location would be much shorter. The facility at Millersburg is currently vacant (see article below for the details).The transfer of all kinds of waste would solve Benton County's dilemma at Coffin Butte. The two sites listed below would address all the current issues that threaten the health and safety of everyone within Benton County and beyond, such as the high volume of methane and other harmful gases that leak out at Coffin Butte and millions of gallons of toxic leachate that leach into the Willamette River. Coffin Butte landfill is also a greenhouse gas emitter that threatens our environment. The bigger the dump gets, the bigger the problem grows. The time to act is now. Stop the Coffin Butte expansion now before it stops us. *COFFIN* Butte: the name alone is deadly.

Fact sheet for REPUBLIC SERVICES of Roosevelt, Washington

The largest private landfill in the state, Roosevelt covers an area of 2,545 acres, has a 120 million ton capacity, and a 40 year expected trash-receiving life. Ninety-seven percent of the trash arrives in shipping containers, mostly via rail from the Seattle area, to an intermodal yard in Roosevelt (owned by the same privately held waste company - Republic Services). Containers are loaded onto trucks for the haul up the hill to the landfill, and then emptied by tilting lifts that upend the container/trailer assembly. Trash also arrives from a network of nine intermodal yards that connect the landfill to sources as far away as California, Idaho, and British Columbia. Trash also comes from Alaska on barges. Empty trash trains take fruit and other goods from eastern Washington back to Seattle (in different containers). The site is also home to a power plant, which uses the methane gas produced by the decaying garbage, to produce up to 37 megawatts (enough to power 30,000 houses) annually.

Fact sheet for WASTE MANAGEMENT at Arlington, Oregon

Located in Arlington, Oregon, this facility provides cost-effective services to customers in the states of Washington, Oregon, Montana, Idaho, Utah, Wyoming, Hawaii, Alaska and provinces of Western Canada. CWM Arlington also offers services nationally through Waste Management's (WM) extensive rail transportation network. In operation since 1976, this award-winning, environmentally safe hazardous waste facility boasts a stellar safety record and an unmatched technical service team with more than 20 years experience per representative. CWM Arlington adheres to strict regulations administered and overseen by the Environmental Protection Agency (EPA) Region X and the Oregon Department of Environmental Quality (ODEQ). This facility is positioned on a 1288-acre site (with 320 acres permitted for disposal operations). The site is buffered by over 11,000 acres of undeveloped property owned by Waste Management. One of the most secure treatment and disposal facilities in the world, this remote operation is built on top of layers of basalt from various

formations. The disposal cells meet very strict EPA and state guidelines, and are constructed of 60 mil High Density Polyethylene (HDPE). Additional security measures include a sophisticated leachate collection system, monitoring wells, and a state-of-the-art leak detection system.

FACT ARTICLE REGARDING THE MID-WILLAMETTE VALLEY INTERMODAL FACILITY

Retrieved from https://oregoncapitalchronicle.com/2024/01/16/behind-schedule-over-budget-state-backed-rail-projects-costing-70-million-sit-idle/ on 12/23/24

UPDATED at 9:30 a.m. Tuesday, Jan. 16, 2024 with comment from the chair of the Oregon Transportation Commission

Five years ago, the state Legislature approved $51 million for two rail shipping centers in the Willamette Valley and eastern Oregon that promised to reduce truck emissions, boost agricultural exports and save farmers money.

Today, the money's been spent and neither the public, nor farmers, have benefited. The centers, essentially truck-to-rail transfer stations that were supposed to deliver onions, hay and grass seed to seaports in Seattle and Tacoma, and to major cities in the Midwest and the East Coast, sit unoccupied. Not a single truck has been taken off the road, and not a single pound of cargo has been shipped. Two companies that initially agreed to run the depots have both walked, and no one has stepped in to replace them.

Experts warned that the projects could fail. The Willamette Valley depot was not well located, and would struggle to get necessary shipping containers. Key agreements ensuring demand, rates and logistics from both rail centers were not in place.

Nevertheless, the Legislature funded the projects in 2017, with the backing of a state representative who went on to make hundreds of thousands of dollars as a consultant on the projects. The Oregon Transportation Commission, charged with reviewing project proposals, released the state funds in 2021. Since 2017, more than $70 million in public money has been spent or committed to the projects, and the experts' warnings have been borne out.

In Millersburg, the Mid-Willamette Valley Intermodal Center off Interstate 5 promised to move hay and grass seed to ports in Seattle and Tacoma via rail, taking up to 150 semi-trucks off I-5 each day. It was finished in November of 2022 – 10 months late and $10 million over budget – but it sits idle next to the thrumming interstate.

The Treasure Valley Reload Center in Nyssa, which was supposed to save onion growers $2 million per year in transportation costs to Midwest and East Coast cities, has gone $18 million over budget, fallen more than two years behind schedule and is still incomplete, the Malheur Enterprise reported. State officials earlier this year stopped work on the site and are assessing if it is still viable.

Experts told the transportation commission that Millersburg wasn't far enough from Washington seaports to make rail cost-effective and that it would need the cooperation of two major railroad companies to ensure deliveries and a steady supply of empty containers to transport agricultural goods.

In Nyssa, experts said the railroad would need to move more than just onions to be financially stable, that the volume of produce projected to move through the facility was inflated and that to be successful, Union Pacific would need to commit to an export schedule it was reluctant to offer.

In the end, the facility operators and project managers could not secure all of the necessary agreements and schedules with rail operators. In Millersburg, a lack of containers needed to move agricultural goods continues to keep the facility shuttered.

State Rep. Greg Smith, R-Heppner, urged the Legislature to fund the projects through a state grant program, then economic development groups supported by both Linn and Malheur counties hired Smith to manage the projects.

He told the Capital Chronicle that he knew from the start that the Millersburg facility would face insurmountable challenges. Despite the warnings and years of revised plans, those who backed and built the Mid-Willamette Valley Intermodal Center blamed setbacks on one another, as well as volatile market forces and a lack of better information.

"All I could do is bring them the best information I had available, and they had to make decisions," Smith said of his clients in Linn County.

An Oregon Department of Transportation official blamed the failure to get the facilities running on inexperience.

"These were new facilities, and ODOT does not have and did not have a lot of experience with these kinds of facilities," said Erik Havig, statewide policy and planning manager at the transportation department. "We did the best we could with the information we had."

The centers are the first of their kind in Oregon.

Many of the officials who've been involved for years with the Willamette Valley project say they've learned a lot since it was approved. They insist the project was not a mistake and continue to promise that it will boost agriculture exports and reduce truck emissions.

"We are not happy with how things have gone thus far, but we are determined to put this property to productive use as soon as possible," Jon Kloor, chair of the Mid-Willamette Valley Intermodal Center Board and the Linn County Economic Development Group Board, said in an email. "The basic premise that led to the Department of Transportation supporting this project and a similar project in eastern Oregon remains true today."

Three of the five transportation commission members who voted to approve the projects did not respond to Capital Chronicle emails or calls requesting an interview. Two commissioners who voted to release funding for the projects and who continue to serve on the commission today responded after the story was published. Commissioner Sharon Smith declined to comment. Chair Julie Brown said in an emailed statement that the projects were a new approach for the state and came with some risk.

"The Oregon Legislature and Oregon Transportation Commission both felt they were worth investing in," she wrote. "I believe that we are still early in the story of both of these projects. I look forward to seeing how the projects' sponsors and partners will find ways to fully realize the investment the state has made in them."

There is no plan or timeline for getting either rail center operational. The state transportation department, which distributed the funds to build both, has no practical way to recoup all the money, according to the Malheur Enterprise.

Years in the making

The Mid-Willamette Valley Intermodal Center was funded with a $25 million Connect Oregon grant from the state. Recipients must show that their project can reduce transportation costs for Oregon businesses and connect elements of the state's transportation system to boost efficiency. (Alex Baumhardt/Oregon Capital Chronicle)

The idea for an intermodal center in the Willamette Valley gained steam in a 2016 report from the Portland-based economic consultancy ECONorthwest. Analysts found that a strategically located truck-to-rail center could help hay and grass-seed growers transport their products to ports in Seattle and Tacoma at rates competitive with truck shipping and take up to 150 semi-trucks per day off I-5. The report noted that moving freight by rail instead of truck reduces greenhouse gas emissions by 75%.

A year later, the Legislature approved $25 million for a Willamette Valley rail center and $26 million for one in eastern Oregon through House Bill 2017, a $5.3 billion package of taxes and fees to fund transportation over the next decade. The bill allocated the money through a grant program called Connect Oregon, overseen by the state transportation department. To receive a Connect Oregon grant, applicants must show that their project can reduce transportation costs for Oregon businesses and connect elements of the state's transportation system to boost efficiency. In comparison, with $51 million, the state could have invested in more than 120 electric buses or 1,200 rapid charging stations for electric vehicles, based on average prices from the U.S. Department of Energy and the West Coast Electric Highway.

Twelve of the 14 members of the Legislature's Joint Committee on Transportation Preservation and Modernization, including Smith, supported the state's investment in the projects.

Soon after the Legislature approved the funding, Linn and Malheur counties contracted Smith and his consultancy, Gregory Smith & Company, to help their nonprofit economic development groups pitch projects for those Connect Oregon grants. Smith was already working as Malheur County's economic development director during the time he advocated funding the projects at the Capitol. The county paid Smith an additional $6,000 per month to manage the Treasure Valley Reload Center project.

According to the Oregon Government Ethics Commission and Oregon law, Smith did not violate any laws by working as an elected official to direct state money to projects he was eventually hired to manage as a private consultant.

A location problem

The Oregon Transportation Commission, which sets state transportation policy, was responsible for vetting plans for the projects. From 2017 to 2021, its members heard from a variety of rail and freight experts who repeatedly said the Mid-Willamette Valley project would only work if it fulfilled key requirements. Among the earliest requirements was securing the cooperation of two railroad giants – Union Pacific and BNSF – which control different sections of track needed to move goods from Millersburg to Seattle and Tacoma. Both railroads would also be needed to get a steady stream of empty containers from Chicago, Kansas City, Denver, Salt Lake City and coastal ports to Millersburg.

In the final proposal for the Mid-Willamette Valley facility, Keith Leavitt, chief trade and economic development officer for Port of Portland, wrote:

"The active participation and cooperation of both Class I railroads (Union Pacific and BNSF) is equally critical to the success of the Mid-Valley Intermodal Facility as both railroads control different segments of the mainline between the Valley and Seattle. The railroads will need to provide heavy-haul rail cars capable of handling the agricultural export loads that are generated out of the Valley from the facility."

By the time the Mid-Willamette Valley facility was approved, only Union Pacific was signed on to run trains through the facility, and there was no certainty the company would be able to get empty containers from the Midwest or the coast to Millersburg. Any mention of BNSF as a partner was eventually dropped from the project following its approval by the commission.

Despite Union Pacific getting exclusive access to the publicly funded rail project, the rate and track agreements between the company and the operators at the Mid-Willamette Valley center are confidential, according to the state transportation department.

The center also faced a location problem, as the California-based freight consultancy Tioga Group noted in an analysis in 2019 for the commission. Rail is usually only cost-effective when goods are transported 500 or more miles, according to supply chain experts. Millersburg and Seattle are 230 miles apart. That meant that trucks would remain a cheaper option for Willamette Valley farmers, the analysis said. Smith, who had helped pitch and refine the plans for Millersburg from late 2017 to the summer of 2019, said this was a concern he had flagged to the project's supporters in Linn County.

"I knew that the distance issue between Millersburg and (Seattle and Tacoma), economically, was going to be very, very hard to overcome," he told the Capital Chronicle. "After that, I mean, I didn't have anything to do with the design, I didn't have anything to do with the negotiations or contracts."

John Pascone, president of the economic development group in Linn County, refuted Smith's claim that he had expressed concerns about the location.

"Greg Smith was always high on the project and to my knowledge never expressed any doubts about its viability," Pascone said in an email to the Capital Chronicle. "He was an energetic and supportive project manager during his involvement."

Smith's work with the county officially ended in July, 2019. He pocketed between $150,000 and $200,000, according to Pascone, and his contract was not renewed. Kloor, of the Mid-Willamette Valley Intermodal Center Board, would not comment on cutting ties with Smith, while Smith said he chose to leave the Millersburg project to dedicate more time to the one in Nyssa.

'Necessary milestones'

In January 2021, the director of the Oregon Department of Transportation, Kris Strickler, recommended that the commission release the necessary funds to finish building the projects.

"At present, both project sponsors have submitted to the department documentation that demonstrates that they have met all of the necessary milestones," Strickler wrote.

A day later, two Tioga group analysts wrote a "confidential memorandum" to John Boren, the manager of the department's freight program, saying again that the Willamette Valley project lacked critical components for success.

"It appears that successful operation of the Mid-Willamette Valley Intermodal Center terminal and intermodal rail service between Millersburg and the ports of Seattle and Tacoma depends on a series of assumptions that have yet been verified," said Daniel Smith and Frank Harder. "Project success thus rests on factors that are still unresolved."

That warning did not dissuade the commission from moving forward, according to Havig of the transportation department.

"We don't remember anything from Tioga saying: 'This project or any of these projects are going to completely fail,'" Havig said.

Kevin Glenn, the department's communications director, told the Capital Chronicle that the Tioga analysts were merely highlighting challenges each facility would face and how best to address those challenges.

"They never stated that if these challenges were addressed that the facility would absolutely be successful, nor that if these challenges were not completely addressed that the proposed facility would absolutely fail," he wrote in an email.

The transportation department had over the years reimbursed the project developers periodically for money spent, but on Jan. 21, 2021, the commission agreed to release what was left of the $51 million to build the centers.

Construction on the Mid-Willamette Valley Intermodal Center took 10 months longer than anticipated and cost $10 million more than the $25 million initially approved. Linn County leaders attribute this to inflation and delays caused by COVID and used federal COVID relief dollars to pay the difference. To pay for maintenance, operations and fees on the land and buildings, Linn County leaders have used nearly $2 million from its annual economic development money from the state lottery.

Lack of responsibility

Many of the warnings that the Mid-Willamette Valley Intermodal Center could fail have been borne out. (Alex Baumhardt/Oregon Capital Chronicle)

Every warning about the Mid-Willamette Valley Intermodal Center remains valid today. There is no guaranteed supply of shipping containers. The railroad is still at a distance from seaports that makes truck shipment less costly, and the facility does not have agreements to move any Willamette Valley produce.

Two companies hired to operate each of the rail centers, including managing negotiations with the railroads, the shipping container suppliers and area agricultural producers, dropped out of their contracts to run the facilities in 2023, and no one else has stepped in to replace them.

Both the Willamette Valley and Treasure Valley projects don't make economic sense, critics say. Yet no one appears to have accepted responsibility for the projects running over budget and failing to function.

The consultants who promoted the projects have been paid. So have most of the developers. The Malheur County Development Corporation, the Linn County Economic Development Group and the board of the Mid-Willamette Valley Intermodal Center are responsible for ensuring the projects are finished and functional one day.

Linn County commissioners did not respond to a question about why they continued to support the Mid-Willamette Valley project and the economic development group, despite the projects' red flags and the extra costs, or what they plan to do now.

"That question might best be answered by the Mid-Willamette Valley Intermodal Center board of directors, but we believe this is a valuable long-term asset for the mid-valley and it will take time to roll up," spokesman Alex Paul said in an email on behalf of the commissioners.

The intermodal board's chair referred questions about why the project continued to move forward and receive funding despite the warnings to the county and the state.

“We believe Linn County and the Oregon Transportation Commission are the appropriate parties to respond to this question,” Kloor, the board chair, said in an email. “That said, we believe it is way too early to declare this project a failure.”

Officials with the state’s transportation department and the transportation commission take some responsibility.

“The ultimate decision to move forward and to construct the facility was with the (transportation) commission,” Havig of the transportation department said of the Willamette Valley center. “But I would also point out that there were clear expectations in House Bill 2017 and from the Legislature that this was a project that was strongly supported. So there was a lot of political support behind it as well.”

Smith, who is in the unique position of bearing at least partial responsibility for the projects at the legislative level and orchestrating the financing of the projects in both counties, only acknowledges responsibility for some mistakes at the Nyssa center.

His consultancy took in $15,000 a month from 2018 to 2022 for economic development work in Malheur County and for managing the Treasure Valley Project. He said if he could do it over again, he would have characterized the $26 million budget he pitched for the center as “seed money,” rather than the full cost. He abruptly resigned from his work with Malheur County last February, right before the county’s third request to the Legislature for financial help to finish the project.

Smith said he bears no responsibility for promoting a flawed plan in Millersburg.

“That was all managed by a board. It was all managed by elected officials,” he said. “I had no decision making in Millersburg.

Public Comment for DSAC Meeting

Wednesday, December 11, 2024

Submitted by Virginia Scott, Citizen of Benton County Oregon

I am concerned about the truck traffic to and from the Coffin Butte Landfill for several reasons.

As self-reported by Republic Services, there are 256,000 trash truck trips to and from the Coffin Butte Landfill per year. This does not include the 20+ trips per day, 5-6 days a week, which haul the leachate from the landfill to inadequately "process" it prior to dumping this leachate in the Willamette River.

All of these truck trips produce diesel exhaust, contributing to greenhouse gases and global warming. What is Republic Service's plan to convert these trucks to an all-electric fleet in keeping with Oregon's Climate Protection Program (CPP) adopted by the Environmental Quality Commission on November 21, 2024 to reduce fossil fuel use by moving commercial trucking from diesel to electric?

What is Republic Service's plan to mitigate the wear and tear on our Oregon roads from this excessive truck traffic?

These 256,000 trash truck trips per year are producing an enormous amount of roadside garbage. Roadside garbage pollutes the waterways, creeks, streams and rivers along our Oregon roads. If you traveled highway 99, between the landfill and Monmouth, in the past few weeks you may have observed the giant yellow bags of trash the were distributed every 30 to 50 feet on both sides of the highway for 14 miles, which is roughly 4,928 commercial sized bags of garbage. This is garbage that flew off the trucks on this one stretch of road. Now consider how much more is lining the other miles of Oregon roads and highway that these truck travel as they collect the bulk of Oregon's garbage for delivery to the Coffin Butte Landfill.

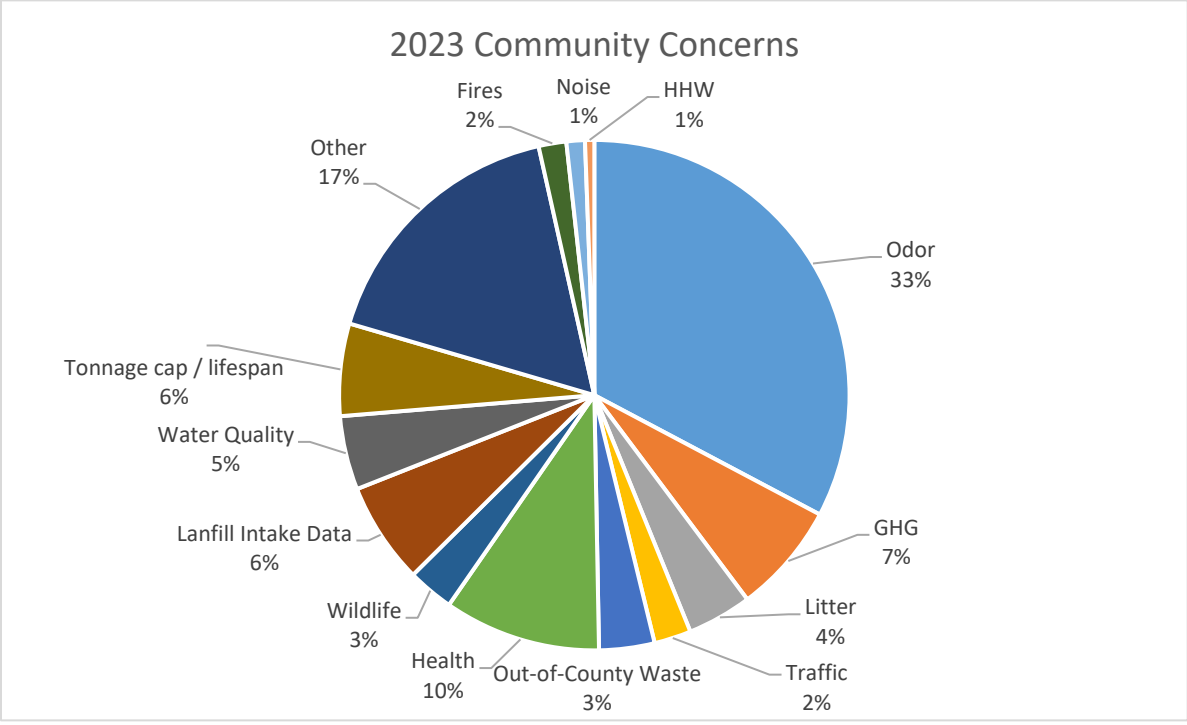
What is Republic Service's plan to prevent future, and clean up past roadside garbage pollution that their 256,000 trash truck trips per year deposit?

I would like us to also consider the risk posed to other traffic, pedestrians, and bicyclists by the 256,000 trash truck trips per year and the approximate 6,240 leachate truck trips per year crisscrossing our state.

What is Republic Service's plan to mitigate these risks to our citizenry?

2023 Coffin Butte Landfill Community Member Concerns Annual Staff Report

Prepared By: Bailey Payne, Benton County Community Development Department, Solid Waste Program



Preparation Date: January 28, 2025

The duties of Benton County's Disposal Site Advisory Committee (DSAC) are outlined in Oregon state law—specifically in ORS 459.325, which includes the requirement that "the committee shall prepare an annual written report summarizing the local citizens' concerns and the manner in which the owner or operator is addressing those concerns" which will be considered by the Department of Environmental Quality (DEQ) as part of issuing and renewing a solid waste permit.

Benton County staff and the DSAC have prepared the following staff report summarizing community member concerns regarding Coffin Butte Landfill in 2023, which may be used by DSAC to meet the requirements of ORS 459.325. Concerns listed in this report have been compiled using information from the Coffin Butte Landfill & Pacific Region Compost Annual Report 2023, comments made at Benton County Talks Trash meetings, complaints received by Benton County staff, complaints received by Republic Services, the Oregon DEQ and concerns presented during DSAC meetings.

One hundred twenty-two complaints about the Coffin Butte Landfill were reported in 2023 as detailed in the table below. Some complaints included numerous topics while others focused on a single concern. The complaints were organized into themes as illustrated in the following pie chart.

The complaints received by Benton County directly were fairly evenly distributed by topic, with odor complaints as the single topic with the most complaints. Odor complaints were one third of all of the concerns reported. In response, Coffin Butte Landfill has reported that it has expanded its methane capture system to reduce fugitive gasses from escaping. Complaints categorized as "Other" were largely comments on the Benton County Talks Trash process, service complaints and people reporting their opposition to the landfill expansion.

Coffin Butte Landfill Community Concern Log 2023

#	Date	Concern Summary	Received By:	Compliant / Concern Communication Method	Manner in which the landfill is addressing those concerns
1	5-Jan-2023	1/5/23 - Staff received Email reporting that the complainants glass and neighbors only gets picked up about 50% of the time. The big tan cart is always picked up (a different truck). The email also said that the complainant tried to contact Repbulic Services via email and phone (541.754.0444) without response. I've tried to get in touch with Republic Services about glass pickup. Nearly impossible to get a hold of them at 541.754.0444. Got no response when emailing Republic Services. So I'm contacting you since the county has a franchise agreement with Republic Services. Glass pickup is supposed to be the first full week of each month. Our glass and neighbors only gets picked up about 50% of the time. The big tan cart is always picked up (a different truck). Perhaps the glass truck person is careless - I don't know. My address is 8910 NW Wynoochee Dr, Corvallis. I'm hoping that someone from the county can put some pressure on Republic Services to do the job they are supposed to do.	Written comment	Email	1/6/23 - Daniel emailed Kenny Larson requesting more information and investigation into the issue. Daniel also responded to Mr. Bucht to let him know that Republic Services has been contacted.
2	11-Jan-2023	1/11/23 - Ken Eklund sent an email with a PDF complaint that the landifll lights go on at 4:45am each day, possibly impacting migratory birds, other wildlife, and the terms of the CUP. The conditions of the CUP, including the lights, are being examined by staff currently. Daniel forwarded this concern to Greg Verret to be investgated as a code compliance file.	Written comment	Email	2/28 - Land use issue for code compliance. In-progress
3	12-Jan-2023	1/12/23 - Rana Foster emailed saying that they smelled a strong methane smell coming from the landfill on 1/11/23 while hiking nearby.	Written comment	Email	Daniel sent an email with this information to the landfill staff, Ian MacNab and Broc Keinholtz.
4	14-Jan-2023	I was planning on going for a walk with a neighbor but could barely make it 10 steps down the driveway before I got light headed and a headache. It essentially made the outdoors of our home inhospitable. I've noticed much more odor trash and noise coming from the Coffin Butte Landfill and Knife River quarry in the last five years. On walks I've taken around our property the last couple months I've found multiple plastic bags and trash that could only have floated there from the landfill or people	DEQ	Written comment	Not reported

		traveling to and from it. It's aesthetically not pleasing and harms the soil and animal health on our property.			
5	25-Jan-2023	air stagnation causes the stench from the landfill and the composting facility to stick close to the valley floor and make its way to our locationThis happens every time we have an inversion and an air stagnation situationIt is disgusting and prevents anyone from working or exercising outside	DEQ	Written comment	Not reported
6	26-Jan-2023	1. Concerns about landfill tonnage cap, lifespan, and revenue;	DSAC Meeting	Meeting, and written comment	Unknown
7	26-Jan-2023	2. Concerns about the Republic Service trucks that are expelling greenhouse gases along with the debris escaping the trucks and littering the roadway;	DSAC Meeting	Meeting	Unknown
8	26-Jan-2023	1. landfill accepting out-of-county waste;	SWAC Meeting	Meeting	Unknown
9	26-Jan-2023	2. Air quality impacts from landfill cover;	SWAC Meeting	Meeting	Unknown
10	26-Jan-2023	3. Unknown volume/types of hazardous materials accepted at the landfill;	SWAC Meeting	Meeting	Unknown
11	26-Jan-2023	We assume this is the result of garbage dumping at Coffin Butte Landfill. Many of our neighbors have complained of the same problem especially on winter days like today.	DEQ	Written comment	Not reported
12	31-Jan-2023	Garbage trucks releasing roadside Litter and debris - Hwy 99; Acceptance of out-of-county waste; Traffic near landfill; Odors from landfill and PRC;	Benton County	Phone	Benton County provided odor complaint resources
13	31-Jan-2023	Landfill and PRC Concerns. Commerial trucks losing material on the way to the landfill creating excessive roadside debris. Experiencing a lot of garbage truck traffic. Odors from landfill and PRC.	Benton County	Written comment	Odor, Waste accumulation, traffic
14	31-Jan-2023	Same old same old. Landfill stench seems to be most noticeable when there is a shift in local atmospheric conditions. Today the high pressure system we've been under seems to be lifting and cloudiness is coming in. Along with the stench.	DEQ	Written comment	Not reported
15	1-Feb-2023	The usual odors emanating from Coffin Butte Landfill	DEQ	Written comment	Not reported
16	17-Feb-2023	Complainant reported very distinct disturbing and strong smell coming from Coffin Butte Landfill. According to the complainant the odor started around 3:30am and lasted until 9:00am before it dissipated. The odor is very caustic and smelled like bug killer or grass killer. The complainant said this is the first time he experience this odor in 40 years.	DEQ	Written comment	Not reported
17	17-Feb-2023	The air smells terrible.	DEQ	Written comment	Not reported

18	17-Feb-2023	Went to go to work and smelled that familiar acrid smell on the land fill. This smell is not an organic smell like from the compost facility. I know the difference. The smell has gotten much worse as the landfill has been bringing in garbage from all over Or. and Wa.	DEQ	Written comment	Not reported
19	22-Feb-2023	Today was the classic local weather situation in Soap Creek Valley that gives rise (pun intended) to hideous odors. Early morning fog which gradually burns off. As it starts to lift usually around 9-11 am it draws air from the north which is the airshed around Coffin Butte Landfill. If there is an inversion situation the odor is trapped all day long and often for multiple days in a row. If a coastal (usually west or southwest) breezes picks up that typically evacuates the odor. But meanwhile it is extremely offensive to be outside for any reason (yard work walking etc.).	DEQ	Written comment	Not reported
20	23-Feb-2023	1. Request for third-party audit of materials accepted at the landfill	SWAC Meeting	Meeting	Unknown
21	23-Feb-2023	2. how often is ash from the Covanta plant used as ADC. Is fly ash mixed with bottom ash? How does Republic ensure that it doesn't dry up and blow around? Would Republic be willing to foot the bill so that neighbors to the north of the landfill can be sure that their wells are safe? Has Republic done, or would they do a flyover of the landfill to find out how much the landfill is actually outgassing? What can we do to make sure that there isn't a cancer cluster around the landfill?; (Written Comment)	SWAC Meeting	Written comment	Republic Services provided a presentation about Covanta Ash at the 4/27/22 DSAC meeting.
22	25-Feb-2023	I smelled (and am smelling) the odor of composting or of landfill garbage when I go outside in my property.	DEQ	Written comment	Not reported
23	25-Feb-2023	Took dog for a walk this morning my mouth still tastes funny airways hurt.	DEQ	Written comment	Not reported
24	25-Feb-2023	Sunny clear day after the recent stormy weather. Slight north wind. OK until mid-day when the odor from the landfill permeated our airshed.	DEQ	Written comment	Not reported
25	26-Feb-2023	4/11/23 - Email to commissioners received from Jeff Thoman on 2/26/23 at 8:13pm, forwarded by Jen Brown to Daniel Redick on 2/27/23 at 6:49am. Here is the email contents (pictures and captions not included). Photos show trash debris on the road, and a specific truck, referenced as the truck releasing the litter (License Plate HV 04556, Truck #5308): Hello Republic Services and Benton County Commissioners, Today while driving my Grandson home to Salem we were driving up Highway 99 when a Semi Sized Truck pulled out from Coffin Butte 1-2 cars ahead of us and to my horror the truck spewed trash all the way to Rickreall before pulling onto Highway 22. My question is what is Republics	Written comment	Email	Daniel responded

		Accountability to this pollution? Are They Fined? Do they pick-up up trash on their own dime without passing the cost to consumers? As we all can see that the roadside is extremely littered in both directions from Coffin Butte and it is clear this is driven by poor trash containment by both Republic or its customers. This needs to improve.			
26	26-Feb-2023	Constant odor from coffin butte landfill that continues to occur more frequently and for days at a time. I wake up and open my door to a crisp mornnng covered with snow and immediately am smacked with odor from landfill (NOT the compost). It is more than discouraging and I am concerned about health risk and ground water as I have a well.	DEQ	Written comment	DUPLICATE COMPLAINT
27	26-Feb-2023	I was biking past the landfill on Coffin Butte Road when I immediately encountered a strong landfill/chemical odor. It seemed to be more intense than usual perhaps due to prevailing winds. I've gone to the landfill many times so I'm aware of the smell of "garbage". This odor seemed to be sharper than the usual "garbage smell" leading me to wonder what the chemical components of it were. It also makes me wonder why a private corporation should have the right to pollute our air with these types of emissions in a neighborhood that has a significant number of families. When people smell odors from the landfill we are essentially being treated as guinea pigs by Republic Services and DEQ. You are allowing them to put chemical compounds into our bodies with unknown cumulative risks. I would like to understand how DEQ permits this to happen and what evidence you have to show the impacts are completely benign.	DEQ	Written comment	No location or other information in this complaint.
28	26-Feb-2023	classic local weather situation in Soap Creek Valley that gives rise (pun intended) to hideous odors. Early morning fog which gradually burns off. As it starts to lift usually around 9-11 am it draws air from the north which is the airshed around Coffin Butte Landfill. If there is an inversion situation the odor is trapped all day long and often for multiple days in a row.	DEQ	Written comment	
29	26-Feb-2023	This has become a serious problem in 2022-2023 and I have experienced extreme atmospheric odors many many times. I have not reported all of them online it's simply not realistic to drop everything and complete an online form. I have experienced this for many years of living in Soap Creek Valley including before the online form so most of these problems were not reported.	DEQ	Written comment	
30	27-Feb-2023	4/12/23 - Anne Fairbother sent the BOC the following email on 2/27/23 with a complaint regarding collection services after a snow storm, and the communication. Commissioner Augerot responded on 2/27/23, I live in Pioneer Village, just off of Hwy 34 near	Written comment	Email	Daniel responded

		Decker Road. Our regularly scheduled garbage pickup day is Thursday, and glass is picked up the last Thursday of the month. Last week - Feb 23 - was the last Thursday of February. Because of the snowstorm, we did not get our garbage or glass picked up. Republic Services never contacted us to let us know if/when they would make up the missed service. I called them today (Feb 27). As usual, the number for the Corvallis office rolled over to the Republic Services Call Center in Nevada. The only thing the woman there could do for me was to schedule a missed pickup - just for me. The 3 big blue trucks plus the smaller glass truck would drive out here to pick up my garbage but would not stop at my neighbor's houses. There are about 50 houses here in Pioneer Village, so it makes no sense for all 50 of us to call individually for missed pickup service. I was told that we can put out extra garbage bags this Thursday and that they will pick them up for no extra charge because of the missed service. But we will have to wait a month, until the end of March for glass pickup! My complaints are: 1. Lack of any communication from Republic Services about the missed pickup day. 2. Having to individually ask for a "missed pickup" and not being able to do that for the entire Village. 3. Needing to wait A MONTH for the next glass pickup. 4. Inability to talk to our local office. Thank you for keeping this problem in mind when you negotiate service with Republic. I feel like we are overcharged and neglected. Not what I expect from a monopoly service with government oversight.			
31	16-Mar-2023	Same as aboveBecoming more and more frequent practically daily. It's horrible. I've lived here almost 40 years so am aware of occasional odor but this so consistent and damages way of life let alone what is going into ground water or gases in the air. Health major concern. I can't even submit daily for as often as this strong odor is present from minute I open my door in morning and now gets into the house.	DEQ	Written comment	
32	18-Mar-2023	The landfill odors have been getting stronger and more frequent over the last several months. The smell is overpowering when I walk out of my door in the morning when it is really bad. The problem seems to be getting worse not better.	DEQ	Written comment	
33	23-Mar-2023	1. concerns the landfill causes nearby residents cancer. (Written comment)	SWAC Meeting	Written comment	Unknown

34	23-Mar-2023	Paul (resident and subcommittee member): He resigns from the sub due to how his wife, Nancy, was dismissed. He offered criticism of the facilitator, including statements about his unprofessional behavior and overall engagement. He notes that Nancy brought a lot of experience to the workgroup, and yet she was dismissed because of her hard work. (For the full statement, please see Appendix B and the meeting recording provided on the project website.)	Public comment received in BCTT meeting	Public testimony	Members thanked Paul for his service and accepted his resignation
35	23-Mar-2023	Chris Workmen – (Philomath city manager): He notes the Republic has an exclusive contract with the city of Philomath, and that they do great work. He encourages the County to continue to see Republic as a partner to continue working with for community development. He also notes some concerns about timing and the report coming out. It would be problematic if the County waits to decide on the expansion until all the research and discussion is done. All development has adverse impacts, but you try to mitigate them. It is harder to do this them just saying no, but it would help a lot of people. . (For the full statement, please see Appendix B and the meeting recording provided on the project website.)	Public comment received in BCTT meeting	Public testimony	None, this was public comment at a meeting
36	23-Mar-2023	(resident and former BCTT member): He is sorry to see Paul going and would like to thank him for his role and hard work. He has a few questions for Darren: What did he mean when he said "many important things are happening behind the scenes" at the Board of Commissioners meeting, and when is this BCTT finally going to finish? . (For the full statement, please see Appendix B and the meeting recording provided on the project website.)	Public comment received in BCTT meeting	Meeting discussion	Meeting discussion
37	23-Mar-2023	Linda (certified soil scientist, works in waste management, served 10 years on SWAC, resident): She makes several points, including that functioning solid waste management is essential for a County to function, SWMS needed for a county to function, Republic has been a reliable partner to the County, and climates like ours requires special needs that Republic has provided. She also notes that the BCTT moniker was a mistake because it gives a humorous and unprofessional impression.	Public comment received in BCTT meeting	Public testimony	None, this was public comment at a meeting
38	23-Mar-2023	He appreciates that everyone, to some extent, is coming together. The County and Republic seem to be coming to the table, and he hopes more people can come to the table to help move forward. After all, the County will not stop making trash anytime soon.	Public comment received in BCTT meeting	Public testimony	None, this was public comment at a meeting
39	23-Mar-2023	I think many of the neighbors feel like we've already given enormous amounts of input that really wasn't appreciated or accepted and I just want to give one example. First I was going to say I was biking by the landfill last night at 8:30 at	Public comment received in BCTT meeting	Public testimony	None, this was public comment at a meeting

		night as I've done hundreds of times before. I smelled the smell coming off the dump on Highway 99, a strong smell and I thought about getting home and sending another report to DVQ to complain about it, but my last report about six weeks ago, I specifically asked for follow-up from DVQ as I've done in previous occasions, I've gotten nothing. As far as I'm concerned, there's no accountability on the part of DVQ. I would like to know if there was air monitoring ever done to know what chemicals are going in my body when I routinely breathe, start coming off the landfill. I'd also like to point my letter to the editor on Tuesday. It was published at the exact time. I'm not sure how to submit that, but I just bring to attention to the public, the PFAS chemicals, which are almost certainly in the effluent from the landfill and are being essentially dumped in the [inaudible 00:14:40] River to the downstream drinking water communities. The issue I wanted to share most with you today is when I first got involved in this in July of 2019, a neighbor alerted me about this expansion of landfill. There was a little public notice I eventually found, and it said that Coffin Butte would be vacated not the road, it said Coffin Butte. It also said that the road would be rerouted and you read this notice and you go, oh, it's no big deal. They're closing part of the landfill. They're going to reroute the road. I think that's part of the problem here. As many neighbors, if they were even aware of that notice, had no idea what was going on so my subsequent communication with the county staff, I just received a whole lot of pushback. They would not publish an amended notice to let people know that that was factually incorrect and that's kind of been the process I've experienced all along is my emails don't get answered. I brought this to the attention of commissioners way back, never get any answers. It's just been incredibly frustrating because these processes just seem designed to exclude the average citizen. I know I've exceeded my time, but thank you for your service and thanks for considering my input.			
40	23-Mar-2023	During the prior CUP within my comments to the planning commission, I stated the expansion cannot only be about the money. Unfortunately, it become more and more obvious it is only about the money. As I raised before why wasn't any due diligence completed prior to our commissioner signing the 2020 landfill franchise agreement. The 2020 landfill franchise agreement, it's big business. Big business that warranted one, a professional cost benefit analysis of hosting a regional landfill, a professional independent environmental impact study covering environmental impacts to date and the future environmental impacts of hosting	Public comment received in BCTT meeting	Public testimony	None, this was public comment at a meeting

		a regional landfill. BCTT suggests this in the future. Third, the Sustainable Materials Management Plan, which BCTT also suggests in the future. In the future does not provide answers now. Please work group where appropriate please consider this during polling. After the prior CUP was withdrawn, I individually invited each of our commissioners to participate in public outreach with a small group. I felt we needed their help in opposing any landfill expansion. I can tell you all we received is pushback. Our Benton County commissioners, Benton County staff and Republic Services all want an expansion. Benton County doesn't need an expansion. Don't the residents of Benton County deserve due diligence in the decision making process? I would argue we do. How can this process of considering expansion not include due diligence? It appears Benton County commissioners are only concerned about the money and due diligence may get in the way of their discretionary cash flow. We're a group. We're appropriate. Please consider all of this in your polling. Please. Commissioners, Benton County residents deserve better. Do the due diligence before moving forward. Thank you.			
41	23-Mar-2023	I used to be on the work group. I wasn't going to say anything, but on the occasion of the consideration of LU21047, the previous landfill expansion proposal that was proposed in July of 2021, one of the local opponents of that who spoke at the planning commission meeting name was Cat Newsheller. We got news two days ago that Cat had died after a long battle with cancer. There was a lot of cancer in the neighborhood around the landfill and that was one of the issues that the Planning Commission identified as being a question that they would like to have answered before there was a decision on whether to increase the size of the landfill. Landfills are not safe. That's becoming more and more clear. They don't ever discover new chemicals that are good chemicals. There are only worse chemicals and some of those chemicals are now being spread on our agricultural lands. There was even a recent CNN article about how people who live near landfills should have their blood tested for PFAS. Landfills are specifically called out as a danger for people who live nearby and no amount of money is going to bring Cat back and this is a question that really needs to be answered. It was if I had remained on the work group, I would've tried to bring it to the attention of the members. I was not in retrospect so it's really great to not be on the work group before because you guys worked really hard so thank you for that, but keep in mind that real people's lives may be at risk and	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

		this is an unanswered question. Thank you very much.			
42	23-Mar-2023	As a concerned resident of Benton County that travels up Highway 99 regularly. I'm concerned about the rapid increase of landfill since Riverbend Landfill closed in McMinnville and I've been following the BCTT since its beginning. And by the way, thank you all I know the hundreds of hours you've spent. What I have learned during this process is that the county gave up its legal leverage to negotiate with Republic Services when it signed that 10 year landfill franchise lease in 2020. We are all in this together, the public, Republic Services, and the county to figure out how to keep the landfill from encroaching on farmland, from driving away neighbors who bought their property when Coffin Butte was smaller, significantly smaller and slated for closure in about the year 2000. So I was a little alarmed when I read the story in the Gazette Times this morning that there was a legal liability over the petition, which I as a Benton County resident have helped circulate. And let me read you the wording in the petition it says we need a plan, not a bigger landfill. By signing this position, we're telling the commissioners to oppose any expansion of Coffin Butte landfill before Benton County completes a thorough detailed waste management plan that focuses on future resilience and includes alternatives for decreasing and redistributing materials from the waste stream. So there is no legal ramification for the county to have a position that opposes landfill expansion. They have legal restrictions regarding approval of a conditional use permit, but we as concerned residents want to hear the county be responsible for what goes into the dump and work hard with Republic Services through whatever leverage they can afford at this point, to pull things out of the waste stream, to increase the recycling markets, to do the things that we've taken time and effort to spell out in the solid waste materials Plan RFP that's due to be released. But anyway, thank you all. Work hard. We've got to stop this juggernaut, there's more to trash management than expanding the landfill. Thank you.	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting
43	23-Mar-2023	I'm concerned that issues around PFAS are not addressed in the report. Leachate is included in CUPR 13, but only its impact on water, not soil. In addition to PFAS-laced leachate making its way into the Willamette River, potentially PFAS-laced bio solids are being applied as a soil amendment at the Soap Creek branch, including where cattle currently graze and on the Carson homestead. This is where the Leticia Carson Legacy Project hopes to someday have an organic farm celebrating Leticia's legacy as a	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

		Oregon Black pioneer. These are two amongst many concerns I have about the BTCC work group process and report. Whose responsibility is it to ensure impacted people's voices are heard? The process has become so inside baseball that I can't understand it despite having tried to follow the proceedings. Community engagement is when you meet people where they are, not where you are. I ask you to please consider the impacts on the many people who are unable to engage in your process as you pull on this report and its recommendations. Thank you.			
44	23-Mar-2023	Mark, a longtime resident of Benton County. I work in Monmouth, so I drive up 99 across Adair Village, up 99 regularly. I've always thought of the news but I never really was that educated about the landfill until I got involved with writing the history of the landfill as part of the Benton County talks trash process. So I wanted to provide, while I am able to submit things as a member statement, I feel like those are just going to become another part of the huge pile of paper. So I wanted to give a little bit of oral testimony to my perspective and concerns regarding this process. One thing I want to start by saying is as we wrote the history which was largely drafted by Marge Pop, myself, with a lot of input from Ginger who is really a great help in many ways. One of the things that is really clear is while Republic's representative was as reasonable as you could ever expect, reaching consensus meant that we did not include things that we feel the public ought to know about. We did take very seriously the drive for consensus, but in the end when I look back on it, I realize consensus really means veto power. For specific areas I want to highlight that we would perhaps have done better if we had submitted a separate report rather than the consensus report of history we did. Five points. One, history of fires and fire risk. We feel were significantly downplayed. It's hard to do justice to some of that stuff, but conversations with people that were fire officials locally, it's pretty clear that there's a greater danger there than was first apparent or that we included in the history. Secondly, the significance for public services corporate decision making in increasing annual deposits that the landfill should have been developed more. In since it's the increased use of the land creates deposits in the landfill that are forcing the county to accept the south expansion, which created a greater incentive for Republic to negotiate for southward expansion and to incentivize it for the county board. I really expanded on the physical transformation of the area as lands on its trucks and lights have really transformed the Coffin Butte area from an almost bucolic area that I once knew 30 years	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

		ago to really a full-fledged industrial zone. I go there different times a day, always the big trucks moving, litter sometimes from the trucks. But just the most important thing is as I drove down from Salem just yesterday, you can see that landfill from very far away over on Independence Road, which is not highway 99, but two miles to the east. Two other broader concerns I want to race, one is while the immediate previous decision was not perhaps conducted properly and the public, and perhaps some officials, were not well-informed of the process or the basic information concerning the expansion negotiations and the proposal that was withdrawn last year for expansion. Many of those who were involved did understand the nature of the issues and I think you can view this process as essentia redo of a decision that perhaps was valid to begin with. And finally, my last point, in the bigger picture, this process seems to ignore the core values of Benton County 2040 Thriving Communities initiative. There should be direct consideration of whether the expansion of landfill helps create the Benton County that we envision for 2040 and that has not come up anywhere. We don't have a committee regarding environment or quality of life. We have ones on economics and things like that. Thank you			
45	23-Mar-2023	I'm a North Benton County resident as a former Air Force pilot and evaluator with a civil engineering degree and a master's of public administration, a community board member and Adair Village rental property owner and a mother of three young children, I've spent years taking input from those under my responsibility to ensure health, safety, and quality of life. Many times each year, and particularly in the winter months, we are affected at our house and while the children are attending school in Adair Village by an oppressive stench, not what is coming from the PRC but one that affects our daily living and activities coming from the landfill. It causes headaches, eye irritation, and throat burning, which limits our outdoor activities and often makes me concerned for the safety of the children at the school transiting between classroom buildings, during outdoor recess, and during sports practice. In addition, the landfill leachate deposited daily at the Corvallis Wastewater treatment plant, which passes through the Municipal treatment System without additional treatment. The abnormal panel of toxins is released into the Willamette River mere miles prior to Adair Village's drinking water intake source. The Adair Village water treatment plant operates well within its required duties to treat river water prior to consumption. My grave concern is that many of the toxins deposited into the source water are not accounted for, treated,	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

		or even tested for at this point. Both the air quality and water quality bring me concern for the safety of the tenants under our responsibility, my own children and their classmates and teachers, and the growing population of Adair Village. It is the charge of county government to ensure the health and safety of the Benton County residents to whom they are responsible and to ensure current and future livability of Benton County. I implore you as the Trash Talks work group to do everything in your power to ensure we account for all potential current and future impacts of our resident landfill prior to contemplating any future expansion. Have you seen and studied results of local air quality tests? Residual environmental toxin tests? And have proof that the drinking water of Adair village does not contain PCB, PFAS, and other chemical toxins not normally tested for in municipal water sources? If not, we need to ensure that the entirety of the sustainable materials management plan is completed prior to any expansion approval to ensure the safety of all Benton County residents. Thank you again for all of your time and efforts. We appreciate the immense efforts that have gone into this process.			
46	23-Mar-2023	So interestingly, if you were to take one day's accumulation of trash at the landfill, which is what, 10 hours of dropping trash? And you compress it into a 60 second time period, you would have six seconds of time where trash was coming from Benton County. The remainder 54 seconds, and if you want we can sit through this, the remainder 54 seconds is coming from outside of Benton County and that's amazing. What's interesting too about that is that six seconds is costing Benton County so much headache and so much time, but we're getting so little benefit from it. And so the fear factors of oh, we're going to close the dump and it's going to cost you a fortune. The reality is they are making so much money on everybody else and very little on Benton County and why are we spending so much time is because Benton County is making a whole bunch of money from that six seconds of trash. Anyway, it's just a perspective that I think is interesting to kind of think about is that so much of all of this headache that is going to live in Benton County forever and ever and ever is really only a small fraction of what Benton County is actually creating. Thank you.	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

47	23-Mar-2023	I'm a North Benton County resident and I want to second just about everything everybody else has said prior to my speaking. I am opposed to the county moving forward on any expansion of the landfill at any level until there is an authentic citizen approved plan to manage solid waste. An authentic citizenry approved plan would include all the stakeholders, especially the neighbors who remain at risk for water, air, and ground pollution. For me, the county's motto "at your service" has come to me as "at Republic's Service" and not the citizens of the county. With all the perils risk and damages already identified and submitted over the past 18 months, how can you in good conscience proceed to consider anything less than a comprehensive and substantive future oriented plan? This plan needs to include specifics on how the county will finally hold Republic services accountable for the damages that are ongoing. Instead of spending $80,000 on a process facilitator, why aren't we getting the state-of-the-art and world-class, 21st century strategies for all the municipalities using the landfill? Other communities with landfills are facing or have faced these same dilemmas. It seems to me the county staff are more diligent in preserving the funding stream than responsibly responding to the very real concerns of the citizens who pay their taxes. If the latest identification of PFAS being dumped into the Willamette River isn't enough to change your direction, then I invite you to go down to the water treatment outflow and take a long drink day after day just as those downstream have to. I'm not a scientist or a specialist, I'm a human being who wants the smarts of scientists and specialists to be integrated into any plan. This is all part of the changes needed to impact our climate concerns and seven generations henceforth. Thank you	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting
48	3-Apr-2023	First I want to thank all the neighbors, committee members, county employees, and others involved in tackling this important issue. Looking through the vast amount of documentation that has been gathered, I'm impressed with the effort made. And these times I think we need to work together to deal with things that impact us all on a personal local level. My husband and I have been residents of the Sub Creek Valley for 33 years. Last year when Republic Services submitted their conditional use permit application, we joined with other neighbors concerned by many aspects of the proposal and hoped that having a facilitator and work group dedicated to examining the issues we would be productive. Perhaps I placed a little too much faith in the process. And it wasn't until a recent survey came out that I started really examining the website and information presented there. I	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

		have already written an email to voice my concerns about the survey and related issues and sent it yesterday. So perhaps you've already had a chance to see it. However, I did want to make a few more comments about this process. First, I want to remind you that there are more people impacted by the landfill and its current and future activities than just a group of disgruntled neighbors crying, not in my backyard. The issue of solid waste management, whether it is household, industrial, hazardous, medical, or recycled waste, is a worldwide concern. On some levels it is very complex and expensive. Yet the long-term benefits of dealing with these issues sooner rather than later can make a huge difference in our neighborhood, our state, our world. In that vein, I notice you've included a statement honoring the Kalapuya tribe and the acknowledgement of there having been here long before the settlers came to this area. I believe that many native spiritual values honor the earth, the plants and animals, the seasons and other elements of this beautiful world that we share and consider them sacred. You cannot find documentation suggesting any input from the nearby tribes into this process and would really have appreciated seeing some. Perhaps it's not too late. Thank you for this opportunity to speak.			
49	3-Apr-2023	It appears to be setting the stage for not just one but multiple expansions. Did you notice in one of the last recommendations that you voted on just before dinner, you referred to expansions in the plural. How did that get in there and in whose interest is that? Thanks to a recent public records request by a community member who spoke earlier, we now know that some important information that is missing from the history section of the report that you really should have heard about at the start of this process, but you were informed of. She referred to a February 2019 memo between county council and an outside attorney, which mentions purchase of additional property as one of the county's goals in upcoming negotiations with Republic. Following up on that in October 2020, Republic mentioned to county council they have many more acres that will hold waste, not just local south of Coffin Butte Road. So they have still more expansions in mind beyond the one we've all been expecting and the county knows that. This is about setting the stage for landfill expansions on top of landfill expansions. During the neighborhood tour, a couple of us tried to point out how the current landfill is already creating blight. We've talked about how this has led to being properties being bought out and added to allow further sprawl of this massive operation. We like to talk about sustainability	Public comment received in BCTT meeting	Public testimony	Acknowledged at meeting

		here in Benton County, but this is about as far from sustainable as you can get. I can't blame Republic, this is their business model, but our county shouldn't be complicit and neither should you. So as you continue to vote on these topics, please bear in mind that you're not just being asked to set the table for a single expansion. This is about multiple continued expansions. Thank you.			
50	3-Apr-2023	It has recently come to light through a Freedom of Information Act request to Benton County that as early as 2020, our county attorney, Vance Croney, was discussing possibilities for largescale expansions of the Coffin Butte Landfill south of Coffin Butte Road with Republic Services local representative, Julie Jackson. The gist of this email exchange that took place between 11:23 and 11:51 AM on October 14, 2020 is presented below. The full transcript was submitted for the record to the BentonCountyTalksTrash email address this afternoon at 1:44 PM.	Email	Email	Daniel acknowledged the complaint and followed up with resident.
51	11-Apr-2023	1) Republic not emptying yard debris containers when scheduled; containers only get emptied when he calls to report container has not been emptied. 2) He has requested, and Republic has promised to, replace his damaged recyclables container. The container has not been replaced.	Benton County	Written comment	Waste Services
52	17-Apr-2023	I was cycling past the landfill when I encountered strong odors coming from the dump. As explained above I've experienced this hundreds of times over the years. I would like to know the specifics of your air monitoring/testing. How do you ensure that the fly ash used for the daily cover material does not become airborne? Have you tested the fly ash (which comes from the Covanta facility one that processes many types of hazardous material)? What trace organic compounds are in the landfill emissions? How much methane and other gases am I being exposed to? Are there any long-term health impacts associated with these emissions/pollutants? I would like answers to these questions.	DEQ	Written comment	DUPLICATE COMPLAINT
53	27-Apr-2023	1. Concern about landfill methane emissions (written comment).	DSAC Meeting	Written comment	Unknown
54	27-Apr-2023	2. Concern about landfill-related traffic (written comment).	DSAC Meeting	Written comment	Unknown

57	20-May-2023	landfill odor increasing from coffin butte	DEQ	Written comment	
58	22-May-2023	Hi Daniel, There have been a number of landfill-related issues to report this week. Here is a short list. Since DSAC is still not meeting in its function to provide a forum for local residents to reports incidents and to promote a dialog with the landfill operator on addressing these problems, I am cc:ing Julie Jackson on this so that she can direct these complaints to the responsible individuals in the company. 1. Garbage flying out of truck on way to landfill: Today (5/22/20123) at 6:21 AM a northbound Republic Services truck with a large construction-type dumpster was shedding plastic bags along Hwy 99W, near the south end of Arboretum Road. After seeing at least 5 bags fly out as I approached the truck (I was headed southbound), I gave a horn blast in an attempt to alert the driver to what was happening, but the driver just kept going north at highway speed. That truck would have arrived at the scale house within a few minutes (by 6:25 AM) so perhaps scale-house records could be used to follow up with the driver. Though this type of thing happens regularly, and this is not the only Republic driver failing to secure a load, so preferably the company will take more systematic action in training drivers and checking that the load-covering systems are functioning properly. 2. Blown tire from garbage truck left in lane of travel Earlier last week (I did not note the date or time but VLI phone logs should have a record of this, I think it was 5/17), a southbound Republic Services truck (the type used for residential garbage pickup) blew the tread off its tire right in front of our house. It made a tremendously loud bang like a bomb going off. I looked outside in time to see the truck which had slowed down in front of our neighbors' house to the south, but then it sped up again and left the scene. When I ran out there I found a full tire tread was left out on the roadway, in the lane of travel for passenger cars which were having to go into the left-hand lane to avoid it, so posing a hazard for regular traffic on this highway. I dragged the tread out of the lane of travel and onto the	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.

		shoulder, then immediately called VLI's office to report the incident. After that I had to run some errands in town, and noticed that there was a trail of shredded strips of rubber -- many with sharp wires projecting -- all along the southbound shoulder of the road as far as the south end of Arboretum Road. The county (or ODOT?) just recently run a street-sweeper along the highway, and over the weekend I had also seen a local volunteer out picking up trash near the south end of Arboretum Road, so this was new debris. Since the shoulder of Hwy 99W also functions as a bicycle lane, this type of debris poses a hazard to bicyclists. Someone did come out and pick up the main section of tread by the time I returned from town, so thank you to whoever did that. However they didn't pick up the long trail of tire fragments along the shoulder to the south. Tire blowouts are also fairly common thing with trucks heading to and from the landfill. If this were to happen while a truck is passing a bicyclist or pedestrian along the highway, there could be a severe injury or even fatality. Republic Services, VLI, and the various commercial haulers should be more responsible in checking that truck tires are properly inflated and in good condition, and that trucks are not overloaded, since those conditions contribute to blowouts. There should also be driver training on what to do in the event of a blowout. There can be no doubt that this driver noticed the enormously loud explosion, so they should have stopped to address the problem (removing the hazard from the roadway and changing out the blown tire to avoid creating further hazards). Does Republic's company culture promote responsible behavior in such situations? Or are drivers so worried about keeping to their schedule, that they feel pressure to keep rolling? 3. Dump odor event on Saturday Saturday morning was a bad one for sulfurous landfill stench in Soap Creek Valley. I happened to be over there for a project monitoring endangered grassland birds, and noticed it as I was driving home, even with the windows rolled up. There were also visible clouds of dust coming off the landfill from the tipping area. I have filed an odor complaint with DEQ. 4. Garbage left exposed in tipping area after Saturday			

		A wide patch of garbage on the south face of the landfill was left uncovered after operating hours on Saturday evening, and all day Sunday. This was clearly visible from half a mile away on Camp Adair Road. Leaving garbage uncovered outside of operating hours is a problem not only in terms of odor, but also because it attracts scavengers. On Sunday I counted 14 ravens and 4 eagles scavenging in the exposed garbage. Ravens are nest predators for many songbirds including grassland birds such as meadowlarks, and eagles prey on Great Blue Heron nestlings (possibly a factor that led to failure of the heron rookery on VLI property last May). Again, this is a recurring problem, though not always reported. I believe it is out of compliance with the conditions of approval for VLI's operating license, so we should expect better diligence from VLI/Republic on this. I'll appreciate if you can add these items to the record of landfill-related issues. Thanks, Joel Geier North Benton County resident and landfill neighbor

76	14-Sep-2023	Joel emailed on 9/14/23 that he was concerned about "medical wastes like syringes to body parts and other kinds of biohazard risks" referenced in the GT article on 9/14/23.	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.
77	14-Sep-2023	Hi Daniel, Some information here and a few questions: An article in today's Corvallis Gazette-Times has the following statement attributed to Jacob Stallings, attorney for the International Union of Operating Engineers Local 701: "Stallings said welfare negotiations are crucial, especially with recent exposures at the Coffin Butte Landfill, from medical wastes like syringes to body parts and other kinds of biohazard risks." I suppose that the mention of "body parts" refers to the most recent grisly incident where the remains of a murder victim from Clackamas County were found during a search by Oregon City police, and perhaps also the incident a year earlier, involving a murder victim from Washington county. Both of those incidents were widely reported, but I don't think the incidents involving illegal medical waste have been reported, though they should be reported by the landfill operators.	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.

		Concerns over such waste were among the reasons why SWAC and DSAC members (prior to the suspension of both, and the eventual dissolution of SWAC by the county commissioners) had been calling for an audit of waste coming to the landfill from out-of-county. So here are my questions: Question 1: Has Benton County received any notification of prohibited medical wastes such as syringes being found recently at Coffin Butte Landfill? This issue might become more acute with the passage of Oregon Senate Bill 488, which was passed and signed into law by Governor Tina Kotek at the end of the last session. See e.g. https://www.statesmanjournal.com/story/news/politics/2023/06/07/covanta-marion-municipal-waste-incinerator-emissions-oregon-senate-bill-488/70279139007/ Question 2: Recently you mentioned an "inspection" of the landfill that you were trying to schedule with the landfill operators. What was the focus of that inspection, did it happen, and what did you find? Question 3: Has Valley Landfills Inc. (or Republic Services) delivered their 2022 Annual Report on the landfill to the county, and if so, can you please make that publicly available on the county's solid-waste management web page?Question 4: Did Valley Landfills Inc. (or Republic Services) share their 2022 Annual Environmental Monitoring Report (as filed with Oregon DEQ) with Benton County, and again, if so, can you please make that publicly available on the county's solid-waste management web page? Although some of these questions should properly be taken up by DSAC, I note that DSAC still seems to be suspended de facto, as there have been no meetings in over a year, and no meeting is yet scheduled for September. So please consider these as questions from a concerned Benton County resident and landfill neighbor, whose legitimate interests are currently not being represented by a Disposal Site Advisory Committee, despite the clear stipulations of Oregon statute. Thanks and all the best, Joel			

78	27-Sep-2023	Joel Geier sent Daniel Redick the following complaint via email "An Adair Village resident, Lisa Mathis, informed me on September 24th that she is hearing heavy equipment operating on top of the landfill in early morning hours, starting around 1 am or 2 am. She says that this has become a regular occurrence in recent months. Her residence is more than 1.8 miles from the landfill. According to the conditions of approval for the 2003 CUP, the hours of operation for the landfill are supposed to be 8 a.m. to 5 p.m. on weekdays and Saturdays, and noon to 5 p.m. on Sundays. Benton County CDD has previously received complaints about pre-dawn operations from neighbors who live closer to the landfill. Now that you have a complaint that this ongoing violation of the 2003 CUP conditions is impacting residents in Adair Village at distances of up to nearly 2 miles. Please register this as an additional complaint. It is related to the previous complaint, as the problem arises from rapid growth in height of the landfill without adequate screening." Daniel emailed a response on 9/28/23, noting receipt of the complaint. Concern about hazardous materials accepted at landfill via commercial waste collection, concern about hurdles and inaction in complaint process (written comment, duplicate of email complaint received by Benton County)	SWAC & DSAC Joint Work Session	(Duplicate - from 10/6/22 email) Written comment	Complainant filed complaints with DEQ, DEQ responded during BCTT process
91	26-Oct-2023	6. Concern about level of detail in landfill traffic reporting (written comment)	SWAC & DSAC Joint Work Session	Written comment	Unknown
92	31-Oct-2023	Hi Daniel, Would you please share this message with the DSAC distribution? While biking yesterday evening on Camp Adair Road (north of Corvallis), I noticed a huge cloud of smoke coming from Republic Services' composting facility ("Processing and Recovery Center" or PRC). I was concerned about the fire, so I went to see if I could find someone from Republic Services to talk to. Unfortunately, no one was in the office or at the weigh station. I've created an album with photos and videos showing the smoke coming from the smoldering file which you should be able to access here: https://photos.app.goo.gl/q59s9dimFMhVVZkZ6 (please let me know if you're unable to view the images and videos). I've attached two of the photos for reference below. The smoke from this fire was drifting over a large area south of the facility, extending roughly 2 miles south on Independence Highway. It had earlier drifted a long way to the east, along Camp Adair Road, extending to Springhill Road (before the wind shifted). The intensity of the smoke definitely made it unhealthy to breathe. I had to hold my breath while biking through the worst of it (and changed my route to avoid it). I would like to know more about this incident. Were you aware of it? I can only assume it was an unplanned (and unpermitted) incident. Does the PRC operate under a permit from DEQ? If so, does the permit allow these kinds of unplanned fires? What corrective action(s) will be taken to prevent these kinds of events in the future? Will any fines or other measures be taken to stop this	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.

		kind of pollution from happening in the future? Thanks in advance for your reply, Doug Pollock ---------- Taxlot: 104170000300 Tax Account: 005656 Assessment Map: 10417 Owner: VALLEY LANDFILLS INC Situs Address: 29891 CAMP ADAIR RD MONMOUTH 97361			
93	1-Nov-2023	We got up around 6:45 am and noticed a thick haze outside. I did not actually go outdoors until around 7:30 am and was met with strong chemical smell - I had never smelled this odor before. It seemed to dissipate around 9 am or thereabouts, but an unusual haze persisted throughout the day.	DEQ	Written comment	Forwarded complaint to permittee and requested investigation and response.
94	3-Nov-2023	In the area around the intersection of Hwy 99W and Camp Adair/Coffin Butte Roads, there were large amounts of smoke mixed with odors from possibly both PRC and the landfill. A neighbor at the same time observed that several of the compost piles at the PRC were on fire and producing massive amounts of smoke. The odors were obvious all the way north almost to Monmouth.	DEQ	Written comment	10/17 - I called the complainant and recommended they contact OSHA about worker safety concerns. They stated they've already contacted OSHA and that they want someone from DEQ to look into this issue. They are concerned about the lack of dust mitigation at the landfill. The photos they attached show white clouds of dust that appear to be kicked up from bags of microglass fibers. They said that Hugh Gao and Becky Williams are both aware of what's going on with this facility.
95	13-Nov-2023	Tip or Complaint: Mr. Orton says there are violations at Coffin Butte Landfill in Corvallis, OR. The violations are grotesque and ongoing, and he has reached out repeatedly to ODEQ and the state, but they do not seem interested. He is requesting a call back.	DEQ	Written comment	DEQ contacted the landfill regarding this issue. The landfill stated/responded on 11/13/2023: "As requested during our meeting, I'm providing a summary of how we handle dusty materials and medical waste at Coffin Butte. We have multiple practices that we

					utilize to minimize dust. First, we have a full-time water truck driver during the dry season. This person waters the roads and working face areas to minimize dust. Our operators are also trained to identify dusty loads and to let the site Operations Manager know about them. This way we can work directly with the customer to implement measure to reduce dust. This can include one or more of the following options: • Have the customer wet down the material prior to bringing it to the landfill • Packaging the material in large bags or containers to contain the dust when the load is tipped • Having the customer dump their material off to the side of our working face so that we can bury it directly in place without having to move the material with our equipment. If a customer is unwilling to work with us to reduce dust, we also have the option of rejecting future loads of material from them. Regarding the material in the white bags, while we are still permitted to accept it, we haven't actually received the material in at least a year. "

96	17-Nov-2023	11/17/23 - The complainant called and left a voicemail at 10:15am. They said the landfill stench was "pretty oppresive" from about 5am-approximately 9:45am. They could smell it from their home (27407 Writsman Creek Drive).	Phone call	Call	11/17/23 - Daniel Redick called the complainant and left a voicemail at 1:19pm, and let them know that the complaint would be recorded in Benton County records.
97	17-Nov-2023	11/17/23 - The complainant called and spoke with Daniel Redick, reporting strong landfill odors in the early morning hours. They could smell it from their home (37420 Moss Rock Road, Corvallis).	Phone call	Call	Daniel acknowledged the complaint and followed up with resident.
98	17-Nov-2023	Original complaint forwarded to DEQ from EPA Regional Tip/Complaints (original email uploaded to documents): https://ebird.org/checklist/S103247095 - Photos of birds at Coffin Butte Landfill: NOTE these photos are from Sunday February 20, 2022. Coffin Butte Landfill operations are closed on Sundays which means at the end of Saturday's operation daily cover was not applied. Coffin Butte Landfill work area left uncovered for the weekend. What the photos clearly show is no daily cover. The 5 inches of soil and or alternative cover required by what I believe to be Title 5. The absence of daily cover is not limited to this one Sunday. I have a series of time lapse photos taken with a game camera over a period of many, many weeks that shows the continuous practice of neglecting daily cover. The time lapse photos show that the only time any cover is applied is when the daily work area is moved across the landfill. Appears that Republic Services only applies cover to facilitate the movement of vehicle traffic. I would like to share the other photos as part of this complaint but in total they are too large for this Media upload. I am requesting EPA contact me regarding an unannounced site visit.	DEQ	Written comment	11/2 - I called complainant and left message. DEQ will need more information, such as an origin of the haze/odor. Complainant is located in a rural area and I don't see any businesses nearby that would generate a chemical smell or unusual haze. It could be a neighbor open burning garbage. 11/3 - The complainant called. They couldn't describe the smell. They said that they regularly smell smoke from slash piles and also experience terrible odors from Coffin Butte Landfill. But this smell was different than either of these and they have no idea where it could have originated from. It just smelled like chemicals. It didn't smell like smoke at all. There were reports that PRC (Pacific Region Composting) had a fire a few days ago and they wondered if perhaps it was from that. I recommended they keep a log with

					date/time, odor characteristics and wind direction if they continue to notice the odor to help DEQ narrow down where it's coming from. They agreed and thanked me for my time. I am closing this complaint.
99	19-Nov-2023	11/19/23 - The complainant emailed Linda Ray the following complaint: Hello Benton County, I'm writing to log in a complaint about the Coffin Butte Landfill, which blanketed its neighborhood with a strong chemical reek on the morning of November 16, 2023. I live in the landfill area. I see reports on social media that many people experienced this smell and that the reek extended as far south as North Corvallis. Can you advise me as to what the people of Benton County can do to address this? Ken Eklund	Written comment	Email	11/20/23 - Daniel Redick responded and provided additional options for filing complaints
100	19-Nov-2023	Another complainaint emailed Linda Ray at 8:59am: "I'm writing to log in a complaint about the Coffin Butte Landfill, which blanketed its neighborhood with a strong chemical reek on the morning of November 16, 2023. I live in the landfill area. I see reports on social media that many people experienced this smell and that the reek extended as far south as North Corvallis. Can you advise me as to what the people of Benton County can do to address this?" (Ken Eklund <futureeverything@writerguy.com>).	Written comment	Email	Daniel Redick responded on 11/20/23 at 8:25am with information about filing complints directly with the landfill and DEQ.

111	13-Dec-2023	Call and voice mail re: odor near the landfill at "the end of Richmond Creek Road". Odor described as "really bad" but no other details. Caller left a phone number.	Phone call	Call	Daniel Redick called the resident.
112	14-Dec-2023	"particularly nasty"	Forwarded to RS from DEQ	Written comment	Not reported

113	15-Dec-2023	"absolutely overpowering"	Forwarded to RS from DEQ	Written comment	Not reported
114	16-Dec-2023	"overwelming stench this morning"	Direct Complaint to Republic Services - Larry LeBlanc	Written comment	Not reported
115	21-Dec-2023	Caller is in North Albany area, poor air quality over the last 2 weeks due to methane leak from Coffin Butte Landfill. Caller got information via a Neighborhood Post when she asked what the odor/air quality was. Would like to file a formal complaint, also has questions on whether or not there is an update from the report by DEQ in beg November. Requesting a call back.	Phone call	Call	Daniel acknowledged the complaint and followed up with resident.
116	23-Dec-2023	I am an Area Coordinator for a local neighborhood watch group in North Albany (single family homes, apartments and other structures for the elderly - quite a large community). I am sending this email on behalf of the Watch in RE: to submitting a formal complaint based on the poor air quality in the Central Willamette Valley on/off since the beginning of November. Many in the areas surrounding the Coffin Butte landfill have been experiencing heavy chemical air for the past 3 weeks, as their has been continuing stagnate air - a huge health concern. Several in our community have asthma and are not doing well in this situation. Here is a message that was sent to a community online platform (covers all of Linn and Benton counties) for residents in this area. Two posts below are from a member to alert neighbors where the source of the bad air was/is coming from. Posts are detailed below. First post: AIR QUALITY AND AIR STAGNATION ALERTS – LANDFILL METHANE EXCEEDANCES Since early November, the residents of Corvallis, Albany, Salem and Eugene-Springfield and surrounding rural areas have been subjected to multiple days of air stagnation weather patterns. Air patterns that trap particulates and other air pollutants close to the surface where these pollutants are inhaled while being outside. Here is an example alert from the National Weather Service on Saturday, December 16 – WHAT...For the Dense Fog Advisory, visibility one quarter mile or less in areas of dense fog. For the Air Stagnation Advisory, a period of stagnant air with light winds is expected. * WHERE...Central Willamette Valley and South Willamette Valley. * WHEN...For the Dense Fog Advisory, until noon PST Sunday. For the AIR STAGNATION ADVISORY, UNTIL 4 AM PST MONDAY. * IMPACTS...Hazardous driving	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.

		conditions due to low visibility. AIR STAGNATION COULD RESULT IN THE DEVELOPMENT AND PERSISTENCE OF POOR AIR QUALITY. During these periods of air stagnation, do you experience the acrid smell in the air? Did you know that the smell is coming from the Coffin Butte dump? EPA INSPECTED THE DUMP IN JUNE 2022 AND FOUND MASSIVE METHANE LEAKS THAT VIOLATE AIR QUALITY LIMITS. Methane is an odorless gas, but it is not the only air pollutant spewing from the dump. On Highway 20 at Independence Highway on Friday December 15 around noon, the smell from the dump was absolutely overpowering. Residents are being exposed to toxic air pollution from the dump, and people living in and around Adair Village, Logsdon Ridge, and North Albany know exactly what I am talking about. Be careful when you are outside, do not exercise strenuously, and limit your outdoor activities to avoid exposure to these chemicals spewing into the air from the dump. Also, to help protect our air quality during air stagnation events, please limit car trips, outdoor burning, and woodstove use. If the air smells bad to you, please call and file an odor complaint with Benton County at 541-766-6819 , submit a written complaint to publiccomment@bentoncountyor.gov , or file odor complaint with Oregon Department of Environmental Quality at 503-229-5696 . DEQ also has an online form at https://ordeq-edms-public.govonlinesaas.com/pub/pub-rcd/ordeq/event;tab=basic . My next post will include report excerpts from the recent EPA air quality inspection conducted at the dump. Follow up: EPA FINDS MASSIVE METHANE LEAKS AT COFFIN BUTTE LANDFILL The EPA performed an ANNOUNCED clean air inspection of Coffin Butte landfill on June 23, 2022. This means that EPA TOLD THE DUMP OPERATORS in advance that EPA was coming to conduct an inspection. For background, SEM stands for Surface Emissions Monitoring, PPM is a measure of concentration and stands for Parts Per Million. Under its Air Quality Permit, Republic Services is allowed to self-monitor gas emissions from the landfill. While EPA found dozens of methane concentration exceedances, not surprisingly, Republic's self-monitoring reports only found very few exceedances and some reports didn't find any. Methane is one of the most potent greenhouse gases. Landfills that are emitting tons of methane are also emitting many other air			

		pollutants. Coffin Butte landfill is one of the largest methane emitters in Western Oregon. Information presented here is excerpted from a 14-page EPA report dated September 19, 2022. Daniel Heins, the EPA inspector, spent nearly 9 hours on site during the inspection. The EPA surface emissions monitoring inspection found: : EXTREME METHANE LIMIT EXCEEDANCES: Quoting from the EPA report, “Over the course of the day, Daniel Heins identified 61 POINTS IN EXCEEDANCE OF 500 PARTS PER MILLION (PPM), EXHAUSTING HIS SUPPLY OF MARKING FLAGS. Of these, 21 flagged exceedances were ABOVE 10,000 PPM. Many flagged exceedances represented clusters of exceedances at multiple points or BROAD AREAS OF EXCEEDANCES. Of the flagged exceedances, 26 were at or partially at gas collection wells (including both active and abandoned or decommissioned). Eight exceedances were at leachate cleanouts. Daniel Heins focused monitoring on areas under intermediate cover, though the first six exceedances were in final cover areas. During the afternoon monitoring, Daniel Heins measured MULTIPLE EXCEEDANCES THAT CONTINUED TO BE ABOVE 500 PPM MULTIPLE FEET IN THE AIR, with multiple feet lateral distance from the emission source, INDICATING SUBSTANTIAL LANDFILL GAS PLUMES.” DISCREPANCIES BETWEEN REPUBLIC’S REPORTED MONITORING AND WHAT THE EPA FOUND: Again, quoting directly from the EPA inspection report, “Daniel Heins expressed potential concerns with Republic’s SEM/Method 21 procedures. Despite Republic having seen no more than 6 exceedances in the recent SEM reports supplied ahead of the inspection that included penetration monitoring, including reports with 0 exceedances, he identified 61 points in exceedance of 500 ppm, including 21 points above 10,000 ppm, with 26 exceedances at gas collection wells that Republic should have specifically been monitoring on a quarterly basis since the Oregon State Plan became effective in November 2020.” “Daniel Heins expressed concerns with the areas of tarp that were inflated with and leaking out landfill gas, as detected during the SEM, noting that in additions to compliance concerns with the surface methane standard that such an accumulation of flammable gas creates a potential safety concern.” For more information on Oregon’s rules for landfill gas emissions, go to this website: https://www.oregon.gov/deq/ghgp/pages/landfill-methane-emissions-reduction.aspx Is there something being done by County and State agencies to hold Republic Services accountable for fixing the multiple violations			

		listed in the EPA report? It appears they've not held up the standards required by the state of OR and should be held to account. Please accept this email communication as a formal complaint on behalf of many in the community who have been suffering from negligent practices currently happening at Coffin Butte. If you could send an update on progress RE: holding them to account, it would be much appreciated. Thank you for your assistance in this matter. Best Regards, Area Coordinator, Blossom Crossing Neighborhood Watch			
117	23-Dec-2023	The odor from Coffin Butte Landfill was particularly nasty for these three days (12/14-12/16)	DEQ	Written comment	
118	25-Dec-2023	Email message: "December 25, 2023 dump smell is overwhelming! We are at 37072 Soap Creek Road, It also smells at 27407 Writsman Creek Dr. it was obvious this morning, this evening it is overwhelming." No request for follow, no phone number left.	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.
119	25-Dec-2023	"like rotten garbage, some sort of gas"	Forwarded to RS from DEQ	Written comment	Not reported
120	25-Dec-2023	Has been smelling like rotten garbage for at least a few hours now. 2 days ago it smelled like some sort of gas. I frequently smell a rotton odor when it gets foggy or there is an air stagnation advisory. I finally found out how/where to report this unacceptable odor, most likely caused by the local landfill.	DEQ	Written comment	Complainant did not reference what specific violations he observed, or dates or times. There are no other complaints from this individual on record in the system.
121	26-Dec-2023	the odor was intense when driving between Coffin Butte Landfill, south on Independence Hwy to Hwy 20, and all the way into Albany	DEQ	Written comment	2/2/24 sent email to Republic requesting they add the complaint to their log and get back to me with findings regarding Dec 25 and 23.
122	28-Dec-2023	Email received: "Over the past year, the smell from the dump has gotten more and more overpowering. There is no way to get away from it. The chemicals that cause the terrible smells also cause cancer when we breathe them in. With so many inversions, Coffin Butte is quickly making this whole area unlivable like the paper mill used to make Albany."	Written comment	Email	Daniel acknowledged the complaint and followed up with resident.

Community Concerns Received Since Last Meeting

Date Received	Concern Summary	Method Received	Response
1/13/25	I strongly oppose this expansion. We need to limit the amount of garbage that we bring into Coffin Butte from other parts of Oregon and not expand it to meet these needs. I am very concerned about the waters of our rivers. We have so much recreation that is dependent on our rivers, why do you want to increase the leachate that pollutes them. The proposed expansion will place an undue burden on public facilities violating BCC 53.215 (2). There will be more truck traffic on local roads. Please do not let this expansion happen.	Email	Bailey provided information about how he can make comments about the proposed expansion when the public comment period has opened.

1/14/25	In my opinion, the response from Republic Services proves that they are outright lying by daring to negate the very real experiences of those of us living in the area. It is my further opinion that if Republic Services produces logs or reports showing nothing unusual or amiss, those are likely being falsified, as it is patently illogical to believe that the methane emissions could have grown exponentially in the last year if everything were as it should be. They are clearly operating in CYA mode (Cover Your A**). That is why everyone has begun reporting complaints directly to the government agencies now, rather than to Republic Services, as R.S. have proven themselves untrustworthy in these matters. I do not personally believe that Republic Services is capable of responsibly managing the byproducts of the current landfill mass, nor should they be allowed to accept an ounce of additional landfill waste until these matters have been INVESTIGATED FULLY AND LEGITIMATELY, AND THE ONGOING ENVIRONMENTAL VIOLATIONS HAVE BEEN IDENTIFIED AND RESOLVED. There should be a judicial stay on the landfill restricting them from further intake of waste. Law-abiding, well-intentioned individuals are held accountable by the government for small mistakes regarding permitting and accidental violations of government bureaucracy, yet this deep-pocketed, out-of-state corporation is being allowed to continuously spew unhealthy chemicals into the land, air and water without a valid permit, and to date has suffered no citations for what I believe is their knowing mismanagement of the landfill. Why aren't Republic Services and its agents who misrepresent the truth of what is happening there being held criminally and civilly liable for the long-term public health and environmental	Email	This email went to the DEQ; and Senators Jeff Merkley and Wyden and Hoyl Bailey responded by letting them know how to record complaints with Benton County, how to provide public comment to the DSAC and how to the Planning Commission.

	problems they are creating? This is too noticeable and far-reaching an issue for the DEQ, Republic Services, Benton County Commissioners or Benton County SWAC/DSAC to pretend the issue isn't real. Based on my experience living near the site, it seems very clear that Coffin Butte Landfill is operating in violation of BCC 53.215 (1). Therefore, I must once again ask what is actually being done to protect the community and ecosystems surrounding the landfill from further, out-of-control methane emissions and ground/water leaching of who-knows-what? And by the way, the odor was present again January 16 and 17 when I came home from work at around 6:30 PM through bedtime, and each morning between 6 - 8AM when I left for work. Thank you for anything you do to protect our community by holding Republic Services accountable for their mismanagement of the Coffin Butte Landfill. You have the opportunity to make a positive difference in the world! Please act on the side of good in this matter.		

1/18/25	I am forwarding the following emails in an effort to ensure that Senator Wyden and Senator Merkley are informed of the ongoing, ever-increasing emissions, odor and mismanagement issues continuing at the Coffin Butte Landfill site in Benton County, Oregon. I received an email from Oregon DEQ representative Laura McWhorter, in which she attached a response from Republic Services Environmental Manager Paul Koster. The responses are incredibly superficial and insufficient to address the odor and emissions complaints. This is gas-lighting at its best. I believe Republic Services and its agents are misrepresenting the truth either outright or by omission, because the odor has indeed increased exponentially this past year, and has reached levels of intensity that have caused me nasal and throat issues if I have lingered outside too long while trying to take care of necessary tasks on my property near the landfill. The odors are also often strong enough to permeate indoor structures that don't have air filtration systems in place. That has been happening throughout the fall and winter, and as recently as this past week in January of 2025, well after the landfill's supposed steps to mitigate emissions leaks exposed in the June 2024 EPA inspection. As someone living within a mile and a half of the landfill, I can attest the problems have only worsened since the inspection. They have certainly not improved. Please ask Senators Wyden and Merkel to help protect our community from the environmental harm being perpetrated by Republic Services. I also beseech them to hold Oregon DEQ and Benton County agencies accountable for what at this point can only be considered informed complicity in allowing the Coffin Butte	Email	This email went to the DEQ; and Senators Jeff Merkley and Wyden and Hoyl Bailey responded by letting them know how to record complaints with Benton County, how to provide public comment to the DSAC and how to the Planning Commission.

	Landfill to continue operating and accepting additional landfill waste after it has been proven through inspections that they are failing to responsibly manage emissions levels resulting from the landfill mass already contained on the site. Whether it's a matter of mismanagement via incompetence or criminal intent, the landfill, its owners and agents need to be stopped immediately. I have also attached a link to a newly released news article related to the issue. I would appreciate an email address for Val Hoyle or her field representative as well, if you would be so kind as to provide that. Please be the change for those of us who don't possess your power and influence. Thank you!!!!		
1/21/25	This came in as a petition that had 15 signees. Stated that an expansion would not be in accordance with the 2040 Thriving Communities Initiative (Vibrant, Livable Cities; High Quallity Environment and Access; Community Resilience. Also states that it would be a violation of county code BCC 53.215.1 "Interfenerence with uses of adjacent property." and BCC 23.325.2 "Imposition of undue burden on public improvements, facilities, utilities or services."	Letter	
1/29/25	Susan wants to report that she can smell the dump at her house on 29th and Grant. This concerns her as well as the request for expansion. She requested that her message go to Commissioner Shepherd and Chair Wyse. She did not request a call back.	hone Call	None
1/1/2025	Coffin Butte Landfill is belching landfill gas permeating the air. I was 6.3 miles from the landfill and the stench was very noticeable.	DEQ	Forwarded complaint with a group received just after Jan 1.

1/1/2025	The Coffin Butte Landfill stench was wafting through the air. Landfill gasses 5 miles from the Landfill. Very strong odor	DEQ	Forwarded several complaints together to Republic. They have some turnover of personnel at the landfill.
1/6/2025	I went out to work in my backyard (taking advantage of my son sleeping and no rain at the moment). I was smacked in the face with a horrible landfill odor. Made my chores worse.	DEQ	Forwarded complaint to Republic, waiting on response.
1/9/2025	The somewhat sulfurous and sickening dump odor coming from the direction of Coffin Butte landfill is common at my house, particularly in the winter when there are breezes from the north.	DEQ	Forwarded complaint to Republic, waiting on response.
1/9/2025	It is not unusual for us to smell the landfill from the NW-facing side of Vineyard Mtn but we live further away on the SE facing side of the ridge. This is the first time since we moved in in 2001 that we have smelled it this strongly on the SE side of Vineyard Mountain ridge crest.	DEQ	Forwarded complaint to Republic, waiting on response.
1/12/2025	The odor from Coffin Butte landfill is consistently getting worse. It is VERY potent today. It cannot be healthy to breathe.	DEQ	Forwarded complaint to Republic, waiting on response.
1/15/2025	Methane emissions from Coffin Butte Landfill have been occurring daily. Last week I came home earlier than normal and on several days the methane odor was present as early as 3:30 PM and 4:30 PM, increasing in strength until bedtime. When I needed to spend time outdoors, it was a limiting factor because the chemical emission was strong enough to trigger headache and nausea, as well as nasal and throat problems that seem to correlate to my increasing exposure to the daily, higher levels of emissions. Something is wrong at Coffin Butte Landfill. It has never been this way in past years. They need to be investigated, fined and shut down. What is the state doing to resolve this ongoing, highly reported issue??	DEQ	Forwarded complaint to Republic, waiting on response.

1/15/2025	On 1-11-25 the odor was very overwhelming in fact even worse than the daily stink it has become. Please take action to have them control the stink. Please start issuing daily fines. How or why would they make corrections to change if there is no reproductions if no corrections are made. Please take some real actions. Please contact me with a plan of action. Thank you Sincerely Eric Harry Nittka	DEQ	Forwarded complaint to Republic, waiting on response.
1/17/2025	The methane stink was once again very strong first thing this morning. It is now almost becoming a daily issue and the strong smell is getting stronger and overwhelming at times. Please do something to get them to take care of this issue. Thank you and God bless you!	DEQ	Not reported
1/21/2025	We frequently smell odors from Republic Services' Coffin Butte landfill. This morning, the odor has been overwhelmingly disgusting; we will not let the dog stay out it smells so toxic. Depending on the time of year, and atmospheric conditions, we might smell these odors several days a week, or just weekly - sometimes it is just smells bad, sometimes it smells toxic enough to make us wonder if vulnerable wildlife or neighbors with compromised health are being seriously affected.	DEQ	Not reported
1/21/2025	Landfill gas stench permeated the air up and down Soap Creek Valley, the majority of the day.	DEQ	Not reported
1/29/25	Complaint regarding (1) air quality, (2) failure to cover garbage over the weekend, and (3) failure to maintain the slopes of the landfill in the condition promised in past land-use applications.	Email	Confirmed that these issues are included in the complaint log.

Petition re: Land Use LU-24-027

Coffin Butte Expansion

We are extremely concerned about Republic Services' attempts to expand Coffin Butte landfill.

This proposal is not in accordance with the Principles as defined in the **2040 Thriving Communities Initiative** which values:

-Vibrant, Livable communities: A landfill makes a mockery of the "vibrant, safe and livable community" which we should "strive to ensure" and is not "forward thinking". We should be implementing more long-term solutions for waste, including reducing the production of single use items and the expanding of recycling and reuse programs.

-High Quality Environment and Access: The landfill will be a toxic, environmental hazard for decades to come. Even if the existing standards, as defined by DEQ and state and local requirements, were enforced, (which is currently not the case) the plans proposed by Republic Services (including no cap on annual tonnage brought in) will only make matters worse. The current and future air, soil and water quality issues will not be resolved without enforcing current standards and limiting future expansion.

-Community Resilience: "Recovering from human caused disasters, threats and changes" is of course critical. But should we not also be preventing, or at least minimizing human caused disasters such as this land fill and Republic Services' disregard for sited emissions violations, methane leaks, PFAS dangers and pollution of the Willamette River?

Violations of BCC 53.215.1- "Interference with uses of adjacent property "

The far-reaching odors from the landfill site and the noise and destruction of Coffin Butte are ruinous of property values and make the EE Wilson Wildlife Area virtually unusable for recreating on many days.

Violations of BCC 23.325.2 – "Imposition of undue burden on public improvements, facilities, utilities or services"

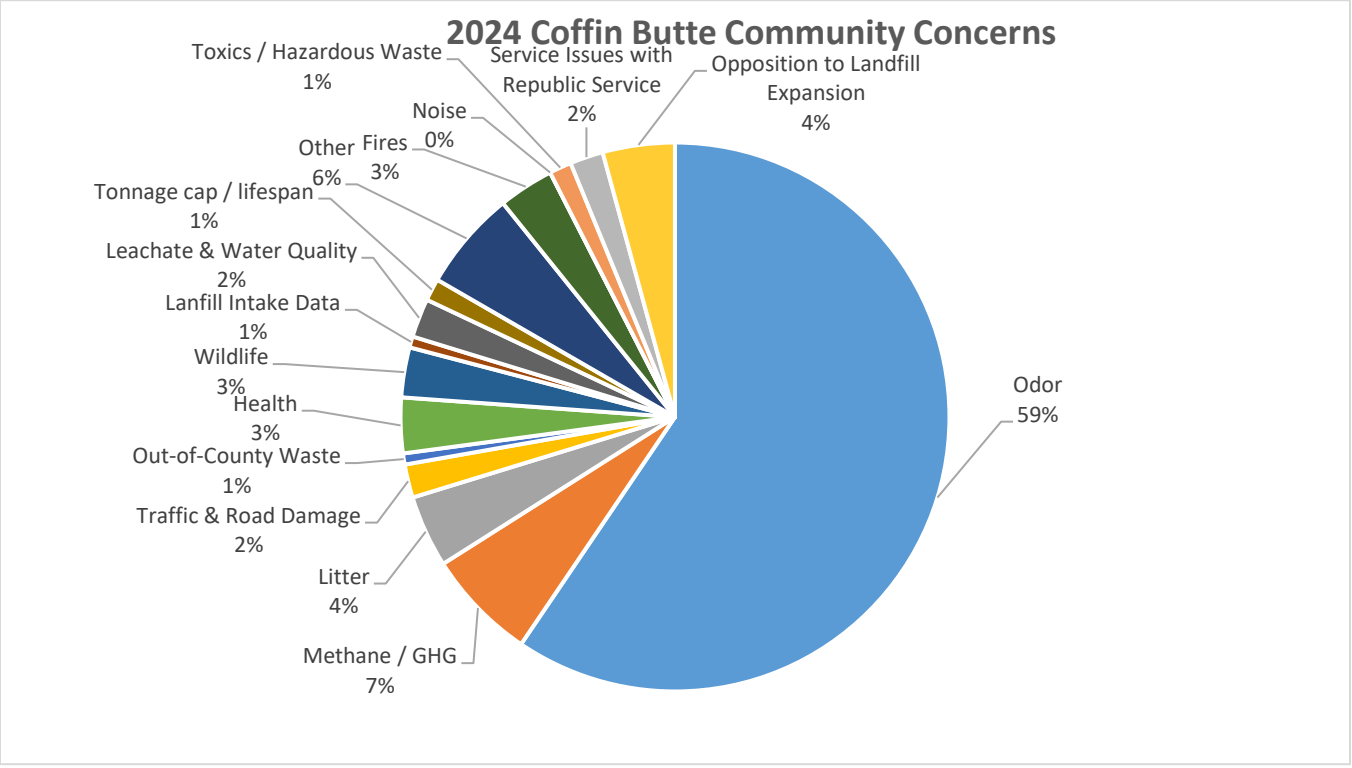
Heavy truck traffic to Coffin Butte drastically increases deterioration of our roads, leaves roadsides strewn with debris and creates more tailpipe emissions near homes and schools.

Leachate from Coffin Butte is dangerous to ground water and soil, creates even more truck traffic, burdens our water treatment facilities and pollutes a major recreational feature of the area, the Willamette River.

Please DO NOT LET THIS EXPANSION PROCEED!

2024 Coffin Butte Landfill Community Member Concerns Annual Staff Report

Prepared By: Bailey Payne, Benton County Community Development Department, Solid Waste Program



Preparation Date: February 19, 2025

The duties of Benton County's Disposal Site Advisory Committee (DSAC) are outlined in Oregon state law—specifically in ORS 459.325, which includes the requirement that "the committee shall prepare an annual written report summarizing the local citizens' concerns and the manner in which the owner or operator is addressing those concerns" which will be considered by the Department of Environmental Quality (DEQ) as part of issuing and renewing a solid waste permit.

Benton County staff and the DSAC have prepared the following report summarizing community member concerns regarding Coffin Butte Landfill in 2024, which may be used by DSAC to meet the requirements of ORS 459.325. Concerns listed in this report have been compiled using information from the complaints received by Benton County staff, complaints received by the Oregon DEQ and Republic Services and concerns presented during DSAC meetings.

Two hundred thirty-three complaints about the Coffin Butte Landfill were reported in 2024 as detailed in the table below. Some complaints included numerous topics while others focused on a single concern. The complaints were organized into themes as illustrated in the following chart.

The complaints received were fairly evenly distributed by topic, with the exception of odor complaints. Odor complaints were 59% of all of the concerns reported. In response, Coffin Butte Landfill has reported that it has expanded its methane capture system to reduce fugitive gasses from escaping and regularly makes repairs to tarps and wells.

#	Date Received	Concern Summary	Method Complaint Received	Response
1	1/11/24	Concerns about landfill odor – "Dump Day" in Adair Village and points north. "I'm at Santiam School, and I can taste it."	DSAC Chair	Not reported
2	1/11/24	Concerns about landfill odor – "take a quick drive up towards Tampico and over towards 99. Adair was stinky mid afternoon, and it's gotten worse and pretty bad right now."	DSAC Chair	Not reported
3	1/11/24	Concerns about landfill odor – "Coming back from town around 3:00 today, the dump stench around CV [Crescent Valley] was overpowering!"	DSAC Chair	Not reported
4	1/13/24	Concerns about road hazards, landfill odor – "I've been driving weekly on highway 99 S from Corvallis to Salem and have noticed a significant increase in large truck traffic coming in and out of the Coffin Butte landfill. A visible change in the landfill seems to be occurring… "Last Friday on January 12th, 2024 there was a toxic smell as a truck pulled out in front of me, and it endured for miles as I followed behind it at some distance - there was no visible back-of-truck license plate on the truck so that I might identify what the source or company was. "There seems now to be every couple of minutes a very large truck crossing onto or over Highway 99 at the Coffin Butte junction when I go by on Fridays in late mornings or early afternoons. Due to the frequency of large trucks entering and exiting, out-of-area incoming trash to the landfill seems as if it may have increased. In addition, I never used to actually smell the landfill as I passed by. However, these last 2 Fridays a strong smell was evident for quite a distance."	DSAC Chair	Not reported
5	1/28/24	Concerns about landfill odor – "I was helping 2 friends in N. Albany (one on North Heights and one on Broadway) Dump stench was present…. Sure wish we coulkd make people aware of what they are smelling or seeing."	DSAC Chair	Not reported
6	2/2/24	Concerns about landfill odor – "It's another stinky day in the neighborhood… With the wind drifting due south today, we're getting the full "dump stink" on the east side of Tampico Ridge, guessing it might be bad on the west side too."	DSAC Chair	Not reported
7	2/7/24	Concerns about landfill odor – "The landfill is stinking it up again today. Just filed another DEQ complaint."	DSAC Chair	Not reported
8	2/9/24	Concerns about landfill odor – "Yesterday late morning, stepping out of my car just north of Luckiamute River just off 99 made me cringe. I hurried inside, so I didn't have to be out there in the stink. Likely the exact scenario that caused the vineyard sale on Airlie to fall through."	DSAC Chair	Not reported
9	2/9/24	Concerns about traffic safety, landfill odor – "The Adair community is growing leaps and bounds. School age children attending Santiam Christian. School busing intertwined with garbage trucks and large tractor trailers hauling trash throughout the day. That new housing trac and a growing school being subjected to toxic air."	DSAC Chair	Not reported

10	2/9/24	Concerns about landfill odor – Soap Creek Valley – “Today is a dump day at our house”	DSAC Chair	Not reported
11	2/11/24	Concerns about landfill odor – 6:30pm, Hwy 99 by dump, "nose burning stench"	DSAC Chair	Not reported
12	2/13/24	Concerns about water quality – groundwater and runoff arsenic contamination – “We know that Coffin Butte Landfill produces leachate that is very high in arsenic. A seepage event in the early 1990s (acknowledged by Valley Landfills Inc.) resulted in high arsenic levels in one monitoring well along Coffin Butte Road, and since then several wells on the east side continue to show anomalously high arsenic.”	DSAC Chair	Not reported
13	2/17/24	Concerns about landfill odor – North Corvallis – “Can somebody please tell me what that horrible smell is here around the neighborhood market of Walmart? — post on Nextdoor”	DSAC Chair	Not reported
14	2/17/24	Concerns about landfill odor – Writsman Creek Road – “This morning I woke up to dump smell, we had a breeze coming up Soap Creek Valley (N to S) it was getting more pungent as the morning progressed.”	DSAC Chair	Not reported
15	2/24/24	Concerns about landfill odor – Coffin Butte overlook – “the odor was bad up there at times”	DSAC Chair	Not reported
16	2/25/24	Concerns about landfill odor and how Republic Services addresses those concerns – the correspondent relayed communications with Oregon DEQ: “DEQ compares odor complaints from the community to Republic Services’ odor report from the same day. I wasn’t aware that someone on R.S.’s staff periodically checks for odors at Coffin Butte, Monday through Friday, and files a report. She noted that they rarely report odors, even on days when we are complaining about especially bad stench. (I noted to her that sometimes, up here on Zeolite Rd., that weekends are just as likely to stink as weekdays!)”	DSAC Chair	Not reported
17	2/26/24	Concerns about roadside trash – Highway 99W – “I was appalled by the amount of trash along Hwy 99W on my way home from Rickreall. It caught my eye when I saw home owners standing in the ditch with bags and trash pickers stabbing plastic waste out of vegetation in their right of way. There is a lot of mostly plastic trash litter scattered all along the highway south of Monmouth from Helmick Park to the dump. These folks need to have a voice on the Disposal Site Advisory Council. I know that won't happen under the current DSAC bylaws, but they should be part of an expanded DSAC to go along with the new multi-county Solid Waste Plan.”	DSAC Chair	Not reported
18	2/26/24	Concerns about roadside trash – Independence Highway – “The roadside garbage along Independence Hwy is appalling (the section between Ryals and Hwy 20). I’ve been driving that stretch once or twice a week for the last 4 years. Despite Republic telling us that they do periodic trash pick-up days, the garbage in the ditches and in the surrounding fields is a constant and seems to be getting worse. I can only assume every heavily traveled route to Coffin Butte is lined with garbage. This is the welcome mat we put out for those driving to our area from other places….”	DSAC Chair	Not reported
19	2/27/24	Concerns about landfill odor – filing odor complaints – “the Republic Services “Odor Complaint Form” was REALLY	DSAC Chair	Not reported

		INTERESTING: I clicked on that link and it did indeed bring up a form where you can "report an odor concern" specifically attributable to the Landfill. That was a surprise! Because a little voice in the back of my mind said, *hm, last time I went to Coffin Butte Landfill's website looking for a way to complain about landfill odors, the only option was a complaint form for PRC, their composting facility. Zero options for complaining about landfill odor.* So I did a little research. Went to the website archive.org (where you can enter a URL in their "wayback machine" and see what the history of a web page is, aka see what it looked like over time). When I entered the URL for the odor complaint form, sure enough, as recently as December that URL went to a PRC odor complaint form, not a Landfill odor complaint form! Which means Republic Services having an actual place to complain about Landfill odors… is NEW as of 2024! "If you go directly to the landfill's website looking for the form... you can't find it! It is not on the "Contact Us" or "Resources" page, it's not in their FAQ... or anywhere else. It's a hidden page. So yeah they do have it, but clearly only begrudgingly. If you search for "Complaint Form" or "Odor Complaint" on their website — you get no results. THE ONLY WAY TO FIND IT right now is to search on the word "Odor"… and then and only then is there a clickable link to their "Odor Report" form."		
20	2/27/24	Concerns about landfill odor – Highway 99W – "I noticed strong odors Thursday the 22nd. We (my family and I) were driving hwy 99W northbound on the 22nd around 5:30/5:45pm-ish. I had a respiratory infection at the time which affected my sense of smell, but just before Adair Village I noticed a "weird" smell and it got stronger right as we passed the landfill."	DSAC Chair	Not reported
21	2/27/24	Concerns about landfill odor, wildlife impacts – "I was at EE Wilson on Sunday the 25th, and the smell was noticeable there. A sharp inorganic smell. Even more noticeable though were all the birds that had collected at the top of the landfill. There were several bald eagles and even some golden eagles there, as well as other raptors, hundreds of seagulls and even more crows, ravens and starlings. Sundays are a big day for them it seems, as there are no humans to disturb their dining – although from time to time a raptor would make a run and a thousand birds would explode off the working area and into the air. I know the landfill is supposed to cover the new garbage at the end of each day with dirt, but seems that didn't happen on Saturday EOD."	DSAC Chair	Not reported
22	3/5/24	Concerns about the recording and preservation of public landfill concerns – "It was told to me yesterday at the meeting by the county manager that because DSAC was not meeting, it kept the complaints from being collated – and that when DSAC begins to meet again then the process of relaying the complaints could begin again. How circular!"	DSAC Chair	Not reported
23	3/5/24	Concerns about air quality – particulate pollution – "I have an ongoing interest in Coffin Butte. Based on a conversation with Mark Yeager I pulled together the attached narrative concerning particulate pollution. It is not ready for distribution but I'd like to get your reaction to the information. I'd also like your ideas on how to get the information out to the community." Attachment:	DSAC Chair	Not reported

		research summary entitled “Coffin Butte’s Air Pollution Not Just Methane and Odors.”		
24	3/7/24	Concerns about landfill odor – “Today is another “Dump Day” — stinky, smelly especially over in Adair Village and around the school there.”	DSAC Chair	Not reported
25	3/17/24	Concerns about landfill odor – Soap Creek Valley – “Well, it is another lovely smelling dump day at the south end of the Valley. Last Thursday was also a dump stench day. Another sunny morning ruined for anything outdoors. The frequency and intensity of these dump days is absolutely unacceptable.”	DSAC Chair	Not reported
26	3/26/24	Concerns about landfill odor – North Corvallis – “A neighbor just texted me and said that the dump smell in North Corvallis (9th & Circle) today is "overpowering". — Nextdoor	DSAC Chair	Not reported
27	3/28/24	Concerns about the climate crisis / landfill greenhouse gases – correspondent sent an article,“Landfills Bake the Planet Even More Than We Realized” by Sachi Mulkey in *Grist*,” noting that the climate-data sleuths at Carbon Mapper published a study in Science that shows U.S. landfills emit methane at levels at least 40 percent higher than previously reported to the Environmental Protection Agency. “At more than half of the hundreds of garbage dumps surveyed — in the largest assessment yet of such emissions — most of the pollution flowed from leaks, creating concentrated plumes. The researchers found these super-emitting points can persist for months or even years, and account for almost 90 percent of all measured methane from the landfills. Tackling these hotspots could be a huge stride toward lowering emission rates, but blindspots in current monitoring protocols mean they often evade detection.”	DSAC Chair	Not reported
28	3/31/24	Concerns about landfill odor – Soap Creek Valley – “Yet again, another beautiful day with the heavy dump odor.”	DSAC Chair	Not reported
29	3/31/24	Concerns about landfill odor – Soap Creek Road – “ Landfill Odor 04/01/2024 – “Ken, do you have any idea why my email is being treated as spam by the County Commissioners office? It just bounces back. I have contacted them by phone and someone named Mindy is going to look at it from her end. Presumably someone is going to get back to me. I wondered if it is possible to reject email that the subject matter is “Landfill"...!"	DSAC Chair	Not reported
30	4/2/24	Concerns about climate crisis / landfill greenhouse gases – “I don’t know if you and your group have seen this article based on a recent new study on landfill emissions? The journal article they reference is here: *Quantifying methane emissions from United States landfills* study in Science”	DSAC Chair	Not reported
31	4/21/24	Concerns about landfill odor – 8:00pm, Buena Vista	DSAC Chair	Not reported
32	5/1/24	Concerns about landfill odor – 2:47pm, Adair Village	DSAC Chair	Not reported
33	5/9/24	Concerns about landfill odor – 2:45pm, Adair Village	DSAC Chair	Not reported

34	5/16/24	Concerns about landfill odor – 11am, Adair Village	DSAC Chair	Not reported
35	5/17/24	Concerns about landfill fire – relaying radio dispatches about fire at the landfill – ACTIVE FIRE AT THE LANDFILL	DSAC Chair	Not reported
36	5/22/24	Concerns about landfill odor – Soap Creek Valley – "Good morning, The dump smell is overwhelming at our place (7:45 AM)"	DSAC Chair	Not reported
37	5/22/24	Concerns about landfill odor – points south of landfill – "We live about 5 miles south of the dump as the crow flies, and we are smelling dump stink this morning!"	DSAC Chair	Not reported
38	5/22/24	Concerns about landfill odor – south of landfill – I was bcc'ed on an email to Bailey Payne, Solid Waste Coordinator: "This was at about 7:45am (Thurs 5/23/24). The smell actually began to make me feel queasy so I went back inside. I heard from a number of neighbors that they smelled it too. The landfill operators are supposed to keep odors in check but do not. It is truly scary smelling the dump (especially at your own home!) because we do not know what all pollutants we are taking into our bodies. And it is very disturbing that if you don't want to breathe those unknown things in, you feel like you have to avoid going outdoors until the "coast is clear."	DSAC Chair	Not reported
39	5/29/24	Concerns about landfill odor – "Dump Day in Adair, 2:30 pm"	DSAC Chair	Not reported
40	7/3/24	Various concerns – "Attached are my notes from the June 28th public outreach session." Attached notes raise issues with increased odor generation due to simultaneously operating 2 dump working faces; building on contaminated land without appropriate preconstruction assessment, remediation if needed and follow-up monitoring; siting landfill operations outside of the designated Landfill Zone; lack of a plan to improve landfill gas collection and monitoring; misleading claims about landfill gas emissions (by focusing on the current power generation system, RS underreports the actual carbon footprint of the landfill.)	DSAC Chair	Not reported
41	7/14/24	Concerns about air quality – landfill gas emissions – Concerns about landfill odor and greenhouse gases – "It appears that Republic is proposing two separate operations i.e. there will be a working face on the north "Quarry side" of CB Road and another working face on the south side. This could mean twice the odor problems. At the 28 June Philomath public session, I asked Ian McNabb if the two areas would be operating simultaneously. His off the cuff answer was yes, then he said he was not sure and would get back to me. No reply yet."	DSAC Chair	Not reported
42	7/21/24	Concerns about landfill monitoring and concerns for community advisory role – "Benton County land use code – chapter 24 governs the need for an advisory group to BOC for landfill operation/management, under Oregon revised statutes, chapter 459- waste management… ORS459.320 Regional Disposal Advisory site committee (public law) for counties which have regional landfills, or landfills larger then x. The Creation of Enrac without public input violates both chapter 24 of bc land use code and state of oregon chapter 459- ORS459.320." Concerns about water qualtity – toxic leachate – "PFAs and 1000's	DSAC Chair	Not reported

		of other toxins are being placed into the Willamette, for pennies by this corp, and damaging this ecosystem. State of oregon has a house bill passed which goes over PFAs. sources. oregon health authority may manage leachate under some ORS they have. And Federal level is RCRA or Clean Water Act. Over time, Short Mountain landfill and coffin butte rlf will have put x cubic feet of raw leachate into the willamette per year, for pennies on the tanker loads, which run 356 days a year to all three water plants (salem corvallis eugene-short mt)."		
43	8/6/24	Concerns about the climate impacts of greenhouse gas emissions and the water quality effects of leachate releases – "Methane is destroying the planet, so BC is currently allowing one of the largest sources of Methane in Oregon" and "I had a concern also from leachate dumped into the Willamette River at Salem and Corvallis, that 'Sorbal', the Hollingsworth and Vose nanoscale (PM2.5) fiber glass rod waste, may be able to bypass filters at both Waste Water Treatment plants in Salem and Corvallis to enter the Willamette River… The residual health impacts of RS using Sorbal are massive, as they ripple through the ecosystem and into entire cities possibly." Concerns also about the forever chemicals and long list of unknown toxics in leachate.	DSAC Chair	Not reported
44	8/10/24	Concerns about methods open to the community to communicate landfill concerns to Benton County – no avenues available – DSAC Chair to Bailey Payne: "We are [DSAC is] going to have public comment, so there really must be contact information added to the Committee webpages."	DSAC Chair	Not reported
45	8/12/24	Concerns about dump methane – "A question of interest to parents who live in Adair and the safety of their children, are they likely being impacted personally by methane on days they aren't smelling other dump fumes? Or are they likely occurring on the same days, as opposed to much more frequently?"	DSAC Chair	Not reported
46	8/12/24	Concerns about air quality – airborne PFAS – "I'm attaching a recent journal article that likely has some relevance to Coffin Butte… You folks probably heard about this issue lately as it did receive some press coverage… While I have heard Republic Services and others make short mention of PFAS "forever chemicals" in the landfill leachate, I haven't heard any discussion about the possible implications of this study: there may be as much or more PFAS emitted in gas form as in leachate. 'These findings suggest that landfill gas, a less scrutinized byproduct, serves as a major pathway for the mobility of PFAS from landfills.'"	DSAC Chair	Not reported
47	8/12/24	Concerns about uncontrolled methane releases – "Monday, Aug 12, P.M. Kezi 9 News report: Senator Merkley is working to get the EPA to move along with Methane violation process as this CUP application is underway." Concerns about future implications of hosting the landfill – "Benton County only contributes a small percentage of trash to this landfill, but BCounty is being impacted by all the Environmental costs, and financial costs on into the future, to insure and pay Republic or some other Waste Mg. firm, to maintain the landfill for 30 years or	DSAC Chair	Not reported

		less after closure." Concerns about "endless landfilling" at Coffin Butte – "The landfill owner is interested in creating more landfill cells, to the west, into Soap Creek Valley and are exploring this with Benton County." Concerns about lack of final cover over most of the landfill. Concerns about closure of Coffin Butte Road – "A trash cell, in future may be planned, to bury Coffin Butte Road, and close it permanently, in order to connect the new South Dump at some point, to Cell 5E, the current, 2024 active dump." Concerns about proper permitting for the expansion as a "new landfill."		
48	8/20/24	Concerns about landfill odor – Writsman Creek Road – "This morning the dump stench is hanging in the air!"	DSAC Chair	Not reported
49	8/22/24	General environmental concerns including greenhouse gas emissions and toxic leachate – "Coffin Butte RL is built in the wrong location, in a wet Mediterranean climate, is generating leachate which means it is also chemically, able to generating methane, as this landfill has been put on top of and up against a massive, water storing, water releasing, layered, rotting basalt geologic feature, Coffin Butte."	DSAC Chair	Not reported
50	9/2/24	Concerns about landfill odor – Adair 7:57am	DSAC Chair	Not reported
51	9/9/24	Concerns about landfill odor – Adair, 8:04am. Nose burning, and throat tickling	DSAC Chair	Not reported
52	9/10/24	Concerns about landfill odor – Adair, 7:55am. "Soggy & heavy"	DSAC Chair	Not reported
53	9/22/24	Concerns about fire – Pacific Region Compost – relaying radio dispatches – a large pile at the Pacific Region Compost is on fire. "1) no RS employees on site, despite having a burn pile today (no "watchers"). 2) I'd be curious to know what the PRC is burning in piles. If they are supposed to be composting, what are they instead disposing of by burning? "Would be interesting to see if they do a safety report every time something like this happens. Perhaps we can ask for a map of where the fire was located, how close it was to other burnable material like vegetation and fields, and ask what their permission source was to be able to burn during such a dry season (particularly leading into the 90° day tomorrow, and leaving it unattended). A homeowner would get in lots of trouble for leaving a fire not put all the way out that could reignite…"	DSAC Chair	Not reported
54	9/28/24	Concerns about fire – Pacific Region Compost – relaying radio dispatches – "Passerby called, saw brown smoke coming from a compost pile near the back of the compost facility"	DSAC Chair	Not reported

55	10/13/24	Concerns about landfill odor – just N of Sarah Helmick park/Luckiamute, nose burning, had to stay inside	DSAC Chair	Not reported
56	11/30/24	Concerns about landfill odor – Dump day here at the end of Soap Creek Valley on 12/1/24 - Likely will continue each day all week with this stagnant air + fog.	DSAC Chair	Not reported
57	12/4/24	Concerns about landfill odor and toxic PFAS area contamination – "Considering the new research that shows that municipal landfills can release similar amounts of PFAS as is found in the liquid leachate -- one of the major sources of PFAS contamination in many areas -- escaped landfill gas is likely a hazardous material that may well pose a serious threat to human health and the environment."	DSAC Chair	Not reported
58	12/13/24	Concerns about landfill odor – "Around 1:30pm Saturday Dec 14, passing the Coffin Butte landfill on Hwy 99… unbelievably bad! The smell permeated my car, and I felt queasy for a good half hour after arriving home."	DSAC Chair	Not reported
59	1/2/2024	This is more of the usual stench that we in surrounding counties are being subjected to on an ongoing basis. Over the new year's holiday weekend the active dumping area was not covered as required, and this may have contributed to the strength of the odor. It was unpleasant to be outdoors. The annual Christmas Bird Count tallied >1,000 gulls feeding on the landfill in the uncovered trash.	DEQ	Not reported
60	1/12/2024	"horrible smell of the landfill"	Forwarded to RS from DEQ	Not reported
61	1/12/2024	Constant gas odors from coffin butte landfill, disturbing quality and health. I have lived here for 40 plus years and it's now intolerable	DEQ	Complaint is about the landfill odors getting worse in general. No specific incident or event.
62	1/13/2024	Offensive air pollution from the landfill. Not sure what else you want to know.	DEQ	1/23/24 - contacted source by email and forwarded complaint, with request for response.
63	1/16/2024	Rotting Garbage and Death smell is very present. Floating debris, garbage bags and chip bags entering animal pastures.	DEQ	Met with solid waste permit writer/inspector for the Coffin Butte Landfill. The landfill has fencing to trap wind-borne debris like bags to keep them from blowing off-site, as a requirement for their operations. Trucks bringing waste to the landfill are not owned or managed by the landfill, and can often be a source

				of wind-borne materials, as well as individuals discarding materials, so the landfill may or may not be the source of these.
64	1/18/2024	"Odor"	Forwarded to RS from DEQ	Not reported
65	1/18/2024	"incredibly intense"	Forwarded to RS from DEQ	Not reported
66	1/18/2024	"odor was very obvious"	Forwarded to RS from DEQ	Not reported
67	1/18/2024	"hits you like a wet blanket and permeates into the home as well"	Forwarded to RS from DEQ	Not reported
68	1/18/2024	"really bad"	Forwarded to RS from DEQ	Not reported
69	1/18/2024	I walked out our front door and was immediately hit by the stench of the landfill. While we often experience stench from the landfill, it's significantly worse today. One factor might be that the landfill has just re-opened, after being shut down over the holiday weekend and then due to winter weather conditions. So gases generated by garbage that have been building up under "daily cover" which was then capped by snow and ice are being released by renewed activity in the tipping area.	DEQ	Sent email with all 5 of the Jan 18 complaints to Ian, including the times reported. Waiting on response.
70	1/18/2024	I live several miles south of the Coffin Butte Landfill. The stench from the landfill is incredibly intense today. Difficult to breath. The source of the smell is unmistakable. I have smelled this smell at other times over the years, but it has never been this intense.	DEQ	Sent email with all 5 of the Jan 18 complaints to Ian, including the times reported. Waiting on response.
71	1/18/2024	Coffin. Uttebmandfill odor is consistent and permeates all the way to town of Corvallis, it’s awfully going outside in your own neighborhood within miles radius. It hits you like wet blanket and permeates into the home as well	DEQ	Sent email with all 5 of the Jan 18 complaints to Ian, including the times reported. Waiting on response.
72	1/18/2024	The smell is really bad from Coffin Butte Landfill.	DEQ	Sent email with all 5 of the Jan 18 complaints to Ian, including the times

				reported. Waiting on response.
73	1/19/2024	"very apparent"	Forwarded to RS from DEQ	Not reported
74	1/19/2024	The landfill stink is very apparent today. Complaint forwarded to DEQ from LRAPA, email w/original complaint uploaded to documents - complaints intake SC	DEQ	Following up with Ian via email. Waiting on response.
75	1/22/2024	The odor from the Coffin Butte Landfill is getting increasingly worse. I am concerned for my family's health and safety.	DEQ	This complaint did not reference a specific event, but I will add this to the multiple-complaint follow up from January 18/19.
76	1/24/2024	AIR QUALITY AND AIR STAGNATION ALERTS – LANDFILL METHANE EXCEEDANCES Since early November, the residents of Corvallis, Albany, Salem and Eugene-Springfield and surrounding rural areas have been subjected to multiple days of air stagnation weather patterns. During these periods of air stagnation, residents of Corvallis, Albany, Adair Village plus other small communities in the Linn and Benton county area have been experiencing acrid and chemical smells in the air, which are turning into health issues for people who have allergies and other respiratory issues. Residents researched and found that these smells are coming from the Coffin Butte dump and an EPA inspection of this particular disposal area was done in JUNE 2022. There was found massive methane leaks that violate air quality limits. It seems these might not have been addressed and the air quality has continuously worsened. Also, several eye witnesses living in Adair Village have recently witnessed open areas of waste NOT being covered (which it was found is a daily requirement per Republic Services permit). They have also witnessed seagulls (by the hundreds) scavenging the dump and found some of these birds dead in their neighborhoods shortly after that event. On Highway 20 at Independence Highway on Friday December 15 around noon, the smell from the dump was absolutely overpowering. Residents are being exposed to toxic air pollution from the landfill, especially residents in and around Adair Village, Logsdon Ridge, and North Albany. Over the past 3 months, many in our communities (very active dog walkers and neighbors who regularly interact outside) have curbed these activities, due to health issues breathing this offensive air. The rare break (when there is a slight breeze) finds all getting out in droves, as the air clears (but ONLY temporarily). People in our Watch are talking about the need for DEQ and Benton County to honor their mission and vision statements RE: air quality to Oregonians. Many have called and sent in complaints (like this one). However, it seems that local Republic Services administrations are not being held accountable for their neglect of environmental air quality in the	DEQ	General complaint not in reference to a specific event. However, complainant is representing a neighborhood group. Additional followup needed, meeting with permit writer on Monday 2/5 as next step.

		Central Willamette Valley. There is talk of petitions and other actions by residents bring taken - if the situation continues further without resolve. I am sending this complaint on behalf of about 150 residences in only a portion of North Albany. We would think that the DEQ would honor all they claim to uphold for public air quality and would hold any business that is required to keep pollution at a minimum to account for local taxpayers. In past years, Wah Chang and the pulp plant in Millersburg were held to account when there was a continuing threat of pollution (danger to public health), so why not Republic Services? Something needs to be done soon, as taxpayers are getting upset with the lack of resolution to this ongoing situation. Redacted per ORS 192.355(4) Confidential Submissions		
77	2/3/2024	"Chemical type smell, Horrible"	Forwarded to RS from DEQ	Not reported
78	2/3/2024	"Strong smell of methane"	Forwarded to RS from DEQ	Not reported
79	2/3/2024	"foul chemical odor"	Forwarded to RS from DEQ	Not reported
80	2/3/2024	"nasty, horrible and probably not good for anyone to breathe"	Forwarded to RS from DEQ	Not reported
81	2/3/2024	"so strong"	Forwarded to RS from DEQ	Not reported
82	2/3/2024	There is a very strong smell of methane outside of my home. This odor is prevalent several days a week and has been growing worse over the last several months.	DEQ	Reported the 3 complaints from Feb 3 to Ian. Currently waiting on a response.
83	2/3/2024	I've reported this before but have yet to receive a reply. This is a frequent occurrence, whenever the wind is from the north. One factor making it a little worse today might be that large areas at the top of the landfill aren't covered by tarps, while they're supposed to be upgrading the methane collection system. Yesterday was windy and I noticed that the tarps were billowing and had come loose in several places on the east side, leaving new areas of exposed soil (or "daily cover") where landfill gases can escape. I thought DEQ and/or EPA were supposed to be getting this outfit to clean up their act -- what's happening?	DEQ	Emailed Ian about the 3 complaints filed on February 3. Waiting on response.

84	2/8/2024	"strong"	Forwarded to RS from DEQ	Not reported
85	2/8/2024	The landfill smell is strong. When we first moved here in 2020 we would smell the landfill about every few months. It's been every other week for the last year. I don't know what is contributing to this, but it's awful.	DEQ	Forwarded complaint to Republic on 2/15/24, waiting on response.
86	2/8/2024	On both Saturday, February 3 and Tuesday, February 6 the smell from Coffin Butte landfill was so strong that it bothered us as we drove in the area.	DEQ	Forwarded complaint to Republic on 2/16/24. Waiting on response.
87	2/10/2024	"awful stench"	Forwarded to RS from DEQ	Not reported
88	2/10/2024	"stinky air" "especially bad"	Forwarded to RS from DEQ	Not reported
89	2/10/2024	Odor	Forwarded to RS from DEQ	Not reported
90	2/10/2024	We live by the land fill and the sticky days are happening more and more :(	DEQ	Forwarded complaint to Republic, waiting on response.
91	2/10/2024	I recognize this stinky air quality as odor from the Coffin Butte landfill. I live in the soap creek valley and the odor is often especially bad.	DEQ	Forwarded complaint to Republic, waiting on response.
92	2/10/2024	Republic Services Coffin Butte Dump.	DEQ	Forwarded complaint to Republic on 2/16/24, waiting on response.
93	2/13/2024	"the usual Coffin Butte stench"	Forwarded to RS from DEQ	Not reported
94	2/13/2024	The usual Coffin Butte Landfill stench. This time the odor was only present above 800 ft elevation, along Vineyard Mountain Ridge. The geography of the stink is very much dependent on local air mass movement and wind direction and strength.	DEQ	Forwarded complaint to Republic, waiting on response.
95	2/14/2024	"very bad"	Forwarded to RS from DEQ	Not reported
96	2/14/2024	"usual rotting garbage odor"	Forwarded to RS from DEQ	Not reported

97	2/15/2024	"extremely strong"	Forwarded to RS from DEQ	Not reported
98	2/15/2024	The landfill smell is extremely strong. This is not compost. The landfill has a distinct odor more chemical in nature. The issue has been getting progressively worse over the last several weeks	DEQ	Forwarded complaint to Republic on 2/23, waiting on response.
99	2/20/2024	"malodorous chemical smell"	Forwarded to RS from DEQ	Not reported
100	2/20/2024	"rotting garbage"	Forwarded to RS from DEQ	Not reported
101	2/20/2024	"usual landfill stench"	Forwarded to RS from DEQ	Not reported
102	2/20/2024	All day Coffin Butte Landfill odors. Moderate levels today, and have been present for the last 3 days (Feb 17-20). Basically smells like rotting garbage.	DEQ	Forwarded complaint to Republic on 2/23, waiting on response.
103	2/20/2024	The usual rotting garbage odor that emanates from Coffin Butte landfill. I first noticed it at my home in the morning. I drove to Albany around 11am and back around 2pm. I smelled the odor from my home, all along Soap Creek Road, Tampico Rd, through Adair Village to Independence Hwy. The odor dissipated soon after I turned onto Hwy 20 toward Albany. The odor was still present when I returned home around 2.	DEQ	Complaint is referencing February 14, which has already been reported and responded to. The additional complaint is being reported, but no additional information is being requested. Called and left a message at the number provided on 2/23 at 10:42 a.m.
104	2/20/2024	The odor was especially concentrated around 700-800 ft elevation, coinciding with the bottom of the cloud deck, but still present at 500 ft. As the fog lifts, the odor often dissipates.	DEQ	Forwarded complaint to Republic, waiting on response.
105	2/22/2024	"Stinks"	Forwarded to RS from DEQ	Not reported
106	2/24/2024	"Rotting stench"	Forwarded to RS from DEQ	Not reported
107	2/24/2024	"sour, reeking stench"	Forwarded to RS from DEQ	Not reported

108	2/25/2024	While driving north on Soap Creek Road prior to the Tampico Road intersection we put our autos air on recirculate and then shut the system off but it was too late the car was already filled with the highly offensive odors. We proceeded north to Hwy 99 and just had to wait it out until we got north of Republic Services Coffin Butte Dump. It is really concerning issue especially since so many people live in the vicinity of the Dump.	DEQ	Forwarded complaint to Republic, waiting on response.
109	2/27/2024	There was on 2/24 and still is a great deal of garbage strewn along Hiway 99 from Monmouth south to the Coffin Butte Landfill. It seems likely this is the result of debris falling off garbage trucks headed to the Coffin Butte Landfill. It is unsightly but also potentially dangerous for people who are walking along the road or getting their mail (or picking up after the garbage trucks).	DEQ	After a very long telephone conversation with the complainant, who advised "there was one spot that had about 5 large plastic bags, that had to have come from a truck headed to the landfill", but no one location, just scattered mess from Monmouth to Corvallis. Everything points to excessive roadway debris, I will be closing the complaint, unfounded.
110	2/29/24	For years I have witnessed garbage flying out of the Republic Services garbage trucks. Independence Hwy is disgusting, so does Hwy 99 and all adjacent roads. These used to be lovely roads with great views but it looks no better than a 3rd world country. This has been brought up in the Next Door Neighbor app and I am not alone. Please read. https://nextdoor.com/p/G6-H2FCk_5Kd?utm_source=share&extras=NDk2ODc1MQ%3D%3D&utm_campaign=1709261818824	Email	Thanked respondant and logged complaint.
111	3/6/2024	"Reeking Stench"	Forwarded to RS from DEQ	Not reported
112	3/6/2024	This is my 2nd Environmental Violation complaint- Regarding non existent and/or lack of Daily Cover. Which is required by not only Title V air quality permit but also by Solid Waste Disposal Site Permit Municipal Solid Waste Landfill SWD P 306 Expiration Date June 30, 2030. My 1st complaint was forwarded to Oregon DEQ Western Region Hazardous/Solid Waste Permitting/Compliance 4026 Fairview Industrial Dr Salem, OR 97302. Mr. Hugh Gao was the first and only person to reply although he started to cc a Miss Becky Williams. I have to report that I feel my complaint wasn't taken seriously. Mr.Gao response was that he contacted the land regarding issue of daily cover and landfill provides us evidence that indicates the landfill is in compliance. My repeated questions about penalties went completely unanswered. Yet COMPLIANCE is half of	DEQ	According to information and photos provided by the permittee, a daily cover material was applied at the operation area of the landfill in compliance with requirements as specified in the SW permit. The landfill did not open in Sunday (Feb. 11,

		Mr.Gao's title (maybe the whole division's title). I find it absolutely unacceptable that repeated acts of noncompliance aren't penalized. Shortly thereafter without informing me Mr.Gao closed my complaint. In my opinion no action was taken. I am also not aware of any penalties levied. Above I checked Falsified in the Violation Method section since landfill stated to Mr.Gao that they are in compliance and these more recent photos evidence they are not. As mentioned above I believe this is both an air quality issue and also a Solid Waste Permitting issue hopefully you can take enforcement action on this issue. Attached photos taken February 11, 2024. I have a video that is too large a file to upload. By zooming in on the video you can see the large number of birds scavenging on the uncovered garbage		2024). A daily cover material was applied on Friday, 2/9/2024.
113	3/7/24	Coffin Butte water quality	Email	Darren asked Bailey to send this information to DEQ (done). Robert Orton's contact information was not included. Mr. Orton is a Republic employee and has given comment at a recent BOC meeting. Xan Augerot received a complaint that Republic Services is using water from the Knife River quarry which is a rock quarry that borders the Coffin Butte Landfill. The complainant is concerned that water that is collected in the quarry is being used to wash the roads around (in?) the landfill. Photos and video are documented here: G:\dev\Code Compliance\Files - Enforcement\2024
114	3/8/24	Coffin Butte odors	Email	Odor complaint. I've sent the Republic Services and DEQ complaint links.

115	3/8/24	Coffin Butte odors - Dump stench today(March 8,2024) 7:00 Am til around 11:00. The areas of concern, 27407 Writsman Creek Dr., Tampico / Trillium intersection and OSU 400 road. It was a pretty high concentration.	Email	Thanked her for contacting us and forwarded Republic Services and DEQ complaint lines. Comm. Augerot also sent the Coffin Butte complaint link.
116	3/8/2024	"5"	Direct Complaint to Republic Services - Ken Kupperman	Not reported
117	3/8/2024	"rotting garbage plus acrid chemical smell", level 8	Direct Complaint to Republic Services - Faye Yoshihara	Not reported
118	3/8/2024	Reeking stench	DEQ	Complaint completed as duplicate complaint - see complaint #2024-00491/41497 assigned to Laura McWhorter based on complaint proximity to Coffin Butte Landfill, Republic Services
119	3/8/2024	Went outside around 8:30 am to the typical rotting garbage plus chemical acrid smell we get when we drive by Coffin Butte Landfill. It was so strong that I abandoned my plan to go for a hike and I went back inside. Around 10:00 am was my last chance for exercise today and I know that sometimes the landfill odors change with elevation and wind direction. Our house is at 500ft. So despite the landfill smell being present with its signature acrid chemical smell, but reduced, I proceeded down to 350 - 400 feet where the smell was the weakest. It was still unpleasant, but not noxious as higher elevation. By the time I returned to my house around 11:30am, the smell was present, but minimal.	DEQ	Forwarded complaint to Republic, waiting on response.

120	3/8/2024	After reporting the signature Coffin Butte Landfill rotting garbage plus acrid chemical smell this morning, I wanted to add that a couple hours later when I went outside, a different smell that I associate more with PRC, was present at our house. It smelled more like silage and rotting organic matter. While I am not 100% certain the smell is from PRC, I will note it as “yes” below, as I believe this is the most likely source. I am only reporting to differentiate the smells we get from both the Landfill and PRC facilities, generally on different days. Today we got both. Some days, I drive to PRC so I can follow the smell to the source, today I did not have time to do this.	DEQ	3/15: Craig Filip (CF) received notification of this complaint via email at 1422 on 3/14, even though it was reported on 3/8. CF emailed Ian Macnab with Republic Services, Inc. about this issue. Mr. Macnab responded today, as did Operations Manager Broc Kienholz, that there were no complaints reported to them and no system upsets or other issues they could identify. CF called the complainant to convey this information, along with his contact information
121	3/10/2024	Noticed early morning Friday 3/8 on Tampico, drove 5 miles soap creek with ongoing odor, drove back Tampico and to CHS odor intensified throughout day. Some days worse than others, it is increasingly consistent	DEQ	Forwarded complaint to Republic, waiting on response.
122	3/12/2024	"landfill odor with a noxious chemical component"	Forwarded to RS from DEQ	Not reported

123	3/15/24	Bailey's comments in **blue**. Dear Bailey, Can you and Benton County work to find a better way for Rep. Ser. to provide a best management practice bill for residents in Benton County? My residential trash pick up and recycling bill lets me know nothing about what I am paying for. I'm not sure what influence Benton County has on this, but I'll certainly pass along your feedback. You can also send these comments to them directly here. As you probably know, Republic Services is a national company and their billing is out of their Phoenix office and I'd guess their billing to be similar for all of their nationwide accounts. I am interested in what Benton County Public Works does with the payment funds they get from Rep. Ser. from the public in their trash bill? I'm new to Benton County, but I believe that these funds go into the Benton County general fund, some of which is used to fund our department's programs. I am interested in what the recycling fee does and why? I'm not certain of this, but I'm guessing that a recycling fee may have been added some years ago to help recycling companies reduce contamination. I could be wrong as I'm not sure what the "recycling fee" is. Where do comingled recyclables go and does all of this material get reclaimed? The materials initially go to Republic Services' facility in Albany. The commingled recyclables are baled for more efficient shipping and sent to a Portland area material recovery facility where they separate the recycling into different materials and grades. From there, the recycling goes to manufacturers that buy it as a raw ingredient for their manufacturing of new products. Does recycling all go to Salem to Garten Foundation to be sorted? I think it depends on the market. It could go to Garten Services in Salem or one of the 6 or so MRFs in the Portland area, depending on what they pay and how much material they need. How is comingled recycling working, or is it failing or is generating more waste or is too cost prohibitive to work as comingled reclamation the few of materials we can put in the recycling bin. Should return to sorted recycling to save more materials from being landfilled? The commingled collection system has been a double-edged sword. On the one hand, it's increased recycling by about 30% which is great. The downside is that people too often put in things that aren't part of the collection system. Things like Styrofoam, hoses, plastic bags and other contaminants have increased which has also put a real strain on the system. Recycling markets took a big hit several years ago which compounded the problem. Ultimately, the best solution is to have the material used domestically, ensuring stable markets for the recyclers. Sometimes processors will run the material a second time to improve how much they're recovering, but as technology improves, these MRFs should be able to better handle it. In the meantime, it's important	Email	Bailey responded (see blue text)

		that people "recycle right." What percentage of our residential trash bill goes directly to an account for paying for the closing and maintenance for x years, of the landfill? I'm not sure about the percentage, but the Oregon Department of Environmental Quality requires that landfills have a fund set aside for closing the landfill and mitigating future environmental problems that could arise. I know that this is a topic that our solid waste committee will focus on. Rana, it sounds like you may enjoy taking the Master Recycler class. It's a great way to learn all about waste prevention, recycling, composting and disposal. Here's a link. You may also find these videos of interest: Saving Little Pieces of Our Earth: Your Curbside Recycling Journey How a Material Recovery Facility (MRF) Works – This is an excellent video that shows the process. One thing to note is that many programs include glass in the commingled. In Oregon we fortunately don't do that (glass shards are really bad for paper recyclers), so glass is collected separately.		
124	3/15/24	Website links don't work	Email	Debbie was frustrated that the links in the BCTT Final Report do not work. Sent Debbie the link to the old website that has the list of links to the solid waste documents that had been listed on the website and assured her that the links will all work again once our website has been revamped.
125	3/18/24	Coffin Butte odors	Call	Bailey acknowledged his complaint.
126	3/21/2024	Original complaint received as email by DEQ HOT Support: Hello my name is Eric Nittka, I live at 28709 Robison Rd, Monmouth, OR 97361. I've been a resident in that location for the last 12 years. The smell from the landfill was only a problem once in a great while for the first 10 years just in just this year we are consistently smelling stink from the landfill day, night, afternoon. I'm not sure why but it's getting bad. Problem number 2. The trash along the roads and highways leading to the landfill are always littered with trash. There's supposed to be a covered load ordinance, that's not being enforced. The landfill is greatly effecting the livability of our community. Please respond to me with what action will take place to see this is corrected. Thank you for your time.	DEQ	Regarding the odor portion of the complaint, I called and left a message with the complainant. The complaint about the trash blowing out of the trucks is related to solid waste rules, so I am also reassigning the complaint to them.

		Sincerely Eric Harry Nittka Original email uploaded to documents - complaint intake SC

134	4/5/24	Numerous pot holes caused by the heavy truck traffic from Knife River.	Email	Emailed complaint to PW (PWinfo@bentoncountyor.gov) and responded to complaintant.
135	4/8/24	Coffin Butte Litter	Call	Bailey provided Craig Filip with Chp. 23 covered loads language and contact info for Kenny Larson. Craig Filip, Oregon Department of Environmental Quality, left a voicemail today. Mr. Filip said his office has received complaints about "trash being strewn on the road to and from the Coffin Butte landfill" and he would like to know if Benton County has a covered load ordinance for road transportation of materials. If the answer is yes, he would also like to know what the code citation is and who is responsible for enforcing such a requirement.
136	4/12/2024	"overpowering landfill stench"	Forwarded to RS from DEQ	Not reported
137	4/12/2024	This happened both yesterday and again today. Overpowering landfill stench as I came out of my house in the morning. I was driving out to do bird surveys so I went right by the landfill and noticed that there are still huge areas up top with no tarps, in the same area where EPA inspectors found 60+ violations of methane emissions a couple of years ago. This is extremely frustrating -- this landfill is in violation and there have been many reports, but we're not seeing any action by DEQ.	DEQ	Forwarded complaint to Republic, waiting on response.

138	5/2/2024	"Strong odors"	Forwarded to RS from DEQ	Not reported
139	5/2/2024	This just keeps happening, whenever a breeze is blowing from the north. By 7 pm the landfill is supposed to be closed for the night, so this could be an indication that they didn't adequately cover the working face, and/or that they still have a problem with leakage through their tarps. Lately I've noticed that larger areas that used to be covered by tarps are uncovered.	DEQ	Forwarded complaint to Republic on May 6, waiting on response.
140	5/23/24	A beautiful morning in Soap Creek Valley with an overwhelming dump stench hanging in the air!	Email	Sent complaint links to Republic Services & DEQ
141	5/23/24	Wanted to report this to you so you knew this goes on… For the first time (for me, anyway), I smelled the dump from right outside my own home. I live a good five miles away from the dump and am surrounded by a lot of trees which usually keep the air clean, but not this morning! My husband went out for a morning walk and texted me he smelled the dump. I hadn't been outside yet, so stepped out my front door and could smell it from my deck. This was at about 7:45am (Thurs 5/23/24). The smell actually began to make me feel queasy so I went back inside. I heard from a number of neighbors that they smelled it too. The landfill operators are supposed to keep odors in check but do not. It is truly scary smelling the dump (especially at your own home!) because we do not know what all pollutants we are taking into our bodies. And it is very disturbing that if you don't want to breathe those unknown things in, you feel like you have to avoid going outdoors until the "coast is clear." This is one of the many reasons a landfill like this should not be located so close to populated areas. When we moved here nine years ago we were given the impression that the landfill was almost full and so would be closing in the near future. On the landfill's own website in their FAQ they describe the process of how the landfill will be closed when it is “filled to capacity” so we were comforted by that. But clearly this is misleading, as they will continue to expand this dump forever if the County allows it to. I know this now, but did not when I moved here. I have made my complaint to DEQ on their form (about this morning’s odor), but wanted to be sure you were aware as well. Do you keep a log of landfill complaints, by any chance?	Email	Documented complaint and sent DEQ & RS complaint forms.

145	5/23/2024	"trash and rotten egg"	Forwarded to RS from DEQ	Not reported
146	5/23/2024	I live approximately 5 miles south of the Coffin Butte Landfill and I needed to drive to my rental house in Adair Village this morning. I could smell Coffin Butte's effluence the entire drive to Adair. Although I smell their odor in the air once a month or so, today it was bad enough that my eyes began to sting and I had to go inside as soon as I could.	DEQ	Forwarded complaint to Republic on 5/28, waiting on response. Multiple complaints were reported on this date, including one reported directly to the landfill and forwarded to DEQ.
147	5/24/24	The smell this morning (8:15am) is not as intense as it was yesterday. But still noticeable	Email	Documented complaint
148	5/24/2024	Wednesday morning the smell of garbage from the Coffin Butte Landfill was overwhelming.	DEQ	Forwarded complaint to Republic on 5/28, waiting on response. Multiple complaints were reported on this date, including one reported directly to the landfill and forwarded to DEQ.
149	5/24/2024	I live near the Coffin Butte Landfill and the odor of trash and rotten egg was incredibly strong at my house, definitely NOT a compost smell.	DEQ	Forwarded complaint to Republic on 5/28, waiting on response. Multiple complaints were reported on this date, including one reported directly to the landfill and forwarded to DEQ.
150	7/12/2024	"landfill smell"	Forwarded to RS from DEQ	Not reported
151	7/22/24	It is long past time to address the overuse of the Coffin Butte landfill by municipalities across Oregon and Washington. It should be designated and operated as a regional landfill. At its current intake rate it will become a Superfund site which is not the legacy you should be leaving. With the CUP application now on file, please make the call as elected leaders of Benton County to restrict any expansion to future use for Benton County only.	Email	Sent her information about DSAC and ENRAC and let her know that there will be ample opportunity to provide public input.
152	7/24/2024	Noticeable unpleasant methane odor	Forwarded to RS from DEQ	Not reported
153	7/24/2024	Trash flew over the buffer property and was dropping on our property and adjacent properties. I have pictures of it in the air. Doritos bag landed on my property. Plume of something was	DEQ	7/30 - Forwarded complaint to

		moving towards my residence on SE corner of landfill buffer property		Republic, waiting on response.
154	7/26/2024	A semi tractor-trailer (Oregon "HV" license plate number 78149 on the trailer, logo on the truck cab said "Ray Trucking / Dallas OR") left the landfill via Coffin Butte Road at 13:45, turned northbound onto Highway 99W, and left a long trail of plastic, paper, and other trash which was blowing out the back end of the truck. Within the first mile the stream of trash was almost constant with 5 to 10 pieces in the air at a time, then gradually diminished but trash continued to fly out even after the truck passed Suver Junction and Old Fort - Helmick Road, all the way to the outskirts of Monmouth where the truck slowed down. Altogether I'd estimate 150 to 200 pieces of trash, which fluttered off into the ditches and into nearby fields. On my return trip from errands in Monmouth about 45 minutes later, I noticed that a field of green beans belonging to Green Spring Farms (see http://www.greenspringfarms.com/contact/) was full of similar litter 10 or more rows out into the field, on the east side of Hwy 99W south of Suver Road. It is very common to see trash flying out of trucks as they leave the landfill, but usually I don't manage to get identifying information (On many trucks that haul to the landfill, the license plates are covered in grime and unreadable, though Wheat LLC is another frequent offender). There seems to be a general problem that drivers are not stopping to clean out their trailers before they leave the landfill. I complained about this directly to the Benton County Disposal Site Advisory Committee, DSAC, in 2021 but Republic Services' representative to DSAC at that time, Ian MacNab, claimed that they have stations for truckers to stop and clean out their trailers before leaving. Obviously that practice is not being followed with any consistency.	DEQ	
155	7/30/2024	"landfill dump smell"	Forwarded to RS from DEQ	Not reported
156	7/30/2024	Landfill dump smell from coffin butte landfill	DEQ	8/6 - Forwarded complaint to Republic, waiting on response.
157	8/1/2024	On 7/25/2024 observers repeatedly witnessed large plumes of particulate matter drifting off site towards the southwest where numerous homes and businesses are located on rural residential, forest conservation, and exclusive farm use land. Commercial trash hauling trucks and much larger semi trucks kicked up particulate matter in two ways. 1) When trucks ascended or descended the gravel road up to the top of the landfill, they kicked up dust from the gravel road itself, particularly when rounding a corner. 2) When semi trucks with hydraulic lifts deposited trash loads onto the	DEQ	Not reported

		landfill's working face a plume of particulate matter emerged from the loads and traveled for a considerable distance to the southwest. These particulate matter plumes appear to be in violation of the operator's Title V permit which requires particulate matter suppression on both the gravel roads and working face depositions.		
158	8/1/2024	On 7/24/2024, a grass fire was started next to the landfill gas flares of Coffin Butte. This grass fire threatened several nearby residential structures and had numerous response barriers for local first responders from the Adair Village and Corvallis fire departments. First responders noted the fire likely was started by debris coming from the open flares. This would not be the first time such an event has occurred (see attached document page 3 paragraph 3. Note the reported fire in this document occurred prior to November 2023) Although fire response is beyond the scope of DEQ, the maintenance and operation of the flares are regulated by the Title V permit. The open flares are an air quality and fire hazard issue. Coffin Butte Landfill still has two open flares in active use, which appears to be in violation of ORS 340-239-0110 (2). Our complaint is directed at the DEQ and the fact that Republic Services, owner of Coffin Butte landfill, is not required to comply with ORS 340-239-0110 (2).	DEQ	Not reported
159	8/4/24	Upset that CB charges "environmental fee" to in-County residents	Email	The receipts documenting the overcharges for the environmental fee were from before the 2021 franchise agreement that states that this fee will not be charged to BC residents.
160	8/4/2024	dump stench	Forwarded to RS from DEQ	Not reported
161	8/8/2024	"dump smell, like driving by", "10"	Direct Complaint to Republic Services - Ryan Griffin	Not reported
162	8/8/2024	Power of odor: "9"	Direct Complaint to Republic	Not reported

			Services - Lauren Griffin	
163	8/9/2024	Piercing garbage smell	Forwarded to RS from DEQ	Not reported
164	8/9/2024	"terrible smell"	Forwarded to RS from DEQ	Not reported
165	8/9/2024	The smell of the Coffin Butte landfill is sitting on top of our property. A piercing garbage smell. My son and I stopped playing outside after the smell approached.	DEQ	Forwarded complaint to Republic on 8/16, waiting on response. Multiple complaints were reported for this date.
166	8/9/2024	Terrible smell from coffin butte landfill	DEQ	Forwarded complaint to Republic on 8/16, waiting on response. Multiple complaints were reported for this date.
167	8/18/2024	"smells like driving by the dump", 8	Direct Complaint to Republic Services - Ryan Griffin	Not reported
168	8/21/2024	Dump stench from Coffin Butte Landfill	DEQ	Emailed complainant, waiting on response.
169	8/23/24	From: allysonkhand@gmail.com Subject: Coffin Butte expansion project Hello, I am writing to inform you of the ongoing issue of the Coffin Butte landfill expansion. Plans have been underway for expansion, despite the actual need to expand. The county is not regulating the expansion. The landfill is still able to receive waste for many more years to come. Yes, it is filling up, but does not require immediate action to resolve. Republic Services has been fined millions of dollars in the past for environmental pollution. Republic Services announced a "pre application meeting" with Benton County Planning Division. The meeting was scheduled for last night and the public was NOT invited. No public were allowed, not even to observe. It is concerning to see this project be able to have a meeting without having to be transparent with the people the expansion will affect the most.	Email	Encouraged Ms. Hand to submit her concerns about Coffin Butte once the CUP is open for public comment.

		The project needs oversight. This project needs to stop. Republic Services needs to be held accountable. The Willamette Valley is full of sensitive ecosystems. The expansion of a landfill only threatens people, wildlife, and the environment. Please look into this. Please hold Republic Services accountable. Cheri Brubaker, Field Representative U.S. Representative Val Hoyle OR-04 Mobile (202) 834-3336		
170	8/23/24	August 4, 2024 8:30 -10:00 AM the smell was present. I was heading to Airlie, and first noticed it at the intersection of Soap Creek and Tampico, it persisted til I reached the 300 RD of OSU Forest. On returning home around 10:00 It was permeating the air at our home. August 21, 2024 7:00 - 10:00 the smell was potent!	Email	Responded to the complaint about the landfill odors.
171	8/23/2024	"landfill chemical stink"	Forwarded to RS from DEQ	Not reported
172	8/23/2024	Earlier today the wind was from the south (from our house toward the landfill) so we weren't smelling the odor. But after a weather front passed through this afternoon, the wind is now from the north, so we're smelling the typical landfill "chemical" stink.	DEQ	Forwarded complaint to Republic, waiting on response.
173	8/27/24	I am very much against the proposal. Before you get stuck in the weeds of all the guidelines you are supposed to focus on or disregard, ask yourself- Do you really want to be one of the people who, because of money, opened the door to degradation of the land, water, and air in our region? I have read the information on the VNEQS website, which makes it clear that NO ONE has the resources to correctly purify the leachate coming from the landfill, to make it safe for wells or for the Willamette River, the water source for many communities. In addition, in spite of systems to collect methane gas, there is still air pollution above and around the landfill area. It particularly shocks me that Republic Waste is wanting no restrictions on the amount of waste that it can accept in the future. Also that they are allowed to define what is a hazardous effect for adjoining lands. There are no simple solutions. However, I hope there are ways to restrict the amount of waste that Republic can continue to collect from all over Oregon. At the very least, Republic should be required to build a state bf the art pre-cycling center to make sure that less material enters the landfill in the first place (similar to what Lane County is doing at this time). At the very least, there needs to be required close monitoring of toxic materials that are already leaking beyond the boundaries of the landfill (with arsenic as an easy way to signal an alarm for surrounding wells and water). I'm sure if there were a vote on this, Benton county citizens would vote it down! You as our elected representative are supposed to represent our interests. Please use your conscience as well as your head to look at the situation. Thank you for your attention. From Larky Hansen, 6780 NW Mountain View Dr., Corvallis, OR	Email	Commissioner Augerot responded.

		97330 (Not close enough to have my well or air quality affected, however close enough to care about fellow citizens, including citizens of Adair Village who get their water only a few miles north of the Corvallis Wastewater facility).		
174	9/11/24	Kevin expressed concern about the potential for wildfires to come to the Coffin Butte Landfill and firest that start at the landfill	DSAC Meeting	This came as a public comment to the DSAC at their meeting on 11/11/24. The committee discussed his concerns and deliberated on next steps.
175	9/11/24	Community member, Kate Harris, opened the discussion by referring to a KLCC article published approximately one month ago, which mentioned assurances from Republic Services regarding robust monitoring and emergency management systems in place at Coffin Butte Landfill. Harris expressed concern that, despite these assurances, in real-life situations such as a recent fire, external observers (such as motorists) were the first to notice fires, which suggests a failure of the early monitoring systems. Harris quoted an SES Engineering Risk Assessment, noting that operators believed the flare may have caused a fire by igniting nearby grass. As a precaution, Republic Services created a gravel-covered buffer between the flare and grassy areas, which was believed to prevent further fire incidents. However, the fire in the summer of 2024 proved otherwise. Harris reiterated that Republic had provided multiple assurances that their fire prevention systems were adequate, but real-world incidents suggest these systems are failing. Harris suggested the need for a third-party, independent risk assessment (not funded by Republic) to provide an unbiased view of the existing risks at the landfill. Harris also noted a discrepancy in the report, which stated that no history of wildfires existed near the landfill. However, there was a wildfire in July 2023, just west of the landfill, disproving this claim.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24. Republic Services representative responded in the meeting.
176	9/11/24	Concern regarding Republic's expansion plans for Coffin Butte Landfill, especially regarding fires crossing Coffin Butte Road. Highlighted the increasing wildfire risk due to climate change and wind events, which could lead to embers affecting nearby properties and Adair Village.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24. Republic Services representative responded in the meeting: Landfill material is sometimes covered with tarps, not dirt. Community concerns were raised over fire risks associated with this practice. Republic emphasized

				their commitment to safety protocols, including reduced working face areas, availability of water, and rapid response times. They disagreed with the assertion that fire risks are increasing.
177	9/11/24	Inquiry into whether Republic has updated their safety protocols in response to climate change and increased fire risks. Republic has not made specific updates addressing climate change but follows standard protocols, including keeping buffer areas mowed and maintaining safety standards	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24. Republic Services representative responded in the meeting
178	9/11/24	Morrell raised concerns about a poorly managed Douglas Fir stand near the landfill, which poses a fire risk.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24. Republic Services noted that they would look into thinning the stand as previously recommended. There was a debate on the relevance of forested areas and other properties near the landfill in the context of fire prevention planning. Some committee members questioned if fire risk in non-landfill areas should be considered within the landfill's fire management scope. It was agreed that understanding the broader scope of land management, including forested and farmland areas, is necessary for comprehensive fire prevention planning.

179	9/11/24	Kevin Kenaga expressed dissatisfaction with the lack of public notification about the meeting. He mentioned that he had to personally reach out to the chair to learn about the meeting date. Kevin emphasized that the lack of communication undermines the committee's ability to fulfill its mission of fostering community dialogue and engagement. Kevin expressed concern over possible misinformation about the materials used in the landfill, particularly a statement that the polyethylene liner was not plastic.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24. This was clarified by Republic Services staff as a misunderstanding, confirming that high-density polyethylene is indeed plastic.
180	9/11/24	Ecklund expressed long-standing systemic problems in how the DSAC and related activities are communicated, with cancellations and changes to meeting schedules without adequate notice.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24. Bailey agreed to better promote future meetings.
181	9/17/24	I read Ken Eklund's letter to the GT editor today, asking for input. I have some. Sometime this past year I listened to a talk offered by the Academy for Lifelong Learning that was mainly a discussion by a fellow from a European country (Germany or Netherlands or...?) covering the way European countries are replacing landfills to an amazing extent with diverse recycling and treatment methods. It was eye-opening, to say the least. The basic story was that landfills there are nearly entirely being replaced by extensive Green approaches. I attended last month's talk at the Corvallis Community Center that focused on our own landfill expansion, which I already knew was driven by financial gains for Republic Services, seemingly favored by the county supervisors because of the income the county realizes when Republic pays to handle one-third of Oregon's untreated waste in Coffin Butte. I am a chemist, retired from OSU Chem Dept., and I understand the role methane has on our planet's atmoshpere. Landfills are said to contribute about a third of the methane emissions into the atmosphere in the US. Expanding our landfill will accelerate this, looking away from the problem. I learned at the talk that should Benton County refuse to permit the expansion, which mainly serves citizens outside our county, would provide a serious encouragement to find another way...and it would NOT mean we in Corvallis would have to find immediately another way to dispose of our trash without recourse. After listening to the way Europe is directing its citizen to take a role in separating recyclables and treating trash, I want to encourage all of us to take part in that. In fact, during the evening talk, the "Toxics..." fellow from Eugene claimed that Eugene is moving in that direction (extensive separation and thermal treatment of some part of the leftovers).	Email	I thanked him for his input and suggested that he submit public comment during the public comment period which hasn't opened yet.

		Turn down the expansion (I have a yard sign!). Michael Schuyler		
182	9/19/24	Commented on difficulties finding DSAC-related information online, which used to be easily accessible. Requested more detailed and accessible information on the committee's webpage.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/11/24.
183	9/19/24	Raised concerns about hazardous waste being deposited at the landfill, specifically incinerator ash from Marion County, and its potential environmental impacts. Also questioned whether ENRAC accepts public comment, as there is confusion about the public's ability to provide input at their meetings.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/19/24.Ian MacNab (Committee Member): Explained that the incinerator ash has been tested and deemed non-hazardous. DEQ approved its use as cover material after a lengthy trial process over 10 years ago.
184	9/19/24	Expressed concerns regarding worker safety at Coffin Butte Landfill, referencing the August 6th Benton County Commissioner meeting and a recent OSHA inspection. Raised numerous questions (see 9/19/24 meeting minutes)	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/19/24. Republic Services responded in the meeting.
185	9/19/24	Raised the question of the costs to Benton County for hosting the landfill, including: o Road degradation, pollution, and landfill fires. o Decrease in land values near the landfill. o Post-closure costs. • Requested any available reports addressing these costs.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/19/24. Staff researched if such a study exists and it does not. Clarified that post-closure management is required for a minimum of 30 years after the landfill closes. Mentioned no existing comprehensive report on externalities related to the landfill but suggested further inquiry with the County.
186	9/19/24	Commented on the updated Coffin Butte Annual Report, specifically regarding new testing for the flare at the landfill. • Kevin Kenaga inquired about the testing procedure: o What is being tested? o When will the testing be available to the public?	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/19/24. Response from Republic

				Services: o Testing is scheduled for October 22. o It is a standard procedure for flare or industrial devices to have initial source testing.
187	9/19/24	Kevin Kenaga raised concerns about the daily cover at the landfill: o The report mentions daily cover (typically 6 inches of soil), but in reality, mesh netting is used, which doesn't prevent odors or wildlife from accessing the garbage. o Kevin criticized the accuracy of the report and emphasized the environmental impact of not using adequate daily cover, including increased methane emissions	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 9/19/24. Republic Services Response: o The daily cover used is a heavy-duty 200x200 foot tarp, not mesh netting, and is an approved alternative daily cover. Using tarps saves clean soil and airspace.
188	9/20/24	Complaint about exceptionally long line at Coffin Butte with 25-30 commercial trucks slowing the line down. Waited 45 min. before getting to the scale house.	Call	Called Rob and discussed the issue. Let him know that I'll send this complaint to Republic Services.
189	10/1/24	Upset that CB charged out-of-county rate because she came in a F350 truck with a u-haul back. Feels that this should have been charged the Benton County rate. She provided receipts documenting the "environmental fee" that should not be charged to Benton County residents.	Email	Asked Petra about the issue of charging an "environmental fee" to BC residents. Our contract with RS states that these fees should not be charged to BC residents. Update: The vehicle size she had doesn't qualify for the discounted rate. Bailey asked Republic to make a sign indicating what vehicles do and do not qualify. They've posted the sign and added the information on their website.
190	10/8/24	Hi! I'm not very good at computers, so hope that you get this message. I believe that the Benton County land fill shouldn't be for numerous other counties(other than maybe a few adjoining ones like Linn which maybe should pay something for access to it) who	Email	Bailey emailed her instructions on how to sign up for Coffin Butte permit

		don't want a landfill in their back yard and would rather we shoulder the environmental burden. If Republic wasn't taking all that other outside trash, the land fill would be able to function until the quarry is available for expansion. I have found Republic's service to be great, but they are being greedy for additional business at our expense. The new contract should restrict where the waste comes from.		application updates and how to provide public comment.
191	10/9/24	Mark Yeager, a Benton County resident, raised concerns about Republic Services' construction of a landfill expansion into the quarry site. He emphasized that this expansion, according to Benton County Code Chapter 77, requires a conditional use permit, which he believes has not been obtained. Yeager questioned whether DSAC was aware of the construction and if they had any comments on the issue.	DSAC Meeting	This complaint came as public testimony at a DSAC meeting on 10/9/24. Ian McNabb (Republic Services representative) responded, confirming that the construction in the quarry had been publicly discussed in previous meetings and open houses.
192	10/9/2024	There was a great amount of litter on both sides of Hiway 99 between the north and south entrances to Arboretum Rd. It really looked like no one was maintaining the highway margins. I believe a lot of this garbage has escaped from garbage trucks going to Coffin Butte Landfill. I think this roadway should be kept neat and clean.	DEQ	
193	10/17/2024	Landfill stench was once again affecting recreation on E.E. Wilson Wildlife Area. With a breeze from the SW on this date, the most strongly affected area was NE of the landfill, starting from north of the archery range (about 150 yards south of the CPI substation) and for about the next 1/4 mile north of there.	DEQ	Forwarded complaint to Republic, waiting on response.
194	11/5/24	Resident sent a letter with newspaper clippings about Coffin Butte. Concerns included accepting waste beyond Linn and Benton Counties and resulting truck impact on roads.	Letter	Read the letter and reviewed the newspaper clippings. Shared the letter and clippings with DSAC (10/9/24 Meeting Minutes)
195	11/8/24	I am writing to report alarming air quality violations that occurred this week originating from Coffin Butte Landfill. On the evenings of Monday November 4th and Wednesday November 6th, I was exposed to concerning levels of methane while commuting home from work. My route takes me onto Camp Adair Road from the Independence Highway, then north on Highway 99 and onto Robison Road where my residence is located approximately 1.5 to 2 miles northwest of Coffin Butte. The timeframe of my commute has me driving through the area at approximately 5:30 to 5:45. The methane scent became noticeable as soon as I turned off Independence Highway onto Camp Adair Road, increasing in strength so that by the time I was driving past the landfill on Highway 99, the methane concentration was strong enough to give me a headache. The methane was still discernable	Email	Documented odor complaint and sent complaintant the Coffin Butte complaint information and the DEQ report form.

		when I parked my car at my residence approximately two miles northwest of the landfill. It is a huge inconvenience to have to write this email, and I want you to understand that there have been many more times when I should have made similar reports, but just didn't have the energy or time. This evening I could smell methane when doing chores outside my home, so I knew I had to take the time to report what has been occurring. In addition to the air pollution, Tuesday night Camp Adair Road was largely covered by hazardous masses of pink fiberglass insulation that I believe were part of an uncovered load heading to the landfill. In addition to posing danger to drivers along the road that evening, the insulation migrated to the vegetation where it is now scattered for hundreds of yards along the roadside ditches. This has to pose an environmental hazard for flora and fauna in the surrounding farmlands and the E.E. Wilson Wildlife Area. The quantity of landfill-related waste littering the local roadways and roadsides is deplorable, and Republic Services should be required to provide litter clean up every day. The ongoing collateral damage of the landfill is both alarming and saddening to those of us who are exposed to it on a daily basis. In my opinion, Republic Services does not deserve to do business in Oregon because they are a persistently irresponsible organization posing many hazards to the health and well-being of residents living in the vicinity of the landfill, as well as to the surrounding farmlands and their nonhuman inhabitants. Less waste is the answer we require for a healthy future, not more landfills. My neighbors, my family and I therefore thank you for everything you can do to hold Republic Services accountable for their egregious behavior toward the local environment, and for any assistance you can offer to protect your constituents from future landfill expansion.		
196	11/17/2024	Multiple problems at Coffin Butte Landfill today: (1) Very strong landfill stench impacting public recreational use of the Coffin Butte Annex of E.E. Wilson Wildlife Area. Overwhelming in the trailhead area. (2) Tarps all along the SE flank (especially right along SE corner of the "pyramid" formed by the newest landfill cell, from mid-slope up to near the top) visibly inflated by landfill gas, forming bulges in the tarp, except where held down by weights (sandbags). Not due to wind billowing, except in one ~15 foot section lower down that was moving with variations in the breeze, where the tarp had pulled loose exposing a bare patch of cover dirt perhaps 5 x 10 ft wide. Above that the tarp formed a series of taut bubbles that were not moving at all. This is in one of the areas where an EPA inspector observed similar inflation of the tarps, indicating positive pressure from below by landfill gas that is not being captured by the gas-	DEQ	Forwarded complaint to Republic. Response received from Republic. See attached document. Emailed a response, including the attached document, to the complainant as well.

		capture system. (3) On the southwest side, before today's rain started up, there was water/leachate streaming out of multiple holes in the tarps on the south-facing slope of the landfill, above the first gate west of the scale house road (above Monitoring Well 23 which has registered high arsenic levels during past seepage events. Some of this may have been runoff from water pooled on a bench higher up, but in several places it was coming out through holes in the tarps, and the tarps were dry above these leakage points. I'd estimate the flow from the biggest stream of seepage at about 15 to 20 gpm. This eventually all goes into a ditch which flows into E.E. Wilson Wildlife Area and is used as the source for a popular fishing pond. Knowing that leachate is high in arsenic as well as PFAS and other toxins, this is an environmental health concern. Many of these holes in the tarps have weeds growing through them, showing that they've existed for a long time. (4) When I checked on the back side of the dump as viewed from Wiles Road and Coffin Butte Road, I could see a large area of garbage at the tipping face that was uncovered, drawing a swarm of 400+ "sea" gulls and an estimated ten thousand of invasive European Starlings. The landfill operators are not supposed to leave trash uncovered over the weekend (this was on a Sunday morning when the dump is closed). Recently they've been pulling a tarp over the tipping face and I could see a tarp up there, but either it wasn't properly deployed or it wasn't properly secured.		
197	11/19/24	I live approximately 2 miles northwest of Coffin Butte Landfill. In the early hours of morning today there was a nauseatingly strong methane odor emanating from Coffin Butte landfill. When I went outside tonight at approximately 8:15, the odor was again strong enough to force me back into the filtered air of my home. The frequency and intensity of the methane pollution is increasing. This methane pollution is more than a nuisance to those living within range of the smell. I believe Coffin Butte Landfill poses serious environmental and public health hazards. I further believe Republic Services should be held accountable for what I see as crimes against the local environment and its inhabitants, be they human or otherwise. Below is a forwarded email with a similar report I made dating from the week of November 8th. For the record, remnants of the insulation spill I mention in that report can still be seen along Camp Adair Road today. It is important that Benton County Commissioners read that complaint since they were not included in the original email. Thank you for your consideration and support in this matter. Your constituents are trusting that our elected officials will act with integrity to protect the public from the bad-faith practices of Coffin Butte Landfill and Republic Services.	Email	Documented odor complaint and sent complaintant the Coffin Butte complaint information and the DEQ report form.

198	11/20/2024	I like 1.5 miles from coffin butte landfill. The sink from the landfill is very noticeable at least 2 times a week lately	DEQ	Forwarded complaint to Republic, waiting on response.
199	11/26/24	Heavy duty dump stench this morning. Starting at about 9:30am… still hanging in the air.	Email	Let Becky know that we're working on a more streamlined complaint process. Thanked her for reporting it.
200	11/26/2024	"Coffin Butte dump stench"	Forwarded to RS from DEQ	Not reported
201	11/26/2024	Coffin Butte dump stench	DEQ	Forwarded complaint to Republic on 12/2, waiting on response. Multiple complaints were reported over the holiday weekend.
202	11/27/2024	"went outside with my cup of coffee. Hit with the smell of the landfill"	Forwarded to RS from DEQ	Not reported
203	11/27/2024	Went outside with my cup of coffee. Hit with the smell of the landfill.	DEQ	Forwarded complaint to Republic on 12/2, waiting on response. Multiple complaints were reported over the holiday weekend.
204	11/30/2024	"sitting at my dest, when I stared to smell it. It lasted for a about 3 hours"	Forwarded to RS from DEQ	Not reported
205	11/30/2024	"a terrible odor that we could smell from our car for about a mile north	Forwarded to RS from DEQ	Not reported
206	12/1/24	Putrid, nose burning, eye irritating odor from landfill ocurring weekly. Very strong (distinct and pervasive) Odor Offensiveness: How disagreeable was the odor? Highly offensive	Email	Let Katy know that we're working on a more streamlined complaint process. Thanked her for reporting it.
207	12/1/2024	"odor is so bad"	Forwarded to RS from DEQ	Not reported
208	12/1/2024	"sometimes unbearable"	Forwarded to RS from DEQ	Not reported
209	12/1/2024	"toxic landfill gases"	Forwarded to RS	Not reported

			from DEQ	
210	12/1/2024	"some sort of chemical", "rotten garbage"	Forwarded to RS from DEQ	Not reported
211	12/1/2024	Coffin Butte landfill toxic gases are flowing south to many houses in Soap Creek Valley, trapped by fog and stagnant air.	DEQ	Forwarded complaint to Republic on 12/2, waiting on response. Multiple complaints were reported over the holiday weekend.
212	12/1/2024	Passing by the Coffin Butte landfill on Saturday afternoon, there was a terrible odor that we could smell from our car for about a mile north and south of the landfill.	DEQ	Forwarded complaint to Republic on 12/2, waiting on response. Multiple complaints were reported over the holiday weekend.
213	12/1/2024	I live near the Coffin Butte Landfill and the odor is so bad today that I can barely stand outside. It is disappointing because it is a beautiful sunny day but the smell is so bad I don't want to rake my leaves or be outside at all.	DEQ	Forwarded complaint to Republic on 12/2, waiting on response. Multiple complaints were reported over the holiday weekend.
214	12/1/2024	This is an ongoing issue with the Coffin Butte Landfill odor, sometimes it is unbearable sometime just annoying, but always bad, and unknown what your smelling or what it is doing to you long term, we have been residents for 50 years and it continually gets worse and worse, PLEASE ISSUE A STOP!!!	DEQ	Forwarded complaint to Republic on 12/2, waiting on response. Multiple complaints were reported over the holiday weekend.
215	12/3/2024	A typical incident regarding Republic Services' Coffin Butte Landfill - in the morning when we go out with the dog, the odors are noticeable (this time the early odor smelled like some sort of chemical). We hurry back inside, then later in the morning head outside to attend to chores. As usual, the odor at this point is unbearable, now smelling like rotten garbage. We are not able to stand being outside until early afternoon. I indicated above that these incidents occur weekly, but that is an average. Sometimes, depending on weather patterns, they can be several days in a row, or occur less frequently.	DEQ	Forwarded complaint to Republic, waiting on response.
216	12/5/2024	I just described the incident in the above statement. I'm feeling nauseous by coffin butte landfill stink. It's now becoming more than a nuisance its really a health hazard for humans and animals in the surrounding area. Please take some real action and stop this. Thank you!!!!	DEQ	Complaint is general in nature and not event-specific. Called complainant 12/6 at 10:10 a.m. as requested and left a voicemail. Spoke with this individual on 11/25 also in response to a previous complaint. 12/6 - 10:50 a.m.

				complainant returned my call and spoke with them about the landfill odor issues.
217	12/6/2024	"landfill stench"	Forwarded to RS from DEQ	Not reported
218	12/11/24	Letter sent (in 2025.01.08 DSAC Meeting Packet). Her concerns related to excessive truck traffic, wondering why Republic's fleet isn't electric, safety and litter	Email	Bailey apologized that the link to the DSAC meeting on 12/11/24 wasn't working and let her know that I'd pass along her concern to the DSAC (in the meeting packet on 1/8/25) and include it in the 2024 CCAR
219	12/11/24	Letter sent (in 2025.01.08 DSAC Meeting Packet). Her concerns related to odors and a need for technological sensors that don't rely on the human nose.	Email	Bailey apologized that the link to the DSAC meeting on 12/11/24 wasn't working and let her know that I'd pass along her concern to the DSAC (in the meeting packet on 1/8/25) and include it in the 2024 CCAR
220	12/14/2024	“like a cross between a putrid low tide and an auto repair garage”.	Forwarded to RS from DEQ	Not reported
221	12/14/2024	Around 1:30pm Saturday Dec 14 I was driving home from Salem to Soap Creek Valley and had forgotten to put my car on "recirc" while passing the Coffin Butte landfill (Hwy 99 southbound, then onto Coffin Butte Rd). I don't often drive this way, but usually turn on recirc when I do because I just don't want to breathe in whatever unknowns are in the landfill odor (which I hear about regularly from other neighbors). Once I realized what I was smelling it was too late to block it and it was absolutely awful. The smell permeated my car, and I felt queasy for a good half hour after arriving home. PLEASE NOTE: under "Odor Frequency", above, you do not provide an option for "intermittent". The only reason I do not smell it regularly is because I don't pass by it "regularly." This was not the first time I've smelled the landfill (smelled/reported it once by my home, 5 miles away), but the first time I've experienced the full-onslaught from driving by without running recirc in my car.	DEQ	Forwarded complaint to Republic, waiting on response.

222	12/20/2024	"odor" "far worse than usual"	Forwarded to RS from DEQ	Not reported
223	12/20/2024	Although this smell has occurred during recent mornings when there was an inversion, this afternoon the odor was far worse than typical. From past experience, I know this is coming from the Coffin Butte landfill to our north. I am putting my personal home address for where the incident occurred so you can see the extent of the odor.	DEQ	Forwarded complaint to Republic, waiting on response.

230	12/31/2024	"stink"	Forwarded to RS from DEQ	Not reported
231	12/31/2024	As I was driving past the Coffin Butte dump on Coffin Butte Road in Benton County, OR on Sunday morning the stench was so strong that I has to put the car's air on recirculate until I was well north of	DEQ	Forwarded complaint to Republic, waiting on response.

		the dump. It was equally as terrible on my return trip past the dump at about 6:30 PM on 12/29/24 and was smelly even on recirculate well past the Tampico/Soap Creek intersection. This is an issue because on moist days, like Sunday, when the car air is on recirculate, the car windows fog up which makes it dangerous to turn onto Hwy 99.		Multiple complaints were reported over the holiday week.
232	12/31 /2024	Almost every evening to early morning there is a strong methane odor originating from the Coffin Butte Landfill located north of Corvallis in Benton County Oregon. This year the odor has become strong enough to smell indoors if an air filter isn't in use. There is also a tremendous amount of litter and garbage along Camp Adair Road, Hwy 99 and other tributary roads leading to the landfill. The garbage is on the roads, in the ditches soaking in water and leaching into the ground. The air and material pollution is a hazard to humans, wildlife and plant life in the local area. There is no telling what chemicals and hazardous materials are contaminating the local biosphere.	DEQ	Forwarded complaint to Republic, waiting on response. Multiple complaints were reported over the holiday week.
233	12/31 /2024	Coffin butte landfill is releasing methane gas and stink into the atmosphere. The stink is becoming worse each day. I don't have enough time to notify you beach day of the occurrence but it is becoming much more frequent, approximately 5 days a week now.	DEQ	Forwarded complaint to Republic, waiting on response. Multiple complaints were reported over the holiday week.

PLANNING COMMISSION FINDINGS

NATURE OF REQUEST:	**Conditional Use Permit to expand Coffin Butte Landfill**. Republic Services is proposing: to create a new disposal cell for the Coffin Butte Landfill which will extend from the current cell south of Coffin Butte Road; close Coffin Butte Road to public traffic (vacate the right-of-way) so the new cell can cover the road; relocate a replacement roadway (for landfill and quarry traffic only) around the area of the new disposal cell; relocate the leachate ponds south of Coffin Butte Road, and move some other structures.
APPLICABLE CODE CRITERIA:	Benton County Code (BCC) Section 51.505, Sections 51.705 through 51.840, Sections 53.205 through 53.235, Section 60.215, Section 60.220, Chapter 77, Chapter 99. The Benton County Code can be found at this link: **https://www.co.benton.or.us/planning/page/development-code**
PROJECT LOCATION:	• 29000 Coffin Butte Road; Township 10 S, Range 4 W, Section 18, Tax Lot 1107 • 29160 Coffin Butte Road; Township 10 S, Range 4 W, Section 18, Tax Lot 1200 • 28972 Coffin Butte Road; Township 10 S, Range 4 W, Section 18, Tax Lot 1101 • Township 10 S, Range 4 W, Section 18, Tax Lot 1104 • Township 10 S, Range 4 W, Section 18, Tax Lot 1108 • 29175 Coffin Butte Road; Township 10 S, Range 4 W, Section 18, Tax Lot 801
APPLICANT:	**Republic Services**
PROPERTY OWNER:	**Valley Landfills Inc.**
ZONE DESIGNATION:	Landfill Site (LS), and Forest Conservation (FC)
COMPREHENSIVE PLAN DESIGNATION:	Landfill Site, Forestry
CAC PLANNING AREA:	North Benton (not active)
STAFF CONTACT:	Inga Williams, inga.williams@co.benton.or.us
FILE NUMBER:	LU-21-047

This matter came before the Planning Commission in public hearings held November 2 and November 16, 2021. At the November 16 meeting:

- the applicant was provided the opportunity to submit additional written evidence up to 5 PM on November 19th;
- per statute, the record was held open so that the public could to submit further written testimony until 5 PM on the 29th; and
- per statute, the applicant was allowed one additional week, until 5 PM on December 6, to submit final written argument.

On December 7, 2021, the Planning Commission returned to deliberate on the application. At the meeting on the 7th, the Planning Commission considered the record as a whole, then deliberated and reached a decision. The decision of the Planning Commission is to **DENY** the Applicant's request for a Conditional Use authorization to expand Coffin Butte Landfill based upon the following findings of fact.

FINDINGS

General Conditional Use Criteria - Chapter 53

53.215 Criteria. The decision to approve a conditional use permit shall be based on findings that:

(1) The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone;

Uses on adjacent property:

Many residents of the area testified that the odor and noise has continually gotten worse over the years. Some testified that they have to seek shelter inside to avoid the noise and smell. They warn that the levels expected in the future will affect their rural residential uses. Some farmers have testified that getting workers to work in the stench has been an issue.

Odor: Methane emission rules do not capture the impacts to the character and use of the area because many people testified that the smell inhibits them from going outside and enjoying the use of their property. Property owners within miles of the site stated they could smell the landfill. The current mitigation of an earthen cap over cells does not mitigate smell and smell reflects emissions of other gases such as Volatile Organic Compounds (VOCs) and hydrogen sulfide. The same mitigation is proposed for the expansion and if it currently does not mitigate the odor then it cannot be used as a mitigation for the future and be expected to minimize the concern.

Bad air quality: People living in areas with poor air quality does pose serious interference with livability. Risk of health concerns is likely with the landfill expansion; enough so nearby residents speak out about it. Some residents point to increasing cancer clusters in their neighborhood and suggest that poor air quality may be responsible. One nearby resident pointed to studies in Europe that tied poor air quality in the proximity of landfills to bad health issues. The applicant noted they cannot control all of the releases of VOCs or hydrogen sulfide and these gases are understood to be potent carcinogens. The applicant did not address the long-term effects of those gases in varying concentrations in different weather situations but the Planning Commission certainly heard from people that they can smell these.

Noise: The noise study contracted by the applicant has been criticized as faulty and inadequate. Proposed mitigations do not seem feasible and such conditions couched as "whenever feasible" or "if permitted by safety conditions" are not stringent enough. Further concern of noise from banging truck gates, loud noises from unloading, was not addressed. Point noises are often the most debilitating and background noise is easier to live with. The proposed Condition of Approval PA-7 (A) is inadequate to address this concern. To base approval on the applicant's assurance that future studies will ensure compliance would be inappropriate.

Much of the applicant's response to these issues is to rely on subsequent review and approval by Oregon Dept. of Environmental Quality (DEQ); however, there is no ability for the Planning Commission to review the situation after DEQ's approval to ensure that DEQ's standards were adequate to prevent the proposed use from seriously interfering with uses on adjacent property.

Conclusion: The proposed use <u>does seriously interfere</u> with uses on adjacent property.

The character of the area:

<u>Increase in landfill area</u>

Residents of the area point to the change in the character of the area. The minimal footprint of the landfill in previous years has and will be changed to a dominant footprint. The proposed expansion

will increase that interference in a number of ways. A whole valley will be filled with garbage. Modification of the fundamental topography at this scale, turning a valley into a ridgeline and burying the valley under 100 feet of garbage seriously interferes with the character of the area. This level of impact could not have been reasonably anticipated by any existing resident or past prospective purchaser. No condition could mitigate this level of change to the character of the area; therefore, the application fails to meet this criterion.

Open space and views of the cascades will disappear. The agricultural production from fields have gone away. The livability of the area because of noise, odors, and the visibility of the garbage pile will continue to degrade. One resident testified that their view of the dump has steadily increased to the point that it is now noticed and commented on by her children, and it is expected to increase more if the expansion is allowed.

Closure of Coffin Butte Road

The closure of Coffin Butte Road seriously affects those that use this road and the proposed Conditions of Approval do not lower the impact below the level of serious. The proposed mitigations for a closure may not be feasible or, if implemented, may seriously interfere with uses on adjacent property or seriously interfere with the character of the area. Improvement to Tampico Road would drastically alter the character of the area. Traffic will increase on Tampico Rd, and no amount of leveling and grading will be sufficient to make Tampico Road a better egress route without substantially altering the character of the area. These improvements will also increase certain dangers on Tampico Road by enabling traffic to travel it faster and increase risks to non-motorized users.

Staff and the applicant conclude that the Tampico Rd corridor would be heavily impacted by the increased passenger traffic and changes to the nature of every day traffic to include freight, agriculture, and forestry heavy equipment. Increasing truck traffic on Tampico will negatively affect the area. It may be widened, but sight issues will remain. This will increase risks to non-motorized users of the road from increased traffic. No amount of widening will change the underlying topography and hazards inherent in it; yet widening would further damage the local community character with no guarantee of success.

Conclusion: The proposed use does seriously interfere with the character of the area.

The purpose of the zone:

Purpose of Conservation Zone

The applicant has not met the burden of proof that the proposal will not interfere with the purpose of the Forest Conservation zone for protection of the wildlife resources. The Conditions of Approval requiring further study of Great Blue Heron (GBH) rookeries do not provide us with timely information to determine if the criteria is met nor if mitigation is possible. Further, testimony regarding threatened Streaked Horn Lark populations, Oregon Vesper Sparrow populations, and wildlife movements in the area of the landfill expansion point to the need for more wildlife investigations before action is taken in this area.

Proposed Condition of Approval PA-4 only addresses GBH concerns. Either that condition should be expanded to include other wildlife or additional conditions should be added. There is also concern that the applicant has limited ability to hire qualified consultants. The inventory of GBH nesting activity by their hired consultant has been challenged by residents with compelling photographic evidence.

Buffering and Zoning

The proposed landfill expansion relies heavily on the buffering of noise, odor, sight, and other nuisances by adjacent property owned by the applicant. Some of this buffering is provided by properly zoned land. However, some of the adjacent land is zoned Rural Residential (tax lots 10419001600 and 104180001200). Rural Residential zoning has no provisions for landfill buffering or for the extension of the landfill's grading footprint. The buffering of the landfill site and proposed grading plan for the new haul road under this CUP shows the new haul road positioned on the lot boundary of tax lot 104180001107 (zoned LS) and tax lot 10419001600 (zoned RR-10) and the land graded in the RR-10 zone. If the landfill requires a buffer to operate and extend grading, that buffer becomes part of the landfill use. As such, it should require appropriate zoning; a zone change or Conditional Use Permit if necessary. If the landfill cannot operate without establishing an illegal use on residentially-zoned lands, then reconsideration of this expansion location is necessary.

Conclusion: The proposed use <u>does seriously interfere</u> with the purpose of the zone.

(2) The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area;

<u>Closure of Coffin Butte Road</u>

This is an undue burden because Coffin Butte Road is used as a bicycle and walking route, log truck and freight haul road, an emergency egress by the neighborhoods to the south and west, and is used by Adair Rural Fire Protection District for public safety and fire access. The closure of Coffin Butte Road seriously affects facilities and services.

Closure of Coffin Butte Road results in the loss of the most direct, safe evacuation route in case of inclement weather or wildfire; it eliminates the best (paved, flat, one curve) and shortest egress from the Soap Creek Valley. Closure of Coffin Butte Road results in the permanent loss of one of only three routes out of the Valley. In addition, the Coffin Butte Road closure results in the loss of the only locally available, direct east/west crossing of Hwy 99W, creating additional traffic conflicts on Hwy 99W at Camp Adair Road, Tampico Road, and Robison Road.

Based on community testimony, during the February 2021 ice storm Coffin Butte road was the only egress for several days. There is testimony dated November 23, 2021, from Chief Aaron Harris to Joe Bessmen and email from County Emergency Manager Bryan Lee dated Nov. 23, 2021, to Julie Jackson, and later that day forwarded to County staff, indicating that they both felt that the loss of Coffin Butte Road would be an impact on public safety.

The Adair Rural Fire Protection District Board advises, "this route should not be closed" and "closure of Coffin Butte Road would be detrimental to public safety". Proposed Conditions of Approval to mitigate this road’s loss through improvement to the northern route will not be "superior to Coffin Butte Road with regards to evacuation routes and public safety".

Closing Coffin Butte Road for this conditional use would remove an important route, replacing it with a lesser, compromised route or routes.

<u>Leachate</u>

Leachate from the proposed expansion is planned to be hauled off-site and disposed at the Corvallis Wastewater Treatment Facility (CWTF). The increased volume of leachate hauled will increase tanker truck loads to Corvallis and burden the transportation corridor and create an undue burden on the CWTF. The treated leachate from CWTF is released into the Willamette River and poses water quality concerns. The applicant has presented no leachate plan to account for this increased volume and continued maintenance and disposal for the future.

Conclusion: The proposed use <u>does impose an undue burden</u> on public improvements, facilities, or services available to the area:

Conditional Use Criteria for the Forest Conservation Zone - Chapter 60

60.220 Conditional Use Criteria. (1) A use allowed under BCC 60.205 or 60.215 may be approved only upon findings that the use: (a) Will not force a significant change in, or significantly increase the cost of, accepted farming or forest practices on agriculture or forest lands; (b) Will not significantly increase fire hazard or significantly increase fire suppression costs or significantly increase risks to fire suppression personnel; and (c) Complies with criteria set forth in BCC 53.215 and 53.220.

There will be increased transportation costs to local farm and forestry operations from the closure of Coffin Butte Road. One commercial forester commented that their harvesting operations use Coffin Butte Road as a major haul route and that closure of the road would affect their forestry operation. "Closing Coffin Butte Road and replacing it with an alternative will add time and cost." Another commercial forester commented that closing Coffin Butte Road would create problems for them in increased costs and safety issues.

Adair Rural Fire and Rescue uses Coffin Butte Road for public safety and fire access. Alternative routes take more time for fire response and are narrower. "The closure of Coffin Butte Road will negatively impact the response time from the Substation to the northern/northeastern areas of our fire district and North Albany automatic aid response areas." It will also create an increase in fire suppression costs and increase risk to fire suppression personnel because of the increase in transportation time to reach a fire.

Conclusion: The proposed use <u>will force a significant change</u> in, or significantly increase the cost of, accepted farming or forest practices on agriculture or forest lands, and <u>will significantly increase</u> fire hazard or significantly increase fire suppression costs or significantly increase risks to fire suppression personnel.

Conditional Use Criteria for the Landfill Site Zone - Chapter 77

77.310 Conditional Use Review. (1) The applicant for a conditional use permit shall provide a narrative which describes:

*****

(c) Provisions for screening of the site from public roads and adjacent property;

The staff discussion in the staff memorandum of November 29, 2021, concluded that screening is appropriate for this application. Pages 2-5 propose screening mitigation activities (tree planting), but even those would not be sufficient. Proposed condition of approval OA-6 and OA-7 for screening are not adequate to address screening of the site from public roads or adjacent property. It will be impossible to adequately screen the view of this mountain of garbage. Since no mitigation is possible, we must deny the application for non-compliance to the criteria.

Conclusion: Provisions for screening of the site from public roads and adjacent property is inadequate.

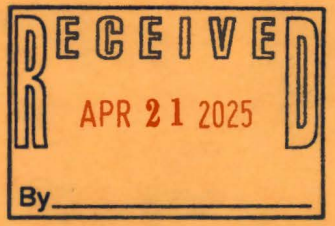
CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners:

My name is Carol Fischler, and I live at 1107 NW 36th Street

I strongly oppose Republic Services's Conditional Use Permit application LU-24-027 to expand the Coffin Butte Landfill and urge the Planning Commission to deny this application.

The landfill has already seriously degraded the appearance of the area and made the air essentially unbreathable, imposing an undue burden on public resources in violation of Benton County Code 53215 (1) and (2). Further expansion will only exacerbate a negative situation which affects the entire Corvallis area. I live in Northwest Corvallis, many miles from the landfill, but even here it is not at all unusual to smell the dump when the wind is in the right direction. In addition, the leachate that escapes from the dump and is eventually conveyed to the Willamette River is distributing toxins from this site to the entire Willamette watershed. If Republic Services cannot control the destructive forces of leachate and pollution while the landfill is at its current size, how can it possibly do so if the landfill is expanded? We owe it to our children and grandchildren to not destroy the environment we will pass on to them. I do not know what can be done to repair the damage that has already been done, but clearly it would be madness to allow that damage to increase by expanding the area of the landfill.



We need to invest in waste reduction, recycling and circular economy solutions, not expanding landfills that perpetuate pollution and place a long term burden on local communities.

Please reject LU-24-027. We need to explore better ways to deal with trash disposal, ways that will protect the health and future of Benton County.

Yours truly, Carol Fischler, Corvallis, Or 97330

Mid-Willamette Bird Alliance

Corvallis, Oregon 97333-1139

MID-WILLAMETTE BIRD ALLIANCE

Date: April 14, 2025

Reference: LU-24-027, Coffin Butte Landfill Conditional Use Permit Application

RECEIVED
APR 21 2025
By

To: Benton County Planning Commission
Benton County Community Development
4500 SW Research Way
Corvallis, OR 97333-1139

We appreciate the opportunity to comment on the future of the Coffin Butte Landfill, a county planning decision of great concern to our human community, and to the wildlife communities dependent on habitats that lie within and proximate to the parcels of this Conditional Use Permit (CUP) application. Since our inception in 1972 as Audubon Society of Corvallis, our more than 300 members support conservation of birds, other native wildlife, and natural habitats through science, education, and recreational activities made available freely to all.

We oppose any further expansion of the Coffin Butte Landfill and urge the Planning Commission to reject this application. We believe the Planning Commission will find that the Applicant, Republic Services, does not provide evidence to conclude that conditional use permit issuance would not violate County Development Code criteria and Comprehensive Plan policies. Further, based on its current performance, Republic Services cannot be expected to demonstrate that it can assure the County of its future compliance with any conditions that the county might issue.

We assert that any approval of Application LU-24-027 would directly violate Benton County Code criteria 53.215(1) and 53.215(2). We further assert that such a decision would violate or otherwise evade County Comprehensive Plan policies 5.1.2, 5.1.5, 5.2.1, 5.3.1, 5.4.1, 5.4.2, 5.4.3, 5.6.7, 5.7.4, 5.8.2, 5.9.1, 5.9.4, 5.9.5, 5.9.7, 6.1.2, 6.5.7 and 6.5.8. In addition, as Benton County has committed to a Prairie Species Habitat Conservation Plan (HCP) under Section 10 of the U.S. Endangered Species Act, covered species protections and long-term actions committed to by Benton County under the accompanying Prairie Conservation Strategy must not be further compromised by permitting further expansion of the Coffin Butte Landfill. Such approval would also directly counter state-wide goals for species and county-identified priority habitats under the E.E. Wilson Wildlife Management Plan and the Oregon Conservation Strategy.

Rationale

We have come to this position through careful study of guiding documents relevant to the decision process before you. Over-arching guidance is supplied through Oregon State Land Use Laws, particularly in the promulgation of State and County Land Use Goals. Tiered to statewide land use planning goals, current Benton County Comprehensive Plan Implementation states: "The policies of the Comprehensive Plan serve as the basis for the implementing regulations of the Development Code." Its purpose from the Introduction Guide #2 is, "To guide public decisions on land use changes as reviewed through implementing regulations such as zoning and land division ordinances, such as the Development Code." (pg. Intro-11)

Benton County Comprehensive Plan Goal 5 Overview: Natural Resources, Scenic & Historic Areas, Open Spaces

"Protection of these diverse natural resources calls for a variety of approaches....
Natural areas, scenic areas and open space are to be managed to preserve their essential character, through Benton County's direct management of its lands and by encouraging private landowners to manage appropriately.
Ecosystem components such as wetlands and riparian areas provide multiple utility functions benefiting humans and the environment, and require cooperation among landowners in order to maintain healthy systems. Inventory, analysis and development of protection plans and landowner education programs guide the management of these important resources....
Protection of groundwater resources and wildlife habitat requires the cooperation and participation of local, state and federal agencies. Benton County's policies support the work of those agencies through collaboration on land use decisions and promotion of conservation efforts."
"The statewide planning program directs counties to inventory natural resources and identify significant sites for which protection plans are to be developed. In some cases, significant sites have been identified by state or federal agencies. Interagency coordination and cooperation with local, state and federal programs is particularly important in the implementation of the Goal 5 policies."[i]

***Goal 5.9 Wildlife Habitat**: To conserve and protect wildlife habitats and to promote habitat management that maintains wildlife diversity.*

Policies

5.1.2 *Benton County shall work to maintain and enhance ecological health of valued natural areas throughout the county by preserving and restoring natural habitats and maintaining the integrity and stability of these areas.*

Our Finding:

The continuance and expansion of the Coffin Butte Landfill disrupts Oregon's recovery efforts at the E.E. Wilson Wildlife Area, by directly attracting avian predators (such as common raven) to the area with nests of imperiled species of concern (streaked horned lark, Oregon vesper sparrow, western meadowlark), by

attracting invasive Eurasian starlings that displace cavity nesting species of concern (western bluebird, purple martin), and by further compromising wetland, riparian and open water habitats for multiple fish and wildlife species with air and waterborne contaminants. The great blue heron heronry on landfill property may have been abandoned due to bald eagle nest predation or to human cause, but now appears to be established on E.E. Wilson lands immediately adjacent to Highway 99W, where newly fledged herons will experience a far higher risk to road-killed losses. Counter to 5.1.2, Benton County has not worked to preserve the recognized heronry on the applicant's land, nor if by approving this application will it be able to work to preserve and restore the natural habitat of E.E. Wilson or maintain its integrity and stability.

5.1.5 *Benton County shall work with watershed councils, land managers, property owners, and others to protect, maintain, and/or enhance healthy functioning ecosystems and watersheds through conservation incentive programs including property tax benefits, income tax credits, regulatory streamlining, direct funding, voluntary agreements, and technical assistance.*

5.3.1 *Benton County shall work with public and private organizations, landowners, and the general public to identify, record, and protect valued scenic and open space resources.*

5.4.1 *Benton County shall recognize the need for protection of open spaces, especially along natural drainage courses.*

5.4.2 *Benton County shall promote private land stewardship of farm and forest lands, respect private property rights, and work with non-profit groups and others to maintain a comprehensive system of connected open spaces that will protect the most valued natural, scenic, and recreational areas of the county.*

5.4.3 *Benton County shall work to protect ecological and hydrological functions of open space, promoting best management practices and green infrastructure.*

5.4.4 *To protect valued open spaces, Benton County shall use a variety of methods such as land purchase, conservation easements, riparian protection ordinance, open space tax deferrals, gifts and donations, and density transfers.*

5.6.7 *Benton County's riparian planning process shall place particular emphasis on identifying and protecting headwater areas from adverse impacts of development.*

5.7.4 *Benton County shall work with others to conserve and protect natural functions of the county's most important wetland habitats.*

5.9.1 *Benton County shall actively participate with appropriate local, state, and federal agencies to identify, conserve, and protect fish and wildlife habitat.*

5.9.4 *In making land use decisions, Benton County shall protect identified sensitive wildlife habitat types and wildlife corridors from adverse impacts.*

5.9.5 *Benton County shall notify the Oregon Department of Fish and Wildlife (ODFW) early in the review process and collaborate with that agency regarding zone and plan amendments, conditional use permits, and subdivision and series partition applications in areas that include habitat types identified by ODFW as Habitat*

Conservation Priorities: in-stream habitat, native prairie grasslands, oak woodlands and savannas, riparian floodplains and wetlands.

5.9.7 *Benton County shall coordinate with Oregon Department of Fish and Wildlife to minimize conflicts between transportation infrastructure and wildlife migration routes.*

Our Finding:
Local and seasonal movements of Roosevelt elk between the Soap Creek watershed and E.E. Wilson must cross Hwy 99W, and pose an ongoing serious risk to both vehicle traffic and to elk. We are not aware of any discussions between Benton County, ODFW, and ODOT regarding this conflict, and are concerned that any continued expansion of landfill operations southward, while Adair Village expands northward, will disrupt movement corridors and exacerbate conflict, all without addressing any underlying causal factors.
We would expect that ODFW, which maintains the South Willamette Watershed District office and E.E. Wilson Wildlife Area office near the Coffin Butte Landfill, will have already been "worked with" or "coordinated with" early in the staff review process of this application. However we have no evidence of this during the extended absence of any open public advisory body discussions concerning ongoing county landfill or solid waste disposal practices and issues.

5.8.2 *Benton County shall require developers to provide sufficient information to enable Benton County to evaluate whether a proposed use could adversely affect the sustainability of aquifer production when reviewing land use applications.*

Our Finding:
Despite historical ground and surface water contamination on record, and leading up to and during staff review time of this application, evidence has indicated that the east leachate storage pond south of Coffin Butte Road had possibly developed a liner rupture which may have allowed leachate to pass into surface and ground water. Neither Benton County nor Republic Services have reported this possible discharge at any public forum, in any newsletter, or to any advisory body. Such information must be included in landfill site documentation, and not buried *<u>while potential landfill expansion is under public review.</u>*

6.1.2 *In cooperation with appropriate agencies, Benton County shall manage its air, water and land resources to insure their protection, conservation, restoration, or enhancement.*

6.5.7 *Benton County shall maintain a committee that advises the Board of Commissioners on solid waste and disposal site issues.*

6.5.8 *Benton County shall assure safe, accessible, and environmentally sound disposal of solid waste at the Coffin Butte Regional Sanitary Landfill.*

Our Finding:
By policy, Benton County is required to ("shall") manage its air, water and land resources to insure their protection or conservation. Regulatory efforts to do so at the Coffin Butte Landfill and its surroundings have been insufficient, resulting in interference with restoration and enhancement efforts being attempted by others adjacent to the landfill site.
For a considerable period of time recently, Benton County abolished both its Solid Waste Advisory Council and Disposal Site Advisory Council. Maintaining such committees is the lifeblood of the democratic process, and allows all community members to collectively engage towards a more sustainable future.
County government cannot assure anyone of a safe, accessible and environmentally sound disposal of solid waste in the absence of transparency in its Coffin Butte Landfill policy planning and implementation.

E.E. Wilson Wildlife Area Management Plan[ii]
As a wildlife and habitat conservation organization with deep roots in the community, MWBA is also aware of the establishment, purposes, and management of E.E. Wilson Wildlife Area, immediately adjacent to, east of, and downslope of Coffin Butte Landfill and its proposed expansion. Our members recreate there regularly and assist in its volunteer efforts and citizen science projects. Benton County recognizes all its eastern portion with Open Space zoning, identifies it as key expansion habitat for two HCP covered species, and lists all of the management area habitats as priorities. The full text of the E.E. Wilson Wildlife Area Management Plan may be viewed or downloaded here: https://www.dfw.state.or.us/wildlife/management_plans/wildlife_areas/docs/ee_wilson.pdf

"The Oregon Conservation Strategy is an overarching state strategy for conserving fish and wildlife. It provides a shared set of priorities for addressing Oregon's conservation needs. The Conservation Strategy brings together the best available scientific information, and presents a menu of recommended voluntary actions and tools for all Oregonians to define their own conservation role."[iii]
In Benton County, E.E. Wilson Wildlife Area manages one-half of all Strategy Components, manages four of Oregon's eleven key Strategy Habitats, harbors dozens of Oregon Strategy Species, and falls within an important Conservation Opportunity Area (Corvallis Area Forests and Balds). Meanwhile the adjacent Coffin Butte Landfill and its proposed expansion carry all of statewide landscape threats to conservation that Benton County can by choice work to improve: Barriers to Animal Movement, Invasive Species, Water Quality and Quantity, and Land Use Changes. https://oregonconservationstrategy.org/

The Benton County Prairie Species Habitat Conservation Plan (HCP) and its Appendix E Prairie Conservation Strategy (PCS) provides our concluding reference. [iv] HCPs offer non-federal landowners an incidental take permit over a multi-decade period in exchange for a commitment to ensure HCP-covered species are provided sufficient habitat for their

persistence, even with an expected level of individual losses. Seven imperiled species are covered under this HCP agreement, and three are relevant for consideration in this CUP application: Fender's blue butterfly, Kincaid's lupine, and Nelson's checkermallow. E.E. Wilson management has worked to establish both these plant species with the expectation that Fender's blue butterflies may populate this area.

Covered Species; Fender's Blue butterfly (PCS pg. 22)

> *"USFWS has identified Finley National Wildlife Refuge as a potential Fender's blue butterfly network. Additionally, E.E. Wilson has the potential to support Fender's blue butterfly and could form a network with Kincaid's lupine patches currently existing along the Soap Creek drainage and along the Benton/Polk county border. Creating stepping stone patches less than 1 km apart in north Benton County will require coordination and cooperation between USFWS, ODFW, Oregon National Guard, Oregon State University, Luckiamute Watershed Council, additional NGOs[v], and private landowners."*

Priority Long Term Actions, Connect (PCS pg. 46)

> *"C5: Connect Fender's blue butterfly habitat in the Soap Creek watershed from Oregon State University's property to E.E. Wilson by protecting stepping stone habitat patches less than 1 km apart. Work with interested private landowners who are willing to plant nectar species and provide information on conservation easements and incentive programs."*

Our Finding:
It is self-evident that any butterfly flight corridor between Soap Creek Valley and E.E. Wilson will be further obstructed by any enlargement of the landfill between Tampico Ridge and Coffin Butte, all the more so by the host of avian scavengers and insectivorous passerines that amass at the open face of the Coffin Butte landfill.

Conclusion

Development Code Chapter 53: Conditional Uses; Administrative Procedures, General Review[vi]

> *BCC 53.215 (1): The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone;*
> *BCC 53.215(2): The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area;*

Based on our findings, the proposed use seriously interferes with uses on adjacent public and private property, significantly alters and disrupts the ecological, visual, and rural character of both the zoned area and all other surrounding zoned uses, and thereby greatly exceeds the purpose of the zone.
It has been clearly established that the current landfill use already imposes an undue burden on public rights-of-way, transportation routes, esthetic and scenic values, as well as conservation and restoration efforts and recreational opportunities at state

facilities, along with greatly increased traffic, incidental refuse, incompatible noise, noxious odor, combustible vapor, and contaminated air, soil and water.[vii] Such grievous current offense cannot justify its furtherance or any proposed increase in its size or use.

We again appreciate the opportunity to provide comment to inform your Planning Commission consideration.

Respectfully,

Karan Fairchild, Co-President

RE: LU-24-027 Conditional Use Permit Application Regarding Landfill Expansion

Dear Nicholas Fowler, Chair, and Members of the Benton County Planning Commission:

Thank you for the opportunity to comment on the Conditional Use Permit (CUP) application submitted by Valley Landfills Inc., which corporation proposes to construct a new landfill on the north end of Tampico Ridge, south of Coffin Butte Road.

I'll be submitting a series of comments on different problems raised by this application, each of which give grounds for denial. This is my first set of comments in the series, focusing on the status of a Great Blue Heron nesting colony (or "rookery") which has been continuously active at this site since the spring of 2000.

The key points are these:

1. Applicant has not provided you with full information regarding the status of the heron nesting colony, which still persists at the site although the locus of nesting activity has shifted approximately 250 yards to the east since an apparent disturbance event in 2022.

2. The currently active nesting area is less than 1/4 mile from where applicant proposes major excavation work to build new leachate ponds on Forest Conservation land (Lot 1200), in place of the existing ponds which are within the footprint of the proposed new landfill.

3. Satellite images of the proposed development show that the applicant has failed to avoid disturbance to the previously documented heron rookery areas, during 2022, 2023, and 2024, and this pattern of disturbance continues into the current year.

Taken as a whole, these points indicate that approval of this CUP application would lead to further disturbance of this heron nesting colony, in contradiction to **Benton County Goal 5.9 Wildlife Habitat: To conserve and protect wildlife habitats and to promote habitat management that maintains wildlife diversity.** The applicant's record of recent and ongoing adverse activity, on the same lots where they propose to develop a new landfill and leachate ponds, makes it clear that the most likely outcome will be exactly the opposite of what Goal 5.9 espouses.

I elaborate on each of these points below (Further documentation is given in the attached report, which is an updated version of a report that I provided to ODFW and ODF on March 15, 2025).

1. Applicant has not provided you with full information regarding the status of the heron nesting colony, which still persists at the site although the locus of nesting activity has shifted approximately 250 yards to the east since an apparent disturbance event in 2022.

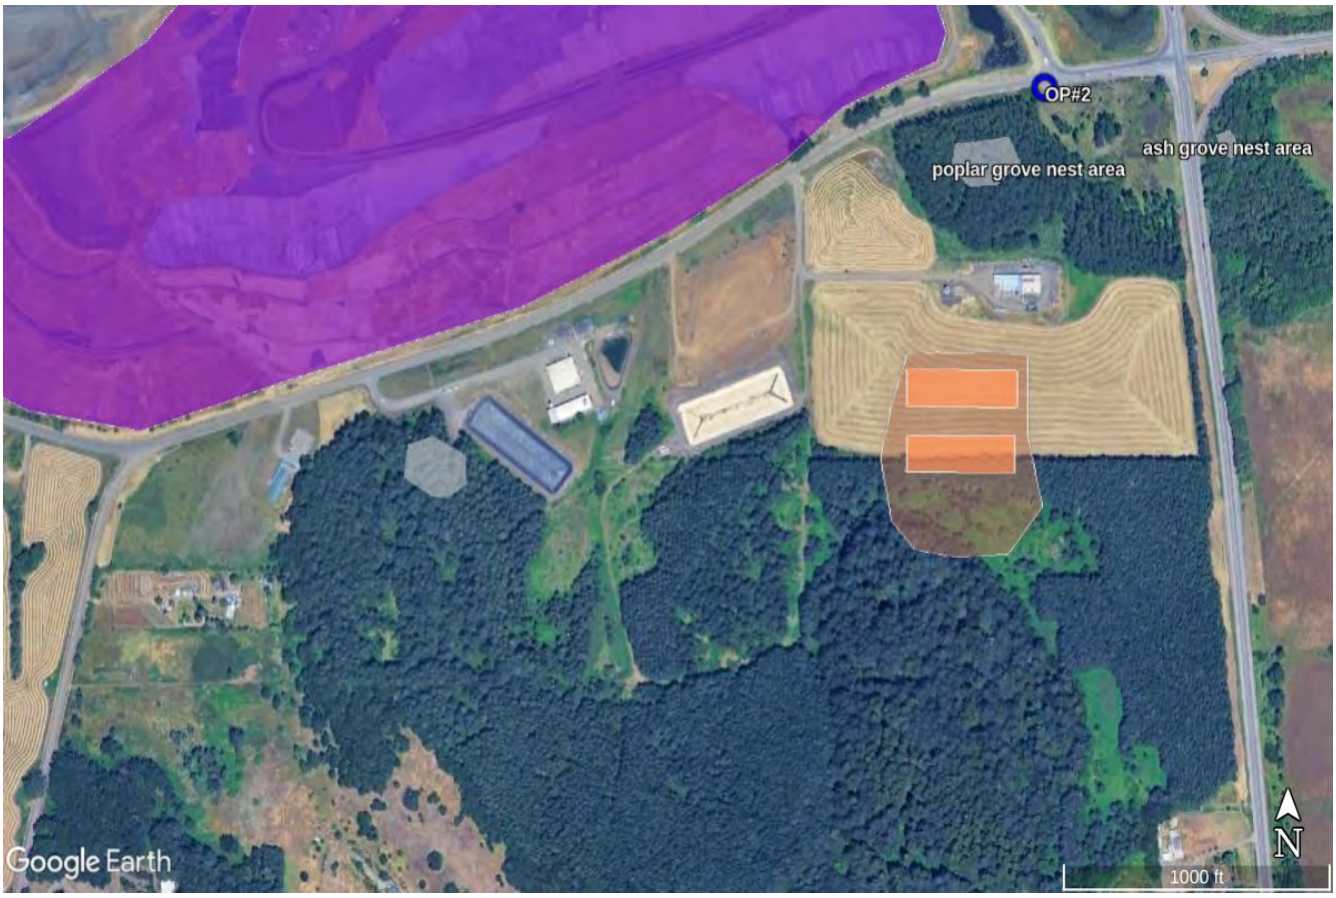
From reading the information provided by the applicant and their wildlife consultant (Turnstone), in their Burden of Proof statement and supporting exhibits, you might easily get the idea that herons simply gave up on the area, after an apparent mass failure of the nesting colony sometime between April and June of 2022. This is far from the truth.

In fact, community observations, as summarized in a report that I'm submitting together with this comment, establish that the herons have continued to nest in ash trees within 220 yards of Turnstone's observation point OP2, beginning in March 2023 and continuing in both subsequent years, up to the date of this comment. Several of the nests are in a direct line of sight from OP2. Adult herons flying to and from nests in the ash trees should have been visible from that point.

This is <u>not</u> to say that the information provided by the applicant or their consultant is false, just that it doesn't provide a full account of heron nesting activity in the immediate vicinity.

One possibility is that the applicant's consultant simply failed to notice heron activity a short distance east of the old nests that they were focused on. This is possible but seems improbable, for skilled field biologists.

A second possibility could be that the consultants may have seen this heron activity nearby, but they adhered to a very narrow interpretation of the protocol which required them only to report if they saw herons in or around the nests in the older nesting area, and not necessarily to report herons nearby.



Regardless of whether the omission is due to careful parsing of observations or simply failure to notice, it's clear from independent observations that herons do continue to nest immediately proximal to the area of the proposed development, which has consequences for the proposed development.

2. The currently active nesting area is less than 1/4 mile from where applicant proposes major excavation work to build new leachate ponds on Forest Conservation land (Lot 1200), in place of the existing ponds which are within the footprint of the proposed new landfill.

The image below shows the proximity of the currently active heron nest area ("ash grove nest area") to the area proposed for development of new leachate ponds on Forest Conservation land. I've sketched in the proposed location of the new ponds (solid orange), and the approximate footprint of the required excavations (tinted orange).

From length scale included in the image, you can see that this construction activity would be within roughly 1000 ft (330 yards). Under the Oregon Forest Practices Act heron rookeries are protected, and Oregon Department of Forestry rules require avoidance of forest land operations (including truck traffic) between February 15th and July 31st, within a 1/4-mile (440 yard) radius.

The applicant has not provided any plan for protecting the ash-grove nesting area, within their current site development plans which acknowledge only a need to protect the older nesting areas, and those only if their consultants happened to notice heron nesting activity during 2023 through 2025.

3. Satellite images of the proposed development show that the applicant has failed to avoid disturbance to the previously documented heron rookery areas, during 2022, 2023, and 2024, and this pattern of disturbance continues into the current year.

Ever since the applicant learned in late 2021 that the herons nesting in the poplars could be an impediment to their development plans, in each successive nesting season (2022, 2023, 2024 and 2025) they have operated heavy equipment (excavators and gravel trucks) in an area that had previously been left undisturbed from 2017 to 2021 (during which period the herons established their nesting area in the poplar grove).

A timeline of this activity, based on evidence provided by historical satellite images, is given in the report included with this set of comments.

Whether this activity was inadvertent or otherwise, it could well have caused the apparent abandonment of nests during 2022, and the reluctance of herons to return to the area in subsequent years.

At the very least, conducting this activity so close to the known nesting areas, during nesting season, demonstrates insufficient diligence regarding the disturbance issue.

Given the applicant's poor track record on this issue, better outcomes cannot be expected in the event that they gain approval for the proposed development.

Thank you for considering these comments. I reserve the right to provide further written and oral testimony according to the time frame allowed by statute.

Yours sincerely,

Joel E. Geier, Ph.D.

Great Blue Heron Monitoring

Community observations of heron nests
Coffin Butte and vicinity, north Benton County, Oregon
2000 through present

March 15, 2025
Amended to include observations through April 20, 2025
Joel Geier

Executive Summary

A heron nesting colony is known to have been present in the area just south of Coffin Butte for more than 25 years, starting in 2000 and continuing into the current year, 2025. Although initially the colony seemed to be stable, making use of a stand of mature conifers from the early 2000s through at least 2018, within the past 6 years it has shifted nesting locations twice.

A mass incident of nest abandonment and colony failure occurred in the poplar grove ("eastern rookery") sometime during in mid- to late May 2022. The cause is not known with certainty, but excavation equipment and trucks were documented as operating as close as 600 ft to the nesting area around the time of the abandonment, much closer than the 1/4 mile buffer zone that was recommended to the operators to avoid disturbance. Bald eagles were seen scavenging the nests, but not until at least a week after the adults had abandoned the nests.

In subsequent years, herons have continued to visit the poplars during nesting season, but have not been documented as re-occupying nests in that area. Continuing disturbance by equipment operating within the recommended buffer zone during 2023, 2024, and again in 2025 may be a factor in discouraging them from reoccupying nests in that area. Instead the main locus of nesting activity since 2022 has been in an ash grove just east of the poplars. Nesting there was successful in 2023 and probably also in 2024.

That nesting area is occupied again in 2025, with herons incubating on nests as of the date of the report. This new nesting area is very close to a busy highway intersection, which poses a potential risk for the long-term success of the colony. Although the herons appear to be acclimated to the normal flow of vehicular traffic, nesting could be disturbed by pedestrians walking along the highway and/or vehicle operators who exit their vehicles during roadside stops. Such an incident was observed on April 19, 2025 when a sheriff's inmate crew picking up roadside litter near the landfill entrance came within 30 yards of the nests.

Introduction

Great Blue Heron (*Ardea herodias*) is one of Oregon's most well-known bird species, frequently noticed, recognized, and beloved by many members of the public.

This is also one of very few bird species to be specifically protected under Oregon state law (OAR 629-665-0120), which is focused on protecting and preventing disturbance to colonial nesting sites known as "heronries" or "heron rookeries."

Although perceived as a "common" bird species due to its high visibility, the status of Great Blue Heron as a nesting species in the Willamette Valley is poorly understood, both in terms of numbers of breeding birds, and the stability of existing colonies.[1]

This report summarizes community observations of herons nesting in the vicinity of the Coffin Butte landfill from the year 2000 through early 2025.

Data sources

Observations of herons nesting were not systematic over most of the 25-year period from 2000 to 2025. For years prior to 2022, a record of incidental observations has been gleaned from resources including *The Chat* (newsletter published monthly by the Mid-Willamette Bird Alliance[2]) and the electronic archives of two e-mail lists:

- Oregon Birders Online (OBOL), https://www.freelists.org/archive/obol/
- Mid-Valley Nature https://groups.google.com/g/mid-valley-nature

From 2022 onward, observations have been maintained systematically in Excel spreadsheets which are reproduced here in tabular form.

1 (Ann Eissinger, personal communication, 2021)

2 The Mid-Willamette Bird Alliance is the current name of the organization formerly known as Audubon Society of Corvallis. Newsletters prior to 2024 were published under the former name of the organization.

Locations referenced

The following locations (Figure 1) are referred to frequently in this report:

Coffin Butte is a natural landform in the shape of a ridge elongated in ENE-WSW direction, about one mile long with a peak elevation of 737 ft, which is the last in a series of ridges and hills extending northward from Vineyard Mountain near Lewisburg.

Tampico Ridge is the first main ridge to the south of Coffin Butte, elongated in the S-N direction, also about one mile long. Tampico Ridge has multiple four main summits. The highest summit, toward the south, rises to 613 ft. The next summit to the north, sometimes labeled as Poison Oak Hill, is just slightly lower at 612 ft. At its north end, Tampico Ridge splits into two ridges, with summits locally known as Schulmerich Hill (532 ft) at the north end of the main ridge line, and Beals Hill (512 ft) on the ridge line branching toward the NW.

Tampico Ridge is separated from Coffin Butte by a topographic saddle which is traversed by Coffin Butte Road, with its highest point just north of Beals Hill.

Figure 1. Satellite view of the landscape around Coffin Butte showing locations referenced by name in this report including Toketie Marsh, conifer grove nesting area ("western rookery"), poplar grove nesting area (eastern rookery"), and ash grove nesting area.

Coffin Butte Landfill is located on the south face of Coffin Butte, north of Coffin Butte Road, and is operated by Valley Landfills Inc. (VLI), a wholly owned subsidiary of Republic Services Inc.

Toketie Marsh is the name given by VLI to a remedial wetland that was constructed in early 1994[3], on the NW side of the junction of Coffin Butte Road with State Highway 99W, as partial mitigation to compensate for the destruction of two ponds higher up on the SE flank of Coffin Butte.

A **conifer grove** (mainly Douglas-firs, covering about 16 acres) on the north end of Beals Hill, between the landfill office and a facility for handling landfill leachate, has been one of the locations where herons have nested during the past 25 years. The heron nesting area in this conifer grove is referred to as "the western rookery" in some VLI documents.

A **poplar grove** (hybrid poplars covering about 9 acres) due south of Toketie Marsh and the landfill entrance (scale house road) has developed from hybrid poplars that were planted around 1994, as part of the same mitigation project. On site development maps this area is referred to as the "south cloverleaf mitigation area." The heron nesting area in this poplar grove is referred to as "the eastern rookery" in some VLI documents.

An **ash grove** (predominantly Oregon-ash, covering about 7 acres) is located on state land just east of the poplar grove, on the east side of Highway 99W. This ash grove together with the poplar grove form a nearly continuous arc of closed-canopy forest, separated only by the highway right-of-way (about 30 m wide). Herons have been observed nesting in the ash grove since 2023 after an apparent mass failure in the poplar grove in 2022.

Rays prairie is an informal name[4] for a 70-acre prairie restoration area on state land (part of E.E. Wilson Wildlife Area), adjacent to the ash grove on its east side and extending south for about 3/4 mile. Herons can frequently be seen hunting both upland areas and around the edges of two constructed wetlands during nesting season.

A **stockpile** area for fill dirt periodically used as cover material on the landfill is located to the west of the poplar grove. The east edge of this stockpile area is 0.12 mile from the heron nesting area in the poplar grove. Satellite images show that this area was managed as an

---

3 Per historical images on Google Earth, and confirmed by former manager Brian May, personal communication November 27, 2023.

4 Named for a former manager of E.E. Wilson Wildlife Area who initiated the restoration effort in the early 2000s. The lower of two constructed wetlands in the prairie area is known as Laguna del Ray (https://ebird.org/hotspot/L14643022). The upper wetland is informally known as Playa del Ray. Baseline point counts for this area during the early stages of prairie restoration are on file with ODFW.

agricultural field through 2006, then left fallow until 2016 when it was farmed again. In 2017 fill dirt was stockpiled on this area to form a small hill which was left undisturbed for the next several years, and was noticeably vegetated by 2020 (Figure 2).

Figure 3. Satellite view of the fill-dirt stockpile from August 13, 2020, showing the fill-dirt stockpile in an undisturbed, vegetated state at that time, with no excavating equipment present. Note that the track leading out from the east side of the stockpile is faint and does not connect to the access road for the generating plant, with a closed gate at that point, indicating that it was in a state of disuse.

Historical observations 2000 through 2020

Great Blue Herons were first documented nesting near Coffin Butte in 2000, with the following description as recorded in the summer field notes column in the *The Chat*:

> *An improbable choice of nesting site by Great Blue Herons at Toketie Marsh, at the entrance to Coffin Butte Landfill along Highway 99W north of Corvallis, gave area birders a unique chance to observe these birds through the summer. On 7-1, Carolyn Paynter watched an adult feeding 3 young in a very crowded nest. By 7-16 the juveniles could be seen hunting inexpertly around the edges of the marsh.*

As this new colony increased, the herons began to nest in the conifer grove south of the growing landfill, in the area between VLI's office building and a leachate storage facility. The field notes from the April 2018 issue of *The Chat* gave this update, noting the impact of rising Bald Eagle numbers on heronries:

> *On 10 Mar more than 20 Great Blue Herons flew in to perch in conifers where they've nested in recent years on the south side of Coffin Butte Regional Landfill. As Bald Eagle numbers continue to recover, herons seem to have abandoned some relatively exposed nesting locations along the main rivers, in favor of conifer groves that offer more protection from avian predators.*

The heron nesting area in the conifer grove, now referred to by VLI's consultants as the "western rookery" for this site, was documented by the Oregon Department of Forestry in a Notification of Operations (NOAP) under NOAP ID: 2019-551-05885. This documentation reportedly occurred when VLI sought clearance from ODF to log in that area, and were informed that this work could not proceed while that rookery remained active.

By the next year, 2020, herons were noticed to be nesting in the hybrid poplar plantation (now referred to as the "eastern rookery"). Whether this shift was due to disturbance in the former location, or due to the improved suitability of the poplars as they had grown taller with a closed canopy, or due to some other factor, is unknown.

Heron nesting activity in 2021

Community nesting observations during the 2021 nesting season are summarized in Table 1. At least 12 pairs nested in the poplar grove (east rookery) and possibly upward of 15.[5] By June local observers began to notice young birds foraging alongside adults in the local fields and pastures of Soap Creek Valley, indicating that at least some of these nests were successful.

Table 1. Heron observations during 2021.

Date	Number of herons	Location	Observer	Notes
1/28/21	0	poplar grove, conifer grove, and vicinity	Joel Geier [Mid-Valley Nature]	"I haven't seen much activity so far in the heron nesting colony at Coffin Butte Landfill. Still many hundreds of gulls around ..."
2/23/21	18	Toketie Marsh	Joel Geier [Mid-Valley Nature]	Two Bald Eagles (one adult, one immature) were keeping the gull flock stirred up above the Coffin Butte Regional Landfill, and also briefly put 18 Great Blue Herons to flight off of the remedial wetland ("Toketie Marsh").
4/07/21	12+ active nests	poplar grove	Joel Geier [Mid-Valley Nature]	"Now is still a good time to watch Great Blue Herons nesting in the poplar plantation just south of Coffin Butte Regional Landfill. At least 12 nests were active as of yesterday, and they're easy to see from the road as the poplars have just started to leaf out.
7/07/21	several	poplar grove	Joel Geier [Mid-Valley Nature]	"Great Blue Heron chicks in the poplars outside Coffin Butte Regional Landfill are now in "Stage 1" [beg from the tree as adults flt back and forth] from recently harvested fields full of voles both dead and alive. Some of the heron chicks may have already left the nest, but some were in good view when I stopped by there this morning. .... The chicks that remain are mainly standing up in the nests now, mostly motionless and pretending to be invisible until mom or dad returns with a cropful of fresh carrion."

An October 25, 2021 report by Stephanie James of Turnstone Environmental Consultants, submitted by the landfill operators in support of a proposed expansion of the Coffin Butte

5 Per comments by wildlife biologist Dave Vesely.

Landfill, based on a single site visit on October 8, 2021, stated the following regarding the conifer grove nesting area ("western rookery"):

> *James was able to observe the rookery from the access road but was not able to investigate under the trees up close due to fencing and high coverage of poison oak. James observed 12 stick nests in 8 active nest trees in the western rookery. The nests were approximately 18 to 36 inches in width, 70 to 100 feet in height, and did not appear active this year (2021) with no visible whitewash. The nests appeared to be intact and were likely were built upon in the last 2 to 3 years.*

Regarding the poplar grove nesting area ("eastern rookery"), the same report stated:

> *The eastern rookery is in a forested stand with 12- to 20-inch hybrid poplar trees approximately 90 to 110 feet in height. This forest lost many branches in recent wind and ice events, as noted by downed limbs and broken branches. The eastern rookery was likely active this year as evidenced by copious whitewash under the nests (Figure 1). This rookery contained six nests approximately 12 to 30 inches in width, 60 to 80 feet in height, in four poplar trees.*

Independent photos from Nov 7, 2021 documented that 13 heron nests were still present in the poplars as of that date, even after fall wind and ice events. Note that this was more than twice as many nests as reported by the landfill's consultant.

After local conservationists expressed concerns about impacts on herons, ODFW commented, recommending three years of professional surveys, as well as restriction of landfill activities within 1/4 mile of the active nesting areas during the critical breeding period from February through June.

Heron nesting activity and nesting failure in 2022

Community nesting observations during the 2022 nesting season are summarized in Table 2. All observations of nesting activity in this year were from the poplar grove. Although this nesting area was occupied with as many as 14 active nests, these all appear to have failed sometime between May 14 and May 25.

At least 10 nests were occupied by March 5. Incubation started sometime between March 22 and April 12, by which date herons were incubating at least 12 nests. Based on a 28-day incubation period, the earliest expected hatch date (if incubation began on March 23) would have been April 20. The latest expected hatch date (if incubation began on April 12) would have been May 10.

In a brief visit on April 20, the adult herons were observed to be perched near the nests, but not incubating. The nesting area continued to be active with adult herons present through May 14, but by May 25 it was abandoned.

Juvenile Bald Eagles were observed visiting the abandoned nests on June 1, but this was a full week after the heronry was already noted to be abandoned by community observers. The most likely explanation of the observed eagle activity on that date is that they were scavenging already-dead heron chicks from the nests.

A carcass draped over a utility wire, noted on May 25 and still hanging there for some weeks afterward, suggests the possibility of a disturbance resulting in a panic flight in conditions of dim light or darkness (i.e., when herons might not be able to see and avoid such a wire) sometime between May 14 and May 25.

Several hypotheses for this nesting colony mass failure during May of 2022 can be considered.

Hypothesis 1: Failure caused by adverse weather

Weather during April 2022, and into the first weeks of May, was notably cool and rainy for the season. These conditions could have been adverse for survival of heron chicks, particularly if they had hatched and reached the stage of growth where both parents would be away from the nest for extended periods, leaving them exposed to the weather. However the observational bounds on incubation period, together with behavioral observations from the period after hatchlings would have been expected, do not support this hypothesis.

Table 2. Heron observations during 2022. Community observations are in black font. Additional observations by Turnstone Environmental Consultants (on behalf of VLI) that help to inform the timeline up to and shortly after the time of mass nesting failure are included in blue font.

Date	Number of herons	Location	Observer	Notes
2/17/22	1	poplar grove	Stephanie James	Adults observed standing in one nest.
3/05/22	10+	poplar grove	Priya Thakkar	"Saturday evening I saw a heron standing up in each of the nests! There were at least 10 that I could see, and only one of the nests off to the side didn't have a heron in it."
3/22/22	17	poplar grove	Stephanie James	Adults observed standing in or near 11 active nests.
4/12/22	12+	poplar grove	Joel Geier	At least 12 nests were occupied with adults incubating or brooding on the nest.
4/20/22	18+	poplar grove	Joel Geier	Adult herons were perched near the nests, but not on them, in brief visit.
4/28/22	17	poplar grove	Stephanie James	Adults observed standing in or near 14 nests, all active. One observed possibly turning an egg in the nest.
5/14/22	several	poplar grove	Joy Shreyer	Several adult herons perched around the nests.
5/25/22	0	poplar grove	Joel Geier	Heronry abandoned. Decomposed / desiccated carcass, apparently of a heron, hanging from utility wire along the south side of Coffin Butte Road, due north of the west end of the poplar grove nesting area.
5/26/22	0	poplar grove	Joel Geier	Posted inquiry to OBOL and Mid-Valley Nature list, noting abandonment of heronry, and requesting any observations not already reported.
6/01/22	0	poplar grove	Stephanie James	No herons present. Juvenile bald eagles moving from nest to nest in groups of 2 to 4.

Hypothesis 2: Predation by eagles

The nearby landfill is well known to host large numbers of bald eagles, both adult and juvenile, which scavenge from the waste. With such concentrations of eagles nearby, predation on heronries is a plausible risk, as has been observed in the Puget Sound region (Eissinger, 2007).

The observations by VLI's consultant on June 1, 2022 document that eagles visited the heronry on that date. However this was a full week after failure of the heronry was noticed by community observers.

If the failure of the heronry was due to eagle predation, we should expect that most predation would have occurred on or within days after the date that adults abandoned the heronry. The fact that eagles were observed going from nest to nest at least a full week post-failure is counter-indicative of this hypothesis, suggesting instead that the eagles had just recently discovered this source of carrion.

Hypothesis 3: Disturbance by landfill operations

Heavy equipment operations in a fill-dirt stockpile just west of the poplar grove was a possible source of disturbance, during the period in which nesting failure occurred.

Satellite images from June 2022 (Figure 3) show excavation equipment operating within 0.16 mile of the heron nesting area. In comparison with satellite images of the same area from August 2020 (Figure 2), the 2022 images show indications of recent truck traffic along the access road leading out from the east side of the stockpile even closer to the nest sites.

Figure 3. Satellite view of the fill-dirt stockpile from June 24, 2022, showing excavating equipment working in a recently excavated area southwest of the poplar grove nesting area. Note that the road leading out from the east side of the stockpile shows signs of recent use. The area of recent excavations, as measured from this image, was approximately 2.6 acres.

Concerns about this issue as a possible cause of the nesting colony failure were raised during a Benton County Disposal Site Advisory Committee on July 27, 2024. Notes on the minutes for that meeting provided to Benton County staff state[6]:

> *Last year ODFW's biologists recommended that there should be no major construction within 1/4 mile of the rookery, from February 15 through July 31, apart from the usual traffic on Coffin Butte Road and Hwy 99W.*[7]
>
> *During March of 2022, local observers noted that heavy equipment was being used to mine away the stockpile of fill dirt adjacent to the Forest Conservation zone. Initially this activity was on the far side of the stockpile, where it seemed unlikely to impact the herons. However that activity seems to have shifted much closer to the rookery during May, around the time that the herons disappeared.*
>
> *Two questions for Republic staff:*
>
> *1) Did Republic Services carry out any monitoring of this nesting colony this year? And if so, have those observations been reported to ODFW?*
>
> *2) Also, is there any log of activities that were carried out within or near the Forest Conservation zone? Of particular concern would be if and when trucks hauling fill dirt started to use the gate onto Coffin Butte to the east of the stockpile, or if there were any personnel entries into the rookery area itself.*
>
> *Ian [Macnab] (Republic Services) responded that these are normal operations and there has been no other change in that area for quite some time. A biologist has been monitoring the eastern and western rookeries starting this year. Results will not be reported by the biologist until the end of a three-year period, and no data is available at this time.*

No further information has been provided by VLI or Republic Services regarding the timing of these operations.

---

6 Comments transmitted by e-mail to Community Development Department staff Linda Ray and Daniel Redick on September 3, 2022.

7 A Condition of Approval proposed by CDD staff for LU-21-047, based on input from ODFW, was stated as follows: "During the critical nesting period for the Great blue heron, which is from February 15 through July 31, neither construction to prepare the ground or build the leachate ponds, employee building, road bed, or landfill cell shall occur within a quarter mile of the boundary of the rookery."

However the company has asserted a right to conduct landfill-related operations outside of the posted operating hours:[8]

> *"..internal operations, which include the arrival of field personnel on-site, begins at 4:30 a.m., Monday through Friday, and at 7:30 a.m. on Saturday. Additional operations not governed by the conditional use permit include work by third party contractors on landfill infrastructure, and commercial customers, who have 24-hour access to the Landfill.*

Such activities have been observed to occur pre-dawn, making use of bright artificial lights. During a landfill tour, the landfill environmental manager confirmed that portable lights to support operations on the landfill typically come on at 4:45 a.m.[9] During the period from May 14 to May 25 in which nesting failure apparently occurred, local sunrise ranges from 5:45 a.m. to 5:35 a.m.

The satellite evidence shows that operations in the stockpile area were in fact unusual, so this remains as a plausible cause for nesting colony disturbance and abandonment. If heavy equipment and/or artificial lights powered up in the stockpile area before sunrise, this would have been an unaccustomed disturbance and could conceivably caused a panic flight.

Heron nesting activity in 2023

Community nesting observations during the 2023 nesting season are summarized in Table 3.

There were two observations during March in which herons either perched in the poplar grove or flew toward it with a stick. Satellite images (Figure 4) show that excavation activity occurred in the stockpile area, during the early part of the nesting season. This recurring disturbance might have inhibited herons from occupying utilizing the nests in the poplars, despite some indications of interest.

Table 3. Heron observations during 2023.

Date	Time of day	Number of herons	Location	Observer	Notes
1/12/23	afternoon	0	poplar grove	Joel Geier	At least 15 stick nests
3/17/23	17:35	1	poplar grove	Joel Geier	roosting in the hybrid poplars, not in one of the trees with one of the nests that were occupied last spring
3/24/23		0	poplar grove	Jim Fairchild	Quick look at the hybrid poplar heron nests (~16, no visible occupants)
3/26/23	12:00	2	Ray's Prairie (Laguna del Ray)	Joel Geier	Flew up from ground south of pond.
3/26/23	14:30	5	Ray's Prairie	Rebecca Geier	South of ash grove
3/26/23	14:45	1	Soap Creek Ranch pasture north of entrance road	Joel Geier	hunting in pasture
3/26/23		2	ash grove / poplar grove	Jim & Karan Fairchild	2 herons just east of 99W in the ash grove next to the highway. One repeatedly circled over 99W towards the [poplars], carrying a stick. Last we saw it had stopped in the top of the ash grove.
3/27/23	15:30	6	ash grove	Joel Geier	6 herons perched in the ash grove ... including two pairs and two "single" birds, each on partly-constructed nests (several of them just a few sticks laid cross-wise). We saw one heron drop down into the understory and come back up with a stick, which its mate then added to the growing nest.
3/29/23	10:00	2	Soap Creek Ranch pasture north of entrance road	Joel Geier	hunting in pasture
5/15/23	10:30	1+	ash grove	Joel Geier	adult standing in nest, hard to see due to foliage
6/18/23	10:45	6+	ash grove	Joel Geier	multiple nests with noisy nestlings, 3 in one nest, total of at least 6 nestlings. Look nearly ready to fledge.

All other observations of nesting activity were from the ash grove. Numbers of herons were decreased from the previous year, with a maximum of 6 adults recorded early in the nesting season. Six nestlings, nearly ready to fledge, were observed in nests in the ash grove on June 18.

Based on these observations, the nests in the ash grove appeared to be successful, but no nesting was observed in the poplar grove. eBird records from nearby E.E. Wilson Wildlife Area confirm that herons were regularly present throughout the nesting season, including in June and July.

Figure 4. Satellite view of the fill-dirt stockpile from April 29, 2023, showing continuation of excavation activity southwest of the poplar grove nesting area, during the early part of the heron nesting season. Note that the road leading out from the east side of the stockpile continues to show signs of recent use. The excavated area has grown to 3.0 acres.

Heron nesting activity in 2024

Community nesting observations during the 2024 nesting season are summarized in Table 4.

Early in the nesting season, around February 12, one heron was observed standing in one of the old nests in the poplar grove. All other observations of nesting activity were from the ash grove.

Satellite images (Figure 5) show that excavation activity occurred in the stockpile area, and agricultural equipment activity (presumably field spraying) even closer to the nesting area occurred during the early part of the nesting season. This recurring disturbance might again have inhibited herons from occupying utilizing the nests in the poplars.

Nests in the ash grove began to be occupied by mid-February. Incubating birds on at least 6 active nests were noted by March 31. Subsequent observations were limited due to dense foliage and other time commitments by volunteer observers. However eBird records from nearby E.E. Wilson Wildlife Area indicate that herons were regularly present throughout the nesting season, including in June and July.

Table 4. Heron observations during 2024.

Date	Time of day	Number of herons	Location	Observer	Notes
2/12/24 (approx)		1	poplar grove	Dave Vesely	1 standing on old nest in poplars (noted in e-mail Feb 14, 2024 as “a couple days ago”)
2/13/24	13:30	1	ash grove	Joel Geier	Standing on one of last year’s nests
2/14/24	13:30	6	ash grove / Ray's prairie	Joel Geier	3 in trees around last year’s nests, 3 hunting out in Ray’s Prairie
3/10/24		6	ash grove	Joel Geier	6 in ash trees around last year’s nests, all toward north end
3/17/24	10:00	6	ash grove	Joel Geier	About 6 standing on nests (brief drive-by)
3/31/24	09:35	6	ash grove	Joel Geier	At least 6 incubating on nests. 3 additional nests seen but could not tell if occupied.

Figure 5. Satellite view of the fill-dirt stockpile from April 19, 2024, showing continuation of excavation activity southwest of the poplar grove nesting area, during the early part of the heron nesting season. Note that the road leading out from the east side of the stockpile continues to show signs of recent use. Tracks in the adjacent grass field, approaching within 250 ft of the heron nests, are presumably from operation of spray buggies during early spring.

Heron nesting activity in 2025 (to date)

Community nesting observations during the 2025 nesting season through the date of this report (March 14, 2025) are summarized in Table 5.

Thus far there have been two observations during March in which herons flew into and/or perched in the poplar grove. However the main locus of nesting activity continues to be in the ash grove.

Disturbance within the recommended 1/4 mile buffer zone is again ongoing and has intensified as of the date of this report (Figure 6).

Table 5. Heron observations during 2025.

Date	Time of day	Number of herons	Location	Observer	Effective transect width (m)
2/09/25	10:00	5	ash grove	Joel Geier	Standing in and near nests, flew off to north
2/21/25	13:30	10	ash grove	Joel Geier	Standing in and near nests
2/28/25	10:00	8	ash grove	Joel Geier	Standing in and near nests
3/06/25		1	poplar grove	Karan & Jim Fairchild	we did see a heron fly low into the hybrid poplar stand, but lost where it went.
3/06/25		1	ash grove	Karan Fairchild	one heron standing on a nest in the thick ash tops immediately east of 99W. I could count at least 12 nest accumulations in the hybrid poplar stand, but saw no herons on nests.
3/11/25	11:55	1	poplar grove	Joel Geier	Heron called while flying north from area of ash grove, looped back over Toketie Marsh and landed to perch in edge of poplars, south of Coffin Butte Road near OP2 (2nd utility pole west of highway). Viewed from north of archery range.
3/11/25	12:05	2	prairie restoration just e. of trailhead.	Joel Geier	Two adult herons hunting in prairie.
3/14/25	13:30	8+	ash grove	Joel Geier	Two herons incubating on nests, others standing in or near nests. Very brief stop. Excavation activity noted adjacent to poplar grove.
3/38/25	12:00	10+	ash grove	Joel Geier	7+ incubating on nests, 2 standing in nests, 1 building new nest.
4/08/25	09:35	10	ash grove	Joel Geier	9 incubating, 1 standing in nest. Small nests up high now occupied with incubating birds.
4/19/25	11:00	3+	ash grove	Joel Geier	Litter crew walking/working on both sides of highway. Herons standing up in nests.
4/20/25	15:30	3+	ash grove	Joel Geier	Brief check following disturbance. 3 herons standing in nests. Heard "cluck" calls indicating birds still in agitated state.

Figure 6. Photograph from March 14, 2025 of excavation activity underway on, below the previous natural grade of the stockpile. Dump trucks observed entering and leaving site via the road to the east, passing within 600 feet of the nesting area in the poplars.

RE: LU-24-027 Conditional Use Permit Application Regarding Landfill Expansion

Dear Nicholas Fowler, Chair, and Members of the Benton County Planning Commission:

Thank you again for the opportunity to comment on the Conditional Use Permit (CUP) application submitted by Valley Landfills Inc., which corporation proposes to construct a new landfill on the north end of Tampico Ridge, south of Coffin Butte Road.

This is my second in a series of comments, and it will be brief.

Today while returning from bird surveys near Airlie, I noticed windblown plastic trash far out in this agricultural field. This is another consequence of the landfill operation. The impacts extends far into Polk County, at least as far as Rickreall.

I'm sharing a few snapshots on the following. This particular land belongs to Green Spring Farms, which specializes in regenerative agriculture. Their office is located in Suver, about 2 miles from the landfill.

A suggested question for you to ask of Staff:

Did Green Springs Farms receive a notice of opportunity to comment on LU-24-027? What about other farms in the landfill-impacted area, which for this issue extends at least as far north as Rickreall?

Thank you for considering these comments. I reserve the right to provide further written and oral testimony according to the time frame allowed by statute.

Yours sincerely,

Joel E. Geier, Ph.D.

Great Old Broads FOR Wilderness

April 19, 2025

To: Benton County Planning Commission, Nick Fowler, Chair

The Willamette Valley chapter of the Great Old Broads for Wilderness **strongly opposes the expansion of the Coffin Butte Landfill**. For the health of our air, water, land, and communities, now and into the future, we insist that the Benton County commissioners reject this noxious expansion.

The Great Old Broads are a national grassroots organization and most of our chapter's more than 100 dues-paying members are Benton County residents who care deeply about the people and nature of the Willamette Valley.

Rather than considering any expansion of this faulty landfill, we believe Benton County should be realistically planning the *inevitable* closure of the landfill. That means developing a serious plan that details a modern waste-recovery facility, an effective waste-reduction system, and a realistic accounting of the cost of clean-up, a cost that Benton County residents will have to pay. Such a plan should be developed in a public process, and be responsible to public review and comment.

As for the proposed expansion of the landfill, we see many troubling problems, including:

• **Gross under-reporting of methane pollution by Valley Landfills, Inc.**, despite 2023 satellite images that show some of the largest methane plumes in the Pacific Northwest emanating from Coffin Butte. In 2022 and again in 2024, the EPA found explosive levels of methane leaking from Coffin Butte, after Valley Landfill had reported only negligible leakage. Landfills are a major source of methane, a climate-damaging gas 28 times more powerful than CO2.

A landfill expansion will only exacerbate this problem at Coffin Butte. This would seriously interfere with the health and well-being of adjacent residents and public lands within a four-mile radius, where widespread drift of noxious chemicals is regularly detected by residents and recreationists. (Criteria 1)

• **Other hazardous pollutants, including mercury, lead, industrial solvents, and "forever chemicals" (PFAs) leach out of the landfill and end up in the Willamette River**. In 2021, 31 million gallons of leachate were pumped out of Coffin Butte and sent to wastewater treatment plants in Corvallis and Salem, where the leachate passed through treatment plants not equipped to capture PFAs, and then dumped into the Willamette River.
Without a credible plan for significantly reducing leachates, a landfill expansion would increase

toxic pollution into the Willamette River, putting increased burden on public utilities by further fouling municipal sources of drinking water. (Criteria 2)

• **Coffin Butte already receives one-third of all of Oregon's garbage**, much of it in large loads of unsorted solid waste. Valley Landfill and Republic Services make little effort to encourage (much less enforce) recycling and waste reduction, despite DEQ's mandate to shift from Solid Waste Management to Materials Management. An ever-larger landfill serves far-flung communities that choose to ignore the importance of Materials Management and leaves an increasing burden of liability on Benton County.

Benton County needs a far more serious Sustainable Materials Management Plan that provides a roadmap toward eventually closing, not expanding, Coffin Butte. The current status-quo approach to waste management violates the shift toward Sustainable Materials Management criteria endorsed by Benton County and the state of Oregon. (Criteria 3)

• **The environmental impact of Coffin Butte extends well beyond the landfill itself.** Besides releases of climate-damaging methane into the air and toxic leachate into the river, the smell of rotting garbage percolates across the northern part of Benton County. Wafting along with rank odors is a cocktail of toxic chemicals—vinyl chloride, ethyl benzene, toluene, benzene—that can endanger public health and welfare. Expanding the Coffin Butte landfill will certainly expand the release of these toxins.

Coffin Butte started as a military dump for Camp Adair during World War Two. The expanding sight, smell, and health threats of this landfill has made it a filthy "Welcome to Benton County" landmark that seriously damages the character of the area. (Criteria 1)

• **Benton County is burdened by the unlimited long-term risk and environmental liability for the landfill,** even though Benton County does not own the landfill. Republic Services, and its subsidiary, Valley Landfills, own and operate the landfill, but it is likely that Benton County will face substantial financial expense of cleanup, which could be far greater than the funds currently being saved for this purpose.

An expansion of the landfill imposes the burden of increased risk and liability on Benton County, compromising the county's capacity for future public improvements, facilities, utilities, or services available to the area and to the residents of Benton County. (Criteria 2)

• **Expanding the landfill removes any volume restriction imposed by Benton County**, freeing Republic Services to immediately increase intake of waste from the region. This Coffin Butte expansion will have long-lasting negative impacts to water quality, air quality, and the climate, rippling far beyond the local area and lasting far longer than the short lifespan of the landfill.

In summary, expansion of the Coffin Butte landfill:

- Will seriously interfere with current and future uses on adjacent property within the watershed, air-shed, and view-shed. (Criteria 1)
- Will seriously interfere with the character and identity of the area, making Benton County a

dump site rather than a destination. (Criteria 1)

- Will impose an undue environmental and financial burden on future public improvements, facilities, utilities, and services that might otherwise be made available to the surrounding area. (Criteria 2)
- Will violate the spirit and the mandate to shift from Solid Waste Management to Materials Management, a stated goal of Benton County and the State of Oregon. (Criteria 3)

Thank you for considering our comments.

Sincerely,
Benton County members of the Willamette Valley Broadband leadership team

From: Gregg, Jillian
To: Benton Public Comment
Subject: Oppose/Deny LU-24-027 - Do Not Expand Coffin Butte Dump!
Date: Monday, April 21, 2025 4:28:31 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To Whom It May Concern,
I am very concerned about any consideration of expanding the Coffin Butte dump.

The Environment and Natural Resources Advisory Committee for the County voted 5-1 to deny the application.
I agree with this assessment fully due to the significant air and water pollution concerns as summarized in their report. I trust that our county commissioners will heed this wise council and do their best to support a sustainable future.

Thanks for your help in all that you do!
Jillian Gregg

Re: File Number LU-24-027
Comments regarding Conditional Use permit proposal to expand the Coffin Butte Landfill,

From my perspective, it is not in the best interest of Benton County nor my adjacent property to support the expansion proposal. The impact of the landfill on adjacent property uses and the overall character of the area has become more and more significant since the site was changed from local to regional. Dramatically increasing the annual intake of refuse is not the answer. In addition, an increasing burden is being imposed upon the local infrastructure, primarily regarding state and county roads and emergency services, but also including habitability of the local region for humans and wildlife. An expansion of the landfill will only exacerbate this situation.

My commentary in no way is to be construed as an affront to the talents and work performed by the operators of the landfill. They perform their work in a very professional manner. It is not their fault that this landfill is in an inappropriate location for expansion and actually should be capped and terminated. Having a major landfill in an area with significant rainfall - immediately upstream and adjacent to a wetland wildlife refuge for aquatic flora and fauna is not in the best interest of future generations. We can do far better!

The vastly increased intake of refuse has already negatively impacted the value of my property. Refuse is apparent on Hwy99W in increasing amounts from improperly secured transport vehicles. Odors that were uncommon for decades are on the increase and noise from the vehicular operations is heard more as the landfill height increases. In addition, the observation by passing motorists on Hwy99W is now one of sheets of plastic instead of grassy green slopes.

There is a great deal of inertia regarding refuse disposal. Work is underway to move us in the direction of less need for landfills, but at a minimum one could locate landfills in regions far superior to one which is adjacent to a wetland and has a moderate to high level of rainfall. Long ago, Oregon commenced development of a means to utilize a landfill located in an arid region of our State for refuse including the use of public funds to build transfer stations on railway systems. It is time we utilize this form of conveyance and also take steps to further encourage compost operations and reclaim. By not supporting an expansion of the existing landfill, the movement toward such a future would be encouraged.

Observations:

1. The air quality at my residence and all the others on the North side of the Butte seems to be increasingly affected by odors believed to be emanating from the landfill as it is now growing at a far greater rate than it was in prior years. It is suspected that this is due to the increased elevation and change of the location of the dumping sites, but may also be impacted by covering practices. This last year, I have noticed many days in which an odor is present, however I have been remiss in reporting each day of an odor event as they are so frequent. Once I am indoors, the filtering in my HVAC system reduces the intensity. I do not measure the composition of the emissions detected. These odors are those of decaying organic matter.

2. Airborne debris are being deposited on my property from the landfill at a rate that has been increasing during the last few years. I can supply photos of such material should these be necessary. The majority are plastic films such as bags and wrappers commonly discarded in refuse streams.

3. The view from the apex of the Butte is now being occluded by portions of the landfill. The ramifications are a lack of the ability to view Hwy99W at this time. The horizon view has not been occluded to date, however in the event the landfill and any structures reach a height approximately 50 feet below the location of the telecommunications systems, their presence will negatively impact the site viability for such operations.

4. In addition, the ambient audio noise at the hilltop due to the vehicular and equipment operations at the landfill during operating hours is significantly greater than it was when fewer vehicles were traversing the area and when the landfill dump site was not as elevated. This does reduce the quality of the conditions at the geodesic dome.

5. The noise floor (a technical term related to telecommunications) has increased from S1 as measured by radio apparatus in 1990 to S6 as measured this year. This represents an increase in the local electronic noise from radio sources of approximately 30dB, or a factor of 1000. This increase has reduced the quality of the site for telecommunications operations. It is unclear as to the source of this radio noise, it is under investigation. The noise floor at my residence on the North Side of the Butte has remained at S1 and not increased.

6. Property value estimations (Zillo) have been declining over the last few years. While uncertain of the precise reasons for such declines, the net result is that the absolute value of the property I and others on the North Side of the Butte own may be further at risk if expansion is supported.

Recommendations:

1. Monitoring and reporting of the air quality including both Greenhouse gas emissions (Carbon Monoxide, Carbon Dioxide, Methane, etc.) and known odor compounds (such as Sulfides and Non-methane organic compounds) with alert notifications to the public and any personnel that can take actions toward abatement if levels exceed either emission standards for public areas or significant odor detection levels. Monitors should be placed at the periphery of the landfill properties. A minimum of four such monitors downwind from the landfill in the top four prevailing wind directions.

3. Public dissemination of the water quality of all test wells on a website that is easily accessible with appropriate comparison to similar regions beyond the local landfill area.

4. Testing and reporting of the water quality for all local residential drinking water wells performed at a minimum annually with comparison to Oregon standards for Drinking water.

5. Covering of all areas of the landfill deemed "filled" with an appropriate layer of local fill dirt and nurturing of appropriate grasses on this fill that will not penetrate the polymer layers below and provide a more pleasing view to motorists passing the landfill along Hwy99W. It is important not to import fill dirt that may contain invasive species seeds from remote locations.

Following are some details of the impacts I have experienced, many of which are increasingly interfering with my intended uses and can be construed as becoming a burden for the public as well.

I have owned and resided on 40 Acres of land on the north side of Coffin Butte since 1980. My property extends from Military Road Southward and over the crest of Coffin Butte and contains the summit. A portion of my property extends on the south face of Coffin Butte and adjoins the landfill properties. I chose this property based on its qualities for residence, agriculture, forestry and radio telecommunications. These uses have been identified in the legal documents I prepared regarding my land use. I have supplemented the forest through planting and maintained its integrity to the present day. I had a road constructed that reaches the top of the Butte. Along that road, there are several test wells. Water samples are drawn from these wells by Republic or its representatives on a periodic bases. Reports of the water quality have not been received by me so I am uncertain of even my own water well quality.

Radio Telecommunications:

The apex of Coffin Butte is one of the best sites for radio telecommunications in the local area. This is one of the primary reasons I selected the property. I have made significant capital improvements to the hilltop to enable the telecommunications:

- a 35-Foot geodesic dome
- three 50-foot self supporting towers
- two smaller self supporting towers
- a self-supporting 50 foot rotating mast
- Solar panels to harvest electric energy
- Storage batteries
- Radio Telecommunications electronic hardware
- Antennas for communications
- Remotely operated amateur radio communications equipment
- There is a well situated on the hill crest

Soap Creek valley is the secluded valley immediately West of Hwy99W and South of the Landfill area. My property is the site of an amateur radio emergency services radio relay (repeater) station for that valley as it is the ideal location for such a communications gateway. The repeater is powered via solar panels with battery storage and is fire hardened as it is buried below its antenna tower. It is in place to facilitate emergency communications to and within the Soap Creek valley. This emergency

and maintained by the Soap Creek valley Amateur Radio community, a volunteer group composed of local citizens within the valley. They have also connected non-amateur radio citizens in the valley through the use of FRS (Family Radio Service) communications tools.

I am an amateur radio operator, having been first licensed in 1966 and continually hence. I am a member of the Amateur Radio Relay League and president of the Oregon Chapter 108 of the Quarter Century Wireless Association. While these are not professional employment activities (amateur radio operators and communications are stipulated by law to be non-commercial), they enable me to aid my fellow citizens in times of natural and other disasters when other forms of communication are not available or unreliable. I have been a Benton County Emergency Services volunteer since 1980.

The Quarter Century Wireless Association Oregon Chapter has installed a remote amateur radio transceiver system within the dome I own on the hilltop. It is powered by solar panels with battery storage. There is a wireless communications control link to this system to one of the Amateur Radio operators in Soap Creek Valley. These types of communications links operate in the 3 to 5 GHz region of the radio frequency spectrum and are considered "line of sight". This means if something blocks the path, communications are not possible.

As long as the landfill surface stays at a minimum 50 feet below my lower property line, it should not deleteriously affect signal transmissions to the site. At the present time, increased radio and audio interference is present for signal reception. At this point is it more of a nuisance than a major issue, however it does reduce my ability to utilize my property in the manner I have been using it since 1980. The earlier local (not regional) landfill was not increasing in size at a rate that would significantly alter my use for radio communications for the foreseeable future, but with the increase from 40KTons to 1MTons annual input, the time to potential interference was reduced by a factor of 25 to roughly 6 years instead of 150 years.

Forestry:

The property was purchased with timber remaining in 1980. Harvesting was performed prior to my purchase, but probably no later than in the 1940's. Trees spanning up to 40 – 50 years age were on the property. To improve the forest, I have planted hundreds of tree starts on the North side of the Butte. The trees on the North side now range in age up to at least 100 years and many exceed 100 feet in height. This year I am in the process of improving the forest further through the removal of invasive species and possibly some selective thinning. The trees do not seem to be affected by the proximity to the landfill, however significant quantities of plastic film-like materials have been found throughout the property. These were not present when I acquired the property in 1980 and are likely the result of a modest amount of material being lofted by wind from the landfill. As the height of the landfill operation level increases, more such material will be lofted and deposited on the North side of the hill. This type of deposit is primarily a nuisance. It does degrade the quality of the property from my perspective and for anyone that might be considering acquisition of it after me.

Agriculture:

The property at the top of the hill and at the bottom on the north side are suitable for pasture use. The land quality is adequate for fruit trees and berry bushes, but not very suitable for row crops. Currently, the hilltop has not been employed as pasture for livestock in part due to its remote location. Odors from the landfill will probably not affect use of this nature unless there are toxic elements to the emissions. It is unknown if toxic or otherwise dangerous emissions exist from the landfill as no monitoring of the emissions is evidently taking place. The odors detected by personal observation seem to be from the landfill, but the composition of these is unknown for the above mentioned reason.

were in place. Whether or not an expansion takes place, it is likely emissions will increase as the landfill active area is elevated and hence such monitoring is increasingly important to ensure safety both for personnel living near and utilizing or working at the landfill.

Residence:
I have resided at 39125 Military road the majority of the time since 1980. While the landfill was a small county facility, I had a close and friendly relationship with Mr. Weber and his operations. I was well aware of the landfill and was of the understanding that it was to focus on local refuse. The rate of landfill deposition was far lower until the change to a regional landfill. While I am a local landholder, I was not aware of any opportunity to comment regarding the change to a regional landfill. That change has affected my quality of life, property use, and the character of the region. In spite of this, my relationship with Valley Landfills and Republic has been friendly. I have happily cooperated with access to the monitoring wells and other items. It is not them that are creating the issue, it is the location and geology of the site.

Odors and audio emissions from the landfill have been on the increase over the last several years. While odors have been present frequently, I have not sent in very many notes regarding odors or audio emissions. At this time, odors are present frequently, and do detract from the ambiance of my residence. Odors are present even during periods in which the landfill is closed. Noises (back-up beepers, etc.) are heard more often lately during the operations, disturbing the ambiance as well.

As the landfill increases in extent, the market potential for my property diminishes. Should the landfill be completed and closed, my property value will likely stop diminishing, odors and emissions will reduce and the view from the apex of the butte would be of green grass instead of black plastic. Due to our climate, rainfall permeates the landfill and enables materials to migrate through runoff beyond the confines of the landfill, either as surface water or even possibly penetrating and entering the aquifer.

No matter what takes place, I shall remain committed to my term of participation in the Benton County Disposal Site Advisory Committee. We have recently worked as a team and developed a plan towards increasing the preparedness of the site in the event of a wildfire entering or emerging during the fire season. Thanks go to Republic and the Adair Rural Fire Department on this matter!

Sincerely, Dr. David Hackleman

Testimony in opposition to LU-24-027

Camille M. Hall

7175 NW Mountain View Drive

Corvallis, OR 97330-9118

I have lived in the Lewisburg area of Corvallis, 6 miles south of Coffin Butte Landfill, since 1981. During this time, I have watched it grow from a small rural landfill, to a Regional Landfill, and now to the second largest landfill in the State.

I oppose LU-24-027, expansion of Coffin Butte Landfill, based on Benton County Code 53.215 (1) "seriously interferes with the character of the area", and 53.215 (2) "places undue burden on public activities and infrastructure", with regard to the impacts of the dump on livability, public health and safety in the neighborhoods around Lewisburg/Adair Village.

Benton County Code 53.215 (1) "seriously interferes with the character of the area":

With each growth spurt the landfill has grown noisier, smellier and more visible:

> Smells from the landfill, made up of methane combined with toxic chemicals such as benzene, vinyl chloride, nitrogen dioxide and micro plastics, drift for miles in all directions, carried by seasonal winds and weather.
>
> Toxic leachate is captured and trucked to disposal sites, ending up in the Willamette River without adequate treatment to remove toxic elements carried by rainwater falling on the dump and percolating through the trash.
>
> Trash and traffic impacts from the landfill are ever-present for North Benton County residents and travelers passing by the landfill as they encounter the hundreds of commercial trash haulers that come and go daily, in the vicinity of the landfill on Hwy 99W, Independence Highway, Coffin Butte and Camp Adair Roads.

The property Republic Services is requesting to excavate for a new landfill south of Coffin Butte Road is the buffer zone that was created to address safety and livability for neighboring properties in an earlier expansion of this landfill. Development here will not just impact the houses on the other side of Tampico Ridge, it will destroy their livability, forcing them to vacate. This has been a repeated pattern for operators of this landfill.

The first step in developing the new landfill will require months of blasting and removing soil and rock from half of the hillside, up to the ridge, to make room for trash. This will destroy the

livability, property values, wells, airspace and groundwater for property holders along Tampico Ridge. Then trash will be piled up against the remaining hillside, pushing odors and toxic leachate over the ridge. Leachate from the leachate pond RS intends to place on the upper north side of the ridge will drain into the wells and groundwater of houses on the other side of Tampico Ridge. There will be no relief for Tampico Ridge residents, from the sounds, smells, lights and vibrations of a working landfill sited on the 59-acre Tampico Ridge parcel proposed for landfill development under LU-24-027.

The existing landfill, without the southern expansion requested in LU-24-027, is currently within 2.6 miles of Adair Village. This request will bring the landfill within sight of parts of Adair Village. Residents there already bear the impacts of increased volume at the existing landfill. This expansion, with or without removal of the annual tonnage cap, will bring the landfill even closer and increase Republic Services ability to market landfill space, creating the demand for multiple inevitable expansions as the landfill outgrows its footprint.

Benton County Code 53.215 (2) "places undue burden on public activities and infrastructure":

In 2021 the Planning Commission denied the Republic Services (RS) landfill expansion request because of safety and livability issues. The impacts of this request are no different. Though the acreage requested here is a fraction of their earlier request, it creates a new landfill across Coffin Butte Road. By opening this new working face, road use along Coffin Butte Road will be dominated by cross-traffic from commercial trash trucks coming in from Hwy 99W or Camp Adair Road, turning left across Coffin Butte Road, into the new dump. Heavy equipment and truck traffic will also move between the two dumps, making it dangerous and difficult for any through-traffic to travel on Coffin Butte Road.

I am particularly concerned about the event of an emergency, whether wildfire, landfill fire, or earthquake. With approximately 350 commercial trucks a day, from many different locations and businesses, coming into and leaving Coffin Butte landfill, an average of 35 trucks an hour entering and exiting the dump over a 10-hour day, it will be difficult if not impossible for RS to stop in influx of trucks during an emergency, without backing up traffic along the major evacuation routes: Hwy 99W, Independence Road, Camp Adair Road. These emergencies could cause commercial trash trucks to stack up on Highway 20 out of Albany, I-5, and Hwy 34/Philomath Boulevard into downtown Corvallis.

I urge you to deny LU-24-027. Please act to preserve the livability, public health and safety of Corvallis and North Benton County.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Please do not approve the expansion of the Coffin Butte Landfill! It is harmful to our community and brings no helpful benefit to the people who live here. It is a selfish proposal to benefit the economic gain of a company at the health, community, and environmental detriment of our home.
I live south of Corvallis and drive past the landfill frequently, I run in the forest, I have friends who live by the well and whose air quality and well-water quality are affected by the pollutants from the landfill, I have previously lived near the landfill and been one of those residents myself.
I urge you to please consider the health and environmental impact on our community more than the economic incentive of serving Republic Waste. The cost is nowhere near with the benefit and this would be a massive mistake, with impacts for generations to come, which would not be easily undone, and the negative results of that decision would be your responsibility to bear.

Thank you,

Naomi

April 21, 2025

Dear Planning Commissioners,

I am writing to you today in conjunction with the Board of Directors of the Adair Rural Fire Protection District, on behalf of our volunteer firefighters and more importantly, the community we are dedicated to serving.

We intend to highlight four concerns pertinent to the current land use application to expand Coffin Butte Landfill, LU-24-027. Namely, the impacts on property tax values, traffic risks, fire risks, and sustainability of the volunteer firefighter department. Until the County has answers to the questions posed below, we believe that any approval is premature.

1) The Adair Rural Fire & Rescue budget is funded by property taxes from residential and commercial properties in our 18 square mile District, including the City of Adair Village and neighborhoods on Tampico, Soap Creek, Wiles, Military, Robison, Calloway, and Arboretum. We already have a much smaller budget than comparable fire districts in the area, and we rely on every dollar of property tax revenue we receive to serve our community.

It is well documented that residential areas close to landfills experience diminished property values. According to the Vasarhelyi at the Environmental Center at University of Colorado Boulder (2021), “Large landfills, on average, decrease the value of land adjacent to it by 12.9%.” What analysis has been completed by the County to estimate the impact on property values within the vicinity of the landfill if the expansion is approved? The District suggests such impacts include those on property value calculations in Corvallis, North Albany, and Philomath. This analysis should include impacts related to air quality, water quality, traffic risks, and roadside trash in order to determine long-term property value forecasts within the Adair Fire District boundaries. Both a reduction of property values and a reduced desire to build new homes within our District will place an undue burden on our ability to continue to respond to and serve the medical, traffic accidents, and fire needs of our District.

2) There has been a significant increase in daily truck trips to the landfill over the last 5 to 10 years. Has the County performed an analysis on vehicle trips, motor vehicle collisions, and road conditions during this time? Has the County analyzed data with surrounding counties, along major travel routes from counties that transport to Coffin Butte Landfill? Has there been an increased burden on emergency services along these routes? If the annual tonnage cap is lifted (an expected consequence of any expansion), what additional burden will be placed on our District and those emergency response districts between Coffin Butte and each county that transports waste to our county? How will that burden be compounded if there is also a corresponding drop in property tax revenue?

3) I have attached a document developed by FEMA's National Fire Data Center, addressing the characteristics and risks associated with landfill fires. One specific topic of note is the impact of methane leaks on the severity of landfill fires, particularly when the levels of methane become

explosive. Coffin Butte is currently involved with an EPA investigation regarding methane leaks, including results of recent inspections that show explosive levels. According to the same document,

> "Landfill fires are particularly challenging to the fire service. A large landfill fire will generally require numerous personnel and significant amounts of time to contain. Both of these circumstances can strain a jurisdiction, particularly one dependent on volunteer staffing" (FEMA, 2005).

Has the County developed a complete understanding of the ramifications of the recent EPA inspections and ongoing administrative process? Has the County conducted an analysis of how additional waste placement on the south side of Coffin Butte Road and associated methane production will impact the safety and risk burden placed on Adair volunteer firefighters, all other Benton County fire agencies, and our surrounding mutual aid partners, Albany Fire and Polk County Fire?

4) Adair Rural Fire & Rescue is staffed by two part-time officers, and 12 currently trained volunteers, down from historical highs of 20+ volunteers. As air, water, traffic, and property value concerns change over-time, there is an increased risk that the Adair Fire Department could become unsustainable. If the department experienced an inability to recruit and retain volunteers, the fire insurance for residents in our District will be significantly negatively impacted from the current ISO Rating of 3. This would result in large increases in yearly insurance premiums for property owners in the District, and potentially the inability to obtain fire insurance at all. Fire insurance is required for anyone who has a mortgage and recommended for all structures. This would place a significant burden on all residents and businesses in the District.

Please thoroughly consider the burdens placed on our community as you consider this land use matter. Without proper answers to these questions, it is not possible to verify that the proposal will not place an undue burden on public resources and the citizens served by those resources.

Sincerely,

Aaron C. Harris

MISSION STATEMENT

As an entity of the Federal Emergency Management Agency, the mission of the U.S. Fire Administration is to reduce life and economic losses due to fire and related emergencies through leadership, advocacy, coordination, and support. We serve the Nation independently, in coordination with other Federal agencies and in partnership with fire protection and emergency service communities. With a commitment to excellence, we provide public education, training, technology, and data initiatives.

CONCLUSION

ACKNOWLEDGMENTS

The United States Fire Administration greatly appreciates the help of the following persons who provided information or reviewed this report:

Rodney Slaughter	Rodney Slaughter is the President of Dragonfly Communications Network, a fire service training and consulting firm.
Todd Thalhamer	Todd Thalhamer, P.E., is a waste management engineer with the California Integrated Waste Management Board. Mr. Thalhamer specializes in investigating and mitigating landfill and tire fires for the State of California.
Dr. Tony Sperling	Dr. Sperling is the President of Sperling Hansen Associates and the founding partner of Landfillfire.com (http://www.Landfill-fire.com). Since 1997, he has specialized in landfill fire risk reduction training and landfill fire extinguishment on more than 30 landfill fire projects.

EXECUTIVE SUMMARY

Landfills can be controversial in and of themselves. Homeowners and business owners tend not to support the siting and development of landfills in their neighborhoods due to perceived notions about noxious fumes, health and environmental effects, and adverse influences on property values. Fires occurring in landfill sites are an ongoing, complex problem that has existed for decades.

Although relatively uncommon, fires in landfills generally receive substantial media attention and have the potential to become politically damaging events. Landfill fires threaten the environment through toxic pollutants emitted into the air, water, and soil.

Landfill fires are particularly challenging to the fire service. A large landfill fire normally requires numerous personnel and a significant period of time before it is contained. Both of these circumstances can strain a jurisdiction, particularly one dependent on volunteer staffing.

Landfill operators, members of the fire service, and community residents need to learn as much as possible from past experience to prevent and mitigate future landfill fires.

REGULATION. In 1976, Congress passed the Resource Conservation and Recovery Act (RCRA), which gave the Environmental Protection Agency (EPA) the authority to control hazardous waste from "cradle-to-grave." RCRA covers the generation, transportation, treatment, storage, and disposal of hazardous waste and provides a framework for the management of non-hazardous wastes. A turning point in landfill regulation and remediation occurred in 1980, first with the "Superfund" legislation, followed by the Hazardous and Solid Waste Amendments (HSWA) in 1984, which finally gave the EPA regulatory authority over landfills. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), known as Superfund, governs closed and abandoned hazardous material waste sites, provides for the liability of persons responsible for the release of hazardous materials at these sites, and established a trust fund to provide for cleanup where no responsible party could be identified.

CHARACTERISTICS. The most common type of landfill is one that is designed to accept municipal solid waste (MSW). Other types of landfills include hazardous materials landfills, construction and demolition landfills, and industrial landfills. Each type of landfill has specific characteristics based on the type of waste it is designed to accept.

The passage of liquid through solid waste in a landfill creates leachate, which contains potentially dangerous pollutants. As such, landfills must operate in a manner that protects the environment, particularly surface and ground waters, from leachate contamination. To do this, landfill designs generally incorporate a composite liner and a leachate collection system, and landfill procedures require that the waste collected each day be completely covered.

Because of the methods normally adopted to deposit, compact, and cover waste in landfills, the decomposition of waste is largely anaerobic, which results in the production of large quantities of methane and carbon dioxide. Landfills are the largest source of methane emissions in the United States; in 1999, 35 percent of methane emissions were from landfills. Methane is highly flammable and plays a large role in the ignition of landfill fires.

EXTINGUISHING LANDFILL FIRES. The different dynamics, characteristics, and regulations of landfills and the fires that occur in them suggest that firefighting tactics need to be determined on a case-by-case basis depending on the materials buried in the landfill, which materials have ignited, depth of the fire, and the fire's ignition source. Challenges explored in this report include wind/weather; water supply; multi-agency response; personnel safety; access to, access by and maneuverability of heavy equipment; logistics; environmental impact; and landfill contents (potentially hazardous or illegal).

PREVENTION. Fire prevention actions can reduce property damage and the risk of injury and death, as well as decrease health and environmental hazards associated with landfill fires. As a rule, the cost of prevention is less expensive than the cost of fighting and cleaning up a fire. In many cases, particularly at larger landfills, fire prevention activities are mandated by law. The principal methods for landfill fire prevention include effective landfill management and appropriate methane gas detection and collection.

STATISTICAL ANALYSIS. Data from the National Fire Incident Reporting System (NFIRS) does not include MSW landfills as a fixed property use category. Rather, the NFIRS data set includes a category for "dump or sanitary landfill" under NFIRS Fixed Property Use code 932. Although this definition is broader than the definition of a landfill, it is the closest match available in NFIRS. Based on extrapolation of the NFIRS data, each year in the United States an average of 8,400 dump and landfill fires are reported to the fire service. This represents less than a half percent of all reported fires. Undoubtedly, some landfill fires go unreported because they burned undetected or were on private property and extinguished by the landfill operator. Reported fires are responsible for less than 10 civilian injuries, 30 firefighter injuries, and between $3 and $8 million in property loss each year.[1] Deaths (civilian or fire service) are rare in these fires. Since NFIRS represents a sample of data, it may be that fatalities occurred during the study period and were not reported or captured in the data.

CASE STUDIES. A sample of landfill fires throughout the world sheds light on the landfill fire problem. Waste disposal practices and the regulation of landfill sites are similar in the comparison countries. Landfill fires have been investigated and studied in more detail in these jurisdictions than in the United States. In addition to presenting U.S. case studies, this report includes brief synopses of interviews and media reports detailing landfill fires in the United States and the lessons that were learned from them.

[1] National estimates are based on NFIRS data (1996–1998) and the National Fire Protection Association's (NFPA) annual survey, *Fire Loss in the United States*.

LANDFILL FIRES

THEIR MAGNITUDE, CHARACTERISTICS, AND MITIGATION

Fires occurring at landfill sites across the United States are an ongoing, complex problem that has existed for decades. Landfill fires threaten the environment through toxic pollutants emitted into the air, water, and soil. These fires also pose a risk to firefighters and civilians who are exposed to the hazardous chemical compounds they emit. The degree of risk depends in part on the contents buried in the landfill, the geography of the landfill, and the nature of the fire. There can be great difficulty in the detection and extinguishment of landfill fires, which is compounded because these fires often smolder for weeks under the surface of the landfill before being discovered.

This report was prepared by TriData Corporation, Arlington, Virginia, under contract to the Federal Emergency Management Agency, U.S. Fire Administration (USFA), National Fire Data Center. It presents an overview of the landfill fire problem. Issues examined include the landfill components that create fire hazards; the effect of Environmental Protection Agency (EPA) regulations and landfill cleanup efforts; a profile of landfill fires including their characteristics, methods of extinguishing, and safety issues for firefighters; prevention efforts to reduce landfill fires; and past examples of significant landfill fires and lessons learned.

SOURCES OF DATA

Data on the number of municipal solid waste (MSW) landfill sites in the United States and their current regulations regarding disposal, including those open for disposal and those retired from service, were obtained from the EPA. Data and regulation information pertaining to the Superfund project, including current maps outlining ongoing landfill cleanup efforts, were also obtained from the EPA.

The EPA derives their landfill statistics from *BioCycle* magazine, which conducts an annual survey called "The State of Garbage in America." *BioCycle* magazine sends the survey to state officials and follows up the collected data with phone calls, e-mails, and letters to obtain as complete and accurate information on each participating state as possible. The survey collects data on MSW disposal practices in the United States, including information on national recycling rates, number of municipal solid waste landfills, and disposal rates.

Other information on landfill definitions, landfill dynamics, landfill regulations, and chemical compounds contained in emissions were derived from several sources within the EPA.

Landfill fire statistics presented here are based on data from the National Fire Incident Reporting System (NFIRS). NFIRS, established in 1975, is a data system maintained by USFA and today is the largest fire data set in the world. Not all fire departments participate in NFIRS, but the distribution of participants in NFIRS is reasonably representative of the entire nation, even though the sample is not random. Since the data set is incomplete and represents only a sample of American fire departments (<40 percent), many of the numbers in this analysis are national estimates or percentages rather than raw totals or absolute numbers.

Technical information on the characteristics of landfill fires was gathered from sources ranging from the textbook *The Essentials of Firefighting*[2] to various international studies on landfill fires.

Interviews were conducted with fire department representatives who have dealt with landfill fires. Examples of these fires are included in the report, along with lessons learned by the departments in suppressing the fires. Media reports (newspapers, magazines) provided further information about those fires discussed during the interviews.

WHY STUDY LANDFILL FIRES?

Landfills tend to be controversial in and of themselves. Homeowners and business owners may not be inclined to support new siting or development in their areas due to perceived notions about noxious fumes, health effects, and adverse influences on property values. As such, landfill fires can raise political issues and have implications for elected officials on election day. Further, the costs associated with fire suppression and environmental monitoring during a landfill fire can be enormous. This raises questions as to who is responsible for those costs—the municipal jurisdiction, a private company that operates the landfill, a combination of both, or some other entity.

Although relatively uncommon, fires in landfills generally receive substantial media attention. In some cases, landfill fires can smolder for weeks, producing odorous and noxious smoke that can be a community annoyance and that pose a health risk to civilians, firefighters, and others who are exposed.

Depending on the type of landfill and its contents, the smoke from a landfill fire may contain dangerous chemical compounds, which can cause respiratory disorders and other medical conditions. Even if the smoke is benign, it can still aggravate existing respiratory conditions and reduce visibility around the landfill. In addition, contrary to conventional thinking, the use of large amounts of water to suppress a landfill fire can actually make the fire worse by increasing the rate of aerobic decomposition, which increases the heat available inside the landfill. Further, runoff from suppression efforts can overwhelm a landfill's leachate collection system and contaminate ground or surface water sources.

---

[2] *Essentials of Firefighting 4th Edition*, International Fire Service Training Association, 2001.

Landfill fires are particularly challenging to the fire service. A large landfill fire will generally require numerous personnel and significant amounts of time to contain. Both of these circumstances can strain a jurisdiction, particularly one dependent on volunteer staffing. Depending on the type and location of the fire, extinguishing it may require specialized personnel and equipment that may not be immediately available. For example, fires involving hazardous materials require specially trained personnel who are equipped with specialized protective gear. Underground fires generally necessitate the use of heavy equipment (bulldozers, excavators, etc.) to dig out burning waste to be extinguished. Fire may also compromise the structural integrity of a landfill, posing a collapse hazard for personnel operating on the fireground.

Because these fires are relatively uncommon, it is important for communities and the fire service to learn as much as possible from past experience to prevent and mitigate future landfill fires and, if one occurs, to understand the best methods for extinguishing it.

CHARACTERISTICS OF LANDFILLS

Landfills have a variety of unique characteristics, which are primarily determined by the type of waste they are designed to accept. Landfills are regulated by different agencies at the federal, state, and local levels. (Regulatory mechanisms are discussed in detail later in this report.)

The characteristics of landfills constructed before 1984, however, may not conform to those discussed in this section. Prior to 1984, no federal agency had the jurisdiction to regulate landfills. Although some state-based agencies may have had regulatory authority before then, older landfill sites may have accepted both hazardous and nonhazardous waste if they were in operation prior to federal or state regulation. Further, older facilities may not have been constructed with leachate collection systems, gas-monitoring systems, or composite liners that meet the specifications required today.

MUNICIPAL SOLID WASTE LANDFILL. The most common type of landfill is designed for the disposal of municipal solid waste. MSW includes household waste such as product packaging, food scraps, furniture, clothing, and grass clippings. In 1999 alone, Americans generated nearly 230 million tons of MSW.[3] Table 1 illustrates the components of the MSW produced in 1999 by material category. Only 57 percent of this waste, however, went to a landfill for disposal; the remainder was either recovered through recycling (28 percent) or incinerated (15 percent).[4]

The Code of Federal Regulations (CFR) defines an MSW landfill (MSWLF) as "a discrete area of land or an excavation site that receives household waste, and that is not a land application unit, surface impoundment, injection well, or waste pile…MSWLF unit may also receive other types of RCRA [Resource Conservation and Recovery Act] Subtitle D wastes, such

as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste and industrial solid waste. Such a landfill may be publicly or privately owned."[6]

The passage of liquid through the solid waste in a landfill creates leachate. Leachate is defined as "a liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste."[7] As such, MSW landfills must operate in a manner that protects the environment, particularly surface and ground waters, from leachate contamination. To do this, MSW landfills generally use a combination of a composite liner and a leachate collection system. A composite liner "combines an upper liner of a synthetic flexible membrane and a lower layer of soil at least 2 feet thick with a hydraulic conductivity of no greater than 1×10^{-7} cm/sec"[8] (Figure 1). A leachate collection system consists of a network of pipes that collect the leachate. The collected leachate is typically pumped to the surface of the landfill so that it can be treated and decontaminated. "The leachate collection system must be designed to keep the depth of the leachate over the liner to no greater than 30 centimeters."[9]

While an MSW landfill is in operation, waste is disposed of in layers. These layers are compacted to the smallest practical volume and covered with earthen material at the end of each operating day, except at facilities exempt from cover placement or that use an alternate daily cover such as a tarp.

When a landfill reaches its capacity for waste disposal, a final cover is constructed. The final cover must be designed and constructed to minimize the flow of water into the closed landfill. It must also contain an erosion layer to prevent the disintegration of the cover. This layer must be composed of a minimum of 6 inches of earthen material capable of sustaining plant

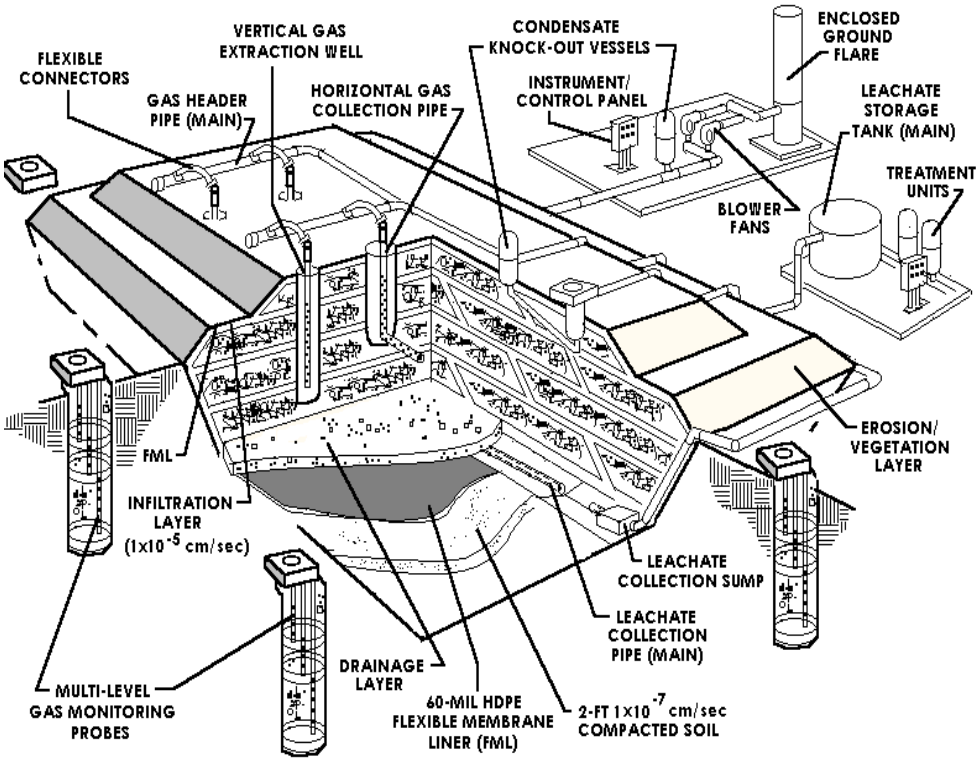

Figure 1. Landfill Components[10]

growth. An independent engineer must certify that the landfill was closed in accordance with federal regulations. For the next 30 years, landfill owners or operators are required to maintain the integrity of the final cover, monitor groundwater and methane gas, and continue leachate management. Finally, the property deed must reflect the property's prior use as a landfill, which restricts the future development of the site.[11]

OTHER TYPES OF LANDFILLS. Some types of waste (e.g., industrial waste and hazardous waste) cannot necessarily be disposed of in an MSW landfill. Instead, these materials must be disposed of in specially designed landfills or in MSW landfills in limited quantities.

Construction and Demolition. Waste from construction and demolition (C&D) projects, including untreated lumber, drywall, plaster, plumbing materials, etc., is not considered MSW. These wastes can be deposited either in MSW landfills or in specially constructed C&D landfills that are required to meet less stringent regulations than MSW landfills. Based on anecdotal remarks by landfill fire suppression professionals, C&D landfills are at a much higher risk for a significant fire than other types of landfills.[12]

[11] *Criteria for Solid Waste Disposal Faciliities,* op. cit.

[12] From information received in e-mail correspondence with Dr. Tony Sperling, P.Eng.

Industrial. Each year, about 7.6 billion tons of industrial waste are generated and managed by manufacturing facilities. The majority of this waste is wastewater or non-wastewater sludges and solids. Nearly 97 percent is wastewater managed in surface impoundments; the remainder is managed in landfills, waste piles, and land application units.[13] Industrial waste is classified as neither MSW nor hazardous waste under RCRA Subtitle C, which places industrial landfills under the regulatory authority of states and local government, not the federal authorities.

Hazardous Materials. In 1999, 1.4 million tons of hazardous waste were disposed of in landfills.[14] Hazardous waste landfills are similar in character and design to MSW landfills, but they are required to meet more stringent regulations for leachate collection and decontamination.

LANDFILL EMISSIONS. Landfill emissions are the result of the decomposition of organic materials in the landfill (including yard waste, household waste, food waste, and paper). Because of the nature of the construction of landfills, this decomposition is anaerobic[15] and results in the production of large quantities of methane (which is highly flammable) and carbon dioxide. In fact, landfills are the largest source of methane emissions in the United States, accounting for 35 percent of methane emissions in 1999.[16] MSW landfills generate about 93 percent of U.S. landfill emissions; industrial landfills account for the remaining emissions.[17] Methane emissions from landfills are affected by site-specific factors such as waste composition, available moisture, and landfill size.[18] Approximately 28 percent of the methane generated in landfills in 1999 was recovered.[19] The remainder of landfill-generated methane was dispersed in the air.

Approximately 50 percent of gas emitted from landfills is methane; carbon dioxide accounts for about 45 percent, and the remainder is composed of nitrogen, oxygen, hydrogen, and other gases.[20] Both methane and carbon dioxide are greenhouse gases that pose environmental problems. Of the two gases, methane is far more potent than carbon dioxide. Methane has a global warming potential (GWP)[21] of 21 over a 100-year period. This means that on a kilogram-for-kilogram basis, over a 100-year period, methane is 21 times more potent than carbon dioxide in causing climate change.[22]

[20] *Landfill Methane Outreach Program*, Environmental Protection Agency, FAQ Sheet, June 2001.

[21] The term *global warming potential* has been developed by the EPA to compare the ability of each greenhouse gas to trap heat in the atmosphere relative to another gas. This measurement of GWP relies on carbon dioxide as the reference gas. The GWP of a greenhouse gas is the ratio of global warming (both direct and indirect) from one unit mass of a greenhouse gas to one unit mass of carbon dioxide over a set period of time.

[22] Climate Change, Methane and Other Greenhouse Gases, Environmental Protection Agency, July 2001.

Current EPA regulations under the Clean Air Act and the New Source Performance Standards and Emissions Guidelines specify that many landfills must collect and combust landfill gas (regulated by size of the landfill). To comply with these regulations, landfill owners can either burn the gas off by flaring[23] it or capture the gas by installing a "landfill gas-to-energy" system. (This is discussed in detail later in this report.)

In addition to regulations governing the emission of landfill gases, federal law also regulates the incineration or open burning of waste. Federal law specifically prohibited open burning of MSW at municipal landfills in 1979 (40 CFR 257).[24] The incineration of MSW is strictly regulated by a variety of federal, state, and local policies.

NUMBER OF LANDFILLS. The amount of MSW produced in the United States has risen substantially over the past 50 years, from 88.1 million tons in 1960 to 230 million tons in 1999.[25] On the other hand, the number of landfills has significantly decreased over the last 10 years, from about 8,000 in 1988 to about 2,200 in 1999.[26] Figure 2 shows the decline over the past 14 years; Figure 3 and Table 2 show the number of landfills per state. This decrease in the number of landfills is generally due to stricter regulations imposed by the EPA regarding landfill gas emissions, safety regulations, and content regulations of a landfill. Over the same period, the size of the remaining landfills has grown steadily to accommodate the increased production of MSW.

The number of landfills recorded by the EPA, however, does not take into account all of the individual, and in many cases illegal, dumping sites that were common in the early 1980s. Many businesses, factories, and enterprises had their own dumping sites where they disposed of various types of unregulated wastes. This was a widespread practice before environmental groups began lobbying against such sites and publicizing links between diseases such as cancer and the dumping of hazardous chemicals and toxic wastes that were contaminating water, soil, and air.

THE DEVELOPMENT OF LANDFILL REGULATION.[27] The EPA was established in 1970 after scientists, elected officials, and citizens recognized the need to protect the environment. The new agency was pieced together from programs elsewhere in the federal government, including from the Department of Health, Department of the Interior, and Food and Drug Administration. It was not until 1984 that the EPA gained regulatory authority over landfills. Over the intervening years, various legislative acts have strengthened the EPA's regulatory authority over these sites.

In 1976, Congress passed the Resource Conservation and Recovery Act (RCRA), which gave the EPA the authority to control hazardous waste from the "cradle-to-grave." RCRA covers the generation, transportation, treatment, storage, and disposal of hazardous waste and provides a

framework for the management of nonhazardous wastes. RCRA focuses only on active and future facilities.

The turning point in landfill regulation and remediation occurred in 1980, first with the Superfund legislation, then by the Hazardous and Solid Waste Amendments (HSWA) in 1984, which finally gave the EPA regulatory authority over landfills.

Technically known as the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Superfund legislation governs closed and abandoned hazardous material waste sites, provides for the liability of persons responsible for the release of hazardous materials at these sites, and establishes a trust fund to provide for cleanup where no responsible party could be identified.

In 1984, the HSWA amended RCRA. HSWA required the phasing out of land-based disposal of hazardous waste and gave the EPA regulatory authority over landfills. The final major piece of legislation, the Superfund Amendments and Reauthorization Act (SARA), was passed in 1986 as an amendment to CERCLA. SARA increased the participation of states in the Superfund program and expanded the size of the cleanup trust fund.

In recent years, federal, state, local, and private programs have increased the emphasis placed on reducing the production of municipal waste to conserve resources and reduce pollution while delaying the entry of waste into the waste collection and disposal system. “Source

[30] Ibid.

reduction" focuses on designing, manufacturing, purchasing, or using materials in ways that reduce the amount or toxicity of trash created.

Some such programs include "pay-as-you-throw," where residents pay for each can or bag of trash they have collected for disposal rather than funding this collection by a flat rate or through the tax base. This provides tangible financial benefits for households that reduce the amount of waste they produce. Other programs target businesses and corporations in an effort to promote waste-reducing manufacturing processes and business practices.[31] The benefits of these practices include a reduction of the combustible material that enters the waste stream. Although MSW facilities will still contain large amounts of combustible materials, this reduction in waste can be a factor in the reduction of landfill fires.

CHARACTERISTICS OF LANDFILL FIRES[32]

Landfill fires fall into one of two categories, surface and underground fires. Depending on the type of landfill and type of fire, landfill fires can pose unique challenges to the landfill/ waste management industry and the fire service. This section addresses the particular challenges and the specific types of fires found in landfill sites and describes their characteristics and causes.

SURFACE FIRES. Surface fires involve recently buried or uncompacted refuse, situated on or close to the landfill surface in the aerobic decomposition layer, generally 1 to 4 feet in depth.[33] These fires can be intensified by landfill gas (methane), which may cause the fire to spread throughout the landfill.

Surface fires generally burn at relatively low temperatures and are characterized by the emission of dense white smoke and the products of incomplete combustion. The smoke includes irritating agents, such as organic acids and other compounds. When surface fires burn materials such as tires or plastics, the temperature in the burning zone can be quite high. Higher temperature fires can cause the breakdown of volatile compounds, which emit dense black smoke. Surface fires are classified as either accidental or deliberate.

Surface fires include the following:

- *Dumping of undetected smoldering materials into the landfill.* Hot load fires are caused by the disposal of refuse that is still burning on arrival to the landfill (e.g., cleared brush).
- *Fires associated with landfill gas control or venting systems.* Landfill gas control systems can themselves pose a fire hazard. Landfill gas (predominantly methane) can be

[32] Much of this section represents a synopsis of a report prepared for the New Zealand Ministry of the Environment. The report, *Landfill Guidelines: Hazards of Burning at Landfills*, was published in December 1997.

[33] E-mail correspondence with Todd Thalhamer, California Integrated Waste Management Board.

ignited as it escapes from the vents or from leaks in the collection pipe network. Excessive gas extraction can also be a fire cause. The vacuum created by excessive extraction can increase the airflow and thereby increase the oxygen level in the landfill, which can cause underground fires (as discussed further in the following section).

- *Fires caused by human error on the part of the landfill operators or users***.** Landfill operators and users can cause fires through careless smoking on the landfill, which can ignite waste or landfill gas. Also, as some hazardous substances can ignite when mixed, operators must take care to prevent the dumping of reactive materials into the landfill.

- *Fires caused by construction or maintenance work*. Fires can occur while construction and maintenance takes place, including fires caused by sparks from vehicles used in the landfill (dump trucks, bulldozers, backhoes, etc.). A surface fire could also be ignited when drilling or while driving metal pipes through layers of buried waste if a hard object buried in the landfill is struck. Usage of welding or electrical equipment on site poses a fire hazard, due especially to the increased presence of methane gas.

- *Spontaneous combustion of materials in the landfill*. The mixing of certain materials in a landfill can result in spontaneous combustion. Even in small quantities, some chemicals can ignite if exposed to one another. Also, some materials, such as oily rags, can spontaneously combust under certain conditions. Spontaneous combustion can also result from bacterial decomposition, which is discussed in more detail later in this section.

- *Deliberate fires, which are used by the landfill operator to reduce the volume of waste*. Landfills contain refuse such as dry garden waste, grass, leaves, and branches. Sometimes these materials are deliberately set on fire to reduce refuse volumes, reduce operating costs, and increase a landfill's operating life. This is an accepted practice under strictly controlled conditions.[34] Uncontrolled, these deliberate fires could escalate into larger fires, cause explosions, or create hazardous products from the ash and residue burned.

- *Deliberate arson fires, which are set with malicious intent*. Arson is a serious problem in the United States; therefore, it is not surprising that landfills are targets for malicious fires.

UNDERGROUND FIRES. Underground fires in landfills occur deep below the landfill surface and involve materials that are months or years old.[35] These fires are generally more difficult to extinguish than surface fires. Underground fires also have the potential to create large

[34] This controlled combustion at landfills is regulated by U.S. Code of Federal Regulations, 40 CFR 60 (Title 40 – Protection of Environment Chapter I – Environmental Protection Agency. Part 60 – Standards Of Performance For New Stationary Sources).

[35] This report addresses operating landfills. Closed landfills are subject to a variety of restrictions on future development, maintenance, etc. It would be difficult to determine the frequency of fires in closed landfills because such sites are likely to be coded in NFIRS according to their property use at the time of the fire (e.g., open land, park, golf course).

voids in the landfill, which can cause cave-ins of the landfill surface. Further, they produce flammable and toxic gases (such as carbon monoxide) and can damage leachate containment liners and landfill gas collection systems.

The most common cause of underground landfill fires is an increase in the oxygen content of the landfill, which increases bacterial activity and raises temperatures (aerobic decomposition). These so-called "hot spots" can come into contact with pockets of methane gas and result in a fire. Of particular concern with these long-smoldering, underground fires is the fact they tend to smolder for weeks to months at a time. This can cause a build up of the byproducts of combustion in confined areas such as landfill site buildings or surrounding homes, which adds an additional health hazard.

Underground fires are often only detected by smoke emanating from some part of the landfill site or by the presence of carbon monoxide (CO) in landfill gas. In the event of an underground fire, CO may be present at toxic levels near the landfill's surface. Generally an underground fire can be confirmed by:[36]

- Substantial settlement over a short period of time.
- Smoke or smoldering odor emanating from the gas extraction system or landfill.
- Elevated levels of CO in excess of 1,000 parts per million (ppm).
- Combustion residue in extraction wells or headers.
- Increase in gas temperature in the extraction system (above 140°F).
- Temperatures in excess of 170°F.

To confirm a subsurface fire using CO, the results must be acquired through quantitative laboratory analysis (using portable monitors may result in artificially high concentrations). In California, levels of CO in excess of 1,000 ppm are considered a positive indication of an active underground landfill fire. Levels of CO between 100 and 1,000 ppm are viewed as suspicious and require further air and temperature monitoring. Levels between 10 and 100 ppm may be an indication of a fire but active combustion is not present.[37]

HEALTH EFFECTS OF LANDFILL FIRES. In addition to the burn and explosion hazards posed by landfill fires, smoke and other byproducts of landfill fires also present a health risk to firefighters and others exposed to them. Smoke from landfill fires generally contains particulate matter (the products of incomplete combustion of the fuel source), which can aggravate pre-existing pulmonary conditions or cause respiratory distress. As with all fires, those in landfills produce toxic smoke and gases. The danger and level of toxicity of these gases depend on the length of exposure one has to them and on the type of material that is burning.

---

[36] *Response to Landfill Fires Guidance Document*, California Integrated Waste Management Board, Internal Bulletin 2001.
[37] Ibid.

Underground fires can result in CO levels in excess of 50,000 ppm—the Occupational Safety and Health Administration (OSHA) permissible exposure limit for CO is 50 ppm. OSHA standards prohibit worker exposure to more than 50 parts of the gas per million parts of air averaged during an 8-hour time period. Carbon monoxide is harmful when breathed because it displaces oxygen in the blood and deprives the heart, brain, and other vital organs of oxygen, which can cause permanent damage or death.[38]

Another serious concern in landfill fires is the emission of dioxins. Accidental fires at landfills and the uncontrolled burning of residential waste are considered the largest sources of dioxin emissions in the United States.[39] The term *dioxins* refers to a group of chemical compounds with similar chemical and biological characteristics that are released into the air during the combustion process. Dioxins are also naturally occurring and are present throughout the environment. However, exposure to high levels of dioxins has been linked to cancer, liver damage, skin rashes, and reproductive and developmental disorders.[40]

EXTINGUISHING LANDFILL FIRES

This section is not intended to address or recommend specific tactical approaches for landfill firefighting. It is important to note that the different dynamics, characteristics, and regulations of landfills and the fires that occur in them suggest that tactics need to be determined on a case-by-case basis depending on the materials buried, which materials have ignited, depth of the fire, and the fire's ignition source. This section explores some of the challenges posed in the suppression of landfill fires.

WIND/WEATHER. Wind and inclement weather can increase the health hazards for firefighters operating on the fireground (e.g., in extremely hot or cold weather) and can directly affect fire spread.

WATER SUPPLY. The use of water to suppress landfill fires is controversial. The application of large volumes of water may actually exacerbate a fire by contributing to the process of aerobic decomposition. Further, adding water to the landfill creates additional leachate, which may overwhelm the leachate collection system in the landfill (if one exists). If the collection system is overwhelmed, the additional leachate could contaminate ground and surface waters surrounding the landfill. Depending on the landfill's location, there might not be an adequate supply of water available for fire suppression. Firefighters may have to establish a water supply using tankers and nearby static water sources (e.g., lakes, reservoirs).

[40] Idem, p. 4.

Foam is an important consideration in landfill fire suppression. There are two primary types of firefighting foam. Class A foam is a special formulation of hydrocarbon surfactants. These surfactants reduce the surface tension of water, which provides for better water penetration and increased effectiveness. When aerated, Class A foam coats and insulates fuels, protecting them from ignition. Class B foam is used to extinguish fires involving flammable and combustible liquids. It is also used to suppress vapors from unignited spills of these liquids.[41] As with all fires, there are advantages and disadvantages to using foam during fire suppression operations on landfills. The on-scene incident commander makes the decision to use foam based on the specific tactical situation at hand.

MULTI-AGENCY RESPONSE. A major landfill fire will likely require the expertise of personnel from multiple agencies (e.g., the EPA, Department of Natural Resources). Some fire departments have Standard Operating Procedures in place that define all landfill fires as hazardous materials incidents, which require a specialized response. To ensure that all personnel (regardless of their agency affiliation) are operating according to the same plan, landfill fires require a strong Incident Command System.

PERSONNEL SAFETY. Fires, particularly those underground, can undermine the integrity of the landfill, which could cause a collapse under the weight of landfill employees, firefighters, or equipment. Such a collapse could necessitate a confined space, trench, or other type of technical rescue operation in addition to fire suppression.

Given the potential adverse effects of exposure to burning landfill contents or the smoke produced by a landfill fire, personnel may have to use specialized personal protective equipment, which may be difficult to obtain.

ACCESS TO AND MANEUVERABILITY OF HEAVY EQUIPMENT. To access waste below the landfill surface or move burning waste away from the landfill, it may be necessary to use heavy equipment such as bulldozers. Landfill operators may already own this equipment and have staff trained in its use. If not, this equipment will need to be located and brought to the fireground. If a fire affects the structural stability of a landfill, operating heavy equipment on the landfill surface would be dangerous. Finally, depending on the landfill's location and design, operating heavy equipment on the site could be quite difficult.

LOGISTICS. As with any protracted fire suppression operation, Incident Commanders at landfill fires must address a variety of logistical concerns to facilitate operations. These include rotating personnel on a regular basis, compensating personnel for overtime spent operating at the landfill or filling in at fire stations in the jurisdiction, keeping firefighters on the landfill hydrated and fed, and, keeping records for future reimbursement. (Depending on the nature and location of the incident, local fire departments can seek reimbursement from the federal government or the landfill operator for costs associated with fire suppression.)

ENVIRONMENTAL IMPACT. The smoke and runoff from landfill fires can be dangerous to those living in the area and to the environment. It is important that air and water quality issues

---

[41] *Essentials of Firefighting 4th Edition*, International Fire Service Training Association, 2001, p. 500.

be addressed early in a fire suppression operation to prevent contamination as much as possible. As mentioned earlier, water used to suppress a landfill fire can overwhelm a facility's leachate collection system, if one exists (older facilities may have been constructed prior to regulations requiring leachate collection systems).

LANDFILL CONTENTS. Fires occurring in landfills where hazardous wastes are buried can be particularly difficult. In past years, illegal dumping of hazardous and toxic materials in landfills and other dumping sites was relatively common. When a fire occurs and rescue workers have wrong or misleading information about the buried contents (e.g., illegal or unknown toxic or radioactive wastes), the fire suppression operation can be extremely dangerous.

Although not a landfill fire, the Wade Dump fire in February 1978 clearly illustrates the dangers posed by fires involving unknown hazardous materials. Firefighters responded to a suspected tire fire at an abandoned rubber shredding plant on the Delaware River outside of Philadelphia. They were unaware that the property's owner and namesake, Melvin Wade, had transformed the plant into one of the most toxic hazardous waste dumpsites in U.S. history. By the night of the fire, more than 3 million gallons of cyanide, benzene, toluene, and other chemicals were stored on the site—plus thousands of junk tires. The burning chemicals produced multicolored smoke and noxious fumes, which alerted firefighters to the unusual nature of the fire they were fighting. Intensified by chemicals and other fuels, the fire raged for hours. Drums of chemicals exploded, injuring firefighters and even damaging fire trucks. As the night progressed, firefighters and other emergency workers noticed that the chemicals were dissolving their protective gear and making it difficult for them to breathe; more than 40 firefighters were sent to a nearby hospital for treatment. Over the past 20 or more years, dozens of those who were present at the Wade Dump fire have become ill, and many have died from cancers and other diseases. Melvin Wade and others responsible for creating the toxic site were found criminally responsible for their actions.[42]

LANDFILL FIRES: STATISTICAL ANALYSIS

Data from the National Fire Incident Reporting System (NFIRS) does not include MSW landfills as a fixed property use category. Rather, the NFIRS data set includes a category for "dump or sanitary landfill: included are refuse disposal areas, trash receptacles, and dumps in open ground" (NFIRS Fixed Property Use code 932). Although this definition is broader than the definition of a landfill, it is the closest match available in NFIRS. As such, despite the broader definition, this section refers to these fires as *landfill fires* for the sake of clarity.

Based on extrapolation of the NFIRS data, each year in the United States an average of 8,400 landfill fires are reported to the fire service. This represents less than a half percent of all reported fires. Undoubtedly, some landfill fires go unreported because they burned undetected or they were on private property and extinguished by the landfill operator. Reported fires are responsible for less than 10 civilian injuries, 30 firefighter injuries, and between $3 and

[42] This paragraph is a synopsis of an investigative report published by the *Philadelphia Inquirer* in April 2000.

$8 million in property loss each year.[43] Deaths (civilian or fire service) are rare in these fires; since NFIRS represents a sample of data, it may be that fatalities occurred during the study period and were not reported or captured in the data.

TYPE OF LANDFILL FIRES. Table 3 shows the five types of fires that occur on landfills. The prevalence of refuse fires is not surprising, but it is interesting that other types of fires occur on landfill properties. Vehicle fires involve dump trucks, compactors, and other vehicles commonly found in landfills. Brush fires may occur when landfill fires spread to the surrounding lands. Structure fires at landfill sites probably involve small offices or other facilities constructed for the landfill staff.

Table 3. Types of Fires Occurring on Landfills[44]

Type of Fire	Percent of Fires
Refuse	77
Trees, brush, grass	12
Outside structure, where material burning has value	6
Vehicle	4
Structure	1

CAUSES OF LANDFILL FIRES. Over half of the landfill fires reported to NFIRS have no information available as to the primary ignition factor. This makes it particularly difficult to accurately pinpoint the cause of landfill fires. Of those fires with reported ignition factors, nearly 40 percent are of an incendiary or suspicious nature. Another 20 percent are attributed to lit or smoldering materials that have been abandoned or discarded, which include cigarettes, matches, or ashes that were discarded without being properly extinguished. Spontaneous heating accounts for about 5 percent of landfill fires. Other leading factors influencing fire ignition include rekindling from a previous fire and inadequate control of open fires.

WHEN LANDFILL FIRES OCCUR. Landfill fires occur most often between March and August. This half-year period accounts for nearly 60 percent of landfill fires, with the peak (11 percent) occurring in July (Figure 4). This monthly incidence of fires generally applies to the major causes of landfill fires (incendiary/suspicious and smoldering materials). Rekindled fires and spontaneous ignition fires, however, are exceptions. Rekindled fires have a peak period in April and May that accounts for one-third of these fires with an additional peak in July (15 percent). Landfill fires that result from spontaneous combustion gradually increase as the weather warms, dropping in September. The peak period, however, occurs in October and November, when 22 percent of the spontaneous combustion fires occur. Figure 5 illustrates the incidence of spontaneous combustion fires by month.

[43] National estimates are based on NFIRS data (1996–1998) and the National Fire Protection Association's (NFPA) annual survey, *Fire Loss in the United States*.

[44] U.S. Fire Administration NFIRS data (1996–1998).

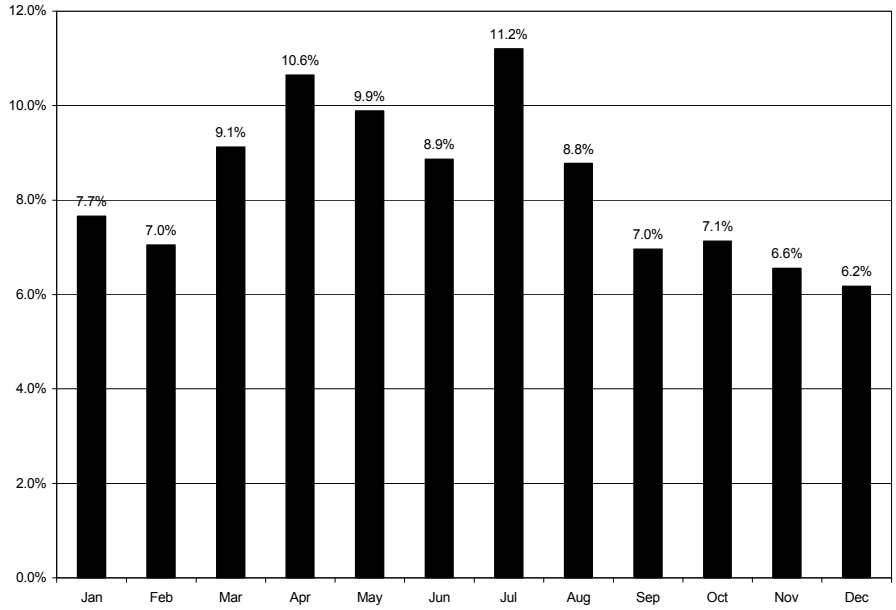

Figure 4. Incidence of Landfill Fires by Month[45]

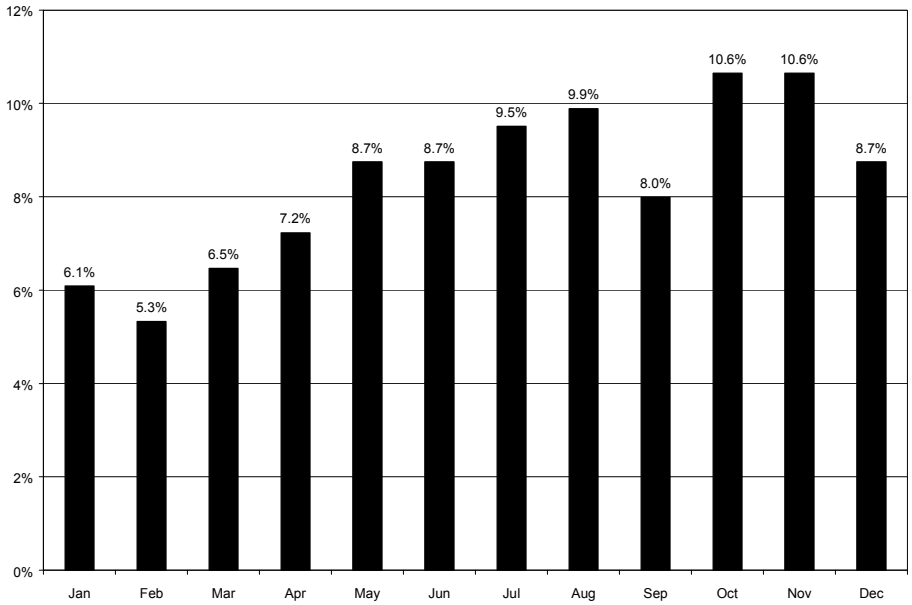

Figure 5. Incidence of Spontaneous Combustion Landfill Fires by Month[46]

[45] Ibid.
[46] Ibid.

The spring peaks in rekindled fires and the fall peaks in spontaneous combustion fires may result from increased winds during these months as many landfills may have inadequate caps (particularly if they use alternate daily covers) to prevent air infiltration. Inadequate caps can allow large volumes of air to enter the landfill, accelerating the oxidation reaction. The air intrusion is due, in part, to the differential in barometric pressure between the landfill and the atmosphere. This condition occurs most frequently in the late fall and spring with the large, naturally occurring atmospheric changes in conjunction with land surface heating and cooling. The increased oxidation raises the temperature in the landfill and can increase spontaneous combustion events. Some of the rekindled fires may be the result of earlier smoldering underground fires that, with the increase in airflow brought by winds, are oxygenated enough to break through to the surface.[47]

LANDFILL FIRE PREVENTION

Fire prevention can reduce property damage, injury, health, and environmental hazards of landfill fires. The cost of prevention is usually much less expensive than the cost of fighting and cleaning up a fire. In many cases, particularly for larger landfills, fire prevention activities are required by law. This section outlines some of the principal methods in landfill fire prevention.

LANDFILL MANAGEMENT. Effective landfill management is a vital key to efficient landfill fire prevention tactics. Management measures include prohibiting all forms of deliberate burning, thoroughly inspecting and controlling incoming refuse, compacting refuse buried to prevent hot spots from forming, prohibiting smoking onsite, and maintaining good site security.

METHANE GAS DETECTION AND COLLECTION. Landfill gas emissions can be a hazard to the environment and to the health of residents surrounding landfill sites. Methane gas, a flammable gas, can present a fire hazard. Federal regulations require all MSW landfill operators to monitor the emission of methane on a quarterly basis. If methane levels in or around the landfill become explosive, the landfill operator must take immediate steps to mitigate the danger. The operator must also implement a remediation program to prevent future explosive buildups.[48]

Federal regulations currently require MSW landfills that opened after November 8, 1987, and have a capacity of over 2.5 million cubic meters to install a gas collection and control system.[49] These regulations, however, affect only about 4 percent of operating landfills in the United States as the vast majority of landfills do not have such a large capacity.[50] Some states, however, (e.g., California) have stricter regulations for gas collection systems, which affect a higher percentage of facilities; these jurisdictions may include closed facilities as well.

[49] U.S. Code of Federal Regulations, 40 CFR 60.33c (Title 40–Protection of Environment Chapter I–Environmental Protection Agency. Part 60 – Standards of Performance for New Stationary Sources).

[50] *Air Rule for Municipal Solid Waste Landfills*, Environmental Protection Agency, January 10, 2002. http://www.epa.gov/reg3artd/airregulations/ap22/landfil2.htm.

Methane gas collection systems actively remove landfill gas using gas recovery wells and vacuum pumps with an interconnected pipe network. Operators must take care to ensure the system is not overdrawn, which can lead to fire ignition. Once the gas is collected, landfill owners/operators have two choices: (1) burn off the gas (flaring); or (2) convert the gas to an energy commodity.

Flaring. Burning landfill gas is the method most large landfills use (as opposed to the more costly waste-to-energy projects). Burning the landfill gas converts methane to carbon dioxide, which not only is less harmful to the environment, but also destroys the components of landfill gas that cause odor, stress vegetation, create smog, and increase the risk for fire or explosion.

Shallow gas venting trenches or gas venting pipes can also be installed in the landfill's surface. These vents allow gas from interior regions of the landfill to escape naturally to the surface where flares can burn off the gas.

Converting Landfill Gas to Energy. The conversion of landfill gas to energy turns this landfill byproduct into a marketable resource. The converted gas can be used to generate electricity, heat, or steam. According to the EPA, landfill gas is the only renewable energy source that, when used, removes pollution from the atmosphere.[51] By converting the landfill gas to energy, the harmful emissions causing global warming are removed from the air and converted to a useful form such as electricity to power a home. Reducing landfill gas emissions is imperative as it reduces local ozone levels and smog formation while simultaneously decreasing explosion and fire risks and unpleasant odors produced by the landfill.[52]

As of September 2001, the EPA estimates that there were more than 335 landfill gas recovery and utilization projects operating in the United States; another 500 landfills are considered good candidates for future program development.[53]

CASE STUDIES

A sample of landfill fires throughout the world sheds light on the landfill fire problem. Waste disposal practices and the regulation of landfill sites are similar in the comparison countries. Landfill fires have been investigated and studied in more detail in several countries outside the continental United States. The concluding portion of this section contains brief synopses of interviews and media reports detailing landfill fires in the United States and the lessons that were learned from them.

FINLAND.[54] An experimental study that sheds significant light on methods of extinguishing landfill fires was conducted in Finland in 1993. The study was conducted in two parts: a questionnaire was distributed to landfill operators throughout Finland, and an experimental landfill was constructed with similar characteristics to an MSW landfill. To determine the most effective methods for extinguishing landfill fires, an underground fire was ignited and allowed to burn in the experimental landfill. The fire was extinguished by smothering it with soil and dousing it with water.

From the questionnaires, the study determined that most landfill fires are small and tend to be of short duration. It concluded that using soil and water to extinguish the fires was insufficient and that a potentially significant factor in landfill fires is the improper compaction of waste in the landfill. The study suggested that one way to prevent landfill fires is to sufficiently compact all waste buried in the landfill site. Only one-quarter of the fires reported to the study team were underground; those fires were particularly difficult to extinguish and tended to last over 2 months. In fact, for underground fires, it was found that covering the smoldering refuse with layers of soil actually prolonged some fires. Another serious concern raised in the study was that by using water to extinguish landfill fires, the runoff could contaminate the surrounding soil and ground water.

Ultimately, based on both the questionnaire and the experimental landfill, the study concluded that the most effective way to suppress landfill fires is by digging out the burning material and cooling it with water, soil, or snow.[55]

CANADA.[56] In November 1999, a fire ignited at the Delta Shake and Shingle Landfill, a C&D landfill outside Vancouver, British Columbia. Although smoke and steam had been emanating from the landfill for weeks, the fire was finally discovered when flames broke through the landfill surface. The landfill operator originally attempted to extinguish the fire without fire department assistance; his efforts only served to exacerbate the fire. After several weeks, residents began to complain about the smoky haze hovering over Vancouver, and officials were concerned about air and water contamination from the suppression efforts. Ultimately, local officials declared a state of emergency and requested assistance from both the private sector and the provincial government.

To contain the fire and starve it of oxygen, officials covered the burning materials with a thick layer of refuse. Next, they determined that although using high-pressure water worked to extinguish the surface fire, it did not extinguish the burning refuse underground. To increase the water's effectiveness, firefighters misted the water and added Class A foam. Once the fire was contained, the firefighters used heavy machinery to excavate burning materials and move them to

---

[54] Ettala et al., "Landfill Fires in Finland," *Waste Management & Research* (1996) 14, pp. 377-384.

[55] Other landfill fire suppression professionals, however, have found that landfill fires can be extinguished by excavating and extinguishing the burning debris layer-by-layer using soil and a suppressant agent, or simply by temporarily shutting down the gas extraction system.

[56] Sources for this section: "Landfill Fire in Delta Gets Provincial Emergency Funding," British Columbia Ministry of Environment, Lands, and Parks. Press Release 330-30:ELP99/00-340, November 30, 1999. Sperling, Tony. *Extinguishing the Delta Shake and Shingle Landfill Fire: Case Study*, Sperling Hansen Associates, January 18, 2002. http://www.landfillfire.com/delta1.html.

areas offsite where they could be fully extinguished. Firefighters used infrared technology to determine which loads were "hot" and required extinguishment and which ones were cool enough to be left alone. After the materials were fully extinguished using foam and water, they were returned to the reconstructed landfill.

A private contractor involved in the suppression effort summarized the following as lessons learned from this fire:

- Soil berms are effective at containing fire spread.
- Trenches that do not fully penetrate the refuse pile are ineffective; trenches should only be excavated if they penetrate the full thickness of the refuse to inert material.

HAWAII. In the late 1990s, fires in legal and illegal landfills were a serious concern for officials on all of the Hawaiian Islands. In July 1996, a fire at an illegal dumpsite in Lualualei, Oahu, attracted government and media attention. The site contained municipal waste, C&D debris, and hazardous materials. After explosions involving gas cylinders or drums, the State Department of Health hired a hazardous waste contractor to remove drums containing chemicals and some hazardous waste. Despite the attention, government officials had difficulty shutting down the dumpsite, as the property changed hands over the years and the cost of cleaning up the site exceeded the land's value.[57]

In January 1998, an odd odor at a C&D landfill in Ma'alaea led to the discovery of an underground fire.[58] Efforts to extinguish the fire with carbon dioxide were unsuccessful and, while the fire was contained, it smoldered for months.

Hawaii has less rigorous air quality standards than other areas of the United States because of its tradewinds, low population density, and isolation. Contractors are allowed to burn brush before depositing it in landfills. This practice decreases the waste volume and amount they are charged for using the landfills. Burned material goes through two inspection sites to check for "hot loads." In the Ma'alaea fire, it appears the ignition source was a smoldering palm tree. Palm trees are spongy inside and, though the outside may have appeared cool, the inside was still simmering. Once inside the landfill, the tree continued to smolder until it ignited surrounding waste.

Although relatively small, the fire sparked a debate involving the landfill operator, EPA, and different divisions of the Department of Health. The debate revealed that there were no regulations on methods to control landfill fires. This motivated government officials to develop guidelines that address underground fires and study the health effects of landfill fires. Also, the fire emphasized the need to thoroughly inspect suspected hot loads to ensure that smoldering materials do not accidentally enter the landfill.

OTHER EXAMPLES. The following examples were taken from media reports and interviews with fire officials in the affected jurisdictions. These examples shed light on firefighting tactics and local concerns associated with landfill fires.

Fairfax County, Virginia.[59] Fairfax County Fire Station 19 (Lorton) has two landfills within its call range. In November 2000, a fire broke out at the I-95 Landfill, near Lorton, VA. A 250-foot by 50-foot pile of debris, consisting of trees, stumps, and mulch, was ignited. Firefighters used water and foam to control and extinguish the fire. A fire technician who participated in the suppression effort stated that the most important tactic used in the fire was having firefighters and machinery overhaul the burning or smoldering areas to ensure that the fire did not rekindle.

Cumberland County, North Carolina.[60] In July 1998, flames at a landfill sent plumes of smoke over a large area. Firefighters were forced to contain the fire and let it burn since it was too hot for water to extinguish it effectively. An estimated 26 trailer loads of mulch were in the landfill. The mulch was very finely packed, the heat remained at the core, and water would not have cooled or extinguished the fire. Firefighters assured the fire did not spread to nearby tire piles by digging a ditch all around the fire, containing it. The fire burned itself out after several weeks.

Montezuma County Landfill, Colorado.[61] In June 2001, smoke from this 6-acre fire spread high over the Montezuma Valley. The 320-acre landfill was filled with compressed, baled trash and municipal and industrial waste.[62] Attempts were made to douse the fire with water, but they were ineffective. State landfill officials and other experts decided the best way to attack the blaze was to remove the smoldering bales of refuse, break them apart, and extinguish them individually. The cause of the fire was not determined. Landfill officials reported that confining the fire and smothering it proved to be the most effective method of extinguishing it.

Danbury, Connecticut.[63] In 1996 and 1997, numerous underground landfill fires occurred at the Danbury city landfill. These fires were caused by spontaneous combustion of decomposing waste and were rekindled and continued smoldering underground over 18 months. Different underground "hotspots" increased the intensity of landfill odors. These fires in the 47-acre landfill were the subject of extensive media coverage and residential complaints. As elsewhere, water was ineffective in extinguishing these fires, and its use added to the stench, causing additional citizen complaints. Residents filed lawsuits for damages caused by exposure to hydrogen sulfide gas from the smoke. As a result of the lawsuits, the landfill was forced to close. A 40-foot high permanent flare had to be installed to burn off landfill gas and reduce the odors.

Bend, Oregon.[64] A youth fell into a burning sinkhole on the site of an old landfill and suffered third-degree burns across 30 percent of his body. The youth and his friend had noticed a thin trail of smoke coming from the ground while walking home and went to investigate. There

[63] *The News-Times*, Danbury, CT, December 1996–October 1997.

[64] "Youth Slips Into Burning Bend Sinkhole," *The Oregonian,* December 28, 1991.

was a small hole at the surface. While investigating the hole, the ground collapsed around the youth. The sinkhole was on a parcel of park district land on the outskirts of Bend, Oregon. The former landfill was owned by the county, and the land was later given to the park district. The original dump was used for wood waste. The decomposing waste smoldered and ignited through spontaneous combustion. Burned out pockets caused the landfill's earthen cover to weaken and collapse. Most of the problem areas were along the edges of the landfill where the earthen cap was the thinnest. The park district originally planned to put children's baseball fields on an unused portion of the old landfill, but reconsidered after conferring with the local Department of Environmental Quality.

Colerain Township, Ohio.[65] In 1996, the Colerain Township landfill experienced a major landslide that filled a nearby limestone quarry with acres of landfilled waste. The quarry was being excavated to hold additional waste in the landfill site when the landslide occurred. The area that had collapsed was dangerous; garbage was exposed and equipment was buried underneath, which made removal of the waste dangerous. The landfill officials could not move equipment to the site due to enormous voids in the exposed area; they feared bulldozers would be swallowed into the pile.

A series of four fires subsequently ignited, covering a 35-acre area. The first was a small 100-square-yard fire ignited by lightning. The second fire was as a result of combustion of decomposing waste and lasted 7 days covering a 20-acre area. Firefighters used pumped water and heavy equipment to tear down the fire area and then smothered it with dirt. Fifteen to 20 million gallons of water were used in the 7-day period. The last two fires were also a result of spontaneous combustion, but they were smaller in size. Water and heavy equipment were used to extinguish these two fires as well. Ultimately, restoring the landfill took approximately 2 years to complete.

San Bernardino County, California.[66] In 1999, funding was approved for the cleanup of a smoldering fire at an illegal dumpsite in Cajon Pass. The illegal dumpsite had been in operation for about 3 years. At the time of the fire, the dumpsite contained 200,000 cubic yards of waste, which filled an area about 60 feet high and 450 feet long. Most of the waste consisted of rubble, telephone poles, railroad ties, whole trees, shrubs, and large stumps. About 80,000 cubic yards (60,000 tons) were organic wastes, which spontaneously ignited, causing the fire. The smoldering fire posed a significant risk to nearby residences, wildlands, power lines, and railroad tracks, and it threatened serious water contamination. Agencies from the state and local level were involved in the funding effort.

CONCLUSION

Landfill fires are not common occurrences. When they do occur, however, they tend to attract a great deal of public attention and challenge the fire service. Illegal dumping continues to be a problem for regulatory agencies and the fire service. Illegal sites are particularly hazardous to firefighters, because the firefighters may be unaware of the presence or nature of chemicals or other toxic substances involved in the fire. Landfill fires in regulated facilities also challenge Incident Commanders, who must make a series of tactical decisions in a situation far different from that found at a "normal" structure fire.

Closed landfills are another area of concern, from both a regulatory and a fire service perspective. By federal law, landfill operators must commit to maintaining a landfill for at least 30 years after it has closed. Landfills continue to emit methane and other dangerous gases even after they are closed. As a result, buildings constructed on former landfills are often required to have automatic methane detectors, which sound an audible alarm in the event that methane levels become unsafe. Construction on closed landfills must not damage the final cover or the existing liners and leachate collection system. The true implications of closed landfills are not clear, largely because, for data collection purposes, these sites are likely coded not as landfills but as the property use at the time of an incident (fire, explosion, etc.).

Through EPA regulation and cleanup efforts of landfills, landfill fires are less likely to contain toxic chemicals than they were decades ago. Also, fire departments are gaining the experience to more efficiently and safely extinguish the fires that occur. Working in conjunction with the public and landfill operators, the fire service can reduce the occurrence of landfill fires, thereby better protecting the public, the environment, and emergency responders.

Subject:	LU-24-027 Coffin Butte Proposed Expansion Written Feedback
Date:	Monday, April 21, 2025 1:35:18 PM

Subject of Testimony: Coffin Butte Landfill

Full Name: Bryn Hazell

Email: brynhazell@msn.com

Street Address: 3247 SW Hawkeye Avenue 97333

Written Testimony:

Please reject the expansion of the Coffiin Butte Landfill. Benton County has done more than its share of disposing of garbage from around the State. It is time to set a date for its closure and come up with new plans for the future. I am appalled that leachate is dumped into the Willamette River in extraordinary amounts, that there is insufficient monitoring of methane and other gases and that Republic Services does not appear to be an honest and trustworthy reporter of what is going on at the landfill. Please reject the expansion. It is bad for our air, our water, the beauty of our space and its potential for future catastrophic damage to our area. Enough!!

Date: April 19, 2025

Reference: LU-24-027, Coffin Butte Landfill Conditional Use Permit Application

To: Benton County Planning Commission

Benton County Community Development
4500 SW Research Way
Corvallis, OR 97333-1139

My name is Thomas Hewes and my wife, Audrey Perkins, and I own property at 37368 Blue Heron Rd, Corvallis 97330.

I appreciate the opportunity to comment on the future of the Coffin Butte Landfill, a county planning decision of great concern to our neighborhood. My wife and I lived in the Soap Creek valley for 30 years and in Benton County for 51 years. Our property is 5 miles south of the landfill and we are adversely affected by the landfill stench, the noise and the pollution of water and airspace. I oppose any further expansion of the Coffin Butte Landfill and urge the Planning Commission to reject this application.

We believe the Planning Commission will find that the Applicant, Republic Services, has not been honest about their activities and have not provided evidence that conditional use permit issuance would not violate County Development Code criteria and Comprehensive Plan policies.

The proposed expansion would seriously interfere with the use of our land and the use of land surrounding the landfill. Furthermore, any approval of Application LU-24-027 would directly violate Benton County Code criteria 53.215(1): *The proposed use does not seriously interfere with uses on adjacent property, with the character of the area, or with the purpose of the zone;* and BCC 53.215(2*): The proposed use does not impose an undue burden on any public improvements, facilities, utilities, or services available to the area.*

The PFAS—which are forever chemicals contained in the leachate that Coffin Butte produces— are currently trucked to public wastewater treatment plants in Corvallis and Salem, both of which discharge into the Willamette River. The last five years PFAS levels have ranged from 25.6 to 31.8 million gallons per year, with an average of 28.5. Last year the amount was 29.1 million gallons. These leachate tanker trucks have a capacity of 7,000 gallons, which means they are making 6 to 13 trips per day to effectively dump this toxic leachate into our river.

That PFAS laden leachate is ending up in the water we drink and in our bodies. Future generations are drinking the PFAS-laden water. That is in violation of Benton County Comprehensive Plan policy 6.5.5 ("*Benton County shall strive for the safe storage, collection, reduction, reuse, recovery, and appropriate disposal of hazardous waste materials*.")

For 30 years we have lived and witnessed the landfill grow, especially in the last 15 years.

We can see the landfill from our property, and it is a canker sore in the beautiful landscape of Benton County. Coffin Butte Landfill also pollutes the water we drink and the air we breathe.

The proposed expansion does nothing to align with Benton County's 2040 Thriving Communities Initiative. This expansion undermines our shared goals for responsible, environmental stewardship, prioritizing public health, and sustainable waste management.

I believe Benton County should invest in waste reduction, recycling, and circular economy solutions, not expanding landfills that perpetuate pollution and place a long-term burden on local communities!

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County and its residents.

Reference: LU-24-027, Coffin Butte Landfill Conditional Use Permit Application

To: Benton County Planning Commission

Benton County Community Development
4500 SW Research Way
Corvallis, OR 97333-1139

Thomas Hewes, mailto:thomashewes11@gmail.com, **37368 Blue Heron Rd, Corvallis, OR 97330 File Number** [LU-21-047

My name is Thomas Hewes. First, thank you for truly listening tonight.

My wife, Audrey Perkins, and I live in Soap Creek Valley at **37368 Blue Heron Rd, Corvallis, OR 97330**, about five miles south of the landfill. Hearing that very fact has caused some members of the county staff to dismiss my and other neighbors' concerns, using the glib term NIMBY- not in my back yard. This dismissal of Benton County residents' contributions to our shared governance strikes me as a convenient way of not having to consider complex issues and is both irresponsible and not wise governance.

Another comment made was that we are a small yet vocal minority that doesn't represent the thousands of Benton County residents who don't seem to object to this expansion approval, a fact that some committee members felt was obvious since those thousands of residents not living close by are not here objecting. Again, this does not reflect wise thinking. Consider that our location means that we are the ones who are aware of what is going on and thus are spending hours and hours and hours researching and considering the wisdom of this expansion so that we understand its implications. Rather than casting us as exceptions, it is prudent to reframe that as casting us as extremely informed representatives of Benton County.

My contribution to this discussion will be brief and quite personal but, I think, should raise some red flags.

In the 30 years that we have lived here in Soap Creek Valley, just on my little stretch of road —so, within a three quarter of a mile stretch — 6 of 8 households have had someone contract cancer. That's 75% of this one sample area. Three of those households have had a family member die from cancer (ages 48,58,58), and the other three, including myself, are fighting

for our lives. These are all long term residents of Soap Creek Valley. So far we have found an additional 7 cancer cases for a total of 13 in Soap Creek area. There are more cases that we don't know about as of today.

I am not saying that the landfill is responsible for any of this. But when I was diagnosed with a blood cancer, the first question I was asked was about any environmental toxins that I might have been exposed to. We often smell the gases from the landfill drifting our way, and there is no way for me to dismiss the possibility that— despite the regulations being followed—that anyone exposed to these fumes might end up in future statistics like mine. We know that the gene mutations that cause cancer are linked to environmental factors.

I am not laying the blame on the Coffin Butte site for our misfortune. But I am saying that to approve this expansion without really doing the rigorous testing needed to make **sure** that we are safe with even *more* of these fumes heading our way nor the increased potential of contamination of our water supply.

Therefore, I conclude by saying that this CUP proposal interferes with my personal property and the character of the area. Please reject this CUP.

Thank you for your thoughtful consideration.

Subject:	Please oppose/Deny LU-24-027
Date:	Monday, April 21, 2025 7:14:56 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

My name is Rose Holdorf and I live at 38483 Plowshares Road–one of the landfill's closest neighbors. My parents purchased the land and built our family home the year I was born, 1989. We reside on tax lot 10419B001500 and share a property line with Republic Services.

I am writing because I strongly oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte landfill. I urge the Planning Commission to deny this application.

It is horrifying to consider what might come if Republic Services is allowed to expand a landfill site onto Tampico Ridge, the same ridge that shares a forest, foundation, and water table as my home and the homes of my neighbors. In the past five years as Republic has ramped up business, the existing landfill has drastically changed the character of my neighborhood. It is a more prominent eyesore on my drive home, I have to pick up more fly away garbage from our property, it smells worse and more frequently than I ever remember in my 36 years of calling this place my home, and for the first time in my life I can actually see the landfill from my living room. The lights from the top of the landfill glare through the trees and the truck motors and beeping backup noises echo through my window early in the morning.

The proposed expansion could devastate the assets my family has cultivated on this land. Building a new landfill cell on the opposite side of Coffin Butte Road keeps me up at night. After 36 years, will we be forced to move? Will we lose all property value? Will our well water become contaminated and undrinkable, or dry up? Will living even closer to a landfill cell give us cancer or make us sick? How will the excavation of the cell, digging deep into our shared hillside, affect the literal foundation from which my family's life in the Soap Creek Valley was built?

The proposed expansion would seriously interfere with the character of the surrounding area and impose an undue burden on public resources, in violation of Benton County Code 53.215 (1) and (2).

In my adult years, every choice I have made–which jobs I choose, how I spend my

free time, how I envision my life ahead of me–has come down to a central question: how can I continue to steward and thrive in the place where I am from? I love where I live and feel so lucky to reside in a house and tend to the land that my family has nourished for my whole life. I feel I live in the most beautiful place in the world. I look forward to taking care of this place and making it even better for the generations to come. I hope Benton County will do its part and envision a future for our community that is sustained by clean air, drinkable water, and solutions to our waste that prioritizes its residents health and wellbeing.

Please reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County and my lifelong home.

Sincerely,

Rose Holdorf
38483 Plowshares Road
Corvallis, OR 97330

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To the Benton County Planning Commissioners,

I am writing to testify in opposition to the landfill expansion - Republic Service's permit application #LU-24-027.

Our house and 60 acres is at 38483 Plowshares Rd. We share part of our northern boundary with the landfill.
My husband (deceased) and I designed and built our 3900 sq ft house 36 years ago with the intention of having a multi-generational property that could be carried on by our family after we were gone. We sit on 30 acres zoned R10 and 30 acres EFU.

We felt we'd done our due diligence in researching the future and impact of the landfill. It was relatively small at the time and not very noticeable from our property, nor from Hwy 99. It was well-kept by the Bunn Bros, with the installation of the wildlife area near the highway, and timely covering of garbage. They even planted wildflowers and clover in the covering soil. And we were told that the landfill would "sunset" in 30 or so years.

Well, things have certainly changed. Now we have a true mountain of garbage, much of which is visibly uncovered and in plain sight from Hwy 99, Tampico, and Soap Creek Roads. Even when areas are covered with plastic, it takes a long time before being covered with soil. There is an endless stream of trucks and noise, and an almost constant stench at all times of day and night.

Republic Services does not seem to show any regard for it's impact on neighboring properties - only on how much garbage they can pack in.

I am very concerned that if Republic is allowed to start a new landfill on the south side of Coffin Butte Rd, our property value would plummet and our well water would be at risk for contamination - or perhaps dry up altogether. This, in addition to the certainty of more noise, worse odors, and likely carcinogenic contaminants in the air. (Already, we are witnessing terrible dust clouds from some of the dumping vehicles.)

And aside from the issues of those of us along the ridge… what about all of those new Adair Village houses? That is a fast-growing community very close by.

This landfill is already a health hazard and has a big negative impact to the community at large - as an eyesore, from the stench and from the garbage along the roads and in fields & yards, and from the endless trucks that bring garbage from so many counties far away. And what of the leachate from all of that toxic garbage? What is that contaminating?

There is so much bad that will come if this landfill is allowed to get bigger. A landfill this size should be far away from a residential area. Please do not allow it to grow.
PLEASE deny this application!

Respectfully, Catherine Holdorf

Nick Fowler, Chair
Benton County Planning Commission

RE: Coffin Butte testimony

Benton County Planning Commission
Nick Fowler, Chair

Dear Mr. Fowler,

We are writing in opposition to the plan to expand the Coffin Butte Landfill, and urge the commissioners to **reject** this dangerously shortsighted proposal.

First of all, Valley Landfills has proven to be an untrustworthy partner in the past:

Dangerous under-reporting of methane pollution by Valley Landfills, despite 2023 satellite images that show some of the largest methane plumes in the Pacific Northwest emanating from Coffin Butte. In 2022 and in 2024, the EPA found levels of methane 20 times higher than EPA limits leaking from Coffin Butte, after Valley Landfills had reported only negligible leakage.

Other hazardous pollutants, including mercury, lead, industrial solvents, and "forever chemicals" (PFAs) leach out of the landfill and end up in the Willamette River. In 2021, 31 million gallons of leachate were pumped out of Coffin Butte and sent to wastewater treatment plants in Corvallis and Salem, where the leachate passed through treatment plants **not equipped to capture PFAs**, and then dumped into the Willamette River. Their leachate discharge permit has not been renewed, so where will they dispose of it next?

Where is the evidence that Valley Landfills will adhere to regulations in an expanded landfill?

Regarding your **Criteria 1**:
A landfill expansion will seriously interfere with the health and well-being of adjacent residents and public lands within a four-mile radius, where widespread drift of noxious chemicals is regularly detected by residents and recreationists.

The environmental impact of Coffin Butte extends well beyond the landfill itself. The smell of rotting garbage percolates across the northern part of Benton County along with a cocktail of toxic chemicals: vinyl chloride, ethyl benzene, toluene, benzene; that endanger public health and welfare. Expanding the Coffin Butte landfill will certainly expand the release of these toxins.

Criteria 2:
A landfill expansion will increase toxic pollution into the Willamette River, putting increased burden on public utilities by further fouling municipal sources of drinking water.

Expanding Benton County's burden of risk and liability will seriously hamstring the county's capacity to make future public improvements, facilities, utilities, or services available to the area and to the residents of Benton County.

Criteria 3:
Coffin Butte already receives one-third of all of Oregon's garbage, much of it in large loads of unsorted solid waste. Valley Landfills makes little effort to encourage recycling and waste reduction. An ever-larger landfill serves far-flung communities that choose to ignore the importance of waste reduction and leaves the residents of Benton County with ever increasing liability and cleanup costs.

An expansion of the landfill and the current status-quo approach to waste management violates the shift toward Sustainable Materials Management criteria endorsed by Benton County and the state of Oregon.

Thank you for your consideration,

Dagmar Johnson

Date: Monday, April 21, 2025 11:42:43 AM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Commissioners-

My family of voters—daughter Molly Hutchinson, son Connor Hutchinson and I are strongly opposed to any expansion of the Coffin Butte landfill.

We have lived in Benton County for almost twenty years. We were drawn to Corvallis because of the quality of its public schools, OSU, the town's commitment to alternative means of transportation, the existence of the Sustainability Coalition its commitment to protect our and natural environment and the commitment of Corvallis voters to maintain that. The fact that the landfill—the dump—is as close to town as it is challenges our commitment to public health and a sustainable environment.

The landfill is, and will continue to be, a toxic waste site. As the Audubon Society correctly stated: "We oppose any further expansion of the Coffin Butte Landfill and urge the Planning Commission to reject this application. We believe the Planning Commission will find that the Applicant, Republic Services, does not provide evidence to conclude that conditional use permit issuance would not violate County Development Code criteria and Comprehensive Plan policies. Further, based on its current performance, Republic Services cannot be expected to demonstrate that it can assure the County of its future compliance with any conditions that the county might issue.

We assert that any approval of Application LU-24-027 would directly violate Benton County Code criteria 53.215(1) and 53.215(2). We further assert that such a decision would violate or otherwise evade County Comprehensive Plan policies 5.1.2, 5.1.5, 5.2.1, 5.3.1, 5.4.1, 5.4.2, 5.4.3, 5.6.7, 5.7.4, 5.8.2, 5.9.1, 5.9.4, 5.9.5, 5.9.7, 6.1.2, 6.5.7 and 6.5.8. In addition, as Benton County has committed to a Prairie Species Habitat Conservation Plan (HCP) under Section 10 of the U.S. Endangered Species Act, covered species protections and long-term actions committed to by Benton County under the accompanying Prairie Conservation Strategy must not be further compromised by permitting further expansion of the Coffin Butte Landfill. Such approval would also directly counter state-wide goals for species and county-identified priority habitats under the E.E. Wilson Wildlife Management Plan and the Oregon Conservation Strategy."

For generations this site will be producing and leaking climate changing methane gas, odors that affect neighbors and travelers, and leachate that contaminates ground water and the

Willamette River. Though good management practices could reduce, but not eliminate, the adverse effects of the landfill on our community, the history of management at Coffin Butte landfill has not indicated compliance with best practices.

The county needs to develop waste management plans that eliminate land filling. Alternatives could include packaging which is either compostible or already has an established market for recycling/reuse. It is high time we all recognize that there is no safe "throwing away" of toxic materials and chemicals on our planet.

Thank you for rejecting this proposed expansion and for working to create an alternative to land filling—burying our toxic garbage.

Sincerely,

George Hutchinson 305 SE Park Avenue Corvallis, OR 97333

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners:

Our Names are Debora L. and K. Norman Johnson
28831 Tampico Road, Corvallis OR. 97330
541-745-5261

We have lived at our current residence near Coffin Butte Landfill for 30 years. We oppose Republic Services' Conditional Use Permit application LU-24-027 to expand the Coffin Butte Landfill.

Over the past 30 years we have watched as:

- The landfill's wetland mitigation projects have gone from ponds with native plant species heavily used by waterfowl, to ponds overgrown by invasive species like the yellow flag iris (*Iris pseudacorus*). The adjacent uplands are increasingly covered by an expansive and diverse assemblage of invasive species.
- Production at what was once a modest quarry ramped up and took down an entire side of Coffin Butte leaving an enormous scar.
- The noise from backup beeping alarms on landfill equipment has continued to increase and oftentimes starts very early in the morning (although we were told 30 years ago by landfill employees that quieter backup warning systems were available).
- There has been a general decrease in communication between landfill representatives and the local community. It seems like Republic Services has absolutely no interest in the well-being or concerns of nearby residents.

We oppose the landfill expansion proposal because we believe that:

- The natural environment on the lands owned by Republic Services in and around the landfill will continue to be degraded and destroyed.
- The expansion that we have watched over the past 30 years as more and more refuse is taken in from distant locations has impacted both the community and the environment. The landfill is poorly located to begin with and should not be allowed to expand without end.
- The groundwater that provides the water that we drink and the water we use for our large vegetable gardens could be irreversibly contaminated.
- The noise from the backup beeping will only get worse.
- Methane emissions from the landfill are poorly managed and contribute to anthropogenic climate warming.

Republic Services should not begin to discuss landfill expansion until it has made significant progress filling the quarry and restoring Coffin Butte to its former pastoral beauty. We believe that this will take quite a few years, during which time they could also try to build community trust.

Thank you for considering our comments.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Commissioners,

My name is Becky Legrande and I live at 1730 NW Sulphur Springs Road in Corvallis.

I am writing because I strongly oppose Republic Services Conditional Use Permit application LU-24-027 to expand Coffin Butte Landfill. I urge the Planning Commission to deny this application.

The proposed expansion would seriously interfere with the character of the surrounding area and impose an undue burden on public resources in violation of Benton County Code 53.215 (1) and (2)..

The concern over air and water pollution are legion and apparently Republic Services does not comply with the regulations. They have not demonstrated that they believe they have any need to comply with these regulations.

They apparently expanded this landfill beyond its original size by hauling in garbage from all over the state. Our local neighbors should not fall victim to decreasing quality of life because a corporation is trying to make as much money as it possibly can. If they received only the garbage from nearby areas, this expansion would not be an issue.

But there would still be the issue of compliance, which they have been unable to demonstrate a willingness to follow.

The proposed expansion does nothing to align with Benton Sounty's 2040 Thriving Communities Initiative.

I believe the county should invest in waste reduction, recycling and circular economy solutions, not expanding landfills that perpetuate pollution and place a long term burden on local communities!

Please reject LU-24-027.. Thank you for your consideration and for protecting the health and future of Benton County

Sincerely,

Becky J Legrande

Subject: Oppose/Deny LU-24-027
Body:

Dear Benton County Planning Commissioners,

My name is Jennifer Johnson and I live at 1730 NW Sulphur Springs Rd, Corvallis.

I am writing because I strongly oppose Republic Services Conditional Use Permit application LU-24-027 to expand the Coffin butte landfill. I urge the Planning Commission to deny this application.

The proposed expansion would seriously affect Benton County property owner's use of and value of their homes. Nearby properties are already adversely affected by the presence of the landfill. It is a massive, odorous, eyesore sited poorly on cracked basalt which poses great environmental risk. Allowing it to become any larger, causing increased pollution and risk to our water and air is unacceptable. Those of us who live in Benton County have no need for a bigger landfill. Our waste makes up only a tiny fraction of the daily intake at the landfill. There is no benefit to residents of Benton County for an even larger, massive landfill.

Republic Services has not been a good neighbor to the residents of the county and they have not earned the trust of the community. They have been fined repeatedly for exceeding gas limits and yet they have not made good faith efforts to remedy the methane leaks and fire risk. How can their promises to follow the rules be trusted when fines do nothing to deter bad management? Allowing an expansion will only insure additional pollution and risk to our community. Payment of fines for safety violations and polluting our air and water does nothing to remedy the harm caused to the community.

The expansion request offers no benefit to our community. It is not needed. Housing is limited, land for development is limited, land for natural areas and wildlife is increasingly limited, land for sustainable business in our community is limited. Our community has many competing needs for our limited resources. Allowing the expansion of a landfill that the community does not need is completely in opposition to Benton County's 2040 Thriving Communities Initiative.

The landfill has already permanently damaged our environment. What possible benefit to the county can there be to allowing additional land to be permanently destroyed?

I urge you to reject LU-24-027. Thank you for your consideration and for protecting the health and future of Benton County.

Sincerely,

Jennifer Johnson

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commissioners,

Benton County certainly does not need any landfill expansion. Republic Services, an Arizona based corporation, is requesting an expansion to benefit its shareholders. While placing an undue burden on the residents of not only Benton County and the state of Oregon but beyond. The EPA inspections (which were submitted by Mark Yeager on April 20, 2025 as testimony) disclose Republic Services lack of compliance with state and federal regulations covering landfill emissions. The methane emissions from Republic Services Coffin Butte landfill are placing an ongoing undue burden on Benton County and beyond. It is hard to understand how Republic Services can even be allowed to file an expansion application with the existing undue burden on Benton County residents. Republic Services had plenty of time to remedy the methane emissions problem between the 2022 and the 2024 inspections and failed to do so. Their failure to remedy the methane emissions problem is evidence that they can't control the methane emissions from Coffin Butte landfill.

I want to thank all of you on the Planning Commission for your volunteer work.
Please DENY LU-24-27 due to the undue burden this DUMP operator has placed and will continue to place with any expansion allowed.

Sincerely,
Kevin Kenaga

Dear Benton County Planning Commissioners,
I am sending you these photos and others to document issues with the daily landfill operation. These photos document the lack of daily cover and also no daily cover at Republic Services Coffin Butte landfill. I believe that leading up to this CUP application you were given a tour of the landfill. Please keep in mind that the tour you were given is much like a realtor's open house with everything all spiffed up and nothing out of place.
When you read the testimony of what was previously known as the Audubon remember these photos because at the end of the work day literally thousands of birds come to the uncovered area of the landfill to scavenge on garbage. Lots of unhealthy meals and plenty of plastic for the birds to consume.
If you happen to read testimony from residents and local farmers about crop damage think about these photos because this landfill buffet increases bird population and not in a healthy way.

I want to thank all of you on the Planning Commission for your volunteer work.
Please DENY LU-24-027 due to the undue burden this DUMP places on gardeners, farmers and wildlife.

Dear Benton County Planning Commission,
This group of photos document the dust that blows off the landfill. Please keep these photos in mind when you are reading a testimony about dust being an undue burden. Dust not only covers the area surrounding the landfill but literally travels for miles. Also keep in mind that this isn't organic soil blowing off a farm field but rather most likely a mix of pollutants and toxic materials being dumped onto the landfill. Dust is an undue burden and this application should be DENIED.

I want to thank all of you on the Planning Commission for your volunteer work.
Please DENY LU-24-027 due to the undue burden this DUMP places and will continue to place on Benton County and beyond.

Date: Monday, April 21, 2025 4:21:46 PM

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Benton County Planning Commission,
During this public testimony period and your deliberations please keep in mind that any expansion of Republic Services Coffin Butte landfill is, has been and will continue to be a generational issue and undue burden on BentonCounty residents and beyond. The request for an expansion has been denied multiple times why because what was once a small whole in the ground where garbage was burned has grown into a massive pile of garbage covering a hillside of Coffin Butte. Coffin Butte landfill is not the little county landfill it once was it is now a massive industrial scale landfill that has quite simply put outgrown its footprint. The applicant is now asking that an area that was once considered part of the buffer zone be used for the placement of garbage. This massive pile of garbage and the operation which involves truck traffic into and out of the landfill, machinery being operated on the landfill which all creates dust that covers the immediate area and also is wind blown for literally miles around 1)does seriously interfere with uses on adjacent property, with the character of the area, and with the purpose of the zone; 2) the proposed use does impose an undue burden on public improvements, facilities, utilities, and services available to the area, just in the amount of traffic to and from the landfill.
Owners of the landfill applied for an expansion in the 1980's denied, another applied again in the 1990's denied, Republic Services applied for an expansion in 2021 denied (this is all of record in #BCTT). Yet, Republic Services is back with another expansion application. This is part of what I mean when I say generational issue. Expansion requests in the past were denied because of the undue burden placed on previous generations undue burdens that continue today. This continuous return with an application to expanded is another undue burden on Benton County residents.
I not only ask that you DENY LU-24-027. I ask that you please have verbiage in your denial that prevents any further expansion applications for the area around Coffin Butte Landfill? Future generations should not have to go through this process ever again!

I want to thank all of you on the Planning Commission for your volunteer work.

Please DENY LU-24-027 due to the undue burden this DUMP has placed and will continue to place on Benton County and beyond with any expansion allowed.

Sincerely,
Kevin Kenaga

Letter of Transmittal

April 11, 2023

To: Benton County Board of Commissioners
From: BCTT through Sam Imperati, Facilitator
RE: Benton County Talks Trash Workgroup Report

Please accept this final report, which summarizes the results of a community-driven Benton County solid waste workgroup process, also known as "Benton County Talks Trash" (BCTT).

The Benton County Board of Commissioners (BOC) hired ICMresolutions to assess, design, and facilitate a Workgroup process to establish common understandings, to develop findings and recommendations for processing future Conditional Use Permits (CUP), and to develop a detailed outline for a Sustainable Materials Management Plan (SMMP).

To accomplish this, the Board appointed Workgroup members that were representative of community voices. The Charter elements were allocated between five subcommittees consisting of both Workgroup and interested community members. The process began on September 8, 2022, and ended on April 10, 2023. During that time, participants attended 11 public Workgroup meetings and 86 subcommittee meetings.

The Workgroup formally vetted 124 Findings and 94 Recommendations for the Board's consideration. Overall, the Workgroup achieved 94% agreement on the 218 Findings and Recommendations. There were six findings and six recommendations where at least one member voted against it, but each received a majority recommendation.

Here is a summary table of the final polling.

SMMP = Sustainable Materials Management Plan

LSCL = Landfill Size/Capacity/Longevity

LLU = Legal Issues and Land Use

CUP = Past Land Use Application Conditions

CEO = Community Education and Public Outreach

Consensus Polling Process

"Consensus" is achieved when all Polling Members poll "1" or "2." If "consensus" is not achieved, the Majority-Minority result is noted. The following definitions are used to reflect the range of options available to members.

- "1" indicates full support for the proposal as stated.
- "2" indicates the participant can agree with the proposal as stated but would prefer to have it modified in some manner to give it full support. Nevertheless, the member will support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal is worthy of general support as written.

- "3" indicates refusal to support the proposal as stated.

We did not have time to poll on items where there were only 2s. Based on experience, that exercise would likely have created an even more robust consensus. It was noted several times during the process that anyone could poll a 3 to block a "consensus." The full record of what was polled upon, the alternative language that was considered, and the provided reasoning in the informal polling for 2s and 3s can be found in Appendix B. The Workgroup only polled on the findings and recommendations in each subcommittee's section of IV. Key Workgroup Findings & Recommendations. While vetted by each responsible subcommittee in advance, the remaining contents of those sections were not polled upon by the entire Workgroup.

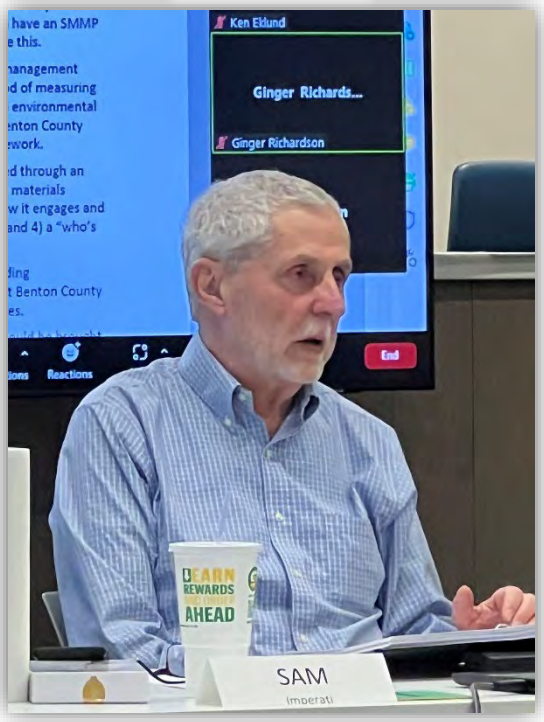
			Unanimous Agreement		"Consensus" Agreement		Majority-Minority Approval	
WG/Sub Committee	Findings and Recs	Total	# with all 1s	% with only 1s	# with no 3 votes	% with no 3 votes	# with at least one 3	% with at least one 3
Total	Findings	124	73	58.9%	117	94.4%	6	4.8%
Total	Recs	94	42	44.7%	88	93.6%	6	6.4%
SMMP	Findings	8	1	12.5%	8	100.0%	0	0.0%
SMMP	Recs	28	10	35.7%	28	100.0%	0	0.0%
LSCL	Findings	42	26	61.9%	41	97.6%	1	2.4%
LSCL	Recs	12	1	8.3%	12	100.0%	0	0.0%
LLU	Findings	35	23	65.7%	30	85.7%	5	14.3%
LLU	Recs	13	5	38.5%	9	69.2%	4	30.8%
CUP	Findings	33	22	66.7%	33	100.0%	0	0.0%
CUP	Recs	25	13	52.0%	23	92.0%	2	8.0%
CEO	Findings	6	1	16.7%	5	83.3%	0	0.0%
CEO	Recs	16	13	81.3%	16	100.0%	0	0.0%

Not every member polled on every topic. Some were absent and one member polled "present" on some topics. In some cases, there are multiple polls on the same topic. Three potential findings on the petition circulating were removed at the last meeting. Details surrounding who polled in what way can be found in the M-11 Meeting Minutes HERE.

The following information is provided for further context.

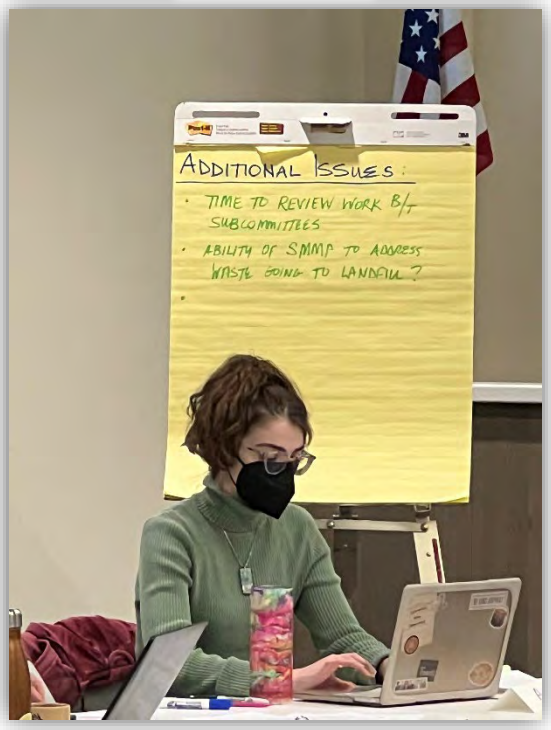
1) The Workgroup process was designed to serve as a "bridge" between past events and any next steps. The goal was to help reset the current dynamics through the development of "common understandings" and recommended protocols for future consideration of solid waste issues.
2) The Workgroup accomplished a substantial amount of work in a relatively short period of time, but much remains to be done.

3) For example, the Workgroup recommends conducting a benefit-cost analysis during the SMMP process that will follow.
4) To the disappointment of some, BCTT was never designed to complete an SMMP, nor to opine on the merits of any past or future CUP expansion. It was designed to develop common understandings and identify paths forward. Those goals were met.
5) The History section was not part of the original Charge, but the Workgroup felt it would provide important context. It was not designed to be an advocacy piece. It contains consensus-based facts and events.
6) The process and its scope were challenged throughout by those who insisted on a different approach and scope despite clear and repeated Board direction. At times, those challenges became personal in nature.
7) When creating findings, the goal was to produce relevant, verifiable facts – not speculation or opinions framed as facts.
8) The Planning Commission and the Solid Waste Advisory Council (SWAC) provided feedback on an earlier draft of this report, which the Workgroup considered and responded to in the form of edits to this report.
9) A summary of the public outreach and public involvement efforts can be found HERE. They include extended comment periods, open houses, and an informal poll of emerging recommendations. The informal public poll was designed to offer the public an additional opportunity to express their views to the Workgroup. The results can be found HERE.
10) For the first time, the County has virtually all of the key documents organized and accessible in one place. They include both County and DEQ records over the past five decades.
11) During the process, the Board agreed with the facilitator's Assessment recommendations to retain outside legal and planning advice for the anticipated expansion CUP application.
12) The main body of the official report contains appriximately 188 pages. The polling results in Appendix B are also part of the official report. The numerous hyperlinks in the body to the other appendices are provided for convenience. The contents of the Appendices were not polled by the full Workgroup. They were vetted by each relevant subcommittee and are provided for background. Where inconsistent, the official report controls, and the meeting video controls over the report.
13) Past and present Workgroup and subcommittee members were given an opportunity to submit an individual member statement. Those can be found HERE and are an important part of this report because the candid comments provide both substantive and process insights ranging from criticism to support.
14) A BCTT process evaluation was conducted and the results can be found in Appendix F, HERE. With regard to the overall process, one member was "dissatisfied," one was "somewhat dissatisfied," and seven were "satisfied." Readers are encouraged to review the full results and form their own conclusions.
15) In light of the sheer volume of material and limited time between the last meeting and today, there was insufficient time to have this document professionally edited or formatted. We apologize.
16) The Board's authorized public comment process begins today and ends on May 26, 2023. Information can be found HERE.



Finally, we want to thank the Board and staff for their leadership and support on this important effort. Most of all, we want to thank the members of the public who served on this project for their tireless efforts and meaningful contributions. This is their work product.

Respectfully Submitted,



Samuel J. Imperati

How to read this document

For a general overview of the process and key recommendations, please see the Executive Summary. For more detail, please read the body of the full report. The Findings and Recommendations are often linked to the relevant appendix for background purposes only.

Project Website

https://www.co.benton.or.us/cd/page/solid-waste-process-work-group

On behalf of the Workgroup and the Benton County Board of Commissioners, thank you for reading this report – and *a special thank you for your interest in a sustainable materials management future!*

Executive Summary

Since World War II, the southern end of Coffin Butte in north Benton County, Oregon, has served as a solid waste dump site in one form or another. Over time, the site has changed and grown – beginning as a rock quarry, then a U.S Army garbage dump/burn pile, Coffin Butte now serves as a full-scale regional landfill serving dozens of communities in western Oregon and Washington. While the site has changed and grown over time, Benton County has not adopted a plan for managing the site or the waste left there over the decades.

From Conflict to Collaboration

Following a pair of conflicting 2021 decisions from its appointed solid waste and land use bodies, and in response to substantial community concern over a proposed landfill expansion, the Board of County Commissioners asked Oregon Consensus to help understand the situation and identify, if possible, a constructive path forward on solid waste and disposal, including at the Coffin Butte Landfill. Following the Board's direction, a third-party facilitation team helped convene a community member-based Workgroup representing a diverse balance of perspectives and established a Charter and Bylaws to guide the work.

Dubbed "*Benton County Talks Trash*," the Workgroup was tasked with building "common understandings" around key topics and outlining the table of contents for a modern, long-term Sustainable Materials Management Plan. To complete these tasks, the Workgroup established five subcommittees to dive into specific topic areas and then report back to the full Workgroup. Subcommittees focused on:

- Developing a Sustainable Materials Management Plan (SMMP)
- Estimating the Landfill Size, Capacity and Longevity
- Clarifying legal issues and reviewing land use law
- Determining the status of past land use Conditions of Approval
- Improving Community Education and Outreach

Sustainable Materials Management Plan (8 Findings and 28 Recommendations)

One key purpose of the BCTT Workgroup is to develop a list of issues that should be addressed in a long-term Sustainable Materials Management Plan. That subcommittee spent some time fleshing out the scope of a recommended plan and then organized that scope into a draft "Table of Contents" for a plan that will be completed by an experienced third-party consulting team working with the Board, the community, and the landfill operators. The scope emphasizes cradle-to-cradle lifecycle analyses and a shift to circular economic thinking and incorporating 2040 Healthy Communities values to replace traditional linear materials models that end in a landfill.

Subcommittees focused on understanding the history and decisions surrounding solid waste over the past fifty plus years that led to where we are today. The SMMP report focuses on the needs and issues that will help lead Benton County, the mid-Willamette Valley and Oregon to where it needs to be in a more sustainable future. This section includes a list of Questions that consultants and the County can use to frame the thinking about this new paradigm, its benefits, and the practical paths to get there. Learn more about the cutting edge thinking and a new approach to materials management, including the SMMP Subcommittee's recommendations HERE.

Landfill Size, Capacity and Longevity (42 Findings and 12 Recommendations)

Estimating the size, capacity and life span of the Coffin Butte Landfill required that Subcommittee to weigh a balance a range of disparate factors, all of which could impact the amount of waste placed at the landfill. Members used tables, charts and graphs to understand and communicate solid waste volumes, including potential wildfires, regulatory changes and the future size of the landfill. The Subcommittee offers a range of possible life spans based on those variables and provides recommendations in its Report HERE.

Land Use and Legal Issues (35 Findings and 13 Recommendations)

The Legal Issues and Land Use Subcommittee provides analysis of Oregon land use law and the Benton County Development Code, as well insights into past negotiations of fee and hauling agreements between Benton County and the landfill operators. Attorneys representing the community, Republic Services and Benton County, along with staff and community members explore insights into the legal constraints and authorities surrounding solid waste and the landfill, and offer Recommendations HERE.

Past Conditions of Land Use Approval (33 Findings and 25 Recommendations)

To understand how we got to where we are, the Past Land Use Applications Committee collected and reviewed more than five decades of documents – many pulled from boxes at the various archive storage rooms at Benton County and the Oregon Department of Environmental Quality – to develop recommendations that highlight the importance of making clear public decisions, and also highlight the need for more transparency in decisions and documents that effect solid waste and the landfill. The Subcommittee asked searching questions about the volume and treatment of liquid leachate that is collected from the landfill's rainwater runoff. They asked about the logic for prior conditions of approval and whether and how those conditions are enforced over time.

As a result of the Subcommittee's diligent exploration, Benton County now has a nearly complete set of records relating to the Coffin Butte Landfill – one of several important "firsts" that emerged from the BCTT effort. This section of the Report holds insights that will benefit the community, the County, landfill operators and the State of Oregon. Read the Subcommittee's detailed critique and specific recommendations for improvement HERE.

Community Outreach and Education (6 Findings and 16 Recommendations)

Picking up on the themes of transparency, public outreach and community-wide inclusion, the Community Education and Outreach Subcommittee identified areas of opportunity to improve how Benton County and Republic Services communicate with the public about landfill and solid waste issues, including providing earlier notice of potential decisions at the landfill and in negotiated solid waste agreements. Many of the Subcommittee's recommendations are simply good practice for government.

Overall Process and Public Participation

Benton County's "Benton County Talks Trash" Workgroup met eleven times between September 8, 2022, and April 4, 2023. All Workgroup meetings were open to the public and

included opportunity for written and oral public participation. The project hosted an initial Open House at the County's Kalapuya Building on November 17, 2022, after the fifth Workgroup meeting. The project hosted a second Open House at the County's Kalapuya Building on April 4, 2023.

The county engaged in various outreach efforts throughout the process. The highlights can be found HERE.

Recordings of the Workgroup meetings are available HERE, as well as meeting minutes and summaries.

The Benton County Talks Trash Workgroup members spent countless hours researching, discussing, and organizing the common understandings and recommendations outlined in this Report. The efforts reflected in this Report provide a resource that will serve Benton County and interested community members for the *next* fifty years . . . and beyond. Their leadership, and their combined commitment to accuracy and collaboration are a model for other efforts and will serve Benton County and Oregon for generations.

During the process, the Workgroup created five Subcommittees to take on various parts of the Charter Elements. Information on the Subcommittees' work products can be found in Appendix C of this report. This report contains the Workgroup's complete work product from the community-driven process. The Workgroup's formally vetted Findings and Recommendations are provided to the Board of Commissioners and posted publicly on April 4, 2023, for their consideration.

In addition to the Findings and Recommendations, the Workgroup polled on the Executive Summary and History. It did NOT poll on the rest of the document, including the Appendix. While linked to the findings and recommendations for ease of reference, the Appendix is for background purposes only.

One item came up too late in the process for the Workgroup to vet or was left unresolved for future work. Metro Council adopted Ordinance No. 17-1401, a Landfill capacity policy that prohibits the disposal of waste generated within the Metro region at a new or "limited capacity landfill." A "limited capacity landfill" is one that seeks a site development plan amendment for expansion.

Finally, this process did NOT opine on Republic Services' expected Coffin Butte expansion application. It was designed to serve as a "bridge" between past events and next steps through the development of "common understandings."

Land Acknowledgment: The Land We're On

Indigenous tribes and bands have been with the lands that we inhabit today throughout Oregon and across the Pacific Northwest since time immemorial and continue to be a vibrant part of Oregon today. We would like to express our respect to the First Peoples of this land, including the federally recognized and the traditionally recognized Tribal communities that have historically and currently reside on these lands. We also recognize that a land acknowledgement is only the first step as we continue to learn and build relationships with Tribal Nations and members of their communities.

Map credit: Atlas of Oregon (2nd ed.) University of Oregon Press, 2001.

What we now know as Benton County was previously inhabited by tribes of the Kalapuya people indigenous to this location. Today, most of the Kalapuya people are enrolled as members of the federally recognized Confederated Tribes of the Grand Ronde Community of Oregon and/or the Confederated Tribes of the Siletz. Prior to colonization and white settlement, the Kalapuya people were believed to have a population of around 15,000 souls. Diseases, illnesses, and violence from settlers led the Kalapuya population to drastically shrink, and by 1849, there are estimates that the population varied between 60 to 600 people. Today, the Kalapuya Tribe is believed to include around 4,000 people.

It is important that we recognize and honor the ongoing stewardship and spiritual relationship between the land and people indigenous to this place we now call Benton County. Despite the settlement of these lands, this was and will continue to remain the home of the Kalapuya. We recognize the pre-existing and continued sovereignty of the tribes who have ties to this place and thank them for continuing to share their knowledge and perspectives on how we care for, impact, and protect the land we live on. We commit to honoring the history of this County as we continue engaging in collaborative partnerships with the tribes and communities indigenous to these lands.

I. Process Background

Context

Before the formation of the "Benton County Talks Trash" (BCTT) workgroup, the County contracted with Oregon Consensus to conduct a situation assessment with the following Scope:

> Benton County and key stakeholders seek assistance identifying and implementing a constructive path forward relating to sustainable materials management and the future of solid waste disposal in the Mid-Willamette Valley, including at the Coffin Butte regional landfill. Following a [December 7, 2021] Benton County Planning Commission denial of a proposed conditional use permit to expand the landfill, key participants recognize that a constructive path forward could benefit from the assistance of a third-party facilitator. Key stakeholders believe that an objective assessment of the situation, conducted by an impartial third party, would be a good first step. (Emphasis added).

Based on this original Scope, the County asked Oregon Consensus to complete a third-party situational assessment. The Benton County Solid Waste Situational Assessment Report (Assessment Report) can be found HERE. The BOC accepted the Report during its July 19, 2022 meeting and approved funding for the third-party facilitated process at its July 26, 2022 meeting.

Subsequently, on August 23, 2022 the Board approved a Charter and Bylaws for the BCTT workgroup, which can be found HERE.

Membership

Workgroup members fall into one of two categories: a) Polling Members; and b) Ex Officio Members. Polling Members have full rights of participation and are authorized to "poll" on issues to determine levels of consensus. Ex Officio Members have full rights of participation but are "non-polling" information sources. All members could bring technical resources to the meetings; technical resources could be used to participate in the discussions with permission of the Facilitator after a WORKGROUP discussion on the advantages and disadvantages surrounding their participation.

Each WORKGROUP member was allowed to assign one alternate for the process. That person was required to have full authority to represent their Organization/Interest Group. If the alternate was attending, the primary member was required to provide written notice to the Facilitator at least 72 hours in advance of that meeting's start time.

Original Membership - Provided in the Charter

Charter

1. Scope & Charge

The Workgroup process was designed to serve as a "bridge" between past events and next steps. The goal was to help reset the current dynamics through the development of "common understandings" and recommended protocols for future consideration of the solid waste issues.

This Workgroup is not a decision-making body. It is a recommendation-making body with the following Scope. (See ASSESSMENT REPORT for details.) The recommendations are not binding on decision makers in any subsequent land use review but will help inform all parties going into a review process.

Here are the core elements of the Charge.

A) Develop Common Understandings to form the basis of the work
B) Clarify existing criteria and information requirements for the land use review process for any proposed landfill expansion
C) Scope the necessary tasks to start a Long-Term Sustainable Materials Management Plan process
D) Provide input on additional topics raised in the ASSESSMENT REPORT
E) Consider creating a public-facing document and community education campaign on these topics

2. Process for Workgroup Recommendations

The Facilitator assisted the Workgroup and its members in identifying objectives, addressing the diversity of perspectives, and developing substantive, practical recommendations. The Workgroup strove for and used a "consensus" recommendation-making approach to determine their level of agreement on proposals. This allowed members to distinguish underlying values, interests, and concerns with the overall goal of developing widely accepted solutions.

Consensus does not mean 100% agreement on each part of every issue, but rather support for a decision, "taken as a whole." This means that a member may poll to support a consensus proposal even though they would prefer to have it modified in some manner to give it their full support. Consensus is a process of "give and take," of finding common ground and developing creative solutions in a way that everyone can support. Consensus is reached if all members support an idea or can say, "I can live with that."

When developing recommendations, the Workgroup addressed each issue individually, and in various combinations. The Workgroup determined whether it wanted to make packaged or individual recommendations at the end of the process, following the full benefit of hearing all Subcommittee and Workgroup discussions.

"1-2-3" Consensus Polling: The Facilitator assisted the WORKGROUP in articulating points of agreement, as well as articulating concerns that required further exploration. The Workgroup used a "Consensus Polling" procedure for assessing the group's opinion and adjusting proposals. In "Consensus Polling," the Facilitator articulates the proposal. Each voting member then offers "one," "two," or "three," reflecting the following:

- A “1” indicates full support for the proposal as stated.
- A “2” indicates the participant can agree with the proposal as stated but would prefer to have it modified in some manner to give it full support. Nevertheless, the member will support the consensus even if his/her suggested modifications are not supported by the rest of the group because the proposal is worthy of general support as written.
- A “3” indicates refusal to support the proposal as stated.

The Facilitator repeats the consensus voting process as reasonably practical and as time allows to assist the group in achieving consensus regarding a particular recommendation, so that all Polling Members poll “1” or “2.” The results are noted in the Workgroup Report.

No Consensus – Majority and Minority Recommendations: If consensus on an issue is not likely, as determined by the Facilitator, the poll results for the options considered will be presented to the BOC.

Summary of Workgroup Recommendations: The meeting summaries serve as the record of the Workgroup recommendations. Past and present members of the workgroup and public members of the subcommittees were invited to submit additional information. The Facilitator packaged all these submittals for Board review in Section VII, below.

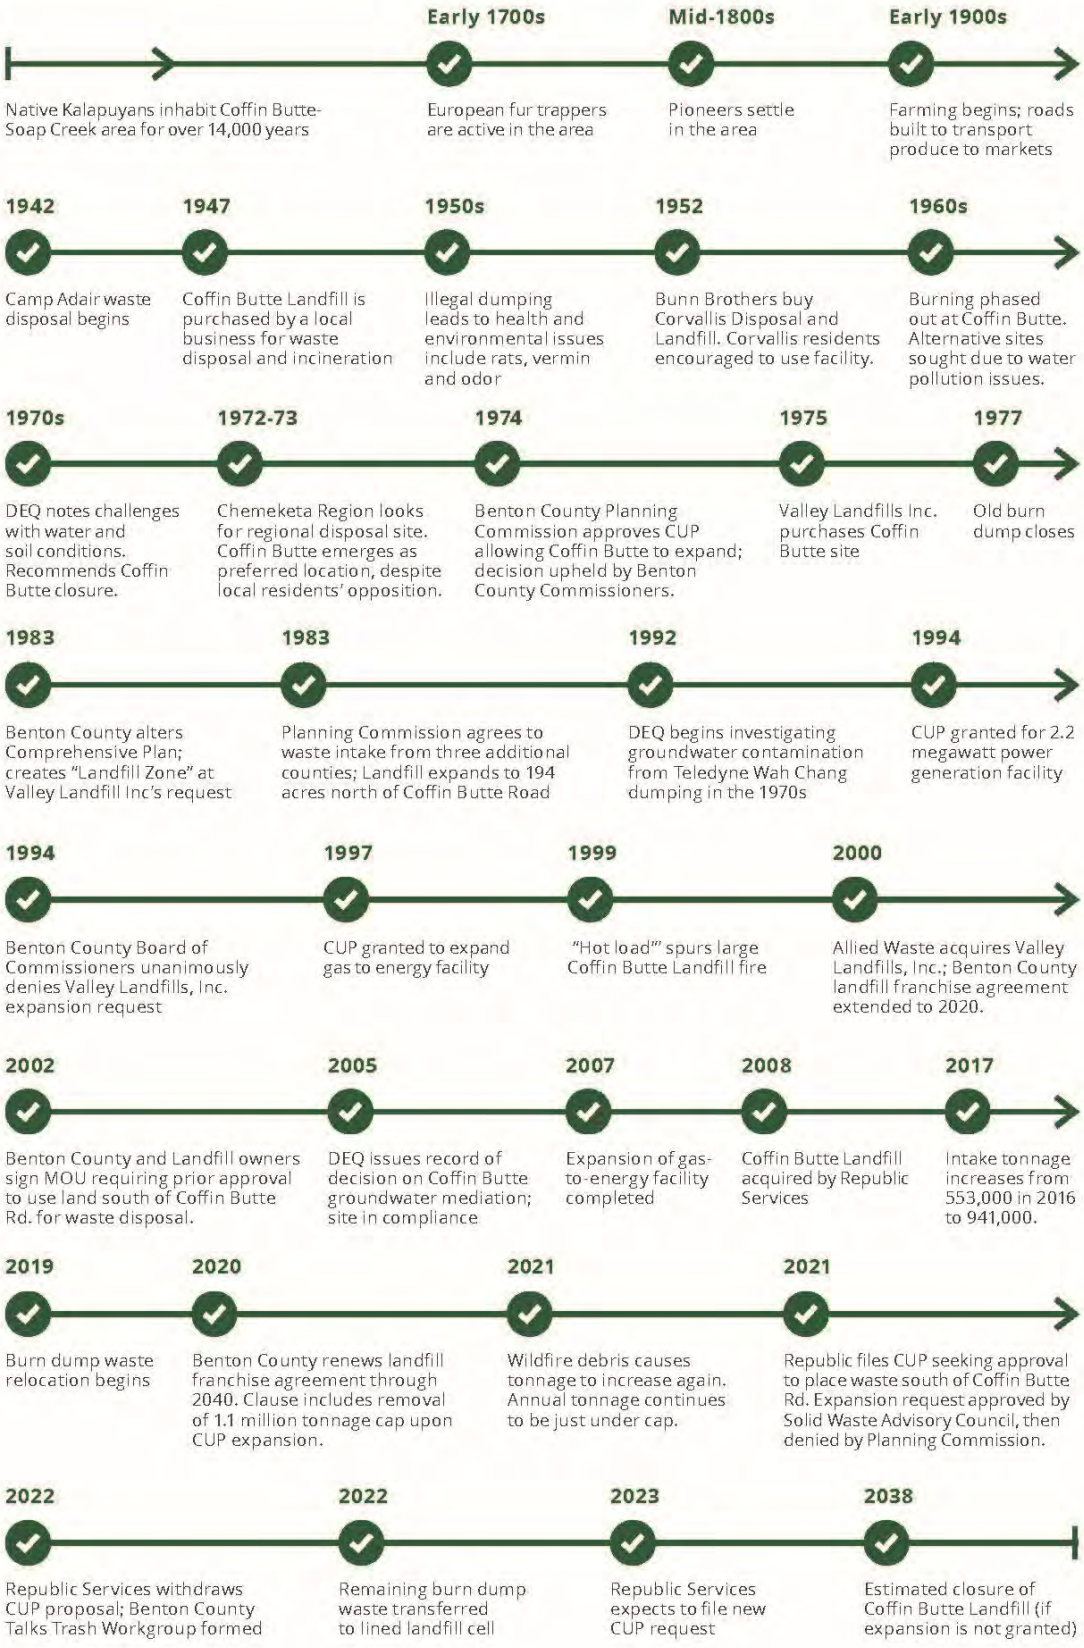
Subcommittee Introduction

At the third Workgroup meeting (October 6, 2022), the Workgroup identified five Subcommittees that would take on various parts of the Charter elements, consistently reporting back to the Workgroup as they progressed. This was done so specific Charter elements could be addressed at the level of depth deemed necessary by the Workgroup and by those with the most expertise and interest. Once formed, each Subcommittee met roughly twice between each Workgroup meeting.

The information surrounding these Subcommittees (such as charge, members, and key work products) can be found in their respective sections of Part IV. of this report, “Key Workgroup Findings & Recommendations.”

History of Coffin Butte

Main Themes



- The siting of the Coffin Butte landfill reflected Benton County’s early desire to control random dumping in rural areas and the initial choice of location stemmed from the historical uses of Camp Adair in the 1940s. Benton County explored alternative sites in the 1970s.
- Coffin Butte Landfill transitioned incrementally from local ownership to becoming part of a national corporate strategy under Allied Waste. Republic Services acquired Allied Waste and the Landfill in 2008, following a Department of Justice review of the merger.
- Historically, the interests of landfill owners and operators and those of the neighbors and other Benton County residents have not always coincided.

- Both remaining landfill capacity and lifespan are based on industrial modeling and have been historically overestimated.
- Issues surrounding the Coffin Butte Landfill have been the subject of strong public involvement. Periodic conflicts were equitably resolved with parties reporting adequate acceptance. Sometimes expansion was approved and sometimes it was not.
- Before the late 2020s, SWAC meeting notices and major upcoming Franchise Agreement renewals were regularly posted in the local papers. No public notice was found for either the 2020 Franchise Agreement or the 2021 CUP application.
- Increased pressure for landfill expansion is driven largely by demand from outside Benton County. This includes other counties that represent 88% of CBL annual intake.
- Benton County discretionary revenue from the surcharge on tonnage delivered to the Coffin Butte Landfill in 2022 is estimated to be $2,040,000.[1]

[1] See *Benton County, Oregon: Adopted Biennium Budget 2021-2023*, page 11.

Coffin Butte: Key dates and ownership changes

The Coffin Butte landfill can be thought of as the product of diverse historical factors. The current Benton County operation evolved in response to:

- a longstanding local need for a place to dispose of solid waste refuse,
- the development of the specific Coffin Butte site through a series of incremental decisions, and
- searches for lower-cost refuse disposal sites in western Oregon and Washington.

To help understand the diversity of these factors, this History is organized under three sections:

1) a review of the geographical and historical context of the Coffin Butte location,

2) Benton County's history of landfill decision-making leading up to Coffin Butte becoming the preeminent site for the county and region, and

3) the social context surrounding specific events regarding ownership, operation, and permitting leading to the current facilities and practices found at Coffin Butte in 2023.

Section 1: The History and Geography of the Coffin Butte Area

Geography, Geology, and Climate of the Coffin Butte Area

The Coffin Butte landfill site is located about seven miles north of Corvallis on Highway 99W. The site is at the northwest corner of the intersection of Highway 99 and Coffin Butte Road, immediately west of the E.E. Wilson State Wildlife Refuge. Coffin Butte is at the northern end of Soap Creek Valley, but Soap Creek and its valley continue north along the west side of Coffin Butte before entering the Willamette Valley.

While the needs and concerns regarding waste disposal and associated issues affect Benton County and neighboring counties of Polk, Linn, Marion, and Yamhill, the areas most impacted by Coffin Butte operations are the neighboring areas to the north and south along Highway 99W, Soap Creek Valley, the E.E. Wilson Wildlife Area, Adair Village, areas to the east which can see the operation and are most likely to be impacted by the potential for off-site odor, and Independence Road which bears much of the truck traffic and debris.

The landfill is in a topographic divide between the two valleys. Groundwater flows both east and west from the area of Coffin Butte Landfill and Tampico Ridge, depending on the underlying geology.[2] Steve Taylor et al. note that there is an unnamed tributary between Coffin Butte and Tampico Ridge and that "associated wetlands drain east-ward toward the E.E. Wilson National Wildlife Refuge."[3] Rainfall in the area is approximately 42 inches a year, with the majority falling between November and May.[4]

Figure 1 - the Coffin Butte Landfill & Pacific Region Compost Annual Report 2021, Page 1

Coffin Butte itself is approximately 738 feet above sea level. The operating landfill is on the southeastern slope of Coffin Butte, north of Coffin Butte Road. Ancillary facilities such as administrative offices, leachate ponds, and a power station fueled by methane from the landfill are located south of Coffin Butte Road. The southwest side of Coffin Butte has a rock quarry operated by Knife River. The rock quarry area, also referred to as Cell Six, is currently planned to be the next area of expansion for the landfill unless the permits are changed.

The earthquake hazard in this area is significant, particularly because of the Cascade subduction zone. Kent Yu et al. note that there have been over 40 earthquakes of magnitude eight or greater and in 1700, one of magnitude 9.[5] A published study by Ram Kulkarni and others states: "… the probabilities of an M9 earthquake during the next 50 and 100 years were estimated to

[5] Kent Yu, S, J Wilson, and Y, Yang. "Overview of the Oregon Resilience Plan for Next Cascadia Earthquake and Tsunami". *Proceedings of the 10TH National Conference in Earthquake Engineering*, Earthquake Engineering Research Institute, Anchorage, AK, 2014. https://www.researchgate.net/publication/281411611_Overview_of_the_Oregon_Resilience_Plan_for_next_Cascadia_Earthquake_and_Tsunami\

be 0.17 and 0.25, respectively."[6] When approving the expansion of the Riverbend Landfill in Yamhill County, the DEQ noted that the only westside landfill rated for a 9.0 earthquake was Short Mountain, while Coffin Butte and Hillsboro were rated to withstand quakes lower than the 8.5 that Riverbend was designed for.[7] Nevertheless, Coffin Butte landfill is in compliance with all EPA regulations regarding the construction of landfills to withstand seismic activity and, according to Republic Services, is rated for an 8.48 event.

History of the Coffin Butte Area

The archeology and history of the region are of great importance to many people involved in Coffin Butte decision-making. In his oral history of the Soap Creek Valley, Zybach notes how before Western contact, the Pacific Northwest was one of the world's more densely populated nonagricultural regions. However, with the introduction of smallpox, malaria, measles, influenza, and other diseases from explorers and traders, over 96% of the local Kalapuyan people died within two generations, particularly from malaria, in 1831-1832.[8]

Tools from the Kalapuyan people have been found throughout the Soap Creek and Coffin Butte area.[9] In 2022, the Oregon State Archeologist, John Pouley, recommended a professional archaeological survey of the proposed expansion area and consultation with all appropriate Native American tribes.[10] Republic Services has hired the firm Archaeological Investigations to research the area. Their report is expected in Spring 2023. One significant cultural practice of the Kalapuyans was the use of annual prescribed fires. Zybach notes this "broadcast burning" served a variety of purposes, including control of unwanted plants (such as Douglas Fir), the enhancement of favored plants (such as camas), easier hunting, and other benefits such as gathering grasshoppers.[11] The Soap Creek Valley was settled early by white pioneers, probably aided by the native American clearing of land by burning.

[11] Zybach, 2000, pp. 118-119.

The area had a colorful history in the 1800s and 1900s. For example, the town of Tampico, located south of Coffin Butte in Soap Creek Valley on the Applegate Trail, was briefly a thriving and boisterous place until purchased by the wealthy pioneer Greenberry Smith. A local driving guide notes that, "On January 23, 1860, the pious Smith purchased Tampico and burned the entire town to the ground, including stores and homes as well as the saloons, brothels, and gambling dens."[12]

Letitia Carson, one of the first black pioneers in the Willamette Valley, was a very early resident of Soap Creek Valley. A formerly enslaved African American, Carson came to Oregon with David Carson in 1845. When David died in 1852, her neighbor Greenberry Smith (the same man who burned down Tampico) took advantage of her unclear legal status to sell off her property. Letitia soon moved to Douglas County but successfully sued Greenberry for $300 in lost wages and $1400 for the loss of her cattle and legal costs. The Black Oregon Land Trust has expressed interest in establishing a model farm on the Letitia Carson homesite.[13]

Figure 3 - Construction of Camp Adair & Coffin Butte Road: Overlook of Camp Adair in early 1940s, from slope on Coffin Butte looking east/southeast (photo from the Salem, OR Library's "Ben Maxwell Collection").

The biggest local change, following white settlement, occurred in 1941 when the U.S. Army chose to build a military training base on the site of the town of Wells which was at the center of the present-day E.E. Wilson Wildlife Area. Within one month, the town was vacated, and houses and barns were bulldozed to be replaced by barracks. The camp itself covered an area two miles wide and six miles long with 1800 buildings. The camp was the second-largest city in Oregon at the time and housed roughly 40,000 troops. The area that eventually became E. E.

[13] "Resilience, opportunity, and struggle: Preserving and sharing the history of Letitia Carson" *Salem Statesman-Journal* (June 20, 2022)

Wilson was referred to as “Swamp Adair” due to the constant rain, mud, and standing water. The Army built sewer and drainage systems that emptied wetlands and channelized streams.[14]

Following the World War II, the residential population slowly increased until the 1970s, at which time growth accelerated rapidly. While there are no estimates of the population of other north Benton County areas close to Coffin Butte, *Nextdoor* estimates that Soap Creek Valley has 1992 residents.[15] Although there is extensive farming along the transit routes leading to Coffin Butte, most area adults commute to work; most homes are on lots less than 10 acres in size, and most families are not directly associated with large-scale farming or forestry practices. But the values generated by ‘living on the land’ are still strongly felt. Coffin Butte Road serves as a primary emergency exit route for Soap Creek residents and a commuter route for those working in Monmouth-Independence and Salem.

Today, the unusually cohesive Soap Creek community works together to restore and maintain the Soap Creek Schoolhouse, a symbol of the valley. Built in 1935 and actively used until 1946, the structure was restored by the community and remains a meeting place for local activities and an annual fund-raising event.[16]

Figure 4 - Soap Creek Schoolhouse (photo by Charles Risen at Adobe Stock Images).

The Coffin Butte Area Today: Wildlife Habitat and Protection

Besides the vibrant community in Soap Creek Valley and the historical significance of Camp Adair, this area is noteworthy today as the home to the E.E. Wilson Wildlife Area, located just across Highway 99W from Coffin Butte Landfill.

E. E. Wilson Wildlife Area

The E.E. Wilson Wildlife Area came into existence in 1950 when the U.S. Government gave quitclaim title to the property to the Oregon Department of Fish and Wildlife. The site was originally built to serve as a US Army cantonment in 1940 and functioned as Camp Adair during the WWII era. The wildlife area covers approximately 1,788 acres of oak woodland, upland shrub, and grassland habitats. The refuge management plan’s primary goal is to manage the

area consistent with conservation and enhancement priorities for native wildlife and the production of game species.[17]

The Coffin Butte Landfill and the E.E. Wilson Wildlife Area are located at the midpoint of a triangle of National Wildlife Refuges. This National Wildlife Refuges (refuges or NWRs) system, managed by the U.S. Fish and Wildlife Service, was established in the mid-Willamette Valley during the 1960s when the Migratory Bird Commission approved the establishment of three refuges: Ankeny, Baskett Slough, and William L. Finley.

Figure 5 - View of E.E. Wilson Wetlands opposite Angler's Pond, 2023 (photo by Marge Popp).

The area containing Coffin Butte Landfill is part of a wildlife corridor and refuge system connecting the Basket Slough, Ankeny, Luckiamute, and E. E. Wilson refuges to the William L. Finley refuge south of Corvallis on through to the Fern Ridge Wildlife area near Eugene. Soap Creek Valley, E.E. Wilson Refuge, and entire area surrounding the landfill has been identified by Benton County as a high-priority area for conservation actions to benefit key local species.[18] Tampico Ridge, the next ridge immediately south of Coffin Butte, hosts a complex mix of habitats, particularly Oak Savannah, and is the site of an ongoing research project looking at plant succession being conducted by Western Oregon University faculty and students.[19]

Section 2: Historical and Social Context of Coffin Butte Landfill

Benton County Confronts Its Waste Issues: Up to 1983[20]

Waste disposal was simple in the early days of Benton County. What little waste there was before the age of plastics would simply be deposited into rivers, ravines, or anywhere convenient. Dumping along roadsides was particularly common. Over time, however, unsystematic dumping created health and sanitation problems, and eyesores. For example, on July 27, 1906, The *Corvallis Gazette* advised: "Another thing in connection to cleaning up, don't dump your trash, dead cats, dogs, and other rubbish onto the vacant lot just over the fence." By May 15, 1911, Corvallis residents could use a "garbage ground" available just a ferry ride across the river, and in June 1921, the *Daily Gazette-Times* advised residents to burn their refuse rather than dispose of it in nearby streams. By May 7, 1937, the *Gazette-Times* was reporting on the city dump's location by Kiger Island and reminding citizens they would be fined if they continue to simply dump their trash along roads.

On February 28, 1950, the county sanitarian warned the public to stay clear of the dumpsite south of town since they would be poisoning the approximately 200,000 rats there.[21] By April 5, 1950, Benton County had established a free refuse facility at the Coffin Butte Site. By April 8, 1954, Robert and Daniel Bunn owned and operated Corvallis Disposal and the Coffin Butte facility, and the *Gazette Times* boasted of the clean efficient service. But roadside dumping remained a problem for decades even after commercial trash pickup was extended to nearly all parts of the county by 1964.[22]

The late 1960s brought changing attitudes toward traditional practices of dumping and burning. By 1967 burning was being phased out as Coffin Butte evolved to be a landfill operation involving covering and sealing refuse. Accordingly, the volume of waste became an increasing problem. The early 1970s brought pressure to re-locate Benton County's landfill and the exploration of several alternate approaches to disposal. As early as October 9, 1969, Corvallis Disposal began looking for an alternate landfill site and had begun negotiating with Oregon State University to use lands east of Corvallis for that purpose. In the March 19, 1971, *Gazette-Times*, County Sanitarian Roger Hayden speculated that one day soon Benton County may be barging its wastes downriver to a regional site where proper sorting and recycling could take place. Hayden suggested at the time that eventually local solid waste would have to be taken to the eastern side of the state since western Oregon had location, water, and soil condition difficulties.[23] Without a ready alternative, however, in November of 1971, the County Commissioners approved an extension of Corvallis Disposal to use the Coffin Butte area as a landfill until December 31, 1974. Corvallis Disposal negotiated a 99-year lease option on the "Granger" site on the Independence Road near Highway 20 where they hoped to develop a landfill despite some concerns by officials about the proximity of the Willamette River.[24]

[20] Unless otherwise noted, all information here is from the *Corvallis Gazette-Times*.

[24] *Corvallis Gazette-Times*, August 26, 1972.

In 1970, there were 17 disposal sites in a five-county area that included Benton County.[25] Only two met the new standards for landfills, as set by the Oregon DEQ. Coffin Butte was one of many sites recommended for "phasing-out" and "closure" at a later date. In April 1970, individuals representing Benton, Linn, Marion, Polk, and Yamhill counties met to discuss solid waste solutions for the five-county area. Two years later, they formed the Chemeketa Regional Solid Waste Program, a cooperative program funded via a grant from the Environmental Protection Agency (EPA).[26] The Chemeketa program is no longer in existence and no record can be found of an updated plan after the projected timelines expired.

At the time, "the Granger site" was the leading location for a regional landfill in Benton County. However, Benton County officials and residents soon expressed concerns about the plan, noting that the parcel was on prime farmland and the Willamette River Flood Plain. The opposition prompted the Chemeketa Board to go back to the drawing table, and by September 1973, four sites were under consideration for a regional landfill.

Two months later, Coffin Butte was designated as a preferred site due to cost and convenience considerations. The selection came following a public hearing in which residents opposed all four sites and a written public comment period during which Benton County received five letters opposed to Coffin Butte and four in favor. Two additional public hearings were held in February and March 1974. At the first, testimony was overwhelmingly in favor of the project. At the second, there was significant public opposition to the proposal, especially from the North Benton County Citizens Advisory group. Testimony lasted more than 3.5 hours.[27]

Ultimately, the Benton County Planning Commission approved a conditional use permit (CUP) request allowing Coffin Butte to be expanded into a regional landfill, one of several designated by the Chemeketa agreement.[28] Residents appealed but two months later the Benton County Commission upheld the Planning Commission's decision. The Chemeketa agreement was not a sweeping commitment by Benton County to take all refuse from the other counties. While the charge of the Resource Recovery center being planned for the former Camp Adair site, and now in operation, was broad, access to use Coffin Butte for refuse disposal was limited to specific areas within the partnering counties, including the general areas of Monmouth/Independence (MI), West Salem (WS), Dallas (DA), Kings Valley (KV), Corvallis (CO), Albany (AL), Lobster Valley (LV), and Monroe/Harrisburg/Halsey.[29]

Pressures for expansion renewed by 1981, notably with the closure of the Roche Road landfill in Linn County. The next level of expansion for Coffin Butte came in 1983 when the Benton County Planning Commission approved another expansion that the Landfill's operators said would add half a century to the site's life.[30] Although this expansion provoked less protest than in the early 1970s, the North Benton Citizen's Advisory Committee (CAC) specified that there would be no disposal of municipal solid waste on the 59.23 acre property south of Coffin Butte Road;[31] this parcel, however, was part of Republic Services' 2021 CUP application.

During the 1980s, the landfill operator purchased several properties surrounding the landfill, some belonging to residents whose water supplies were compromised as a result of landfill operations. A household well west of the landfill, on the former Helms home site, received sufficient contamination from the landfill site and was decommissioned under DEQ supervision. A DEQ report on the situation notes that practices at the landfill were being adjusted to minimize future problems, and the responses included the decommissioning of some wells. "Decommissioning water wells within the LOF ("Location of Facility") or in areas potentially downgradient of impacts removes potential exposure to contaminants in groundwater. Two wells currently proposed for decommissioning include PW-1, which is within the LOF, but currently unused, and the Helms well, which is outside and downgradient of the LOF. The Helms well will be used (with carbon filter unit) until September 2006 at which time it will be disconnected from use and scheduled for decommissioning."[32]

Coffin Butte Landfill History: Operating as a Landfill, 1983-2010[33]

In the early 1980s, plans for Coffin Butte began to evolve, driven by increasing demand to expand the volume embedded at the site and changes in ownership. The 1983 Benton County decision to allow Linn County waste operators to use Coffin Butte generated significant attention but not powerful opposition and a new 'landfill site' zone was created for the 266-acre CBL site and the site development plan allowed Valley Landfills to expand the landfill site by 10 acres.

In the 1980s, there appeared to be little concern about Coffin Butte's site life. An article in the *Gazette-Times* in August 1990 noted that Coffin Butte had an estimated lifespan of 60 to 70 more years and detailed the purchase of a new machine, the "Horizontal Fixed Hammer Hog", that could process wood into compost and wood chips. At the time, company officials said the machine would extend the Landfill's life by 20 years.[34]

In April 1994, Benton County Commissioners proposed eliminating a 10 percent surcharge on all waste coming to Coffin Butte from surrounding counties and replacing it with a 1 percent franchise fee levied on all customers. The move was an attempt to keep waste from coming into Coffin Butte from Lincoln and Tillamook counties; the latter was being sued by a company

[34] *Corvallis Gazette-Times*. August 26, 1990.

that said it could offer a better rate for disposal elsewhere. County Commissioners approved the franchise fee in July to provide a "more stable funding source" for the County's solid waste program.[35] In 1994, Coffin Butte lost a significant amount of business, including 43,000 tons of paper from the James River Paper Plant and 12,000 tons from Tillamook County. Overall tonnage placed at Coffin Butte in 1993 was 313,572; that dropped to 270,645 in 1994.[36]

In addition to the surcharge debate, newspapers also covered Valley Landfills Inc.'s gas-to-energy project, a $2.4 million effort to turn methane into electricity. At its inception, the facility was capable of powering 1,500 homes with clean energy. Today, PNGC Power Plant is capable of powering 4,000 homes with clean energy. Generating energy this way is a partial solution to controlling methane produced by decomposing waste at the Landfill.

Also in 1994, Valley Landfills filed another CUP, seeking to rezone 26 acres it owned from rural residential for use as a landfill, as part of its long-term planning efforts. This was estimated to increase the capacity of the landfill by 64 to 80%.[37] As reported in the *Gazette Times* on November 3, 1994, this request encountered stiff opposition when local landowners cited concerned over smell, noise, groundwater contamination while other county residents wondered how large the county would let the landfill grow and whether increased capacity would affect the incentives to reduce consumption or recycle. About 50 people attended a Board of Commissioners' meeting in early November.[38]

The residents' perspectives in 1994 are similar to those in the 2020s. Community members argued that approval of the expansion by the County Commission after the extensive negative public testimony would show a lack of concern about what the community thinks. Specific concerns focused on the potential impact on springs and water supplies, that the change would be an exception to our state land-use goals, and how it could set precedent for even more massive change in waste disposal in the future.

Newspaper archives indicate that numerous residents wrote letters to the editor, authored op-eds or said they were concerned that: 1) eventually the county would have to close Coffin Butte Road, a critical emergency route; 2) they had existing concerns about traffic, noise, smells, and roadside litter; and 3) that potential earthquake damage to landfill liners could cause contaminants to seep into the underground water supply.[39] After delaying the vote at an earlier date, in a December 14, 1994 hearing, the Board of Commissioners unanimously denied the expansion. An article in the *Albany Democrat-Herald* reported that Commissioner Pam Folts said the Willamette Valley is not a good place for landfills because the high amount of rainfall can cause leachate to reach groundwater.[40]

In the mid-1990s, Coffin Butte, its neighbors, and elected officials worked cooperatively to solve leachate-related problems. Heavy rains in 1996 led DEQ to authorize the Landfill to pump

[35] "Proposed Franchise Fee May Eventually Boost Garbage Rates," Wed. April 6, 1994, Corvallis Gazette-Times. leachate into the Willamette River on an emergency basis. (The agency later said the rain had diluted the liquid, and there was no environmental harm to the area.) To avoid a similar situation, the Landfill announced plans to raise the walls on its storage ponds, sent some leachate to the City of Corvallis for treatment, and tried new liquid processing techniques.[41]

By 1997, the landfill property had grown to 790 acres of which 194 acres were zoned for disposal. Public meeting notices regularly placed in the local paper by the County's Solid Waste Advisory Committee (SWAC) show that the public was invited to hearings that were held to approve the extension of services to each of the seven counties then served.

The second half of 1999 was eventful for Coffin Butte. On August 24, 1999, at around 6:30 pm, the landfill caught fire.[42] This fire, large enough to be covered by the Associated Press as national news, burned for more than 24 hours, prompting fire crews from Adair Village, Corvallis, Albany, and Polk County to respond. The Landfill's owner said the blaze was caused by a 'hot load' delivered to the site.

Figure 6 - Karl Maasdam/Gazette-Times August 25, 1999. Permission to use granted by OWH News Archives and Licensing Manager.

Probably more notable in the long run, on December 14, 1999, after 40 years of operating Corvallis Disposal and Coffin Butte Landfill, the Bunn Family announced they had sold their operation to Allied Waste Industries, the second largest solid waste services company in the world. Company President Duane Sorensen said of Allied, "We're really excited about these guys, they run pretty decentralized just like we do…you won't see any change."[43]

Operations at Coffin Butte changed little in the early 2000s. Throughout this period, the Solid Waste Advisory Council frequently posted public meeting notices in the local paper. In November of 2002, the Benton County Board of Commissioners signed a Memorandum of Understanding with Valley Landfills stating that Valley Landfills, Inc (VLI), "will not conduct, without the prior approval of Benton County and the State of Oregon, the placement of solid waste on the approximate 56 acres, within the landfill zone which it owns south of Coffin Butte

[41] *Corvallis Gazette-Times*, July 16, 1996.
[42] *Corvallis Gazette-Times*. August 25, 1998.
[43] *Corvallis Gazette Times*. December 15, 1999.

Road."[44] The required Benton County approval process specifies the need for a Conditional Use Permit (CUP) approved by the County Planning Commission.

In 2008, Republic Services merged with Allied Waste Industries and acquired control of the Coffin Butte facility. Republic Services, headquartered in Phoenix, has managed the landfill since.

Section 3: Current Political and Social Context of Coffin Butte Landfill

Throughout the 2000s and 2010s, the landfill operators raised trash hauling rates with relatively little public concern. In 2018, that changed when Republic Services announced that the per-load tipping rate would rise nearly fourfold, from $28.75 to $85.75. Republic Services said the rate increase sought to discourage the general public from bringing their trash to the landfill.[45] "We have a lot of traffic in and out of Coffin Butte Landfill," Julie Jackson, Republic Services' municipal manager told the Board of Commissioners. "It's becoming increasingly dangerous to have the public there."[46]

Figure 7 - View of Coffin Butte Landfill, Feb. 2023 from E.E. Wilson Archery Park (photo by Marge Popp).

Even after Republic Services dropped the rate to $40, county residents voiced their displeasure at a Commissioners Meeting.[47] Because Coffin Butte is a privately-owned landfill, Benton County could not then, and cannot now, directly regulate the rates Republic charges. However, the County was able to encourage a lower fee increase because it was in the process of renegotiating its franchise fee agreement.

The current pressure for expansion is tied to the annual volume of waste placed in Coffin Butte landfill. Although Benton County contributed less than 12% of the total intake at Coffin Butte in 2021, pressures to expand the landfill's footprint include population growth, diversion rate, wildfire debris, and according to EPA data, more waste is being generated per capita today than

[44] "Memorandum of Understanding Relating to Land Use Issues". Benton County and Valley Landfills, Inc (2002) https://www.co.benton.or.us/sites/default/files/fileattachments/community_development/page/8136/landfill_mou_2002.pdf

ever before in history.[48] It is important to recognize that the current issue of Coffin Butte is not about closure, but about the manner of expansion.

As the science behind landfill siting and maintenance progressed, sites with high rainfall and soils that have low compaction have lost favor. Also, as landfills increase in size, location in remote areas is preferable. Therefore, the newer large landfills, such as Roosevelt and Columbia Ridge disposal sites, are located east of the Cascades where meteorological, geologic, and population density conditions are more favorable.[49] Locating landfills must take into consideration factors other than environmental conditions and immediate impacts on close neighbors, including the costs to local residents of refuse disposal, the suitability of alternative disposal sites, and the financial impacts on the local government of hosting a facility. Still, many landfills on the west side of the Cascades have been closed or are in the process of closing, and the impending closure of Riverbend Landfill in Yamhill County is one justification for Coffin Butte expansion.[50]

The capacity issue is discussed in detail in another section of this report, but there is a historical component to it. The amount of waste (tonnage) being delivered to Coffin Butte has increased steadily in recent years. Annual reports submitted to the county show that tonnage in 2016 was 552,978.53. The following year, tonnage increased by 66.63 percent. Republic Services has noted that much of that increase is due to the diversion of waste from the Riverbend Landfill in Yamhill County, which was having difficulties with its expansion plans.[51] Tonnage has continued to increase on an annual basis, except for 2020, a year that was marked by significant lifestyle changes due to the global COVID-19 pandemic. There was 1,046,066.96 tons of waste deposited at Coffin Butte in 2021, an 89.17 percent increase compared to 2016 numbers. Coffin Butte currently operates under a tonnage cap of 1.1 million.[52]

The current Benton County Talks Trash (BCTT) process is a reaction to three specific decisions made by Benton County officials and Republic Services:

1. First, the public process and outcome of the December 2020 franchise agreement between Benton County and Republic Services.
2. Second, the issues raised when Republic Services applied for a CUP to expand landfill operations south of Coffin Butte Road in 2021, an application approved by the SWAC, but unanimously rejected by the county Planning Committee.
3. The third action leading to the creation of the BCTT process was the decision of Republic Services to withdraw their Board of Commission appeal of the Planning Commission decision. Instead, it reserved the option to request another CUP in the future. As a result, BCTT was created by the County Commission to develop common understandings that could inform the Board, other decision-makers, and the public on solid waste issues, including any possible future request.

[50] BCTT Subcommittee A.1 Revision 5 1/10/2023

[51] The ongoing difficulties with Riverbend Landfill can be seen at: Nicole Montesano, *Yamhill County New-Register.* "Riverbend landfill stops accepting garbage". June 18, 2021.

[52] Benton County Trash Talks, "Data from Coffin Butte Landfill Annual Reports – 2014-2021", https://www.co.benton.or.us/sites/default/files/fileattachments/community_development/page/8317/data_from_coffin_butte_landfill_annual_reports.pdf

In each of the above situations, some residents raised concerns about the public notice process and the lack of information given to residents before decisions were made or contracts were signed. Recommendations for addressing these communication gaps are part of Subcommittee E charge to: "Develop protocols for the timely and broad distribution of CUP-related information to the public, other governmental entities, and internal committees, groups, and divisions."[53]

Benton County and Republic Services approved a hauling franchise fee agreement on June 7, 2022, a ten-year agreement, with the possibility of re-negotiation July 1, 2024. As County Commissioner Xan Augerot observed, "… while county officials have a long-standing working relationship of trust with Republic's local staff, many members of the community haven't been party to that."[54]

The Benton County Commissioners chose to transfer responsibility for solid waste management from the Health Department to the Community Development Department (effective on July 1, 2019) as negotiations over the 2020 franchise agreement were underway.

In response to a community member's public records request, an e-mail exchange was found between Republic Services Representative Julie Jackson and County Counsel Vance Croney on October 14, 2020 where County Counsel sought to clarify how the expansion across Coffin Butte Road would affect the lifespan of the landfill, and also noted that Republic Services "has many acres of EFU-zoned land that certainly can be used for additional cells, but would require rezoning."[55]

A communication breakdown between some residents and county officials regarding landfill issues became very apparent following the signing of the new Coffin Butte franchise agreement signed in mid-December 2020, which assumed an expansion of the landfill. Unlike the more highly publicized prior franchise negotiations, a review of local newspapers through 2020, while the landfill franchise agreement was being negotiated, did not reveal any announcements about the process, nor did the public seem to be made aware of the negotiation of a new franchise agreement. At the Board of Commissioners meeting to vote on the franchise agreement, the county attorney attested that there were no public comments.[56] Members of the SWAC acknowledged that they were told that this was not a matter for their consideration. This is surprising considering that a September 2020 solicitation notice for Advisory Board membership explicitly states 'review franchise agreements' as a primary responsibility.[57]

The 2020 franchise agreement over landfill operations enhanced the financial incentive for the county to support increased solid waste intake. Under the 2020 agreement, Benton County receives compensation in two forms. The "franchise fee" given for allowing the landfill to operate starts at $2 million in 2021 and rises to $3.5 million by 2024. The agreement was designed to incentivize the county to favor increased disposal volume and the landfill's expansion by adding a "host fee" compensation model. The "host fee" starts at $2.87 per ton of

[57] *Corvallis Gazette-Times*. September 8, 2020.

waste in 2021, increasing to $3.99 per ton in 2024. Before the county receives the "host fee," however, the franchise fee is first subtracted from the per ton charge. If too little is disposed of, the county may receive no host fee, and the county is rewarded if more waste goes to Coffin Butte. As the franchise fee increases, the volume required to receive the host fee also increases. Furthermore, the fees will go up slightly if the landfill expansion is approved by 2023 and will go down slightly if the landfill expansion is not approved by 2025.[58] Before the vote to sign the franchise agreement, Benton County Counsel Vance Croney stated that Republic Services maintained that its ability to pay higher fees was dependent on reducing cost or increasing capacity.[59]

In May 2021, Republic Services applied to Benton County for a CUP to expand the landfill. At the July 28, 2021, meeting, the Benton County Solid Waste Advisory Committee 'strongly supported' the CUP, according to a memo submitted to the Planning Commission the next day. A search of the local papers did not reveal a public notice regarding the 2020 Franchise Agreement process nor the Republic Services CUP request that followed, but by August members of the local community formed a coordinated effort to educate themselves and fellow Benton County residents regarding what could be a doubling of the size of the Coffin Butte Landfill. Letters to the editor critical of the planned expansion began to appear in the local papers, and public meetings were well-attended by people objecting to the expansion.[60] Reporting at the time also noted Mr. Croney's financial arguments in favor of the expansion, particularly the revenue implications and possible future disposal costs for county residents of denying the expansion request.[61] These arguments engendered a *Gazette Time*s editorial endorsing the expansion.[62]

Public notice of the Planning Commission Hearing for the Republic Services CUP application (County File Number LU-21-047) regarding the Coffin Butte Landfill appeared in the local papers on October 14, 2021. Public outcry had been building over the past few months as residents began to understand the ramifications of the 2020 Franchise Agreement and the corresponding CUP, which proposed extending the landfill area south of Coffin Butte Road, which had long been viewed locally as a 'case closed' impossibility given the 1983 and 1994 agreements. During the period leading up to the first LU-21-047 Planning Commission meeting, neighbors of the landfill and residents throughout the county wrote numerous letters to the editor in the local papers, convened meetings, and gathered data regarding the proposed expansion.

While much public commentary in attributed editorials and letters to the editor opposed the expansion, several *Gazette Times* articles written by veteran reporter James Day throughout the period from October 2021 through January 2022 gave a positive account of the Coffin Butte expansion and could be said to advocate for its approval. In addition, on November 12, 2021, an unattributed full-length staff editorial in the *Gazette Times* recommended approval of Coffin

[59] Benton County Board of Commissioners Meeting. December 15, 2000. Recording.

[60] There were at least three letters alone on October 20, 2021. The letters emphasized that the waste was overwhelmingly from outside of Benton County, transportation implications of an enlarged facility, and impacts on a great blue heron rookery. Another news article from that day discussed the hearing that Republic Services held to explain their plan.

[61] *Corvallis Gazette-Times*. October 31, 2021, and November 12, 2021.

[62] *Corvallis Gazette-Times*. December 2, 2021.

Butte expansion, and on December 19, 2021, the paper's editorial page feature "Roses and Raspberries" assigned a raspberry rating "to the Benton County Planning Commission for unanimously denying a proposal by Republic Services to expand the Coffin Butte landfill."

The first LU-21-047 Planning Commission meeting generated so much controversy that over a hundred residents signed up to testify at the 4.5-hour hearing, and a second meeting was scheduled to hear public comment. The more than 30 citizens speaking at the November 2, 2021, and the November 16, 2021, Planning Commission hearings all opposed the expansion.[63] Objections raised in public comments in this process are partially why the County Board of Commissioners created the Benton County Talks Trash process.

On December 7, 2021, the Planning Commission unanimously denied the LU-21-047 CUP. Republic Services filed a timely appeal of that decision to the Benton County Board of Commissioners, claiming the evidence in the record did not support the Planning Commission's conclusions. Republic also said the landfill has maintained compliance with DEQ's air quality permit regulations. But on March 15, 2022, the company informed the Board of Commissioners it would withdraw the appeal.

Meanwhile, from October 2021 to January 2022, the Solid Waste Advisory Council membership changed; three members finished their terms and two other members resigned. The Board of Commissioners then appointed four new members.

Based in part on the distinctly different decisions at the Solid Waste Advisory Council and at the Planning Commission and based on the level of opposition from neighboring community members, the Board of Commissioners asked Oregon Consensus to conduct a situation assessment to understand whether and how the County, the community, and the landfill operators might be able to move forward constructively. Oregon Consensus conducted the situation assessment and presented a Report to the Board on July 12, 2022. Based on the findings from that assessment, the Board voted to establish a Solid Waste Process Workgroup "Benton County Talks Trash." The Solid Waste Process Workgroup first met on September 8, 2022.

II. Project Website and Workplans

PROJECT WEBSITE

WORKGROUP CHARTER AND BYLAWS

Initial Project Workplan

Meeting One: 9/8/22
• Introductions • Review of Charter with Process Overview • Member Comments • Charge A: Discuss Common Understandings document draft • Next Steps and Homework • Meeting Evaluation
Meeting Two: 9/15/22
• Charge A continued: Develop Common Understandings • Coffin Butte Tour • Next Steps and Homework
Meeting Three: 10/6/22
• Charge B: Clarifying existing criteria and information requirements for the land use review process for any proposed landfill expansion • Next Steps and Homework
Meeting Four: 10/27/22
• Charge B continued: Clarifying existing criteria and information requirements for the land use review process for any proposed landfill expansion • Next Steps and Homework • Mid-Process Evaluation

Meeting Five: 11/3/22
● Charge B continued, and Charge C: Scope the necessary tasks to start a Long-Term Sustainable Materials Management Plan process ● Next Steps and Homework
Meeting Six: 11/17/22
● Provide input on Charges D and E: Additional Topics o Hauling Reopening o Roles/Responsibilities o Timeline for code changes o Consider creating a public-facing document and community education campaign on these topics ● Authorize Draft to SWAC/DSAC and Planning Commission for comment ● Next Steps and Homework
Meeting Seven: 12/1/22
● Review SWAC/DSAC and Planning Commission Feedback ● Edit Draft Report ● Next Steps and Homework
Meeting Eight: 12/15/22
● Finalize Report to BOC ● Next Steps: The BOC is expected to consider the findings and recommendations in January 2023. ● Process Evaluation ● Celebration!

The workplan evolved over time to accommodate the needs of the Workgroup and there were 11 Workgroup Meetings held to complete the charge. The last meeting was held on April 3, 2023. The list of meetings and the links for the meeting websites are located on the Project Website linked above.

III. Workgroup Meeting Topics

Meeting Summaries for the Workgroup Meetings can be found on the Project's Website HERE

Meeting One: September 8, 2022

- Welcome & Introductions
- Participant Meeting Instructions
- Participant Commitments
- How We Got Here
- Review Major Charter Sections:
- Collaboration 101 Training
- Public Comment
- Triage Charge Elements
- Draft Report Structure Explore Common Understandings Section
- Mechanics: Add Representative Table
- Next Steps

Meeting Two: September 15, 2022

- Welcome & New Member Introductions
- Participant Meeting Instructions
- Participant Commitments
- Approve Draft Minutes from Meeting One
- Public Comment
- Meeting One Evaluation Highlights
- Homework Highlights
- Explore Common Understandings & Refine List of Missing Topics/Questions
- Discuss SWMP Table of Contents Concept
- Triage Charge Elements/Workplan
- Next Steps

Landfill Tour: September 24, 2022

- Republic (Ian) gave agenda, safety, & scale liner model speech.
- At the top of Coffin Bute hill observed the dumping area and machinery, observed the self-tipping/emptying trailers, and discussed the gas pump vacuum system.
- At an overlook of the quarry had Q&A time.
- At the power plant a CPI representative (Roman Gillen) spoke about PNCG Power owning this landfill power plant, and the Facility Manager (Steve King) gave an overview of the facility.
    - The tour was split into two groups to view the generators and interior of the power plant.

Neighborhood Tour: October 1, 2022

- Tour guide Joel Geier began with some geology, local history, and comments about the community. Then Joel and Nancy Whitcombe provided comments on topics including bird watching, disc golf, airport for model airplanes, North Palestine Baptist church, Santiam Christian school, local geology, and geologic fault lines.

- At a stop 3 miles southeast of the landfill, the group discussed tree cover and property siting.
- As the tour moved to the E.E. Wilson Archery Range, the discussion covered vehicle traffic, Yamhill landfill, Red Barn Farm, the PRC composting facility, a WWII maintenance shed, zoning, land use, terracing versus continuous slope, vegetated or productive slopes, settling and gasification processes, and the siting of landfills.
- The tour stopped at and discussed Bit-By-Bit Horse Farm.
- When viewing the quarry, the discussion focused on the leachate facility, Republic's office, invasive species, properties purchased by landfill, OSU beef ranch, monitoring wells and water contamination.
- At the historic Soap Creek Schoolhouse, Kevin Higgins, a firefighter and employee with the Benton County Sherriff's Office, gave a talk on growing up in the area, landfill fires, types of items in landfill, and DEQ. This was followed by a video testimony from Priya Tucker, of Rising Joy Flower Farm, and resident Elisabeth Pott.
- Discussion on the bus ride back focused on affordable housing and local buildings.

Meeting Three: October 6, 2022

- Welcome & New Member Introductions
- Review Participant Meeting Instructions & Agenda
- BOC Presentation
- Approve Draft Minutes: Last Meeting & Tours
- Landfill Tour Questions
- Public Comment
- Comments on Meeting Two Evaluation Suggestions
- Discuss County Counsel Deference Memo & Set Stage for Legal Subcommittee
- Check-in Activity
- Big Picture Discussion
- Stand-Up the Subcommittees
- Review Amended Workplan
- Next Steps

Meeting Four: October 27, 2022

- Welcome & New Member Introductions
- Review Participant Meeting Instructions & Agenda
- Approve M3 Draft Minutes
- BOC Action on Updated Workplan
- Public Comment
- Update on Tour Questions & Answers
- SMMO Values & Goals Discussion
- Q&A Session with Representatives from other Counties
- Subcommittee Reports
- Next Steps

Meeting Five and Open House: November 17, 2022

- Welcome
- Review Participant Meeting Instructions & Agenda

- Approve M4 Draft Minutes
- Approve Updated Tour Q&A
- Updated Workplan Facilitator 11/16/22
- Public Comment
- Subcommittee Reports
- Reintroduce Charges D & E
- Next Steps
- Open House

Meeting Six: December 15, 2022

- Welcome & New Member Introduction
- Review Agenda
- Member Shares Original Document
- Public Comment
- Subcommittees A.1. & E.1. Report
- Review & Approve M5 Minutes & Evaluation Summary
- Discuss Consultant/Attorney for Next CUP
- Subcommittee A.2 Report and A.3 B.1 Report
- Introduce & Approve Third Attorney with Poll
- Subcommittee C.1. Reports
- Updated Project Workplan
- Next steps

Meeting Seven: January 19, 2023

- Welcome and Review Agenda
- Meeting 6 Minutes and Evaluation Summary
- Review Workgroup Report Draft 2
- Land Use Acknowledgement Discussion
- Subcommittee E Presentation
- SMMP Subcommittee Presentation
- CUP Subcommittee Presentation
- Legal Subcommittee Presentation
- Capacity Subcommittee Presentation
- Key Dates Review
- Review Consultant Selection Process
- Next Steps

Meeting Eight: February 23, 2023

- Welcome and Review Agenda
- Meeting 7 Minutes
- Review Updated Workplan
- Introduce Key Findings and Key Recommendations Crosswalk Document
- Review the Feedback Plan
- Member FRs Feedback Session 1
- Member FRs Feedback Session 2

- Member FRs Feedback Session 3
- Next Steps

Meeting Nine: March 16, 2023

- Welcome and Review Agenda
- Meeting 8 Minutes
- Review Updated Workplan
- Public Polling on Recommendations
- Introduce Key Findings and Key Recommendations Crosswalk Document
- Review the night's Feedback Plan
- Member FRs Feedback Session 1
- Member FRs Feedback Session 2
- Member FRs Feedback Session 3
- Member FRs Feedback Session 4
- Discuss Final polling on Body of the WG Report, not on the Appendix.
- 1-2-3 Polling Refresher
- Next Steps

Meeting Ten: March 23, 2023

- Welcome and Review Agenda
- Meeting 9 Minutes
- Public Polling Results: Recommendations
- Review the Polling Plan
- 1-2-3 Polling Plan
- Explore F&Rs with "3s" and any New Items

Meeting Eleven: April 3, 2023

- Welcome and Review Agenda
- Meeting 10 Minutes
- Updated Public Polling Results: Recommendations
- Review the Polling Plan
- Explore F&Rs with "3s" and any New Items

Open House: April 4, 2023

- Seven stations that focused on:
    - Check-in and survey submittal
    - History section
    - Landfill Size/Capacity/Longevity
    - Sustainable Materials Management Plan
    - Past Land Use Application Conditions
    - Legal Issues and B.1. Land Use Review
    - Community Education

IV. Key Workgroup Findings & Recommendations

Each of the Subcommittee sections below is organized similarly. First, each section provides an Introduction and a link to the Subcommittee's webpage, including its Charge and Members, and a link to each Subcommittee's "Master Document" with the agendas, attendance, and notes for each subcommittee meeting. Each section then provides the Subcommittee's Key Findings and Recommendations. Next, a section called Additional Details includes items that fall outside of a Key Finding or Key Recommendation. Finally, each section ends with a summary Conclusion.

Note that Findings and Recommendations in the Subcommittee reports in Appendix C may differ in places from the Findings and Recommendations of the BCTT Workgroup as shown in this report section. The Subcommittee reports reflect the work of each Subcommittee as it was submitted to the BCTT Workgroup on March 16. The Workgroup discussed, and in many instances revised, findings and recommendations during Meetings 9, 10, and 11 with the goal of achieving a consensus.

Section A: Sustainable Materials Management Plan (SMMP)

INTRODUCTION

Benton County is seeking to develop a first ever Sustainable Materials Management Plan (SMMP) to help guide decisions and policies for the future of solid waste and disposal consistent with Benton County values. Historically, the County has not had the benefit of such a plan. The main theme of the subcommittee's findings and recommendations are that an SMMP should help transition and re-focus from linear, end-of-life waste management to more holistic, systemic, circular approaches for all materials. The many positive impacts of this transition include:

- Efficiencies of full life cycle/cradle-to-cradle sustainable material management.
- Cost savings and other benefits from waste reduction
- Creating opportunities for efficient circular economies both locally *and regionally*
- Better inclusion of equity and shared prosperity in waste considerations
- Recognizing and encouraging innovation in the materials stream

Traditionally, Benton County has managed waste materials with an end-of-life approach – largely by landfilling them locally in Coffin Butte Landfill, and by recovery, recycling, and composting. This has presented challenges, which include, but are not limited to, the landfill's limitations environmentally and economically. The SMMP Subcommittee sought to chart the expectations and aspirations for a longer-range vision to guide the County towards more sustainable materials management. Our report advises the County on the parameters for a Request For Proposals (RFP) that would bring in consultants to develop a Plan that enables the County to achieve that longer-range vision.

Based on the magnitude of ideas and possibilities we encountered, the SMMP could usher in a paradigm shift in how we view and interact with the materials we use in our everyday lives. In addition to Findings and Recommendations, this section includes a list of Questions that consultants and the County can use to frame the thinking about this new paradigm, its benefits, and the practical paths to get there.

The subcommittee was tasked to develop a "table of contents" outlining subjects that should be covered in an SMMP. The group started by looking at examples of Solid Waste Management Plan (SWMP) documents from other Oregon counties, and by listing, reviewing, and comparing the topics covered in each. The group was able to add to and edit that list, creating a "table of contents" of topics to cover in a future SMMP, as well as an associated list of questions for the SMMP to answer. This overarching sustainable materials management approach evaluates impacts across the full life cycle of materials and weighs the costs and benefits in the decision-making process.

The Subcommittee also reviewed Benton County's 2040 Thriving Communities Initiative, as well as the values and goals expressed in other planning documents, to develop an overarching framework for developing an appropriate SMMP for Benton County.

The more recent subcommittee work focused on future next steps and recommendations for the RFP process, including contracting out, workplan and timeline, and who should "at the table" in future discussions. The Subcommittee included lessons learned from outside of

Benton County, including information and lessons from neighboring counties' presentations to the full work group.

SUBCOMMITTEE WEBPAGE LINK

SUBCOMMITTEE CHARGE

Long Term Sustainable Materials Management Plan (SMMP) tasks:

1) Contracting out;
2) Subjects to be covered;
3) (Moved from Common Understandings) Benefit-Cost Topics are only Outlined;
4) (New) Add in Vision 2040 and related County documents with similar from other counties referenced;
5) Who needs to be at the table beyond those in the County;
6) A workplan outline with a timeline for completion;
7) Topics covered in recent similar planning efforts across the state; and
8) What "lessons learned" should be brought forward in this process. Includes necessary foundational "common understandings" and protocols needed before beginning the actual planning process.

NOTE: This charge does not include completing the plan. It only includes a discussion of the preliminary scoping to start that planning process.

If there is sufficient time to complete the original Charge and the following activities, subcommittee to provide recommendations on:
1. the most important topics/subjects from the draft of the SWMP Table of Contents;
2. brainstormed options for those topics/subjects; and
3. the reasoning, both pro and con, for their selection.

SUBCOMMITTEE MEMBERS AT END OF PROCESS

Brian May
Daniel Redick
John Deuel
Ken Eklund
Marge Popp
Ryan McAlister
Sean McGuire
County Staff: Daniel Redick

The **SUBCOMMITTEE'S REPORT can be found linked HERE** in Appendix C.

The **SUBCOMMITTEE'S "MEETING NOTES" can be found linked HERE**.

KEY FINDINGS AND KEY RECOMMENDATIONS

This section lists Key Findings and Key Recommendations from the full subcommittee report below. These key findings and key recommendations do not capture the comprehensive discussions of the subcommittee, nor are they intended to do so. Instead, these provide a summary overview of key observations. The link adjacent to each Key Finding and Key

Recommendation provides access to the full report. These summaries encourage readers to follow the links to find detailed content in the full subcommittee report.

			Unanimous Agreement		Consensus Agreement		Majority-Minority Approval	
Sub. Comm.	Findings and Recs	Total	# with all 1s	% with only 1s	# with no 3 votes	% with no 3 votes	# with at least one 3	% with at least one 3
SMMP	Findings	8	1	12.5%	8	100.0%	0	0.0%
SMMP	Recs	28	10	35.7%	28	100.0%	0	0.0%

Key Findings:

#	Finding	Formal Workgroup Polling		
		1's	2's	3's
SMMP F-1	Many Sustainable Materials Management Plans (SMMP) and related Request For Proposals (RFP)s have been formulated, executed, and are in use in Oregon and beyond.	11	1	0
SMMP F-2	The charges of the SMMP Subcommittee are intimately related to and should be embodied when scoping the necessary tasks to start a Long-Term Sustainable Materials Management Plan process.	11	1	0
SMMP F-3	Contracting-out processes often include a Technical Advisory Committee (TAC), which vet technical information in the RFP, and a Community Advisory Committee (CAC), which review the RFP from the community perspective. Institutions of higher learning, including Oregon State University has a large population of faculty, faculty emeriti, staff and students that are subject matter experts in many of the technical areas that the SMMP will address.	12	0	0
SMMP F-4	The overall length of the project can be heavily impacted and defined by the level of public interaction/engagement included in the project. The consultant may help define the scope of public engagement, including engagement in rural areas of the county and in communities outside the county.	10	2	0
SMMP F-5	There are aspects of the work to be performed that are technical in nature or lend themselves toward extensive research, that the consultant may conduct at the same time as public engagement. To expedite the process, certain procedural elements can be done	11	1	0

	concurrently. The timeline can generally be defined throughout the process.			
SMMP F-6	The SMMP aims to reduce the full lifecycle impacts of materials management practices in Benton County and where other jurisdictions' practices overlap with Benton County. Addressing only materials from Benton County would have limited impacts compared to that of all the materials from neighboring counties, as Benton County's waste contribution to the landfill is relatively small. SMMPs are not specifically about landfills, but about materials management across the full lifecycle of materials, including addressing impacts from production, transportation, use, reuse, recovery, and disposal.	10	2	0
SMMP F-7	Benton County has limited control over the waste management practices of the counties that emplace the vast majority of the annual landfill waste intake, and the volume of waste material they haul to Coffin Butte Landfill, however, the county and its infrastructure is impacted by other counties' waste stream contributions to facilities within Benton County (via Coffin Butte Landfill, Pacific Region Compost, and transportation methods through the county).	9	3	0
SMMP F-8	The 2040 Thriving Communities Initiative identified our communities' Core Values and has been adopted by Benton County government which is used as a benchmark or lens for initiatives such as the Benton County SMMP.	10	1	0

Key Recommendations:

#	Recommendation	Formal Workgroup Polling		
		1's	2's	3's
SMMP R-1	Benton County Sustainable Materials Management Plan should be developed within a Sustainable Materials Management framework, reflecting full lifecycle impacts. The development of a Sustainable Materials Management Plan should consider, 1) the 2040 Thriving Communities Initiative and our communities' Core Values, 2) national, State and local goals, vision documents (DEQ's Materials Management in Oregon 2020 Framework for Action), plans, policies,	10	3	0

	ordinances, etc. relating to materials management and climate change, 3) examples of values and goals expressed in state and local jurisdiction materials management plans, and 4) long-term strategies (to 2040) with short-term action items (5 years or less).			
SMMP R-2	Benton County should use the 2040 Thriving Communities Initiative as a high-level lens to frame our communities' Core Values in developing the SMMP.	12	0	0
SMMP R-3	The SMMP should not just be about how Benton County can better manage materials, but to also address how to approach inter-county collaboration from a regional perspective. The RFP should indicate the need for researching and exploring opportunities for a regional multi-county approach to achieve the goals of sustainable materials management. RFP firms with experience with Oregon's materials management legislation, policies and other county materials management plans may have the capability to address this need.	10	2	0
SMMP R-4	Counties impacting Benton County through their materials management practices (including by contributing materials to Coffin Butte Landfill) should have an SMMP in place. The SMMP should have a perspective on how to strategize this.	10	3	0
SMMP R-5	SMMP content should incorporate the sustainability of materials management strategies/tactics. The result of the process should give us a method of measuring costs and benefits to evaluate the impact on economic, social, and environmental indicators. Specific goals should be included of how materials in Benton County can fit within a circular economy, cradle-to-cradle, or similar framework.	12	0	0
SMMP R-6	The SMMP should clarify Benefit-Cost perspectives being addressed through an equity analysis, including, 1) financial cost impacts associated with materials management and outcomes, 2) the equity of circular economy, how it engages and impacts consumers, 3) a perspective that goes beyond landfilling, and 4) a "who's at the table" list of stakeholder perspectives.	12	0	0
SMMP R-7	Bring "lessons learned" into the process from other sources, including international examples as well as other counties, lessons from past Benton County experiences, and West Coast states. See full report for more sources.	11	1	0

SMMP R-8	Beyond those in the County, a wide assortment of stakeholders should be brought to the table. Stakeholders include community members, advocacy groups, businesses and industry, local and state government, and resources for innovation. See report for full stakeholder list. The consultant should provide recommendations based on analysis and extensive outreach and engagement with community stakeholders from the "who should be at the table" list. These stakeholders should represent a broader area than Benton County.	10	2	0
SMMP R-9	Benton County should use an RFP to find consultant(s) for developing a Sustainable Materials Management Plan.	11	0	0
SMMP R-10	The SMMP subcommittee researched other jurisdiction's plans, compared and aggregated a list of subjects, and the SMMP should evaluate and address the subjects listed in the full subcommittee report, answering the 117 questions listed as RFP priorities allow, and include recommended courses of action.	11	2	0
SMMP R-11	Recruitment for the RFP needs to be extensive, and selection of successful proposal should be careful and thorough. Qualities of a successful applicant should include those listed in the full subcommittee report.	11	1	0
SMMP R-12	The scope of work for this project is expected to be broad and comprehensive, with specific goals recommended for the County to consider as milestones.	12	0	0
SMMP R-13	The RFP development process should: 1) provide details about the Workgroup process and its findings to RFP applicants, 2) prioritize topics, adding additional topics that are important to consider, and 3) communicate accurate priorities to applicants.	12	0	0
SMMP R-14	Members of this BCTT SMMP subcommittee should be offered to participate in subsequent stakeholder group meetings for RFP development and review. Benton County's Advisory Committees related to SMMP work should have an advisory role during the development of the plan.	11	1	0
SMMP R-15	The RFP Release/Announcement should 1) communicate an expectation that this plan can be approached by teams (multiple firms), instead of just single firms, 2) put guidelines on the size/length of proposals and sections of proposals, and 3) be	11	1	0

	distributed to allow enough time for it to be posted to various trade groups, shared with underrepresented groups, and internationally minded outlets.			
SMMP R-16	The County should share the various steps of the process with the public, making updates available, and demonstrating transparency (cross-referencing subcommittee E.1. work).	12	0	0
SMMP R-17	The RFP should demonstrate flexibility in allowing further work plan development after applications are reviewed and accepted.	10	1	0
SMMP R-18	The SMMP Timeline should allow for extensive public interaction and engagement. In order to expedite the process, procedural elements should be done concurrently as possible. The timeline should generally be defined throughout the process.	10	2	0
SMMP R-19	Applicants should include various scope/cost options for one year, two years, and three-year timelines. The report should be released in sections, based on timeline and content priorities.	12	0	0
SMMP R-20	It's important that the SMMP process include extensive public outreach and engagement. In addition, a Technical Advisory Committee (TAC) should vet the consultant's technical work (SMMP development) and a Community Advisory Committee (CAC) to provide more general review. SMMP Sub-Committee members should be included in the CAC. The TAC should include subject matter experts from Oregon State University, and other regional academic institutions. Many of the subject areas of central importance to the SMMP are characterized by fast-moving science, and a SAC could help the SMMP consultant to navigate to the best available data and knowledge.	11	2	0
SMMP R-21	Proposals contain the following information, with parameters around each of these items in terms of document length. Requested information includes project team experience and qualifications, understanding of the project, approach to the scope of work, cost of the proposal, the project schedule, social/environmental responsibility, and references. Each criteria includes a total set of points the proposal can be awarded. See full report for more information.	10	2	0
SMMP R-22	An evaluation team consisting of County staff and members of the stakeholder group should determine	11	1	0

	the best proposal deemed most qualified based on the above criteria.			
SMMP R-23	The SMMP should emphasize impacts of the results of the RFP on social equity, innovation, to understand and emphasize the upstream aspects of material sustainability, and creative solutions that provide pathways for tangible long-term outcomes.	10	2	0
SMMP R-24	The workplan should include ongoing adaptive management and refinement and include a timeline for completion. The sections of the workplan outline include RFP development and release, a webinar for prospective consultants, a pre-proposal Q&A period, a period for application submittal, and the selection committee to identify shortlisted firms who are given time for additional presentation. The committee then evaluates proposals, selects a consultant, and develops a workplan with selected consultant. See full report for more information.	10	2	0
SMMP R-25	The County should evaluate if it would be in their best interest to have an SMMP in place prior to any major materials management decisions.	13	0	0
SMMP R-26	The county should consider using alternative funding mechanisms, including landfill revenue, to support the SMMP recommendations.	13	0	0
SMMP R-27	A complete materials audit is highly recommended as both a benchmark and a way to measure progress. Benton County should initiate a Waste Audit to characterize more precisely what is in the waste stream of Coffin Butte Landfill. The SMMP consultant can use this audit information when formulating this plan, and there is no up-to-date information specific to the landfill currently available. The benchmark audit should be completed as soon as possible, along with recommendations for follow up audits.	10	2	0
SMMP R-28	The SMMP should evaluate the costs, benefits, risks, and opportunities of a wide range of materials management strategies to find the most sustainable future for Benton County. The successful applicant should present a complete benefit-cost analysis of a wide range of strategies that work as a more integrated system, including but not limited to, the benefit-costs analysis of Benton County acting as the host of a regional landfill that contributes a small portion of the total waste the landfill receives. This analysis should	11	2	0

include key parameters of Coffin Butte landfill, such as its operating life, its large intake from outside the county, its franchise fees, and its long-term environmental risks and costs.

CONCLUSION

A modern, long-term SMMP that reflects the unique needs and values of Benton County, the Willamette Valley, and Oregon will serve the County, its residents and the state now and into the future. Acknowledging the long-term nature of such a plan, the SMMP should be adaptable to new technologies while aligning with clearly stated County and Statewide goals.

Benton County should not rush the selection process or solicitation process – selecting a partner team whose core values and vision align with what has been assembled will be a key component to getting the best outcome in the process of developing a long-term SMMP.

Section B: Landfill Size/Capacity/Longevity

INTRODUCTION

The landfill size/capacity/longevity subcommittee aimed to research and compile factual information about the landfill as it relates to the group's charge. One of the primary interests of the group was to communicate accurate information about the landfill's estimated end-of-life and capacity, which resulted in estimates provided by Republic Services staff, as well as other information about how the estimated life span of the landfill can change depending on various additional factors and scenarios not included as assumptions in Republic Services' estimate. The subcommittee's report includes information about the landfill's size over time, including annual tonnage accepted, landfill volume, and the landfill's geographic footprint. The report also includes information about specific locations at the landfill which relate to the capacity, including the status of the current active cell, the future disposal area currently occupied by the quarry operation, the landfill site zoning designation, and areas approved for disposal.

Supporting data researched and compiled by the group includes historical end-of-life projections, and annual intake tonnage over time. Some information about the landfill was not available for the group to review, a challenge most prevalent with the lack of information available about the landfill prior to 1974. The following Key Findings and Key Recommendations are based on the information compiled in the subcommittee's report, as well as the subcommittee's discussions in each of the topic areas.

KEY FINDINGS AND KEY RECOMMENDATIONS

This section lists Key Findings and Key Recommendations from the full subcommittee report below. These key findings and key recommendations do not capture the comprehensive discussions of the subcommittee, nor are they intended to do so. Instead, these provide a summary overview of key observations. The link adjacent to each Key Finding and Key Recommendation provides access to the full report. These summaries encourage readers to follow the links to find detailed content in the full subcommittee report.

			Unanimous Agreement		Consensus Agreement		Majority-Minority Approval

LSCL	Recs	12	1	8.3%	12	100.0%	0	0.0%

Key Findings:

Landfill Estimated Remaining Life, Projected End of Life (EOL)

#	Finding	Formal Workgroup Polling		
		1's	2's	3's
LSCL F-1	In 2003 EOL was projected to be approximately 2074, with a Landfill Life estimate of 71 years (2003 East Triangle CUP document, Benton County file PC-03-11.pdf). Twenty years later EOL is projected to be 2037-2039 with a Landfill Life of 14.5-16 years, a reduction of approximately 36 years of estimated life in 20 elapsed years. In 2013 Valley Landfills Inc. reevaluated an area of Landfill Site zoned property in the northeast corner of the site for waste placement stability engineering. This area was removed from the landfill's site development plan based on updated state seismic guidance for landfill stability.	13	0	0
LSCL F-2	In 2013 EOL was projected to be 2053-2062, with a Landfill Life estimate of 40-49 years[64]. Ten years later EOL is projected to be 2037-2039 with a Landfill Life of 14-16 years, a lower and upper range reduction of approximately 16 and 23 years respectively.	13	0	0
LSCL F-3	Current (1Q2023) estimate for landfill EOL = CY 2037 – 2039, with a landfill life estimate of 14-16 years, based on an annual intake level of 1.0 – 1.1 MTons/year and a	13	0	0

[64] 2013 Coffin Butte Landfill and Pacific Region Compost Annual Report

	density of 0.999 Tons/yd3, assuming the quarry area will be fully excavated by the time the current disposal areas are full. Valley Landfills, Inc. has represented that this nominal life projection ("baseline") is derived from a few data points in annual measurements, and is the product of a modeling process that is standard in the landfill industry. Valley Landfills, Inc. acknowledges that a variety of factors, including human factors, can impact landfill site life, but are not included in this baseline calculation. Valley Landfills, Inc.'s baseline projection of a 2037-2039 closure date is based both upon existing demand and Valley Landfill Inc.'s efforts to maintain and/or grow its service area and business in the market.			
LSCL F-4	The 2021 Site Development Plan is a registered engineer of record stamped and dated plan set which includes but not limited to a projected a 2039 EOL based on an annual intake of approximately 846,000 Tons/year, but this intake tonnage is not considered binding or controlling by either ODEQ or Valley Landfills, Inc. This is based on the best information available at time of approval by Oregon DEQ, which can change based upon service area impacts.	11	2	0
LSCL F-5	Under the 2020 Franchise Agreement, the 1.1M tonnage cap is eliminated upon Benton County's approval of a CUP (expansion). If intake volumes increase, an **expansion would not necessarily guarantee an increase in site life** or the extension of the Landfill's closure date. For example, if an expansion increases available airspace but intake volumes increase the fill rate even more, the overall life of the landfill could decrease. Republic Services said it was unlikely such a scenario would occur, due to operational limitations at the Landfill and in the Service Area [could not reach consensus]. Nonetheless, transitioning from the current linear landfill economy to a circular economy landfill can potentially extend the life of a landfill. This is because a circular economy landfill is designed to minimize the amount of waste sent to the landfill and extract value from the materials that are discarded. By recovering valuable materials through recycling, composting, and other forms of recovery, a circular economy landfill reduces the volume of waste that needs to be disposed of in the landfill. This, in turn, reduces the rate at which the landfill is filled up, which can extend its lifespan with or without tonnage cap limitation.	6	6	0

	Notwithstanding, a landfill tonnage cap is a regulatory limit on the amount of waste that can be disposed of in a landfill over a certain period of time. The tonnage cap is typically set by the local or state government and is intended to prevent the landfill from becoming overfilled and causing environmental or problems such as contamination of groundwater, soil, air, or demand and supply equilibrium problems, while transitioning to a circular economy.			
LSCL F-6	For purposes of this discussion, the subcommittee agreed to rely on data from the annual reports and other landfill filings with the county. EPA also provides data in in its greenhouse gas reporting webpage that uses different data from another source.	12	0	0
LSCL F-7	Factors such as population growth and debris from disasters may drive up intake rates and thus shorten landfill life; factors such as recycling and waste diversion, plus emerging factors such as extended producer responsibility (EPR) incentives and climate crisis legislation, may drive down intake rates and thus lengthen landfill life.	12	1	0
LSCL F-8	Landfill Life (longevity) is the availability of the landfill reserve resources and landfill ancillary resources that currently operates the landfill's demand, supply and equilibrium of refuse disposal in a linear economy model.	12	1	0
LSCL F-9	The subcommittee identified these factors that could impact usable landfill airspace: Landfill expansion(s) and associated removal of tonnage cap; the quarry excavation schedule; water table concerns; disasters that happen to the landfill itself.	9	4	0
LSCL F-10	The subcommittee identified many factors that could impact the landfill's annual tonnage, i.e., the rate at which its usable volume fills up. These included: exceedance of the tonnage cap; recession(s); economic growth; structural and societal reductions in waste generation; disposal alternatives; transportation alternatives; global health issues such as pandemics; climate change and other environmental legislation concerning methane and other greenhouse gases; climate change and other environmental legislation concerning the reduction of waste and pollution in landfilled material; state and local legislation upgrading waste diversion efforts; environmental activism,	13	0	0

	especially about the climate crisis; wildfires and other disasters that generate debris for landfilling; service area changes; changes in population in the service area.			
LSCL F-11	Recognizing that the question "What factors could make the landfill close earlier than the Baseline Scenarios (by 2037–39)?" is of particular importance to this report's readers, the subcommittee has prepared a table that contains background information about each factor and proposes questions for the County and the SMMP to answer. This information can be found in Table 4.	11	1	0
LSCL F-12	Landfills are known to be major emitters of methane, but previously these emissions have typically been estimated through mathematical modeling, because the emissions themselves were hard to measure directly. The methane emissions from Coffin Butte Landfill have not been well-characterized, so the possible effects of methane-reducing legislation on the landfill's waste intake rates are also hard to characterize.	10	3	0
LSCL F-13	One proven way to reduce a landfill's greenhouse gas emissions is to divert organic material. Landfill gas collection systems are another tool to lessen the greenhouse gas impact but do not remediate it. In 2019 the Oregon DEQ estimated that Coffin Butte Landfill's controls (engine/generators with backup flare) collected 57% (https://downloads.regulations.gov/EPA-R10-OAR-2019-0640-0011/content.pdf). Republic Services provided data to Oregon DEQ for inclusion in EPA's 2021 Greenhouse Gas report that estimated the Landfill's gas collection system had an efficiency of 91.2 percent. (Reference: https://ghgdata.epa.gov/ghgp/service/html/2021?id=1007054&et=undefined)	11	1	0
LSCL F-14	The impetus to curtail methane emissions is focusing attention on ways to divert organic waste from landfill wastestreams. The 2023 Food Donation Improvement Act, for example, enables existing food donation organizations to expand operations and incentivizes the creation of new methods and innovations in preventing food waste, both to stop wasting a valuable resource and to reduce methane emissions.	13	0	0

Landfill Size: Capacity

#	Finding	Formal Workgroup Polling		
		1's	2's	3's
LSCL F-15	A significant portion of the permitted airspace in the quarry area (also known as Cell 6) is currently unavailable for waste disposal due to unexcavated rock. As with other cells at Coffin Butte, permitted airspace is ultimately the result of two separate decisions by two separate entities. Benton County approves the land use for the landfill's footprint, while DEQ and the franchisee (Valley Landfills Inc.), approve the cell design that determines the physical volume available.	13	0	0
LSCL F-16	The addition of Cell 6 added approximately 13,400,000 cubic yards of airspace. The Landfill total capacity increased by approximately 9,000,000 cubic yards in 2003 with the addition of the West and East triangle areas for a total of approximately 35,500,000 cubic yards. Since 2004, reported remaining airspace has decreased gradually, while total permitted airspace has remained remaining somewhat constant. As of end 2021 approximately 44% of permitted capacity remained unused. [See also LSCL F-17]	12	0	0
LSCL F-17	Valley Landfills Inc. anticipates it will no longer be able to place waste in Cell 5 by mid-year 2025. When Cell 5 is full, Republic Services is working on a plan to deposit waste in the permitted area of the landfill known as the quarry known as Cell 6. Excavation of the primary quarry footprint is scheduled to begin in Spring of 2023 with completion in Spring 2025.	11	2	0

Landfill Size: Intake Tonnage

#	Finding	Formal Workgroup Polling		
		1's	2's	3's
LSCL F-18	The amount of waste placed into the landfill has grown dramatically over the past 40 years. In 1983, 375 tons per day were placed into the landfill (117,000 tons per year). By 1993, the tonnage volume increased to 310,000 tons per year. In 2003, 550,000 tons were placed into the landfill. In 2013, the waste tonnage was 479,000, and in 2021, 1,046,000 tons were placed into the landfill.	12	1	0

LSCL F-19	The official 2022 Coffin Butte annual intake tonnage is not available at the time of this report (February 2023). The size of the Host Fee payment to Benton County in January 2023 indicates a 2022 intake volume of 1,066,436 Tons. Actual tonnage should be updated upon receipt of the 2022 Coffin Butte Landfill Annual Report.	12	1	0
LSCL F-20	The 2000 Landfill Franchise Agreement stipulated that the County was to perform a "Baseline" study as a reference for measuring potential future adverse effects (completed in 2001), and defined a ramping intake tonnage threshold to be applied during the term of the agreement (CY2001-2019). Intake volumes in excess of this threshold granted the County clear right to pursue specific remedies: a) the County, at its expense, could perform an updated Baseline assessment, and b) if the County determined that the new assessment indicated an adverse impact on "the Baseline," the agreement stipulated that "the parties shall immediately proceed in good faith to negotiate an increase in the Franchise Fee and/or Host Surcharge…".	12	0	0
LSCL F-21	The 2000 intake tonnage threshold was exceeded in calendar years 2017, 2018 and 2019.	12	0	0
LSCL F-22	Washington County waste tonnage accepted at the landfill increased by over 400% between 2016-2017, with the increased tonnage continuing through 2019. Riverbend Landfill was a regional landfill that accepted waste from many counties, including Washington County. Riverbend's owner/operator diverted tonnage to Coffin Butte in an effort to extend Riverbend's site life.	12	0	0
LSCL F-23	Benton County did not utilize either of the contractual remedies available to it as a result of the intake tonnage exceeding the threshold in 2017-2019. No updated Baseline study was performed, and no renegotiation of the landfill fee structure was undertaken.	12	0	0
LSCL F-24	Benton County received approximately $3.1M of incremental revenue from the increased intake volumes over the 2017-2019 period. Of this, approximately $1.08M was the result of intake volume in excess of the annual limits over the three-year period. This equates to roughly $11.50 total per Benton County resident for the three-year period.	11	0	0
LSCL F-25	In an official 2018 presentation to Benton County Board of Commissioners, Benton County represented the 2000	12	0	0

	Franchise Agreement intake threshold as “Annual Maximums Specified in Franchise Agreement.” However, the 2000 Franchise Agreement does not describe the tonnage threshold as a “limit” or “maximum” and does not limit the number of tons that can be accepted.			
LSCL F-26	Both the 2000 Landfill Franchise Agreement and the 2020 Landfill Franchise Agreement include a section stating that “The parties acknowledge that there may be adverse effects to the County’s infrastructure and environmental conditions due to increased annual volumes of Solid Waste accepted at the Landfill.” In both agreements this section of the agreement then stipulates terms regarding intake volumes.	12	0	0
LSCL F-27	The intake threshold defined in the 2000 Landfill Franchise Agreement and the Tonnage Cap defined in the 2020 Landfill Franchise Agreement were stipulated as contractual provisions, with consequences explicitly defined in the 2000 agreement and implicit (violation of contract) consequences in the 2020 agreement.	11	1	0
LSCL F-28	The 2020 Landfill Franchise Agreement defined a 2020 Tonnage Cap of 1.1 M Tons/year that the Landfill "shall not exceed." That includes 75,000 tons reserved annually for Benton County. The Tonnage Cap does not apply to fire, flood, natural disaster, or Force Majeure event materials.	10	2	0
LSCL F-29	The 2020 Landfill Franchise Agreement also includes a provision that the tonnage cap would be eliminated upon governmental approval of an application to “expand the landfill onto the Expansion Parcel.”	12	0	0
LSCL F-30	It is unclear if the 2020 Franchise Agreement’s enforcement mechanisms are strong enough to prevent agreement violation or if the County will pursue the options at its disposal.	12	0	0
LSCL F-31	The landfill operator generally chooses how much tonnage to accept, based on demand and their contracts with various jurisdictions and haulers. Some of the increasing tonnage accepted at the landfill from 1993-2021 reflect the increase in business development. (See, Post-meeting note in M11 Meeting Minutes, prepared by Republic in response to a member request - NOT vetted by the Workgroup and not part of the finding.)	12	0	0

LSCL F-32	The slow downward trend in intake volume in the 2006-2010 period is explained by the franchisee as resulting from the economic downturn of 2008.	12	0	0
LSCL F-33	Republic Services states that the drop in volumes to Coffin Butte in 2020 is due to the global COVID-19 pandemic, coupled with diversion of tonnage from Riverbend Landfill to other landfills besides Coffin Butte. However, tonnage volumes increased again in 2021 due in part to changes in lifestyle/development/at home shopping patterns as a result of the pandemic, as well as debris from the Oregon wildfires.	12	0	0
LSCL F-34	A range of human factors have been seen to influence the landfill's intake rate and therefore its operating life in the past. These include business factors such as expansions or contractions of the Service Area, social factors such as recessions and population growth, and environmental factors such as recycling and other initiatives that divert materials out of the waste stream.	12	0	0
LSCL F-35	More human factors are emerging that could influence the landfill's intake rate and therefore its operating life in the future. These include newly enacted state legislation assigning responsibility for disposal costs to the producers of waste material, newly enacted national legislation addressing food waste, and national legislation being rolled out that targets methane and other greenhouse gas pollution.	12	0	0
LSCL F-36	A 2016 MOU between Benton County and Republic Services acknowledged "Coffin Butte Landfill will be accepting municipal solid waste currently being delivered to Waste Management's Riverbend Landfill for a term of 1-2 years, beginning in January of 2017."	12	0	0
LSCL F-37	The 2016 MOU does not contain language preventing Benton County from exercising its rights under the 2000 Landfill Franchise Agreement (see Recommendations).	12	0	0

Specific Locations

#	Finding	Formal Workgroup Polling		
		1's	2's	3's
LSCL F-38	Approval of the 1983 rezoning was recommended by SWAC and CAC with on the condition that "No landfill be allowed on property south of Coffin Butte Road."	12	0	0

LSCL F-39	The recommended condition prohibiting landfill south of Coffin Butte Road was not included in the 1983 rezoning ordinance through a change recommended by Benton County Staff, in which Staff noted that any new disposal area would require approval of the Planning Commission in a public vote. The process for approving landfill south of Coffin Butte Road was subsequently changed to "allowed by conditional use permit." This appears to be done via Ord. 90-0069 (BCC 77.305) This change was memorialized in the 2002 Memorandum of Understanding executed by Valley Landfills and Benton County.	11	1	0

Landfill Size: Footprint and Structure

#	Finding	Formal Workgroup Polling		
		1's	2's	3's
LSCL F-40	The 1983 rezoning action defined 194 acres as Landfill Size (LS) zone. An additional 59-acre parcel south of Coffin Butte Road, while zoned LS, would not be used for disposal of solid waste unless approved by a conditional use permit and Department of Environmental Quality permit for solid waste landfill use. The site map attached to the 2002 MOU restricted "fill" activity to the north side of Coffin Butte Road.	11	0	0
LSCL F-41	Twenty-three tax lots are owned by landfill-affiliated entities. Six of these tax lots are zoned LS, and the five LS tax lots on the north side of Coffin Butte Road contain landfill cell disposal areas. The most recent tax lots associated with the landfill were purchased in 2001 (non-disposal areas).	11	1	0
LSCL F-42	The workgroup took two polls on various versions of this finding, and the results appear below: Version 1: The landfill has developed visually over time in accordance with site development plans. Coffin Butte Landfill has changed visually since it's designation as a regional landfill in 1974, growing in both height and size, and visual appearance. However, the overall landfill acreage has not changed significantly since 1983; it has filled in more of its footprint.	7	1	2
	Version 2: The landfill has developed visually over time in accordance with site development plans. Coffin Butte	8	1	2

Landfill has changed visually since it's designation as a ~~regional~~ landfill in 1974, growing in both height and size, and visual appearance. However, the overall landfill acreage has not changed significantly since 1983; it has filled in more of its footprint.			

Key Recommendations:

#	Recommendation	Formal Workgroup Polling		
		1's	2's	3's
LSCL R-1	The Sustainable Materials Management Plan should further develop scenarios and factors that may impact the landfill lifespan, including detailed analyses of likely projections. The Commissioners and County staff should keep the questions about these factors and their effects in mind when making decisions affecting the landfill.	11	2	0
LSCL R-2	Benton County should create and share a plan for the enforcement of all franchise agreements.	11	1	0
LSCL R-3	Benton County should contract for an updated Baseline Study to evaluate the impact of the current intake level at Coffin Butte. As with the 2001 Baseline Study stipulated in the 2000 Landfill Franchise Agreement, this new study should determine and measure adverse effects, including but not limited to: traffic, soil conditions and contamination levels, air quality, surface and ground water conditions and contamination levels, noise, odor, visual screenings, litter, hours of operation, solid waste control systems and compliance with all solid waste Permits. This baseline study could help inform Benton County in decision making and financial choices regarding how to use the income from the landfill.	9	4	0
LSCL R-4	The County should, as soon as possible, consider the public record of the deliberations leading to the execution of the 2020 Landfill Franchise Agreement in order to assess a) which party requested that the 2020 Tonnage Cap be eliminated if expansion was approved, b) if Benton County proposed the elimination of the 2020 Tonnage Cap, determine why this was done, c) determine the County's expectation for the benefit(s) to the County of accepting up to 1.1M Tons of waste per year when the County's reserve portion is approximately 6.8% of that amount, d) interpretation of	9	3	0

	the “Tonnage Cap”, specifically relative to the 2020 Tonnage Cap, and e) expectations of both parties for future landfill site expansion, including any plans for multiple (repeated) future expansions. The county should then use this information to inform landfill-related decision-making. These negotiations were conducted privately (not in public meetings), and there are elements of these discussions that may be proprietary and/or fall under attorney-client privilege.			
LSCL R-5	Benton County should clarify and document the process for officially establishing Permitted Space, including any and all required Benton County actions and regulatory agency approvals (ODEQ, EPA, etc.).	9	3	0
LSCL R-6	The County should clarify when formal approval of Cell 6 as a disposal area was granted. LLU F-23 provides information on this issue.	7	5	0
LSCL R-7	The Benton County Disposal Site Advisory Council (DSAC) should review all future Coffin Butte Landfill Annual Reports relative to past reports and official approvals, in particular with regard to intake volume, landfill traffic volume (both Municipal Solid Waste and leachate transport), expected landfill life and end of life, and total and remaining Permitted Space. DSAC should report these findings to the Board for consideration.	9	3	0
LSCL R-8	Benton County should secure information from Republic Services about the Annual Tonnage figures for presentation to SWAC/DSAC as soon as they are available, and not wait to include them for the first time in the Annual Report.	12	0	0
LSCL R-9	The baseline scenarios laid out in this report assume that landfilling will continue as it is doing today for the next 16 years. That expectation should be tempered by signals of factors that can reshape Coffin Butte Landfill's social and regulatory landscape, especially environmental considerations related to the climate crisis. This reshaping is something that Benton County can participate in, on behalf of its citizens, as the landfill’s permitted volume is filled.	12	1	0
LSCL R-10	Benton County should take steps to acquire better information about the methane emissions of Coffin Butte Landfill, because the landfill’s emissions are currently not well-characterized and use this information to guide diversion programs that could limit the amount of organic waste going to the Landfill.	12	1	0

LSCL R-11	In its current actions and in concert with its Sustainable Materials Management Plan, the County should be aware of and prepare for changes in Coffin Butte Landfill's social and regulatory landscape, as the future could hold significant opportunities for the County and affiliated organizations to bring waste management closer into alignment with the County's goals and values.	12	1	0
LSCL R-12	Benton County should keep in mind that the most effective way to curtail a landfill's greenhouse gas emissions is to divert organic material from being landfilled. This can inform County and area-wide decisions regarding recycling, composting, food waste, and other initiatives affecting how the landfill's permitted volume is filled.	11	2	0

ADDITIONAL INFORMATION

The current landfill activities north of Coffin Butte Road consist of a total of 194 acres, with 6 cells currently slated or approved for disposal of waste.

- In 2003 the End of Life (EOL) of Coffin Butte Landfill was projected to be approximately 2074, with a Landfill Life estimate of 71 years.
- In 2013 EOL was projected to be years 2053-2062, with a Landfill Life estimate of 40-49 years.
- In the current year of 2023 the EOL is projected to be years 2037 -2039, with a landfill life estimate of 14-16 years.

The above landfill progression reflects a linear economy model that represents a waste management approach in which waste is generated, collected, and disposed of in a linear manner, without much emphasis on resource recovery or reuse. This approach is often characterized by a "take-make-dispose" model, where resources are extracted, processed into products, used, and then discarded as waste by society.

The linear model of a landfill economy is being replaced by more sustainable models, such as the circular economy. In a circular economy, waste is minimized by prioritizing waste reduction and recycling, and by designing products and processes that focus on sustainability and longevity. In this model, waste is seen as a valuable resource that can be reused, repurposed, or recycled, rather than being discarded into a landfill.

This circular approach supports the solid waste management plan of Benton County working shoulder to shoulder with a sustainable materials management plan being developed by Benton County in conjunction with Oregon Department of Environmental Quality, local community members, as well neighboring Counties and municipalities using Republic Services waste management services.

In Republic Services' 2021 Sustainability Report, President and Chief Executive Officer, Jon Vander Ark, reports, "This is our company vision, which is intentionally ambitious because we believe we are uniquely positioned to help our customers achieve their own sustainability goals. That commitment begins with our Elements of Sustainability – Safety, Talent, Climate Leadership and Communities – and these elements anchor our 2030 sustainability goals."

The reader of this executive summary is encouraged to read further into the full subcommittee reports to appreciate the wealth of information members of the community have brought forward in a short amount of time during the Benton County Talks Trash bridge process, into a needed sustainable landfill economy and transportation plan for waste disposal.

Landfill Life Projections

CONCLUSION

After reviewing extensive information about the variable factors that can influence the landfill's size, capacity, and longevity, this subcommittee developed dozens of findings and recommendations. While these Key Findings and Key Recommendations summarize much of the group's work, readers are encouraged to review the full subcommittee report for more details on each topic. This subcommittee topic is complex; the variables influencing site life are nuanced and often multi-faceted. The findings and recommendations are supported by the details provided in the subcommittee's report, which cover the landfill's end-of-life, tonnage intake, volume, footprint, and specific locations.

Section C: Legal Issues and Land Use Review

INTRODUCTION

The purpose of this subcommittee is to address: a) law relevant to, and the legal status of, landfill operation and oversight; b) relevant law related to land use regulation, and c) typical practices in land use regulation. The majority of the subcommittee's work product is in the form of objective legal information; however, the charge elements that relate to land use also include descriptions of practices and considerations and are noted as such. In all areas, the subcommittee's goal is to be clear, concise, and legally informative.

Membership of the subcommittee consists of Benton County Counsel Vance Croney, Planning Commissioner Liz Irish, Republic Services land use attorney Jeff Condit and Republic Services in-house counsel Holly Doyle. The facilitator invited participation by Jeff Kleinmann, a land use attorney who represented a group of property owners in the vicinity of the landfill during the 2021 Planning Commission hearings on the proposed expansion. Mr. Kleinmann declined to participate and submitted a letter stating his reasons. The facilitator subcontracted with Virginia "Ginny" Lucker, a highly regarded Oregon land use attorney and Benton County community member, to participate on the subcommittee and provide a third legal perspective. The County staff member supporting the subcommittee was Greg Verret, Deputy Director of the Community Development Department.

The Key Findings and Key Recommendations summarize most of the subcommittee's work. However, a wealth of information on each charge element is presented in the subcommittee's full report and readers are encouraged to refer to that report for a full accounting of any topic.

SUBCOMMITTEE WEBPAGE LINK

SUBCOMMITTEE CHARGE

SUBCOMMITTEE CHARGE
Charge A:
2) A Summary of the County's current rights and obligations to Republic Services, and vice versa, surrounding:

a. The hauling franchise;
b. The landfill CUP; and
c. What legally can and cannot be conditions of any land use approvals (e.g., past compliance, compliance with future laws, codes, and policies, DEQ compliance, reopening, limitations on what can be brought into the County from where, required facilities and practices, reporting/compliance/financial monitoring requirements, etc.)

3) *Interpretation and Deference:* **A Summary of the rights and obligations of other entities surrounding landfills, hauling, and sustainability initiatives, etc.:**

a. Federal;
b. Tribal;
c. State (e.g., Is DEQ prohibited from permitting another landfill west of the Cascades and what does the "regional landfill" designation mean?);

d. Local Government; and
e. Summary of the step-by-step process in ORS chapter 459 and associated timing for the cross-jurisdictional approvals of landfill applications, (e.g. DEQ) including:

(i) What topics are within whose authority, and
(ii) Whether, for example, the County can or should consider the topics it does not have permitting authority over when assessing the criteria outlined in Code section 53.215?

Charge B: Clarifying existing criteria and information requirements for the land use review process for any proposed landfill expansion. Specifically:

1) Create a common understanding document outlining which Development Code criteria are applicable to the review of a conditional use application for landfill expansion by reviewing:
   - 53.215 (Criteria)
   - 77.305 (Conditional Uses)
   - 77.310 (Review)
   - 77.405 (DEQ)
   - Review Chapters 50 and 51 for context, and then

   a. Preparing a conceptual list of any other Development Code criteria the WORKGROUP recommends be applicable.
   b. Developing recommended guidelines for interpreting any ambiguous provisions recognizing current statutes, regulations, case law, and County precedent, etc.

      A. The phrase, "Other information as required by the Planning Official" 77.310(e)
      B. The terms found in Section 53.215, e.g.
      C. "seriously interfere"
      D. "character of the area"
      E. "purpose of the zone"
      F. "undue burden"
      G. "any additional criteria which may be required for the specific use of this code.
      H. Other: _____

2) In doing so, refer to Comprehensive Plan for policy guidance regarding interpretation of any ambiguous Development Code provisions (see, BCC 50.015,) and Review the Planning Commission comments made during its last review of Republic Services' CUP application for context. Examples for consideration include:
   a. Necessary Tasks to Start Planning Reopening of Existing Hauling Agreement
   b. Roles, Responsibilities, and Protocols of SWAC and DSAC
   c. Specific Recommended Review Criteria for the Evaluation of Landfill CUP applications
   d. SWAC/DSAC, Planning Commission, and BOC Use of the Review Criteria
   e. Future Timeline for Discussing any Needed Changes to the Benton County Code Flowing from WORKGROUP Recommendations

SUBCOMMITTEE MEMBERS AT END OF PROCESS

Jeff Condit
Liz Irish
Vance Croney
Holly Doyle
Ginny Lucker
County Staff: Greg Verret
